Master teacher, scholar, mentor, and friend

About the Editors

Spencer C. Tucker, PhD, held the John Biggs Chair of Military History at his alma mater, the Virginia Military Institute in Lexington, for 6 years until his retirement from teaching in 2003. Before that, he was professor of history for 30 years at Texas Christian University, Fort Worth. He has also been a Fulbright Scholar and, as a U.S. Army captain, an intelligence analyst in the Pentagon. Currently the senior fellow of military history at ABC-CLIO, he has written or edited 25 books, including the award-winning *Encyclopedia of World War I*, *Encyclopedia of World War II*, and *Encyclopedia of the Cold War*, all published by ABC-CLIO.

James Arnold is the author of more than 20 military history books and has contributed to numerous others. His published works include *Jeff Davis's Own: Cavalry, Comanches, and the Battle for the Texas Frontier* and *Napoleon Conquers Austria: The 1809 Campaign for Vienna*, which won the International Napoleonic Society's Literary Award in 1995.

Roberta Wiener is managing editor for the John A. Adams Center for Military History and Strategic Analysis at the Virginia Military Institute. She has written *American West: Living the Frontier Dream* and has coauthored numerous history books for the school library market, including *Robert Mugabe's Zimbabwe*.

Preface

The conflict with Spain in 1898 was the first U.S. war with a foreign power since the Mexican-American War of 1846–1848. The Spanish-American War was, of course, about much more than freeing Cuba and the explosion of the battleship *Maine*. What Secretary of State John Hay called “a splendid little war” ended with the United States becoming a world power.

The American people were united behind the war effort, probably more so than in any other war in our history. There was, however, disagreement over the decision to take the Philippines and controversy resulting from the ensuing fighting against those Filipinos who did not wish to simply trade one colonial master for another. Yet Americans generally applauded the results. And when all was said and done, the United States probably had as fine a record in the Philippines as any colonial power in history. Ironically, the acquisition of the Philippines affected the future of the United States far more than any other provision of the Treaty of Paris that ended the Spanish-American War. Cuba was made independent, Puerto Rico was gradually advanced to Commonwealth status, but the Philippines made the United States a Far Eastern power, involved it in Asiatic power struggles, and made an eventual war with Japan probable. The seeds of Pearl Harbor came from the Battle of Manila Bay. Thus, the annexation of the Philippines was a major turning point in American history.

The war also had far-reaching repercussions for the U.S. Navy. Indeed, its remarkable record in the war fueled sentiment for an Isthmian canal and more ships. By 1917 the United States had the third-largest navy in the world and was administering the Panama Canal, which it had built from 1904 to 1914. It had also become a global power and the world’s leading industrial and financial center.

This encyclopedia is the most comprehensive to date on the Spanish-American War and the Philippine-American War. In addition to the volume of documents, the encyclopedia has more than 600 entries covering a wide range of topics on both sides of the conflict. In keeping with encyclopedias in this ABC-CLIO series, we have endeavored to include not only military events, leaders, and weapons but also entries treating political, diplomatic, economic, social, and cultural leaders and events.

There are many people to thank. I am especially grateful to David Task for writing the excellent introduction. I first encountered David at the Military History Workshop at West Point in the summer of 1980 when I was attending the workshop and David was a guest lecturer. His painstakingly researched and elegantly written book *The War with Spain in 1898*, first published in 1981 and reprinted many times, remains the classic study of the conflict. He provides a splendid overview and analysis of the factors behind the conflict, the war, and the consequences. As always, associate editor Paul Pierpaoli Jr. has been a tremendous assist. A trained diplomatic and political historian, he has not only helped edit all the entries but has written a number himself. I am also delighted to have the services of two assistant editors, Jack McCallum and Justin Murphy, who also have read all the entries and helped catch myriad small problems. Both received their doctorates under my direction, and I am inordinately proud of them. Jack is also a well-known neurosurgeon and author of a splendid new biography of General Leonard Wood. Justin, a distinguished teacher and scholar who has assisted me on several encyclopedia projects and is an accomplished editor, is now also acting dean at Howard Payne University. I am also most appreciative of the efforts of the many scholars who contributed to this project. And I am especially grateful to Becky Snyder, president of ABC-CLIO, for her vision, encouragement, support, and friendship and to my good

friends and team colleagues at ABC-CLIO Pat Carlin, Andrew McCormick, and Maxine Taylor. As usual, I take full responsibility for any errors. Finally, my perennial thanks to my wife and partner Dr.

Beverly Tucker, whose support enables me to continue writing and editing.

PHILIPPINE-AMERICAN WAR, 1899–1902

U.S. ACQUISITIONS IN THE PACIFIC, 1857–1899

Introduction

The Spanish-American War and the Philippine-American War stemmed from international dislocations that began during the 1890s. These global discontents eventually led to a long era of global warfare, including the Cold War, from 1914 to 1991. At this time the international balance of power, which had been largely stable though dynamic after the Napoleonic Wars, began to destabilize, a consequence of imposing changes during the 19th century. Among these unsettling developments were the urban industrial revolution, the rise of strong nation-states in the Western world that enjoyed the loyalty of their citizenry, and the expansion of European empires in Africa and Asia.

The Spanish Empire, once the greatest in the world, largely disappeared during the Napoleonic era, leaving only a few colonies in Africa (Morocco), the West Indies (Puerto Rico and Cuba), and the Pacific Ocean (the Philippines and smaller island groups, among them the Carolines and Marianas). During the latter years of the 19th century, anticolonial movements emerged in the most important of Spain's possessions, the Philippines and Cuba. Spain's Restoration Monarchy, which had been established in 1875, decided to put down these insurgencies rather than grant either autonomy or independence. The Spanish Army crushed the first outbreaks, the Ten Years' War (1868–1878) in Cuba, and the First Philippine Insurgency (1896–1897). A second insurgency in Cuba, which began in 1895, evolved into extended guerrilla warfare that proved most troublesome for the Spanish Army, although by the end of 1897 General Valeriano Weyler, known as “the Butcher” because of his stern methods, had succeeded in largely containing it.

This success, however, came too late. Spain's Conservative Party, led by Antonio Cánovas de Castillo, had authorized drastic measures in Cuba to counter the insurgents' recourse to partisan tactics. This initiative aroused growing opposition in the United

States, especially after Weyler ordered a cruel reconcentration of rural civilians in urban areas to deprive the insurgents of support in the countryside. The United States did not have large investments and commercial interests in Cuba, but anti-Spanish sentiment grew as newspapers published reports of terrible civilian suffering and aroused latent dislike of Spain.

President William McKinley, who took office in April 1897, exerted increasing pressure on Spain to adopt reforms that would at least grant Cuba a significant degree of autonomy. When an anarchist assassinated Cánovas in 1897, Spain's Liberal Party, headed by Práxedes Mateo Sagasta, soon took power, recalled Weyler, and finally granted home rule to both Cuba and Puerto Rico. This gesture, however, came too late. The Cuban leaders rejected autonomy, sensing that this concession signaled Spanish weakness and that perseverance might soon lead to independence.

The Cuban question, although of growing importance, was but one of several great issues that concerned Americans at this time, but a stirring event suddenly transformed the situation. On February 15, 1898, the battleship *Maine*, which had been sent to Havana Harbor to establish a U.S. naval presence, exploded and sank, causing the deaths of 266 crew members and many injuries among the survivors. Thereafter the Cuban question dominated public attention. The nation jumped to the conclusion that the Spanish had placed a mine in the harbor to destroy the *Maine*. A naval inquiry confirmed this view, although years later it became clear that internal combustion in the ship's coal bunkers adjacent to stockpiles of ammunition had probably caused the disaster.

The cautious McKinley opposed armed intervention, seeking instead to emphasize economic reforms, but public pressures eventually forced him to call for Cuban independence. His supporters in the business community, the most important constituency in the

Republican Party, were concerned chiefly with the monetary system and the tariff. They feared the unsettling effects that might stem from war, which often leads to unexpected and undesirable outcomes for business.

When Spain did not bow to the American demand for Cuban independence, the U.S. Congress authorized armed intervention but also adopted the Teller Amendment, which proclaimed that the purpose of armed intervention was to help Cuba achieve independence, a resounding repudiation of imperialist intentions. For various reasons many Democrats supported war, which influenced McKinley. He reluctantly went along with Congress, in all probability fearing that his failure to do so would compromise the Republican Party in the fall elections and eventually return the Democratic Party, the champion of free silver and free trade, to power in Washington.

Spain attempted to gain support from the great powers of Europe but failed to do so. The nation had no international ties of importance, having followed a policy of isolation from other nations during many years of internal political challenges, notably the agitation of Carlists, Basques, Catalonians, and other groups. Widespread domestic unrest raised fears of revolution and the fall of the Restoration Monarchy. Given these domestic challenges, Spain did not involve itself in external affairs. The European powers, preoccupied with great issues of their own including difficulties with their own empires, refused to help Spain, having no obligations and no desire to earn the enmity of the United States. Bereft of European support, Spain had to fight alone against a formidable enemy.

Popular emotions influenced the Madrid government to some extent; many Spaniards believed that the empire had been God's gift as a reward for the expulsion of the Moors from Europe and believed that no Spanish government could surrender the remaining colonies without dishonoring the nation. War seemed a lesser evil than looming domestic tumult. In addition, many believed that Spain could give a good account of itself because the Americans seemed unprepared for war. Spain possessed a large army, already in place in the likely combat zones, and it also possessed a respectable navy, which it deemed superior to that of the United States. Even if Spain experienced defeat, an honorable military effort rather than craven acceptance of the American demands might preserve the established order.

Spain declared war on April 23, 1898, and the United States followed on April 25, predating its action to April 21 because it had already begun naval operations.

Spain adopted a defensive strategy to back up its policy of retaining its colonies, hoping to repel American attacks on Cuba, Puerto Rico, and the Philippines. The most important decisions made in Madrid during the early days of the war were to dispatch a naval force to help defend Cuba and to organize another to reinforce its garrison in the Philippines.

To achieve its sole war aim, the independence of Cuba, the United States adopted an offensive strategy, a product of prewar planning. There was no thought of acquiring Spanish colonies. Rec-

ognizing the limited size of the regular U.S. Army (28,000 men), the United States would first conduct naval operations on the peripheries of Spanish power in the Caribbean Sea and in Philippine waters. The United States sought to intimidate the enemy by launching prompt and vigorous campaigns in the hope of achieving an early cessation of hostilities. Lacking sufficient trained troops under arms, the nation could not immediately dispatch large armies to the theaters of war. Of course it could call upon immense numbers of militia and volunteers, but these men lacked military training. It would take a year to mobilize, train, equip, and deploy a huge volunteer army. For the moment the government could only contemplate rather modest army expeditions to the Caribbean Sea and the western Pacific Ocean in support of naval operations.

As soon as war was declared, Commodore George Dewey's small but competent Asiatic Squadron, which had been ordered from Japan to Hong Kong in anticipation of possible hostilities, departed for the Philippines. It did so in accordance with prescriptions in the navy's prewar plans in the event of war with Spain. On May 1 the U.S. squadron entered Manila Bay. Dewey's warships consisted of the protected cruisers *Olympia*, *Baltimore*, *Raleigh*, and *Boston* and the gunboats *Concord* and *Petrel*.

This force, which mounted 54 heavy guns of which 10 were 8-inch breech-loading rifles, engaged Admiral Patricio Montojo y Pasarón's Spanish squadron of two large cruisers, four unprotected cruisers, and one gunboat, which mounted only 37 heavy guns, the largest being 6.3-inch rifles (7 total). This weak aggregation bereft of armor anchored in shallow water off the naval base at Cavite rather than near Manila to avoid an American bombardment of the city and to limit casualties during the impending battle.

When Dewey located the antiquated and unarmored Spanish squadron, he simply steamed past it several times and fired on it at will. The guns of the American vessels outnumbered those of the enemy and outranged them. Dewey's gunfire sunk three vessels and severely damaged the other four. The crippled ships were scuttled and joined the others on the shallow bottom. After the battle the *Petrel* set fire to them. Three were later raised, repaired, and placed in American service. Montojo's crews suffered heavy casualties, with 161 killed and 210 wounded. The unprotected cruiser *Reina María Cristina*, Montojo's flagship, attempted to sortie against the American squadron but was soon forced to return to its anchorage. It took more than half of the Spanish losses. Dewey's crews sustained only 9 wounded and none killed.

The victorious Dewey lacked troops to conduct operations on land. He stationed his squadron off Manila and soon brought in the former leader of the defeated Philippine insurgency, Emilio Aguinaldo, and encouraged him to resume hostilities. Aguinaldo organized an army and instituted successful operations against the Spanish garrisons located elsewhere on Luzon and on other islands, but the Americans did not allow him to attack Manila. He also established a civil government in anticipation of gaining independence.

Meanwhile, the North Atlantic Squadron, commanded by Rear Admiral William T. Sampson, left its base at Key West and imme-

diately established an effective blockade of Cuba, initially at Havana but soon extended to other ports. Another naval force, the Flying Squadron, then at Hampton Roads, Virginia, received instructions to deal with an enemy naval attack on the East Coast. As in the Philippines, no land force was available to conduct early and extensive operations on land. In any event, an attack on Cuba had to await assurance that Spain's navy could not compromise such an operation.

Spain attempted to counter the early American successes with naval initiatives. Sagasta's government immediately ordered Admiral Pascual Cervera y Topete's small squadron of only seven vessels (four armored cruisers and three destroyers) to proceed to Cuban waters. The best of these ships, the armored cruiser *Cristóbal Colón*, lacked its main battery of 10-inch guns. Minus one of his destroyers, Cervera arrived on May 19 at Santiago de Cuba, a port on the southeastern coast of the island several hundred miles from Havana. The principal Spanish land forces were far distant in western Cuba. A Spanish garrison at Santiago de Cuba of just over 10,000 troops held off a smaller force of Cuban insurgents.

The Spanish government also organized a naval squadron commanded by Admiral Manuel de la Cámara y Libermore to relieve the Philippines, but necessary preparations delayed its departure for about two months. Meanwhile, the U.S. Navy sent important naval reinforcements to Manila Bay.

The United States took immediate steps to follow up its initial naval operations. McKinley decided to dispatch modest army expeditions to both Cuba and the Philippines, seeking to maintain pressure on the Spanish defenders. Representatives of the United States made contact with Cuban military leaders, and the insurgents received shipments of arms. When the navy's Flying Squadron, with Commodore William T. Schley in command, managed to blockade Cervera in port at Santiago de Cuba on May 29, McKinley authorized a modest expedition to seize the port and destroy the Spanish vessels.

Major General William R. Shafter was made commander of the army's V Corps, which was hurriedly concentrated at Tampa on the west coast of Florida amid considerable confusion. The expedition received orders to go to Santiago de Cuba as soon as possible. V Corps eventually included 12 regular army regiments, 4 of them black units. It also contained 5 volunteer organizations including the 1st Volunteer Cavalry, dubbed the Rough Riders, and militia from New York, Massachusetts, and Michigan for a grand total of about 17,000 men. After a muddled delay in Tampa, the expedition departed for Cuba on June 15 and arrived off Santiago de Cuba on June 20. Shafter made contact with the local Cuban commander, General Calixto García y Iníguez, and landed almost immediately at Daiquirí and Siboney, located east of Santiago de Cuba, without opposition.

Fearful that tropical disease, especially yellow fever and malaria, would infect his troops and that Spanish reinforcements might soon bolster the enemy garrison, Shafter decided to move quickly against Santiago de Cuba along an inland route. He rejected Admiral Samp-

son's proposal to seize the Spanish batteries located near the Morro Castle at the harbor entrance, an operation that would bottle up Cervera. Rivalry between the U.S. Army and the U.S. Navy at Santiago de Cuba arose frequently with unfortunate consequences.

On June 3 Sampson attempted to block the channel with an old ship, the *Merrimac*. Naval constructor Richmond P. Hobson commanded this bold enterprise. The ship came to rest outside the channel, but this brave failure brought fame to Hobson and his small crew, who were taken prisoner.

On June 24 Shafter advanced eastward from his landing locations to the small village of Las Guásimas on a miserable road known as the Camino Real. His men soon encountered Spanish troops, who inflicted the first casualties on the American troops. After a brief firefight the Spaniards withdrew toward San Juan Heights just west of the city. Shafter moved his headquarters to a location named El Pozo and prepared to attack the Spanish defenders to their front who were stationed in two locations, the village of El Caney and San Juan Heights. These strong points lay in advance of a line of fortifications, the main line of resistance that protected the city.

Seeking to prevent Cuban insurgents from entering Santiago de Cuba, the Spanish commander, General Arsenio Linares y Pombo, posted his troops, including a large contingent of sailors from Cervera's squadron, along a semicircular perimeter of about 20 miles. This arrangement resulted in small concentrations of troops in numerous positions. Only 500 troops occupied El Caney. Another 500 held San Juan Heights, which included a small rise called Kettle Hill and a larger elevation named San Juan Hill.

Shafter's plan of operations specified two attacks. One of the infantry divisions, commanded by Brigadier General Henry W. Lawton, received orders to seize El Caney, thereby preventing a highly unlikely flank attack from the enemy left. After quickly accomplishing this presumably simple mission, Lawton would immediately join the rest of the troops on the right of the line in front of San Juan Heights. At this time an infantry division and a dismounted cavalry division would make a second attack, sweeping the enemy from San Juan Heights. Then these two units and Lawton's division would press forward immediately to occupy Santiago de Cuba.

Meanwhile, volunteer troops from Michigan were detailed to advance along the coast toward Aguadores, which was located near the entrance to the bay of Santiago de Cuba, and demonstrate against the Spanish infantry and artillery around the Morro Castle. Shafter hoped to convince the enemy that the main attack would come at the entrance to the mouth of the harbor. Such an operation would also prevent reinforcements from moving northward from that area to engage the Americans who were to attack San Juan Heights.

This unduly elaborate plan, which did not make adequate use of naval support, unraveled immediately. Lawton's division proved unable to overcome the resistance of General Joaquín Vara del Rey y Rubio and his small force until afternoon. The Americans took a

large number of casualties. This delay forced Shafter, who had fallen ill, to begin the assault on San Juan Heights at 1:00 p.m. without Lawton, who did not join the other two divisions until the next day.

When V Corps advanced toward San Juan Heights, it attracted artillery fire from Spanish batteries. An observation balloon that approached the front helped the Spanish locate the American troop concentrations. The Spanish fire caused some troops to hesitate, including men of the 71st New York, a volunteer regiment. A regular army regiment passed through them and moved up San Juan Hill along with other advancing units.

Meanwhile, the Rough Riders, with Lieutenant Colonel Theodore Roosevelt in command, and a regular army regiment, the black dismounted 10th Cavalry, assaulted Kettle Hill, which was located northeast of San Juan Hill. These units evicted the defenders of Kettle Hill without serious opposition and then came to the assistance of the troops moving up the adjacent San Juan Hill. The 500 Spanish defenders on the hilltop at first resisted, but when a battery of three Gatling guns sited at El Pozo opened fire for eight minutes, the enemy troops quickly withdrew to the main line of resistance behind them, leaving the Americans in possession of the heights. The Gatling guns decided the outcome, although the attacking units, which vastly outnumbered the resisting enemy, would most probably have taken San Juan Heights without this assistance.

The projected advance into Santiago de Cuba did not materialize. The delays and difficulties that V Corps encountered at El Caney and San Juan Heights precluded further operations that day. Instead, the exhausted troops constructed field fortifications on San Juan Hill and prepared to repulse a possible counterattack.

Shafter and his subordinate commanders did not grasp the extent of their victory. Deeming their position on San Juan Heights quite dangerous, they contemplated withdrawal and called for reinforcements. When McKinley and the War Department learned of the possible retreat, they immediately ordered Shafter to hold his position, recognizing the negative reaction that might follow any such move. The War Department rapidly sent reinforcements to augment the force at Santiago de Cuba.

General Linares was wounded on July 1, and General José Toral y Vázquez succeeded to the Spanish command. He received reinforcements from Manzanillo, 2,700 troops under Colonel Federico Escario García, who succeeded in getting past the Cuban insurgents assigned to stop them, but this augmentation increased the difficulty of supplying the besieged army and probably did more harm than good. Toral devoted himself principally to negotiations with the Americans during his brief tenure, recognizing the weakness of his position.

When Spanish governor-general Ramón Blanco y Erenas in Havana learned of the defeat on San Juan Heights, he directed Admiral Cervera to leave Santiago de Cuba immediately. Cervera opposed this order, recognizing that he had little or no chance of escaping through the strong American blockade. Blanco persisted, however, and Cervera resigned himself to the probable catastrophe that lay ahead. He rejected a nocturnal departure, which might have allowed

him to achieve surprise, because of navigational difficulties in the narrow channel. At 9:00 a.m. on Sunday, July 3, in broad daylight, his vessels began to pass in single file through the channel to the open sea.

By unlucky chance Admiral Sampson absented himself from the blockade that morning, having steamed in his flagship, the *New York*, eastward toward Siboney to confer with General Shafter. This circumstance left Commodore Schley, the commander of the Flying Squadron, in his flagship *Brooklyn* in charge when the Spanish squadron made its appearance. Sampson reversed course and joined the battle in its final phase but made only a minor contribution.

As the Spanish vessels exited the channel, they came under heavy fire from the blockading squadron, which that morning included seven ships (the battleships *Indiana*, *Oregon*, *Iowa*, and *Texas*; the armored cruiser *Brooklyn*; and the converted yachts *Gloucester* and *Vixen*). An equal number of vessels was absent, including the flagship *New York* and two accompanying gunboats, the battleship *Massachusetts*, two cruisers, and a tender.

Nevertheless, the remaining vessels reacted effectively. All except the fastest of Cervera's six vessels, the armored cruiser *Cristóbal Colón*, were sunk or forced to beach on the coast shortly after clearing the channel one after another and immediately coming under fire. Only the speedy *Cristóbal Colón* managed to slip past the blockaders. It fled on a westerly course toward Cienfuegos with Schley in hot pursuit. The *Brooklyn*, which turned away from the Spanish warships at the beginning of the battle, a serious mistake, led the pursuit. The Spanish ship eventually ran out of good coal and lost headway, allowing the *Brooklyn* to approach within range. The commander of the *Cristóbal Colón* then beached his ship about 50 miles west of Santiago de Cuba. The naval battle at Santiago de Cuba ended like the one at Manila; the American ships destroyed the entire Spanish squadron.

The outcome of the naval battle had profound consequences; the Spanish government decided to seek a cessation of hostilities. To this end it recalled Admiral Cámara's squadron, which had finally begun its voyage to the Philippines, and soon inaugurated peace negotiations with the United States through the good offices of the French government.

At Santiago de Cuba General Shafter and General Toral engaged in exchanges that eventually led to a capitulation on July 17. The Cuban leader, General García, was not allowed to participate in the negotiations. To reach a settlement, the United States agreed to finance the repatriation of Spanish troops in Cuba. This outcome came none too soon. Tropical disease appeared among the Americans and quickly disabled large numbers. A hurried evacuation of V Corps to Montauk, Long Island, soon began, and other troops arrived to occupy Cuba.

During this time Major General Nelson A. Miles, the commanding general of the U.S. Army, stopped briefly at Santiago de Cuba with a large complement of troops on its way to invade Puerto Rico. He was supposed to land at Fajardo near San Juan, but in-

stead he steamed to the south coast of the island to achieve surprise. After landing his troops at Ponce and other ports, he launched several columns on northward routes toward San Juan. These groups encountered little resistance but did not reach the capital city before August 12, the date when the belligerents signed a protocol in Washington that ended the war. Critics later argued that Miles would have encountered little resistance at Fajardo and San Juan and should have followed the original plan.

Meanwhile, the United States sent about 10,000 troops, mostly volunteers, to Manila in three phases during June and July, achieving a much more orderly process than the expedition to Santiago de Cuba. During the voyage of the first contingent the U.S. Navy escort occupied Guam, the southernmost island in the Marianas. Of greater importance was the annexation of the Hawaiian Islands. These acquisitions improved the long line of communications across the Pacific Ocean to the Philippines.

After assembling his troops, Major General Wesley Merritt prepared to attack Manila. Admiral Dewey, however, managed to negotiate the capitulation of the Spanish garrison. A new governor-general, Don Fermín Jáudenes y Alvarez, decided to give up after Dewey agreed to a sham battle to preserve the honor of the Spanish Army and promised to prevent Aguinaldo's insurgents from entering Manila. The army brigade commanders who led the assault were not informed of this charade, which involved some casualties during the largely unopposed advance that led to the occupation of the city.

As it happened, the capitulation came on August 13, a day after the signing of the Protocol of Peace. Spain later argued that this circumstance invalidated an American claim to the islands based on the right of conquest, but the United States rejected this contention despite support for it in international law. Although Aguinaldo's army continued to expand its control of areas outside of Manila, Major General Elwell S. Otis, who led the American occupation, followed orders not to recognize the Filipino government, a policy that led to growing tensions.

Meanwhile, the United States and Spain conducted peace negotiations in Paris. The protocol of August 12 specified most of the principal elements of the settlement, including Cuban independence and the American acquisition of Puerto Rico and Guam, but left the disposition of the Philippines to the peace conference.

McKinley did not immediately respond to growing pressure to acquire the archipelago. After undertaking a speaking tour to test national sentiment, he ultimately decided to authorize annexation, arguing that responsibility to humanity along with national unity, duty, and destiny required this action. As in April 1898 when he reluctantly supported armed intervention in Cuba, he bowed to public opinion, again seeking to safeguard the Republican Party's control of the government and the pursuit of various domestic reforms of interest to his political constituency. In the peace treaty of December 10, 1898, the United States agreed to purchase the Philippines for \$20 million. Spain sold its other insular possessions in the Pacific to Germany.

Opponents of overseas expansion publicized cogent arguments against an imperialist policy, among other things claiming the unconstitutionality of overseas territorial acquisitions, the reversal of sound anti-imperialist traditions, its inconsistency with isolationist foreign policy, and disturbance of racial tensions, but these contentions failed to overcome the burst of enthusiasm for expansion after the defeat of Spain. This short-lived but fairly intense reaction to the victory over Spain stemmed from expectation of outlets for trade and investment, the example of European empires, the recent rise to great-power status, and certain irrational feelings such as overblown patriotism and nationalism that stimulated expansionist sentiment.

The turn toward overseas expansion led to difficulties that gradually cooled interest in the modest new empire composed of Puerto Rico, the Philippines, Hawaii, and various small islands in the Pacific, including Midway Island, Wake Island, Guam, and American Samoa. Chief among the developments that inspired disenchantment was the failure of anticipated trade and investment to materialize and the outbreak of an insurgency in the Philippines that exposed the burdens associated with imperialist adventures.

The decision to annex the Philippines greatly exacerbated the festering animosity of Aguinaldo and his supporters. A threatening force of insurgents, denied entrance into the walled city, lay outside the gates in Manila. On February 4, 1899, an American soldier shot a Filipino, an act that precipitated the outbreak of an insurrection against the United States, which today is called the Philippine-American War. This event also influenced the U.S. Senate's consideration of the Treaty of Paris, which was divided in its views. Two days later the Senate gave its advice and consent by a close vote of 57 to 27, barely achieving the required two-thirds margin. The president soon ratified the settlement. The Spanish Cortes (parliament) refused its approval, but the queen regent of Spain overrode this act and ratified the treaty on March 19, 1899.

After winning the Second Battle of Manila, General Otis began a campaign of pacification. The Filipino commander, General Antonio Narciso Luna de St. Pedro, decided to wage conventional warfare, a decision that played into the hands of the Americans. The cautious Otis conducted methodical attacks that gradually wore down Luna's ill-equipped and poorly trained troops. Luna was assassinated, probably with the connivance of Aguinaldo. By the end of 1899, Aguinaldo decided to abandon conventional warfare in favor of guerrilla operations. Otis incorrectly concluded that the insurgency had been defeated and returned to the United States.

His successor, Major General Arthur MacArthur, forced to quell revived opposition, faced a difficult task. Small guerrilla bands operated from secure areas in the countryside where they gained support, either voluntary or coerced, from the local civilian populations. They avoided pitched battles in favor of harassing American garrisons established in many locations throughout the island of Luzon without giving battle. The Americans had to decentralize their forces to cope with widely separated pockets of resistance, which required considerable reinforcements and increased costs.

The development of significant anti-imperialist sentiment in the United States in 1900, spearheaded by the Democratic presidential candidate William Jennings Bryan, led the insurgents to hold out, hoping that the defeat of McKinley would lead to an eventual American withdrawal. This expectation failed to materialize. Filipino resistance suffered after McKinley gained reelection in November 1900, blasting insurgents' hopes for an early grant of independence.

In March 1901 Brigadier General Frederick Funston led a group of pro-American Macabebe tribesmen to Aguinaldo's headquarters in a remote area of Luzon and captured him. Aguinaldo soon swore allegiance to the United States and urged his followers to give up.

This outcome was part of a tactic known as attraction, an application of a policy of benevolent assimilation that included efforts to gain the backing of influential Filipinos and undermine popular support for the insurgency. American efforts to improve education and sanitation gained favorable public notice. A civilian commission headed by William Howard Taft contributed importantly to pacification. Taft later became the first civilian administrator of the Philippines.

Meanwhile, local field commanders developed various means of dealing effectively with the insurgency in differing combat environments. A resort in certain locations to reconcentration of civilians provided a means of depriving the insurgents of essential support. Also in some cases U.S. troops used torture to extort information from captives, a crime that patently violated American law and ethics. Congressional investigations called attention to these acts and aroused considerable public criticism.

After the insurgents attacked a small American garrison in Balangiga on the island of Samar in September 1901, killing 48 Americans and wounding 22, Brigadier General Jacob Smith ordered severe retaliations that caused considerable suffering in the Philippines and extensive public criticism in the United States.

Slowly but surely, isolated bands of insurgents were forced to abandon the field. Among the last leaders to surrender, ending three and a half years of resistance, were General Vicente Lukban on Samar (February 1902) and General Miguel Malvar on Luzon (April 1902).

On July 4, 1902, President Theodore Roosevelt declared an official end to the Philippine-American War, although some pockets of resistance still existed in scattered locations. On the large island

of Mindanao a Muslim population sustained a long resistance that persisted until 1913, but the pacification achieved by 1902 endured in almost all other places.

When the short-lived burst of imperialist enthusiasm came to an end, the idea of granting independence to the Filipinos began to take root and by stages became public policy. In 1934 the Tydings-McDuffie Act authorized commonwealth status for the Philippines and eventual independence. Japan occupied the Philippines during World War II, but the Philippines finally gained its independence in 1946.

The Spanish-American War and the Philippine-American War were minor events at the outset of an international crisis that bred a long century of death and destruction. The costs and dangers of overseas expansion soon became apparent to the American people, and the imperialist experiment at the beginning of the 20th century came to an early end.

The international agenda for the United States at the outset of the 20th century ought to have included extensive and sustained participation in international politics with an eye to the restoration and preservation of a just and lasting balance of power by peaceful methods. To support such a policy the United States had to maintain credible armed forces. Almost half a century passed before the United States finally recognized that it must accept an extensive and continuing role in world politics. Future statecraft would have to guarantee the future of all peoples and places and preclude the possibility of another resort to general warfare, an event that would surely cause inconceivable destruction and suffering everywhere.

A turn to such a policy did not occur until the exigencies of World War I forced the United States into the struggle. The postwar departure from the prescription for a revolution in American statecraft and the creation of effective international peacekeeping and reform contributed most importantly to a renewal of warfare from 1939 to 1945 and the long and dangerous aftermath that endured until about 1991. Then, after the dissolution of the Soviet Union, the international balance was finally restored on a reasonably firm foundation. During the 20th century the great Eurasian empires all fell by the wayside along with the hegemonic ambitions that had flowered on all too many occasions during a long era of unprecedented international instability and total war.

Abril y Ostaló, Mariano

Birth Date: May 25, 1861

Death Date: December 5, 1935

Puerto Rican nationalist, journalist, and historian. Born in San Juan, Puerto Rico, on May 25, 1861, Mariano Abril y Ostaló was first employed as a messenger for a notary public in San Juan. In his free time, however, he wrote various articles for *El Palenque de la Juventud*, a literary journal established by Manuel Quevedo Báez (1865–1955) during the 1880s. Abril used the pseudonym Florete, the Spanish term for a long, flexible steel sword.

Abril’s experience at the journal prepared him for a successful literary career, and he subsequently wrote for *El Clamor del País* and *La Democracia*. In 1895, he was appointed editor of *La Democracia*, a proautonomist periodical founded in 1890 by his friend Luis Muñoz Rivera, who established the Autonomist Party in 1887. In his editorials, Abril warned of encroaching U.S. influence in the Caribbean region and advocated autonomy from Spain as the best solution for his homeland.

In 1896, a Spanish court in Puerto Rico convicted Abril in absentia of criticizing the colonial government. However, Abril managed to escape imprisonment by fleeing to France. After spending a few months in Paris, he went to Spain incognito. Unable to hide his identity from Spanish authorities, however, he was arrested in Spain and briefly imprisoned. In 1896, Spanish minister of overseas territories Tomás Castellano y Villaroya interceded on Abril’s

behalf, and Premier Antonio Cánovas del Castillo granted him a pardon.

Abril lived in Madrid until the end of 1898 and wrote for such periodicals as *El Globo*, *El Herald*, and *El Liberal*. At the outbreak of war between the United States and Spain in 1898, he urged support for Spain and encouraged Puerto Ricans to remain loyal to that country and fight against any U.S. invasion. He repeatedly praised Spanish soldiers for their efforts to defend Cuba and Puerto Rico.

Following the Spanish-American War, Abril returned to Puerto Rico and wrote numerous articles criticizing U.S. occupation of the island. He joined the Unionist Party of Puerto Rico, which was founded in 1904 by Rivera and José de Diego. Like Rivera, Abril was a pragmatist. In an effort to obtain greater autonomy for Puerto Rico, in 1916 both Abril and Rivera abandoned their calls for independence. The result was the 1917 Jones Act, which granted U.S. citizenship to Puerto Ricans and gave the Puerto Rican people more local autonomy by providing for a two-chamber legislative assembly, which included a Senate of 19 members and a House of Delegates of 39 members. In 1920, Abril was elected to represent Guayama in the Senate.

In 1930, Abril, now the author of numerous historical studies such as *Un Antillano Ilustre: Salvador Brau* [Illustrious West Indian: Salvador Brau] (1915), was elected the fourth official historian of Puerto Rico, succeeding Cayetano Coll y Toste. The Office of Official Historian, created in 1903, was first occupied by Francisco Mariano Quiñones. In 1934, Abril was elected first president of the Puerto Rican Academy of History. He died in San Juan on December 5, 1935.

Adams, Charles Francis, Jr.

Birth Date: May 27, 1835

Death Date: May 20, 1915

American lawyer, historian, author, railroad executive, and principal figure in the anti-imperialist movement of the 1890s, which adamantly opposed the U.S. acquisition of the Philippines after the Spanish-American War. A member of the distinguished Adams family of Massachusetts, Charles Francis Adams Jr. was born in Boston on May 27, 1835. He was the son of U.S. diplomat Charles Francis Adams (1807–1886), grandson of President John Quincy Adams (1767–1848), and great-grandson of founding father President John Adams (1735–1826).

Adams attended Harvard College and graduated in 1856. He served as an officer in the Union Army during the Civil War (1861–1865) and saw significant action, including the Gettysburg Campaign. He began the war in the 1st Massachusetts Cavalry Regiment with the rank of captain, and by war's end he had earned the brevet rank of brigadier general.

After the war, Adams wrote extensively, becoming well known as an economist, a historian, a journalist, and one of the leading experts on the railroad industry. In 1871, he and his brother Henry wrote *Chapters of the Erie and Other Essays*, which exposed the abuses of price fixing, collusion, preferred rates for large shippers, and monopoly in the railroad industry. A number of additional influential books and articles on the same subject soon followed. *Railroads: Their Origins and Problems* (1878) became the gold standard of railroad history, management, and regulation. Adams's influence contributed to the passage of the Interstate Commerce Act of 1887, which established federal regulation of railroads. In addition to his civic interests, he also pursued business investments and made a tidy sum in both securities and land speculation.

As chairman of the Massachusetts Board of Railroad Commissioners (1869–1879), Adams earned his stripes as a reformer. In searching for a way to convince rather than coerce the state's railroads to adhere to scrupulous and standardized business practices, he sought to publicize the railroads' shady dealings in an attempt to shame them into good behavior. Known as the Sunshine Commission, the board had a salutary effect on the railroad industry, although it should be noted that Adams was more interested in protecting the interests of business rather than those of the public.

In 1882 Adams became a director for the Union Pacific Railroad, and from 1884 to 1890 he served as that company's president. Following his stint at the helm of the Union Pacific, he wrote a wide variety of books, including numerous histories of Massachusetts

and its environs, a biography of Richard Henry Dana (1890), and his own autobiography (published in 1916). Adams, who had been imbued with a sense of noblesse oblige because of his lineage and wealth, also served as a trustee for his alma mater, Harvard University.

Adams was also active in the anti-imperialist movement that began to gain momentum with the outbreak of the Spanish-American War. Indeed, he was one of the first members of the Anti-Imperialist League, formed in June 1898 to block the annexation of the Philippines. Many of the league's members were quite prominent. They included Mark Twain (Samuel Clemens), Andrew Carnegie, and Samuel Gompers. The Anti-Imperialist League opposed the annexation of extraterritorial possessions on economic, legal, political, and moral grounds.

Following the reelection of President William McKinley in 1900, which the anti-imperialists had opposed, Adams became disillusioned with the anti-imperialists because of their lack of unity, characterizing them as impractical cranks. For all practical purposes, the anti-imperialist movement ended with McKinley's reelection. Over the next two decades, the Anti-Imperialist League slowly withered away before it disbanded completely in 1921. Adams died on May 20, 1915, in Washington, D.C.

Addams, Jane

Birth Date: September 6, 1860

Death Date: May 21, 1935

American reformer, social worker, peace proponent, women's rights advocate, and a vocal critic of U.S. imperialism. Jane Addams was born in Cedarville, Illinois, on September 6, 1860, the eighth of nine children, to a middle-class family of millers. She graduated from the Rockford Female Seminary (now Rockford College) in Rockford, Illinois, in 1882. She continued her education in Europe after graduation and there became interested in poverty, slums, and the care of the disadvantaged. She is said to have been most affected by a well-circulated British essay titled *The Bitter Cry of Outcast London*, which detailed the grim circumstances of slum living. In 1887, Addams paid a visit to the renowned Toynbee House in East London, a settlement house that attempted to mitigate the worst effects of poverty through social welfare, education, and job

American sociologist, pacifist, and feminist Jane Addams, cofounder of Hull House, the nation's first true settlement house. Addams was active in advocating for consumer protection and equal rights for women and African Americans. She also helped establish organizations to promote world peace. Addams shared the Nobel Peace Prize in 1931. (National Archives)

training. Her visit to Toynbee House inspired her to create a similar settlement house in the United States.

In 1889, Addams cofounded Hull House, which became the first true settlement house in the United States. It also became the most famous and a model for others that sprang up beginning in the 1890s. Addams chose Chicago because it was then one of the fastest-growing cities in America and was teeming with newly arrived immigrants, many of whom were forced to live in deplorable housing in dangerous and run-down slums. Located at Polk and Halstead streets, an area dominated by Polish and Russian Jews, Italians, Greeks, and Germans, Hull House offered child daycare, an employment registry, a well-stocked library, art exhibits, music instruction, and art classes. It also served as a centralized place where slum dwellers and newly arrived immigrants could receive counseling on vocational training, education, hygiene, and health issues. At a time in which no government welfare services existed, Hull House and other settlement houses became an indispensable part of urban living for the poor.

Over time, Hull House branched out into other endeavors, including labor-management issues, juvenile protection, citizenship

and language classes for immigrants, lobbying for child labor laws, women's suffrage, and more. It also became a laboratory for social issues and social work, which helped the field of social work immensely in its formative years beginning in the 1890s.

Addams was involved in myriad reform endeavors throughout her life, including women's suffrage, civil rights for African Americans and other minorities, poverty mitigation, consumer protection, and the Campfire Girls, to name the most significant. Besides her work in the slums and other forms of social work, she became an impassioned voice for peace and deplored what she termed "American imperialism." When the United States declared war on Spain in April 1898, she was one of the first to come out against the war. When the war ended and the Philippine-American War commenced in 1899, she wrote and spoke widely on what she considered the folly of imperialist adventures.

Addams's commitment to peace continued into the 20th century and took its form in internationalism and multilateral action against armed conflict. In 1915, after the start of World War I, she was a participant in the International Congress of Women in The Hague. She was also a member of the Women's Peace Party and

4 African American Soldiers

kept her pacifist ideology even after the United States went to war in 1917. In 1919, she founded the Women's International League for Peace and Freedom and won the Nobel Peace Prize for her efforts in 1931. Addams died on May 21, 1935, in Chicago.

African American Soldiers

African Americans made significant contributions in the U.S. Army during the Spanish-American War. At the beginning of hostilities, some 5,500 African Americans were members of the army. They

were formed into four regiments stationed in the American West: the 9th and 10th Cavalry and the 24th and 25th Infantry Regiments. In recognition of the important role played by African Americans on the Union side in the Civil War, Congress had specifically created these four black units following that conflict. All had white officers, including future World War I American Expeditionary Force commander John J. Pershing, who was a brevet major in the 10th Cavalry during the Spanish-American War. The members of these regiments, the so-called Buffalo Soldiers, distinguished themselves in combat with hostile Native Americans. At the time, African Americans were generally forbidden from serving with white soldiers in the same unit. There was also strict segregation in mobilization and mustering-in camps as well as in military hospitals.

Following the declaration of war in April 1898, all four African American regiments were designated for service as part of Major General William R. Shafter's V Corps in the invasion of Cuba. During the subsequent assembly in Florida, there were some racial problems between African American and white soldiers.

Following the U.S. landing in Cuba at Daiquirí, the 10th Cavalry saw action in the Battle of Las Guásimas on June 24, 1898. All four African American regiments took part in the Santiago Campaign

The African American 24th Infantry Regiment leaves Salt Lake City on April 24, 1898. All four African American regiments in the U.S. Army served in the war. (Library of Congress)

and in the largest land engagement of that campaign, the Battle of San Juan Heights (July 1), where they earned respect and praise from white units. The 9th and 10th Cavalry Regiments won special praise for their performance that day, and 5 African Americans were subsequently awarded the Medal of Honor for their valor under fire. Another 26 African Americans received Certificates of Merit.

During the war, other African American volunteer units were created at the state and national levels, but only Company L of the 6th Massachusetts Regiment saw combat during the war. At the state level, a great many African Americans volunteered for service, but there were problems because few governors were willing to form mixed regiments of African American and white soldiers. Many refused African American volunteers altogether and rejected appeals for the mobilization of black militia units. A few African Americans did serve in white volunteer units, most notably those of Maine and Iowa, but the vast majority were members of all-African American outfits.

Altogether, perhaps 10,000 African Americans served either in the state volunteer units or in the so-called immune regiments that were subsequently formed to go to Cuba for occupation duties. The 8th Illinois, 23rd Kansas, and 9th Immunes all served in the Cuban occupation. The other regiments remained in the United States.

During the war, John Mitchell Jr. of the African American newspaper the *Richmond Planet* called for the commissioning of blacks

to serve as the officers of the African American units. Other African American leaders took up his call, but only three volunteer units were staffed entirely by African American officers: the 3rd North Carolina, the 8th Illinois, and the 23rd Kansas. During the war some 259 African Americans were granted commissions, but following the war in May 1899 the only African American commissioned officers were Lieutenant Charles Young and several chaplains. Also after the war, a number of state governments in the South abolished the African American companies in their state militias.

The four regular African American regiments saw service in the Philippines during the Philippine-American War. Again they performed well. They returned to the United States in 1902 but again served in the Philippines, this time in garrison duty, during 1906–1908.

African Americans

It is hardly surprising that in a time of racial segregation in the United States, especially in the South, a large number of the country's 7.5 million African Americans supported independence movements in Cuba and the Philippines. In the run-up to war in the late winter and spring of 1898, Booker T. Washington, then the nation's foremost authority on civil rights and the plight of African Americans, took great pains to point out that 22 African American seamen had died in the explosion of the battleship *Maine* in February 1898. He urged his fellow African Americans to enlist in the armed forces and "prove" their love for and loyalty to their nation. In March 1898, just a month prior to the war declaration, Washington assured Secretary of the Navy John Davis Long that there were at least 10,000 African Americans in the South alone who were willing to show their gratitude by sacrificing themselves for their country. With the beginning of the war, African Americans volunteered for the war effort in significant numbers, and some 15,000 served in either the regular army or volunteer units. Leaders of the African American community hoped that a significant black contribution to the war effort would indeed bolster their cause of full civil rights in the United States.

Opposition to the war—by no means limited to African Americans—grew, however, when the conflict to free the Cubans turned into a war of territorial acquisition, especially in the Philippines where U.S. forces had to fight to subdue a Filipino independence movement. Vocal African American critics of the U.S. acquisition of the Philippines included educators William S. Scarborough of Wilberforce University, Kelly Miller of Howard University, and Washington, then teaching at Tuskegee Normal and Industrial Institute; African Methodist Episcopal bishops Henry McNeal Turner and Alexander Walters; and influential newspaper editors John Mitchell Jr. of the *Richmond Planet* and William C. Chase of the *Washington Bee*.

For many African Americans, the long fight against the Filipino insurgents and periodic reports of atrocities committed by U.S. troops were all too reminiscent of their long struggle against oppression and injustice in the United States. The violence in the Philippines served as a stark and uneasy reminder that no African American, particularly in the South, was immune from random violence perpetrated by whites. Indeed, lynchings and other acts of violence by whites against blacks were a common occurrence in the United States at the time, and U.S. justice was far from blind when an African American was involved. What made the African American community even more sympathetic toward the Filipinos was the fact that they were not white and were treated with similar disdain by U.S. troops and civilian officials. Some American troops even began to employ the same racial epithets for Filipinos that were used for African Americans. Unfortunately, African American concerns turned out to be prescient, for an end to segregation and full civil rights for African Americans in the United States did not come until the 1960s.

Agoncillo, Felipe

Birth Date: May 26, 1859

Death Date: September 29, 1941

Filipino lawyer and high-ranking member of the Filipino resistance movement. Emilio Aguinaldo's revolutionary government charged Felipe Agoncillo with the task of representing the Philippines at the negotiations leading to the 1898 Treaty of Paris. Agoncillo is thus considered the first Filipino diplomat. Agoncillo was born on May 26, 1859, in Taal, Batangas, Philippines. His parents, Ramon Agoncillo and Gregoria Encarnacion, were affluent members of Taal's high society. A brilliant student, he earned a law degree from the University of Santo Tomas in Manila.

In the 1880s, Agoncillo returned to Taal to practice law, administer his family's estate, and marry Marcela Mariño. Agoncillo and his wife were ardent nationalists as a consequence of injustices inflicted on the Filipino people by the Spanish colonial government. Much to the ire of Spanish colonial authorities, Agoncillo frequently provided free legal services to the poor. Forewarned that they were about to be arrested for subversive behavior, in 1895 the Agoncillos went into self-imposed exile in Hong Kong, a haven for Filipino exiles.

In December 1897, following the Pact of Biak-na-Bato, Aguinaldo and several revolutionary leaders also went into exile in Hong Kong. Once there, Aguinaldo was a frequent guest at the Agoncillo residence. Following Aguinaldo's instructions, Agoncillo's wife, with the assistance of her daughter Lorenza and José Rizal's niece, Delfina Herbosa Natividad, made the first Filipino flag. Constructed of satin with gold embroidery, the flag was begun on May 12, 1898, and completed in five days. Aguinaldo was delighted with the flag and took it back to the Philippines at the end of May when he resumed his struggle against the Spanish colonial authorities. On June 12, 1898, he unfurled the new flag from the window of his home in Cavite and proclaimed Philippine independence.

On August 7, 1898, Aguinaldo sent Agoncillo to Washington, D.C., to discuss Filipino participation in the peace negotiations to end the Spanish-American War, scheduled to begin in Paris on October 1, 1898. President William McKinley, however, arguing that Agoncillo did not represent a legitimate government, refused to meet with him. Undeterred, Agoncillo met with American Episco-

Felipe Agoncillo, Filipino lawyer, revolutionary leader, and representative at Paris during negotiations that formally ended the Spanish-American War in 1898. (John Clark Ridpath, *Ridpath's History of the World*, 1901)

pal bishops before continuing on to Paris. Excluded from the peace negotiations there, he learned that Spain had sold the Philippines to the United States for \$20 million.

On December 12, 1898, two days after the Treaty of Paris was signed, Agoncillo sent a formal diplomatic note to the delegates at the peace conference. He contended that Spain had no authority to sell the Philippines because it no longer exercised control over the islands. Regardless, on December 21, 1898, McKinley issued a proclamation stating that the United States would use force if needed to establish its sovereignty over the Philippines.

Agoncillo and his family returned to the Philippines after the conclusion of the Philippine-American War in 1902, and Agoncillo resumed his law practice. He served as Philippine secretary of the interior from 1923 to 1925 during the administration of American governor Leonard Wood. Agoncillo died in Manila on September 29, 1941, and was buried in Manila's La Loma Cemetery. In 1949,

the municipality of Agoncillo was created in his honor in Batangas Province.

Aguadores, Battle of

Event Date: July 1, 1898

Battle involving U.S. troops and a fortified Spanish strong point on the western side of the San Juan River some three miles east of the harbor entrance to Santiago, Cuba. The U.S. attack on Aguadores was planned as a diversion during the concurrent principal U.S. attack against San Juan Heights. The plan called for U.S. Navy ships and 2,500 American troops under Brigadier General Henry N. Duffield to attack the Spanish garrison there.

North Atlantic Fleet commander Rear Admiral William T. Sampson had ordered his flagship, the armored cruiser *New York*, and the gunboat *Gloucester* and armed yacht *Suwannee* to commence shelling Aguadores at 6:00 a.m., but Duffield's troops were three hours late arriving, and the naval gunfire did not commence until 9:20 a.m. When the men of the 33rd Michigan Regiment arrived at the 700-foot railroad bridge over the San Juan River, they discovered that the Spanish had blown a 40-foot span on the western side. The Americans were thus never able to secure positions from which they could lay down effective fire against the 274 Spanish defenders at Aguadores. The Americans subsequently came under effective Spanish long-range rifle fire. At about 1:30 p.m., after his men had sustained casualties of 2 killed and 10 wounded, Duffield withdrew to Siboney. While Secretary of the Army Russell A. Alger claimed that the operation had prevented the Spanish from reinforcing San Juan Heights, there is no evidence to support this conclusion.

Aguinaldo y Famy, Emilio

Birth Date: March 22, 1869

Death Date: February 6, 1946

Filipino resistance leader. Of Chinese and Filipino Tagalog ancestry, by 1897 Emilio Aguinaldo y Famy was the acknowledged military leader of the Filipino rebellion against first Spanish and later U.S. rule. He was also president of the short-lived Philippine Republic from 1898 to 1901. Although the republic never received foreign recognition, Filipinos consider Aguinaldo to be their first president. Aguinaldo was born into a Chinese-mestizo family in Cavite El Viejo (now Kawit) in Cavite Province on the island of Luzon on March 22, 1869. He was the seventh of eight children of Crispulo Aguinaldo and Trinidad Fanny. Aguinaldo's father was the town head, and the family enjoyed relative wealth.

Aguinaldo received his primary education in the town and attended secondary school at the Colegio de San Juan de Letran, but he left school in his third year to assist his widowed mother in running the family farm. At age 17 he was elected head of a barrio of Cavite El Viejo, and in 1895 he was elected head of the town government.

By the end of the 19th century, Spain's once powerful colonial empire was crumbling. In both Cuba and the Philippines, revolutions were under way prior to the Spanish-American War. Aguinaldo was relatively late to join the Filipino revolutionary movement. He joined it in 1896 after the execution of José Rizal. The movement, known as the Katipunan (Highest and Most Respected Association of the Sons of the Country), had been founded by Andrés Bonifacio in 1892. Although Bonifacio was the principal figure in the movement, many lesser local leaders who sought to strengthen their own positions joined the cause, often to the detriment of the larger organization. Aguinaldo, who supported a more secular approach to Philippine nationalism, soon came into conflict with Bonifacio.

The charismatic Aguinaldo quickly attracted a large following, and his great victory over the Spanish at the Battle of Imus on September 3, 1896, propelled him to the forefront of the revolutionary movement. By late March 1897, growing dissatisfaction with the movement, due partly to jealousies within the Katipunan as well as a fresh Spanish resolve to crush the rebellion, led Aguinaldo to create a new revolutionary party, of which he became president.

Bonifacio became a minority figure, and in subsequent weeks it was alleged by Aguinaldo's followers that Bonifacio planned a coup against the new leadership. Based on this allegation, Bonifacio was arrested, charged with treason, and executed on May 10, 1897, probably on Aguinaldo's orders (although this has never been proven). With Bonifacio dead, Aguinaldo was the unchallenged leader of the Filipino revolutionary movement.

The struggle for power, however, led to the defection of many of Bonifacio's followers, and the Spanish had severely mauled Aguinaldo's forces. In these circumstances and wishing to avoid a protracted guerrilla war, the Spanish offered Aguinaldo attractive

terms, which he accepted. The surrender agreement of December 1897 is known as the Pact of Biak-na-Bato for the location of its signing near Manila. Under its terms, Aguinaldo was allowed to go into exile in Hong Kong with 40 followers. Spain also agreed to pay the Filipino leader \$500,000 in return for his neutrality. Aguinaldo arrived in Hong Kong on December 31, 1897. As it turned out, both sides were less than serious in their intent to comply. Spain proved delinquent in its payment, and Aguinaldo prepared to return to the Philippines, something he had probably planned to do anyway.

As the United States and Spain edged closer to war, Aguinaldo opened communications with U.S. officials, including Lieutenant Commander Edward P. Wood and U.S. consul in Hong Kong Rounseville Wildman. When one of the members of the junta sued Aguinaldo for a share of the Spanish payment, Aguinaldo fled to Singapore. There he also held conversations with U.S. consul E. Spencer Pratt. Aguinaldo claimed in his *True Version of the Philippine Revolution* (1899) that all of these individuals had encouraged him to return to the Philippines. Then, following U.S. commodore George Dewey's victory over the Spanish squadron in

the Battle of Manila Bay on May 1, 1898, he cabled Aguinaldo and asked him to return.

Aguinaldo arrived in the Philippines on May 19 in the U.S. revenue cutter *McCulloch*. He then met with Dewey, who provided him both arms and ammunition with which to fight the Spanish. Establishing his headquarters at Malolos 30 miles north of Manila, on May 24 Aguinaldo announced the formation of a provisional government. Then, on June 12, 1898, an assembly proclaimed an independent Philippine Republic. On June 23, Aguinaldo formed a new government with himself as president. He held that position until April 1, 1901. President William McKinley's administration did not recognize Aguinaldo's government, however, and Secretary of the Navy John D. Long instructed Dewey not to have any political discussions with Aguinaldo or his followers. Meanwhile, Aguinaldo's forces easily routed isolated Spanish garrisons in the islands and soon had Manila under siege.

In June 1898, units of the U.S. VIII Corps began to arrive in the Philippines, and on July 25, U.S. Army major general Wesley Merritt took command of the expeditionary forces. Since U.S. objectives would be better served if the insurgents were excluded from any peace talks with the Spanish, Merritt was under strict orders from Washington not to cooperate with the revolutionary forces. In any case, Merritt had a low opinion of Aguinaldo, whom he referred to as a "half-breed Chinese adventurer." Merritt refused any communication between his forces and those of the Filipino leader.

The tenuous relations between Aguinaldo and the U.S. military steadily deteriorated during the summer of 1898. The tense situation was exacerbated when his forces were excluded from participation in the sham First Battle of Manila (August 13, 1898). U.S. troops then prevented the Filipino Republican Army from entering the city following the Spanish garrison's surrender to the Americans.

Merritt then left the islands to travel to Paris for the peace talks with Spain, but his successor, Major General Elwell S. Otis, had a similarly poor opinion of Aguinaldo, whom he held to be little more than a robber whose army was bent on looting the islands.

Although the fighting between Spain and the United States ended with the signing of the Protocol of Peace on August 12, 1898, Aguinaldo continued to maintain a strong military presence in the Manila area. The tension between American and Filipino forces worsened, with Otis setting out to humiliate Aguinaldo. Evidence also suggests that Otis deliberately provoked an armed clash. On the night of February 4, 1899, fighting erupted and quickly turned into full-scale war.

With the outbreak of the Philippine-American War (or Philippine Insurrection, as it is sometimes still referred to), Aguinaldo at first attempted to fight the United States on conventional terms. Superior U.S. weaponry and training prevailed, however, forcing Aguinaldo to resort to guerrilla warfare. Although he was generally regarded as the Filipino leader, there was considerable divisiveness within the overall revolutionary movement, as local leaders sought to further their own ambitious designs.

If Aguinaldo possessed charismatic qualities, his military and political leadership left much to be desired. His decision to try to engage U.S. forces in conventional warfare was a serious error in judgment because his army, lacking weapons and disciplined training, was ill-prepared for such a fight. Aguinaldo, however, held out hope that William Jennings Bryan would defeat McKinley in the 1900 election and that the United States would then give the islands their independence.

By the end of 1899, Aguinaldo had withdrawn to Palanan in northeastern Luzon. He also quarreled with the able Filipino general Ant3nio Narciso Luna de St. Pedro, who was an Ilocano; Aguinaldo and most of his followers were Tagalogs. In June two soldiers from Cavite who were loyal to Aguinaldo assassinated Luna, and many blamed Aguinaldo for the deed, further reducing his influence. By now, military operations against the Americans were in the hands of local commanders and not Aguinaldo.

On March 23, 1901, Aguinaldo was captured by forces under the command of Colonel Frederick Funston and taken to Manila. Perhaps believing that further resistance against the United States was futile or simply realizing that his own influence had deteriorated too much to warrant a continuation of the struggle, Aguinaldo signed an oath of allegiance to the United States and encouraged his followers to do the same.

Despite signing the oath, Aguinaldo felt no strong sense of attachment to the United States. During World War II, he tried unsuccessfully to have the Japanese occupiers appoint him president. Sensing that he had no major following, they rejected his request. He did live to see the Philippines granted full independence from the United States in July 1946. Aguinaldo died in Quezon City on February 6, 1946, at age 95.

Aleandrino, José

Birth Date: December 1, 1870

Death Date: June 1, 1951

Filipino revolutionary and politician. José Aleandrino was born into an affluent family in Binondo, an enclave of Manila primarily inhabited by Chinese, on December 1, 1870. After studying at the Ateneo Municipal School, he earned a Bachelor of Arts degree at the University of Santo Tomas. He pursued graduate studies in Spain and at the University of Ghent in Belgium, where he graduated with a degree in chemical engineering.

During his stay in Spain, Aleandrino became a close friend of fellow Filipino revolutionary José Rizal. On December 13, 1888, a group of Filipinos, including Aleandrino, formed a nationalistic movement known as La Solidaridad (Solidarity) in Barcelona. On February 15, 1889, they launched a political propaganda newspaper, also called *La Solidaridad*, calling for colonial reform. Aleandrino was a frequent contributor to the revolutionary newspaper until its last issue on November 15, 1895.

On November 21, 1896, after the Filipino Revolution erupted, Aleandrino returned to the Philippines. He immediately sought out Emilio Aguinaldo in Cavite to offer his services to the revolution. Aguinaldo charged Aleandrino with obtaining weapons in China for the revolution. Aleandrino immediately departed for Hong Kong, where he helped to organize the Revolutionary Council with Felipe Agoncillo. Unlike many Filipino revolutionaries such as José Basa who preferred eventual annexation to the United States, Aleandrino and Agoncillo staunchly supported complete and unconditional Filipino independence.

Because he was able to procure only a limited number of weapons in Hong Kong, Aleandrino left the British colony for Japan in February 1897. There he also had little success in securing arms and financial assistance. Returning to Hong Kong, he then sailed to the Philippines with U.S. commodore George Dewey's Asiatic Squadron and thus witnessed the Battle of Manila Bay on May 1, 1898. That September, Aleandrino helped to draft the revolutionary government's constitution. Because of Aleandrino's skills, Aguinaldo appointed him the commander of the revolutionary army's corps of engineers.

During the early months of the Philippine-American War (1899–1902), Aleandrino fought with the troops of General Antonio Narciso Luna de St. Pedro. Aleandrino's skills as an engineer enabled him to direct the construction of defensive works throughout the Philippines. Aguinaldo subsequently promoted Aleandrino to brigadier general and made him acting secretary of war of the revolutionary government. During the final months of hostilities against the Americans, Aguinaldo placed Aleandrino in charge of military operations in Central Luzon and named him military governor of Pampanga. In September 1899, Aleandrino attempted to initiate negotiations with U.S. Army major general Elwell Stephen Otis to suspend hostilities between the revolutionary forces and the United States. Otis, however, rebuffed Aleandrino's efforts. Indeed,

Otis insisted that "Fighting, having begun, must go on to the grim end." After Brigadier General Arthur MacArthur replaced Otis in 1900, Aleandrino once again attempted to negotiate a suspension of hostilities with the Americans. In May 1901, two months after Aguinaldo had surrendered to MacArthur's subordinate, Brigadier General Frederick Funston, Aleandrino surrendered to Funston in Arayat.

In August 1901, U.S. military governor William Howard Taft appointed Aleandrino to be second city engineer for Manila. Within a year, however, Aleandrino retired from public life until 1925. Philippine governor Leonard Wood appointed him senator for the 12th Senatorial District during the seventh legislature from 1925 to 1928. In 1933 Aleandrino published *La Senda del Sacrificio* (The Price of Freedom), his personal account of the Filipino revolution against Spanish colonialism and the Philippine-American War. Aleandrino's account provides detailed personal insight into the vagaries of war not found in usual documentary evidence. In his account, Aleandrino chastised the United States for not granting immediate independence to the Philippines and for having caused the Philippine-American War. Aleandrino died in Manila on June 1, 1951.

Alemán, José Braulio

Birth Date: March 26, 1864

Death Date: January 30, 1930

Cuban revolutionary, journalist, and the primary author of the 1896 Cuban Constitution, which was the template for the 1901 Cuban Constitution. José Braulio Alemán was born into a wealthy family in Santa Clara, Las Villas Province, Cuba, on March 26, 1864. After briefly studying law at the University of Havana, he left the university to pursue a career in journalism. He was the owner and editor of *La Defensa*, a liberal newspaper in Santa Clara. A staunch supporter of independence from Spain, he eagerly joined the revolutionary struggle to liberate Cuba initiated by José Martí in 1895.

During the Cuban War of Independence (1895–1898), Alemán served as a brigadier general and as secretary of war for the Cuban

revolutionary government. He used his skills acquired as an investigative journalist to gather and sort intelligence reports and initiate espionage activities against Spanish civil and military forces. His considerable network of spies informed him of Spanish troop movements, which allowed Cuban insurgents to attack the weakest points in the Spanish defense. His spy network facilitated correspondence between the various Cuban generals in the field, which facilitated their ability to coordinate attacks against Spanish troops. Alemán also instituted the use of balloons to observe Spanish troop movements, especially over the fortifications at La Trocha.

In addition to using his formidable journalistic skills to support the revolutionary effort on the battlefield, Alemán employed his journalistic and legal skills to write the 1896 Cuban Constitution, which was proclaimed at Yara. The site was chosen for significant historical reasons. On October 10, 1868, Carlos Manuel de Céspedes y del Castillo had initiated the Ten Years' War at La Demajagua, his sugar plantation, in Yara. For his service in the war against the Spanish, Alemán was promoted to major general.

After the Spanish-American War, Alemán served as governor of Las Villas, senator, minister of education, and ambassador to Mexico. As minister of education, he integrated the public school system and established vocational schools. Politically, he was one of the earliest supporters of women's suffrage in Cuba. When the Cubans drafted the 1901 Cuban Constitution, it was a virtual copy of the 1896 constitution he had written. Before the Cubans would be granted independence, however, the United States insisted on the inclusion of the 1901 Platt Amendment in the Cuban Constitution. The Platt Amendment allowed the United States to intervene in Cuban affairs when it deemed necessary and limited Cuban sovereignty.

Alemán strongly opposed the inclusion of the Platt Amendment in the constitution. Arguing that the amendment merely replaced Spanish imperialism with American imperialism, he insisted that Cuba should remain free and sovereign. Regardless, the majority of Cuban political leaders in 1901 realized that failure to accept the Platt Amendment would further delay Cuban independence.

After a political career spanning three decades, Alemán died on January 30, 1930, in Havana. To honor his memory, city officials in Las Villas renamed the Calle San Agustín, one of the main boulevards in the city, in his honor.

Alfonso XII, King of Spain

Birth Date: November 28, 1857

Death Date: November 25, 1885

King of Spain (1874–1885). Born on November 28, 1857, in Madrid, Alfonso was the son of Queen Isabella II and her homosexual husband, Fernando de Asís. Although his legal paternity is not contested, Alfonso's biological paternity remains a mystery. Enrique Puig y Moltó, the captain of the queen's guard, is perhaps the most likely candidate.

Isabella II (1830–1904) was proclaimed queen when her father, Ferdinand VII, died in 1833. However, Ferdinand's brother, Carlos, contended that he was the rightful heir to the throne, which set off the first of three Carlist Wars during the 19th century. The Carlists, who supported Carlos and his heirs, envisioned a Spanish monarchy characterized by both absolutism and Catholicism. The supporters of Isabella and her heirs, however, envisioned a Spanish monarchy based on more liberal principles.

The chaotic nature of Isabella's reign was exacerbated by the queen's proclivity for intrigue, conspiracies, and favoritism. As

Alfonso XII, king of Spain during 1874–1885. During his reign, Spain fought rebels in Cuba. (Library of Congress)

such, she was a highly unpopular queen. In 1868, a revolution launched by a coalition of liberal generals sent the queen, her consort, and her young son Alfonso into exile. The matter of the succession led to a plan fostered by Prussian minister-president Otto von Bismarck to name Catholic German prince Leopold of Hohenzollern-Sigmaringen as king of Spain. Word of the plan leaked out before it could be consummated and led to an exchange of notes between the French and Prussian governments and the Franco-Prussian War (1870–1871). In 1870, the Spanish Cortes (parliament) proclaimed Amadeus I, the second son of Italy's Victor Emmanuel II, the king of Spain. However, court intrigue, continued Carlist violence, and revolution in Cuba convinced Amadeus I to abdicate in 1873. At this point, the Cortes proclaimed a republic.

While the Spanish royal family resided in exile in Paris, Alfonso went to the Theresianum in Vienna to study. In 1870, he returned to Paris, where his mother abdicated in his favor. On December 1, 1874, while studying at the Royal Military Academy at Sandhurst, England, Alfonso, then age 17, proclaimed himself the sole representative of the Spanish Bourbon family. At the end of that same month at Sagunto, forces led by Arsenio Martínez de Campos proclaimed Alfonso king and quickly marched on Valencia, taking control of the city by the end of the year.

Alfonso XII returned to Spain in early 1875 and was greeted with great acclaim in Barcelona, Valencia, and Madrid. Although no previous monarch of united Spain ruled under the name Alfonso, he assumed the name Alfonso XII. He chose to do this to reestablish the historical legacy of Spain's ancient past, as 11 kings of Castile and León were of that name. In 1876, forces loyal to him defeated the Carlists, which ended the militant phase of Carlism. In 1878, troops led by Martínez de Campos successfully ended the Ten Years' War in Cuba. On December 29, 1879, Alfonso XII married María Cristina of Austria.

During his reign, Alfonso reestablished fiscal stability and administrative order in Spain and in its possessions abroad. The enhanced prestige of the Bourbon monarchy coupled with the restoration of order and stability enabled Spain to avoid revolution during the disastrous war fought with the United States in 1898. A wise and pragmatic monarch, Alfonso XII died in Madrid of tuberculosis on November 25, 1885, three days before his 28th birthday. His son, Alfonso XIII (1886–1941), born several months after Alfonso XII's death, became the next king.

Alfonso XIII, King of Spain

Birth Date: May 17, 1886

Death Date: February 28, 1941

King of Spain (1886–1931). Alfonso was born in Madrid on May 17, 1886, six months after the death of his father, King Alfonso XII. Alfonso XIII's mother, María Cristina of Austria, acted as regent until 1902, when he assumed full power on his 16th birthday. He was thus king of Spain during the Spanish-American War but had no impact on events.

In 1906, Alfonso XIII married Scottish-born princess Ena of Battenberg (Victoria Eugenie), niece of King Edward VII and granddaughter of Queen Victoria of Britain. Alfonso and Ena had seven children. During Alfonso XIII's reign, Spain lost its last colonies in Cuba, Puerto Rico, Guam, and the Philippines, and its armies were also defeated in several wars in Morocco. Alfonso became increasingly autocratic and was in constant conflict with Spanish politicians. In 1909, the army brutally suppressed a general strike in Barcelona, and Alfonso ordered the execution of the radical Catalan leader Francesc Ferrer i Guardia.

Alfonso kept Spain neutral during World War I, with the country benefiting from trade with both sides. Economic unrest followed the war, and in 1923 Alfonso encouraged General Miguel Primo de Rivera y Orbaneja's military coup yet abandoned him in 1930 when social

Alfonso XIII was king of Spain during 1886–1931, a time of great social and political upheaval for the once powerful European nation. During his reign, Spain lost much of its overseas empire. (Library of Congress)

tensions in the country forced him to agree to democratic elections. When the Spanish people voted overwhelmingly for a republic, Alfonso departed Spain on April 14, 1931, for France without formal abdication, the day the Second Spanish Republic was proclaimed.

When the Spanish Civil War began in July 1936, Alfonso announced that he favored the military uprising against the government. General Francisco Franco, however, declared in September 1936 that the Nationalists would not reinstate Alfonso as king. Alfonso XIII moved to Italy and died in Rome on February 28, 1941, leaving his successor rights to his son Juan, father of current Spanish king Juan Carlos.

Alger, Russell Alexander

Birth Date: February 27, 1836

Death Date: January 24, 1907

U.S. secretary of war (1897–1899). Born in Medina County, Ohio, on February 27, 1836, Russell Alexander Alger may have been a distant relative of Horatio Alger. Russell Alger was in fact a success story himself. Orphaned at age 11, he managed to support himself and two younger brothers through various jobs, including farm labor. He also acquired sufficient education to teach school. He went on to study law and was admitted to the Ohio bar at age 21. In 1860, he moved to Michigan.

During the American Civil War (1861–1865), Alger secured a commission as a captain in the 2nd Michigan Cavalry Regiment, eventually rising to the rank of colonel in the 5th Michigan Cavalry in Brigadier General George Armstrong Custer's brigade. A capable field commander, Alger served with distinction in the eastern theater of war and saw service in the Battle of Gettysburg (July 1–3, 1863) and the Battle of the Wilderness (May 5–7, 1864). He distinguished himself in Major General Philip Sheridan's Shenandoah Valley Campaign in 1864 and won special mention for his cavalry charge in the Battle of Trevilian Station (June 11, 1864). In June 1865, Alger was breveted major general of volunteers.

Following the war, Alger settled in Detroit and headed the firm of Alger, Smith & Co. and the Manistique Lumbering Company. He also founded the Michigan chapter of the Grand Army of the Republic (GAR) and served as its national commander in 1889.

Businessman and politician Russell Alexander Alger was U.S. secretary of war during the Spanish-American War. (Library of Congress)

Elected governor of Michigan, Alger served in that post during 1885–1887. During the 1896 presidential campaign, he organized Civil War veterans in support of William McKinley, who named him his secretary of war on March 5, 1897.

As secretary of war, Alger was regarded as the most militant member of McKinley's cabinet and an outspoken proponent of war with Spain. Alger told the president that a failure to go to war would destroy the Republican Party. In any case, Alger came to be seen as an inept civilian head of the army. He would perhaps have been a more able administrator in quieter times, but in the frantic preparation for war with Spain in 1898, he lacked the aggressive approach that many, including Theodore Roosevelt, believed was necessary. Alger was also constantly at odds with the army's senior officers, especially commanding major general Nelson A. Miles.

Alger did respond to the call to arms with a certain dedication. The passage of the so-called Fifty Million Dollar Bill in March 1898 was intended to put the United States on a war footing. With the amount apportioned to the army (about \$19 million), Alger directed various army bureaus to increase their inventories. However, it soon became clear that the army's infrastructure was unprepared to handle a massive buildup. Alger also rather naively assumed that a larger number of men could be prepared for war in a short period of time. To his credit, Alger and the army's adjutant

general, Henry C. Corbin, did much to streamline the movement of supplies and equipment to the expeditionary forces. Nonetheless, problems abounded, and these were, rather unfairly, all laid at the doorstep of the secretary of war. Indeed, the miscues and bungling resulted in the creation of the term “Algerism,” which became synonymous with incompetent officialdom.

Eventually the real director of the nation’s military affairs came to be President McKinley, in part because he had served in the army himself and was interested in military affairs but also because Alger proved to be an ineffective secretary of war. Alger’s constant squabbling with Miles and other senior officers diverted energies away from the prosecution of the war and forced McKinley to involve himself more actively than might have otherwise been the case.

During the war, Alger, who held strongly xenophobic and anti-immigrant views, became involved in the Immunes, stating that as a rule men of color were not to be commissioned above the rank of lieutenant. After Cuba was secured, Alger believed that U.S. troops should remain on the island despite outbreaks of yellow fever, malaria, and typhoid, which had laid low many in Major General William Shafter’s V Corps. As these diseases spread, the press criticized Alger, who finally ordered the bulk of the troops back to the United States. Unfortunately, upon reaching Camp Wikoff at Montauk Point, New York, which had been designated as the separation point, the troops found that there were no facilities to accommodate them. Alger was also much criticized in the press for his feud with Miles over the so-called Embalmed Beef Scandal.

Within the year, McKinley became convinced that a new secretary of war was necessary and requested Alger’s resignation. However, the secretary refused to step down and instead asked for and received a formal hearing. The Dodge Commission, the body that heard his case, found that Alger had done his best to deal with problems that were largely beyond his control. Following a bitter meeting with McKinley, Alger resigned in July 1899 and was replaced by Elihu Root.

The criticism of his conduct as secretary of war did little to harm Alger’s reputation in the United States. He published his own version of events, *The Spanish-American War*, in 1902. In it he blamed the lack of army preparedness for war on insufficient congressional appropriations. He also remained a political power in Michigan and was appointed to finish the term of U.S. senator James McMillan, who died in 1902. Alger remained in the Senate until his own death in Washington, D.C., on January 24, 1907.

Allen, Charles Herbert

Birth Date: April 15, 1848

Death Date: April 20, 1934

U.S. assistant secretary of the navy. Born in Lowell, Massachusetts, on April 15, 1848, Charles Herbert Allen attended both public and private schools before graduating from Amherst College in 1869. He then worked for his father in the firm of Otis Allen & Son, which specialized in lumber and wooden boxes.

Allen’s first foray into public service came with the Lowell School Committee. He was then a Republican member of the Massachusetts House of Representatives during 1881–1882 and served one term in the state Senate during 1883. In 1885 he won election to the U.S. House of Representatives from Massachusetts, serving there until 1889 when he declined to run for reelection. He ran for governor of Massachusetts on the Republican ticket but was defeated in 1891 by Democrat William E. Russell. During 1897–1898, Allen was Massachusetts prison commissioner.

When Theodore Roosevelt resigned his post as assistant secretary of the navy to join the army at the outbreak of the Spanish-American War in 1898, Secretary of the Navy John D. Long picked Allen, with whom he had served in Congress, to fill the vacancy. Allen took up his duties on May 11, 1898. While he lacked Roosevelt’s great energy, Allen proved a solid, competent assistant secretary.

In 1900 President William McKinley appointed Allen to be the first civilian governor of Puerto Rico. Allen held that post until 1902, when he returned to Lowell. During his tenure as governor of the island, he built up a treasury surplus.

Allen became active in banking after his return to Lowell. He served on the boards of a number of firms and was vice president of the Morton Trust Company and of the Guarantee Trust Company of New York. He was also president of the American Sugar Refining Company. Allen was a member of the board of trustees at Amherst College and was a recognized painter of landscapes and maritime subjects. He died in Lowell on April 20, 1934.

Allen, Henry Tureman

Birth Date: April 13, 1859

Death Date: August 29, 1930

U.S. Army officer and founder of the Philippine Constabulary. Henry Tureman Allen was born in Sharpsburg, Kentucky, on April 13, 1859. He attended Georgetown College in Kentucky but transferred to the United States Military Academy, West Point. Graduating from there in 1882, he accepted a commission in the cavalry. Thereafter, he spent time on frontier duty in the West, commanded an exploring expedition in Alaska (1885–1886), served as an instructor at West Point, and was a military attaché to various American legations in Europe, including Russia (1890–1895) and Berlin (1897–1898) as a first lieutenant. With the beginning of the Spanish-American War in April 1898, Allen left Germany, and by June he was commanding Troop D of the 2nd Cavalry Regiment.

Soon after, Allen, now a major of volunteers, was ordered to Cuba, where he and his men performed escort duty and scouting during the Santiago Land Campaign and fought with distinction at the Battle of El Caney on July 1, 1898. Allen took command of the town but subsequently contracted yellow fever and returned to the United States to recover.

In the fall of 1898, Allen was promoted to captain in the regular army and returned to Berlin as an attaché. Hoping to see action, he transferred to the 43rd Volunteer Regiment in 1899 with the rank of major. Arriving in the Philippines on New Year's Eve 1899, he took command of the 3rd Battalion stationed on the island of Samar, where he fought against insurgents and recruited members for the Philippine Scouts.

With Samar pacified, Allen commanded one of the three sections of Leyte, where he often personally led patrols and insisted on strict observance of the laws of war. He treated the civilian population fairly and undertook numerous improvement projects. For his strict but humane governing style, the locals called him “Iron Commandante.”

During April–June 1901, Allen served briefly as governor of Leyte before being selected to organize the Philippine Constabulary. He secured this appointment as a result of his record on Leyte, Spanish-speaking ability, and success in recruiting members for the Philippine Scouts. The constabulary was meant to fill a gap between Filipino police and American forces in the islands. Among other purposes, it helped to suppress the insurrection, provided intelligence, guarded jails, and restored law and order. He retained command of this group until 1907, rising to the temporary rank of brigadier general commanding more than 10,000 men. The constabulary, consisting of American officers and Fil-

ipino constables, became a highly reliable force and a source of stability in the islands.

Allen left the Philippines in the spring of 1907 and returned to the United States, reverting to his permanent rank of major. In 1910 he joined the General Staff as a cavalry expert, rising to lieutenant colonel in August 1912 and to colonel in July 1916, when he assumed command of the 8th Cavalry Regiment, which he led in Brigadier General John J. Pershing's punitive expedition into Mexico that sought to capture Pancho Villa.

Following U.S. entry into World War I, Allen was advanced to brigadier general in May 1917. That August, now commanding the 90th Infantry Division, he was appointed to temporary major general. After the war, he commanded American troops in occupation in the Rhineland of Germany during 1919–1923. Allen retired in 1923, the same year in which he was promoted to permanent major general. He died in Burne Spring, Pennsylvania, on August 29, 1930.

Allianca Incident

Event Date: March 8, 1895

International incident involving a U.S.-registered merchant ship and the Spanish Navy. On March 8, 1895, a Spanish gunboat fired on the *Allianca*, a 3,000-ton merchant ship registered in the United States, heightening tensions between the United States and Spain. The ship, which was returning to New York City from Colón, carried a cargo of wine, bananas, rubber, mustard seeds, and cocoa. The incident occurred in the Windward Passage off Cape Maisi, more than three miles beyond Cuba's territorial waters. Undoubtedly the Spanish commander assumed that the ship had been involved in transporting arms to rebel forces in Cuba.

The timing of the incident could not have been worse, coinciding as it did with the beginning of the Cuban War of Independence (1895–1898). Jingoists immediately seized upon this “Spanish affront against the American flag,” alleging that the attack was intentional. The U.S. yellow press, meanwhile, delighted in having another story about Spanish malfeasance. The Spanish gunboat

Conde de Venadito had failed in its attempts to stop the American ship, firing upon it and chasing it for approximately 20 miles. While the *Allianca* was not damaged, the incident illustrated the fragile state of relations between Washington and Madrid over Cuba. As a gesture to appease the United States, Spain eventually transferred the commander of the Spanish gunboat.

During Grover Cleveland's second administration (1893–1897), Washington had maintained an official policy of neutrality toward the Cuban insurrection. Following the *Allianca* Incident the president steadfastly refused to send additional naval units to the region. Despite criticism of this stance, Cleveland maintained that such action was unnecessary during the period of investigation and negotiations. During Cleveland's administration, the issue of Spain's rule in Cuba increasingly became a subject of debate in both Congress and among the business community.

At the same time, private interests and filibusters continually sent supplies to the Cubans by sea, and the Spanish Navy could not interdict all the vessels bringing aid to Cuban insurrectionists. Newspapers of the period were replete with the names of vessels and their military cargoes destined for Cuba. Although the U.S. government attempted to prevent such violations of American law, it was unable to halt all such activity.

Although Madrid issued a formal apology to the United States regarding the *Allianca* Incident, this and the *Competitor* Incident of a year later contributed to the increasingly explosive situation that eventually led to the Spanish-American War.

Almodóvar del Río, Duque de

Birth Date: 1859

Death Date: June 23, 1906

Spanish nobleman, diplomat, and minister of foreign affairs (1898–1899, 1901–1902, and 1905–1906). Juan Manuel Sánchez y Gutiérrez de Castro, the 8th Duque de Almodóvar, was born in Jérez, Spain, sometime in 1859. His parents were António Sánchez Romante and Isabel Gutierrez de Castro y Cossio, the 1st Duquesa de Algeciras. Sánchez became the 8th Duque de Almodóvar del Río when he married Genoveva de Hoces y Fernández de Córdoba, the 8th Duquesa de Almodóvar del Río.

The duke was an ardent supporter of the Liberal Party. Because of the Spanish-American War, Spanish prime minister Práxedes

Matoe Sagasta chose to reorganize his cabinet on May 24, 1898. Sagasta then replaced Pío Gullón y Iglesias with the Duque de Almodóvar del Río. It was thus the duke's task to represent Spanish foreign interests during the Spanish-American War and oversee negotiations leading to the 1898 Treaty of Paris.

Following a series of disastrous military campaigns for Spain, in mid-July 1898 Sagasta came to the conclusion that the war was lost. He thus instructed Almodóvar to begin the process that would lead to Spain's surrender. On July 18, 1898, the duke sent a telegram to the Spanish ambassador in Paris charging him with the task of obtaining French assistance in securing a suspension of hostilities and the start of peace negotiations. That same day, French ambassador to the United States Jules-Martin Cambon sent a message to U.S. president William McKinley informing him that Spain wished to cease hostilities and begin the peace process.

On July 28, 1898, the duke announced that Spain was willing to relinquish control of Cuba to the United States. On July 30, McKinley presented Cambon with the American conditions for a cease-fire. With reservations regarding jurisdiction over the Philippines, Almodóvar accepted McKinley's proposal on August 2, 1898. Hostilities between the United States and Spain ended on August 12, 1898.

Almodóvar represented Spain throughout the peace negotiations conducted in Paris. On November 21, 1898, American negotiators insisted that Spain sell the Philippines to the United States for \$20 million and relinquish control of Cuba, Puerto Rico, and Guam. The United States, however, accepted neither sovereignty over Cuba nor responsibility for the debts that might have come with that sovereignty. Spain was given one week to respond or face the possibility of the resumption of hostilities. Almodóvar agreed, and the Treaty of Paris was signed on December 10, 1898. Resentment against Sagasta resulted in the termination of his government on March 4, 1899, at which time Almodóvar left government service. He was subsequently minister of foreign affairs from March 6, 1901, to December 6, 1902, and from December 3, 1905, to June 23, 1906. On July 3, 1902, he signed the Treaty of Friendship and General Relations with the United States, which entered into force on April 14, 1903. He represented Spain at the 1906 Algeciras Conference, which mediated the First Moroccan Crisis between France and Germany. Almodóvar died in Madrid on June 23, 1906.

American Federation of Labor

American labor union federation founded in 1886 by Samuel Gompers. Initially designed to organize only skilled workers, the American Federation of Labor (AFL) would go on to become one of the largest and most powerful labor organizations during the 20th century in the United States. The AFL was actually a confederation of many smaller labor unions, mostly craft unions that represented highly skilled workers such as typesetters, machinists, carpenters, electricians, and musicians, among others. Gompers, himself a highly skilled cigar maker from New York City, was steadfast in his refusal to organize semiskilled or unskilled workers, whom he considered to be incapable of organization or group cooperation. The AFL was founded in Columbus, Ohio, on December 8, 1886, as a successor to the Federation of Organized Trades and Labor Unions, which had been founded in Indiana in 1881.

Earlier in his life, Gompers had advocated fairly radical means by which to force workers' rights from employers, and much of his mind-set was socialistic in nature if not in rhetoric. He had also advocated confrontation if necessary to compel employers to meet workers' demands. By the time the AFL was founded, however, Gompers had abandoned his confrontational approach to labor-management relations and instead sought accommodation wherever possible. He now believed that concrete, sensible goals such as higher pay, better benefits, and job security should be the top priorities of labor unions. As such, the AFL's approach to labor-management relations was a conservative one in that it did not advocate the overthrow of free-market capitalism and believed that industrialists and big business were entitled to their profits as long as they took proper care of their employees. Issues such as set work hours and the improvement of working conditions were not top priorities of the AFL in its early decades because they often did not apply to the skilled laborers who belonged to the group.

Notably, Gompers shrewdly steered clear of political favoritism during his long reign as the head of the AFL (he served until his death in 1924 except for one year). This allowed him to work with Democratic, Republican, and Populist politicians and helped the AFL avoid the spasms of violence that shook and destroyed other labor organizations in the 1890s. Yet the AFL's cautious, conservative, and relatively impartial approach to unionization provoked the ire of many labor unions that were not allowed to join. It also brought accusations that the group was elitist and cared only for workers who were perhaps in least need of organization and representation.

At the time of the AFL's founding in 1886, its chief rival was the Knights of Labor (KoL), a somewhat amorphous federation of labor unions that had coalesced during the 1870s and had grown rapidly thereafter. Unlike the AFL, the KoL, which had some 700,000 members by the late 1880s, prided itself on its all-inclusive membership, which after 1883 included women and African Americans, both of whom had been traditionally barred from

Poster issued by the Missouri State Federation of Labor, a member of the American Federation of Labor, advising customers to buy union-produced goods, circa 1895. (Getty Images)

unions in this era. The KoL had a large contingent of railroad workers, and early on it enjoyed some successes in wresting concessions from the railroad companies. But the KoL was not particularly organized, and centralized control was badly lacking. It also had rather pie-in-the-sky methods, which included allowing employers to join the group and discouraging the use of strikes to achieve labor demands. By the early 1890s, the KoL was a moribund organization. Many of its members had joined other federations, including the AFL, and the violent repression of its workers during the May 1886 Haymarket Riots and the 1892 Homestead Steel Strike had badly eroded its power base.

In its initial years, the AFL had pointedly not excluded African Americans or other minority groups, although its skilled-only membership policy effectively excluded them nevertheless. By the

early 1900s, however, the AFL admitted unions that had blatantly discriminatory membership policies that excluded not only African Americans but many newly arrived immigrants groups as well. Women were unlikely to be found at any level in the AFL until well into the 20th century.

With the demise of the KoL by the late 1890s, the AFL had no real competitor, despite the rise of some new unions such as the Industrial Workers of the World (IWW) in 1905, a strange hybrid of quasi-socialists and grassroots democrats. Gompers had wisely forsaken the catastrophic confrontation with management that had undone the KoL in the 1890s and continued to eschew political affiliations. This set the AFL up as the most influential labor federation in the United States by 1900. As more unions joined the organization and as its membership requirements became a bit less restrictive, the AFL's membership exploded in size. Its growth continued unabated after Gompers's death in 1924, and its influence grew dramatically during the 1930s and 1940s, which was the high-water mark for organized labor in the United States. In 1955, the AFL merged with the Congress of Industrial Organizations (CIO), and the resultant AFL-CIO continues to be the leading labor federation in the nation today.

American National Red Cross

Organization founded on May 21, 1881, by Clara Barton and intended to offer humanitarian assistance in the event of war or natural disasters. Organized into state chapters with numerous subchapters, the American National Red Cross (ANRC) offered relief to the victims of floods, hurricanes, tornadoes, and rail disasters across the United States prior to the Spanish-American War.

During her 23-year stewardship of the organization, Barton exercised a tight grip on the ANRC's activities, frequently alienating its middle-class and wealthy patrons who sought greater roles in its administration. Exercising full right of veto over all requests for assistance, which she reviewed personally, Barton often left the national headquarters in Washington to direct relief efforts on-site, frequently acting at cross-purposes to the actual need and local capabilities. Hence, the ANRC was occasionally criticized as being poorly run and subject to the whims of its founder.

Even before the Spanish-American War, the ANRC was active in Cuban relief efforts, with Barton herself visiting Havana in 1897 and again in early 1898. There, beginning on February 9, 1898, she personally oversaw relief for victims of the Spanish regime's policies in Cuba. She also took an active role in revealing the extent of Spanish abuses, accompanying numerous American visitors, including U.S. senator Redfield Proctor (R-Vt.), on tours of the bleak and squalid *reconcentrado* (reconcentration) camps. These visits served a dual purpose: they highlighted Spanish indifference to the plight of civilians and the charitable impulse of Americans toward the war's unfortunate victims.

In late March, Barton returned to the United States, where on April 1 she chartered a freighter, the *State of Texas*, in Key West, Florida. As war appeared imminent, she hurriedly arranged for 1,400 tons of food, clothing, and supplies to be loaded on the ship for one final delivery of humanitarian supplies to Cuba before war broke out. Events overtook her efforts, however. The *State of Texas* was ordered by the U.S. Navy to remain in port, as Rear Admiral William T. Sampson's North Atlantic Squadron instituted the blockade of Cuba on April 22, 1898.

With the official outbreak of hostilities between the United States and Spain on April 21, 1898, the flaws in Barton's personal administration style became readily apparent. ANRC efforts to mount a wartime relief program were hamstrung by its leader's absence and the overall lack of structure in the organization. While Barton remained with the *State of Texas* in Key West, ANRC representatives in Washington were struggling to gain recognition and permission from the War Department to work in the military volunteer camps scattered throughout the United States. Accordingly, and without clear direction at its head, the ANRC's response drifted aimlessly, with individual members and chapters taking the initiative and acting without coordination. Across the country, local relief committees raised money, gathered supplies, and provided support to volunteer militia and National Guard units as they departed for their mustering camps. The range of support from local ANRC chapters was varied and included collecting reading material and tobacco products, outfitting special-diet kitchens and laundry facilities for regimental and brigade hospitals, and purchasing field surgical kits for volunteer regiments.

Compounding the problems of disorganization was the appropriation of the ANRC's name and insignia by various independent and temporary relief groups. Many of these organizations ultimately competed with the ANRC for support from local philanthropists and volunteers. Without strong leadership at the helm in Washington, the ANRC was helpless to act against its competitors. As a result, the general public came to see the ANRC's response to the war as fragmented and chaotic.

The chief obstacle to direct coordination between the ANRC and the U.S. War Department was Surgeon General George Miller Sternberg. Mindful of Barton's tendency toward meddling and interference with army physicians during the Civil War (1861–1865), Sternberg was willing to accept any supplies and material support

A member of the American National Red Cross assisting the wounded in a field hospital in Cuba during the Spanish-American War. (Library of Congress)

donated by the group. He was far less charitable toward the prospect of ANRC volunteers in camp hospitals, however, where he believed that they would cause more harm than good.

The typhoid fever epidemic forced Sternberg to revise this position. Following a July 16 interview with representatives of the ANRC Committee on Maintenance of Trained Nurses, he agreed to allow ANRC female nurses to serve in general hospitals in the United States, Cuba, and the Philippines. ANRC nurses, however, never gained the full access that Sternberg had accorded to the volunteer nurses under the direction of Anita Newcomb McGee.

Meanwhile, on June 25, 1898, the *State of Texas* finally departed Key West for the V Corps beachheads at Daiquirí and Siboney, Cuba. In fact, Barton and her supplies arrived in the immediate aftermath of the Battle of Las Guásimas. On July 1, after the battles at El Caney and San Juan Heights, V Corps commander Major General William Shafter sent a request to Barton for all essential medical supplies. Barton then commandeered two army wagons, loaded them with supplies, and personally delivered the material to the front. After two weeks in hospitals caring for American and Spanish wounded, Barton and her delegation traveled throughout V Corps offering supplies and assistance to sick soldiers as needed. After the August truce, she turned her attention toward civilian

relief, offering clothing and food to the poor and opening several relief hospitals in Havana.

Despite, or perhaps because of, Barton's efforts in Cuba away from the ANRC's headquarters in Washington, several members began to agitate for her retirement after the war. During the next four years, a group opposed to Barton's stewardship coalesced around the efforts of Cleveland socialite Mabel L. Boardman. The struggle for leadership continued until 1904, when Barton finally resigned in the face of growing opposition. A year later the ANRC was reorganized, and a new charter was granted to the organization by the U.S. Congress.

Anderson, Edwin Alexander, Jr.

Birth Date: July 16, 1860

Death Date: September 23, 1933

U.S. naval officer. Edwin Alexander Anderson Jr. was born in Wilmington, North Carolina, on July 16, 1860. He was appointed to the United States Naval Academy, Annapolis, in 1878; graduated in 1882; served an obligatory two years' duty at sea; and was commissioned an ensign on July 1, 1884. Owing to the large number of officers and the navy's policy of advancement based on seniority, he did not make lieutenant, junior grade, until 1894. In late January 1897, he reported for duty aboard the cruiser *Marblehead* and was serving in that assignment when the Spanish-American War began in April 1898.

The primary U.S. Navy goal at the beginning of the war was to blockade Cuba and sever its communications with Spain. In pursuit of this objective, on May 11, 1898, the *Marblehead* and the light-draft gunboat *Nashville* shelled a Spanish cable house and barracks on the coast at Cienfuegos, Cuba. As part of the mission, men were sent in small boats to cut the Spanish telegraph cables in shallow water.

Lieutenant Cameron Winslow had charge of the four launches from the two ships designated to carry out the order. Anderson had command of the two boats from the *Marblehead*: a steam launch crewed by 5 seamen, 3 sailors manning a 1-pounder Hotchkiss gun, and 6 marine marksmen and a sailing launch crewed by 16 men, including Anderson, who were armed with rifles and revolvers. The plan was for the sailing launch crews to cut the cables while the steam launches provided fire support.

U.S. Navy lieutenant Edwin Alexander Anderson Jr. served with distinction in the Spanish-American War and, as rear admiral, commanded a squadron in World War I. (Library of Congress)

The steam launches from both ships moved to between 150 and 200 yards of the beach and cable house and began to direct fire ashore. Meanwhile, the sailing launches located two armored cables about 30 yards from the beach. Fire from the shore intensified as the Spanish employed rifles and machine guns against the launches during a three-hour span. Anderson took over the steering of his launch when his coxswain was wounded; four other members of his crew were also wounded. The launch took on water from numerous bullet holes, requiring constant bailing to keep it afloat in the rough water. Nevertheless, the two American boat crews were able to drag the sea floor with grappling hooks, pulling up two cables and cutting them with hacksaws. Lieutenant Winslow reported on the coolheadedness, bravery, and intelligence demonstrated by Anderson while under fire and eventually had to order Anderson to desist from further cable cutting. Unfortunately, a smaller cable that was not cut during this operation enabled the Spanish to maintain communications until additional cable-cutting expeditions occurred in the following weeks.

By 1901, Anderson had been promoted to captain and held a variety of commands, including that of the battleship *Iowa*. He was recognized for his heroism in 1898 and was awarded the Medal of Honor for leading naval forces ashore at Veracruz, Mexico, during the U.S. intervention there in 1914. He was also decorated by the Japanese government for providing humanitarian assistance after a devastating earthquake and tsunami there in 1923. Anderson retired as a rear admiral in 1924 and died in Wilmington on September 23, 1933. A World War II destroyer was named in his honor.

Anderson, Thomas McArthur

Birth Date: January 21, 1836

Death Date: May 8, 1917

U.S. Army general. Born in Chillicothe, Ohio, on January 21, 1836, Thomas McArthur Anderson attended St. Mary's College in Maryland and graduated from Cincinnati Law School in 1858. He was admitted to the bar in Cincinnati the same year.

When the American Civil War (1861–1865) began, Anderson enlisted as a private in the 65th Ohio Volunteer Regiment. Through

the influence of his uncle, Brigadier General Robert Anderson, hero of Fort Sumter, the younger Anderson was soon commissioned a second lieutenant of the 5th Cavalry. He served in the cavalry throughout the war and advanced to the rank of captain. Remaining in the army after the war, he eventually rose to the rank of colonel and commanded the 14th Infantry Regiment.

During the Spanish-American War, holding the temporary rank of brigadier general, Anderson commanded the first U.S. expeditionary force to the Philippines. Arriving at the Presidio in San Francisco on May 23, 1898, he sailed with his 2,500-man VIII Corps two days later. On June 21, his forces captured Guam en route to the Philippines. They arrived at Manila on June 30 and established headquarters ashore at Cavite. There on July 1 he met with Rear Admiral George Dewey and Filipino nationalist leader Emilio Aguinaldo y Famy. Anderson assured Aguinaldo that the United States was not seeking colonies.

Prior to the First Battle of Manila on August 13, Anderson, now in command of the 1st Division of VIII Corps under Major General Wesley Merritt, notified Aguinaldo not to take his troops into the city. When insurgents entered the Manila suburbs, Anderson ordered Aguinaldo to remove them, which he did. Anderson remained in the Philippines on the conclusion of peace with Spain and briefly commanded U.S. forces during the Philippine-American War until he was succeeded by Major General Henry W. Lawton. Anderson retired from the army as a brigadier general in 1900. He wrote afterward that the origins of the Philippine-American War dated to U.S. refusal to allow Aguinaldo's troops to participate in the capture of Manila. In retirement Anderson moved to Vancouver, Washington. He died in Portland, Oregon, on May 8, 1917.

Anita Expedition

Start Date: March 1898

End Date: May 1898

Expedition that was in reality a propaganda mission to Cuba organized and outfitted by newspaper publisher William Randolph Hearst (of the *New York Journal*) and composed of a group of U.S. lawmakers and their families. The *Anita* Expedition was alternatively known as the Congressional Cuban Commission or the *Journal* Commission. The legislators whom Hearst selected and

recruited for the venture held similar jingoist views to his own and included Senators Henrando Money of Mississippi, John M. Thurston of Nebraska, and J. H. Gallinger of New Hampshire. U.S. Representatives William Alden Smith of Michigan and Amos Cummings of New York rounded out the group. Smith and Cummings held particular significance in that they were members of the House Foreign Affairs and Naval Affairs committees, respectively.

The expedition derived its name from the ship that transported them to Cuba, the *Anita*, the largest press boat belonging to Hearst's *New York Journal*. Formerly, it had served as one of the publisher's personal yachts. Hearst planned the mission to Cuba to give the lawmakers a firsthand look at conditions there in 1898. At the same time, dispatches sent back to the United States by the politicians would be published by Hearst's papers, helping to stoke the war fever that the publisher sought to ignite.

The *Anita* departed from Fort Monroe, Virginia, in early March 1898. When the ship arrived in Havana on March 11, the lawmakers aboard the *Anita* quickly began writing accounts of the suffering caused by the *reconcentrado* (reconcentration) system's camps created by Governor-General Valeriano Weyler y Nicolau in his attempt to deny the Cuban insurgents the support of the populace. The dispatches sent back to the United States graphically depicted the camps and the destitution on the island in highly emotional language, which fed the yellow journalism prevalent in Hearst's papers at the time. Hearst's cause received a boost when Senator Thurston's wife died from a heart attack while the yacht was anchored at Matanzas, Cuba. Hearst's papers portrayed this as a reaction to the deplorable conditions she had witnessed. In reality, Mrs. Thurston had been ill prior to the junket. When the commissioners returned to the United States in May, they also spoke before the houses of Congress, praising the work of Hearst's publications in awakening America to the atrocities taking place in Cuba and declaring that his newspaper's reporting was not exaggerated.

Anti-Imperialist League

A national organization formed in the United States on June 15, 1898, that represented a powerful voice against extraterritorial expansionism during its brief existence. The Anti-Imperialist

An anti-imperialist political cartoon from 1898 satirizing the colonial policy of the United States. The cartoon depicts the United States as Danish king Canute, the 11th-century monarch who ruled Denmark, Norway, England, and part of Sweden. (Library of Congress)

League's first major crusade was an attempt to block the annexation of the Philippines after the Spanish-American War. The organization began as a series of smaller leagues in the eastern United States that spread westward during 1898–1899. At one time, the league was thought to number some 30,000 individuals, including some of the most prominent and influential men in the country. They included former president Grover Cleveland; labor leader Samuel Gompers; Mark Twain (Samuel Clemens); Jane Addams; Carl Schurz; E. L. Godkin, editor of *The Nation*; Samuel Bowles, editor of *The Republican* in Springfield, Massachusetts; Charles Francis Adams Jr.; and the industrialist Andrew Carnegie, whose vast fortune helped fund the league's activities.

The Anti-Imperialist League was absolutely opposed to the U.S. annexation of Hawaii and the Philippines, arguing that the U.S. Constitution did not allow for the acquisition and governing of foreign colonies. The league also viewed Filipinos and other peoples of color as inferior and not deserving of being enfranchised as U.S. citizens. Besides legal and racial issues, many anti-imperialists argued that economic and governmental concerns also militated against the construction of an overseas empire. Realizing that protecting overseas colonies militarily would be expensive, the Anti-Imperialist League feared that increased defense expenditures would increase the size—and power—of the federal government and lead to the institutionalization of a large standing armed force, two concepts that were, until this point, antithetical to American governmental ideology. There was also a concern that the addition

of extraterritorial possessions would tax the U.S. economy and might result in a mass influx of immigrants to the United States who would compete for jobs and drive up unemployment. During the long debate over the annexation of Hawaii, Gompers held that Hawaiian annexation would result in an influx of cheap Asian labor. Despite Gompers's opposition, however, President William McKinley received strong support from the labor community over annexation issues.

Not surprisingly, the Anti-Imperialist League was vehemently opposed to ratification of the Treaty of Paris, signed in December 1898, that formally ended the war and ceded Puerto Rico, Guam, and the Philippines to the United States. The league campaigned vigorously against President McKinley's reelection in 1900 but failed in that effort as well. McKinley's reelection and congressional ratification of the Treaty of Paris effectively ended the league's clout and resulted in a splintering of the group into competing factions that only further diluted its efforts.

In general, the Anti-Imperialist League included among its membership individuals who embraced the concepts of free trade, small government, and the gold standard as a monetary policy. As such, they had supported neither McKinley nor William Jennings Bryan in the pivotal 1896 elections, preferring instead to support the fledgling National Democratic Party, which ultimately performed poorly in the election. In the 1900 election, many anti-imperialists found themselves in the uncomfortable position of supporting Bryan, who was campaigning on an anti-imperial platform but who also opposed the gold standard. Several league members tried to cobble together a third party that would stand for the league's principles, but that attempt fell apart. The Anti-Imperialist League then endorsed Bryan's candidacy but was not an enthusiastic supporter. League members were particularly opposed to the Philippine-American War that pitted the U.S. Army against Filipino rebels.

In the years that followed, the Anti-Imperialist League steadily lost membership and influence. In 1921, it was formally disbanded.

Antilles

A long and varied archipelago of islands forming the greater part of the West Indies and located in the Caribbean Sea between South and North America. The Antilles range from the northern coast of Venezuela as far west and north as Cuba, their largest island. The island chain is divided into two principal groups: the Greater Antilles and the Lesser Antilles. From Puerto Rico north and west, the larger islands of the Caribbean are the Greater Antilles. The four major islands in order of size are Cuba, Hispaniola (Haiti and the Dominican Republic), Jamaica, and Puerto Rico. These islands are usually considered part of North America and form part of a series of underwater mountain chains. All of the Antilles have a tropical climate, although temperatures are lower in the mountainous high-altitude regions.

Cuba is 745 miles long and averages 80 miles in width, with the widest point being 124 miles. It has several good harbors including Havana, Guantánamo, Cienfuegos, and Santiago de Cuba. The average rainfall is 51.7 inches a year, with two-thirds falling between June and the beginning of November, which is also hurricane season. Cuba's rich soil, plentiful rainfall, and warm climate made it an agricultural center, with the Spaniards exploiting this natural wealth as early as the mid-1500s. By the early 19th century, Cuba was the world's largest single producer of sugarcane.

Hispaniola, lying to the south and east of Cuba, has a similar climate and is just a bit more than half the size of Cuba. There are numerous mountain ranges, and what is now Haiti contains the highest point in the entire Caribbean (Pic la Selle, at 8,973 feet). The main ports are Port-au-Prince in the west and Santo Domingo in the east. The western third of the island was colonized by the French, who were overthrown during an indigenous slave uprising between 1791 and 1801. In 1801 Toussaint L'Ouverture conquered the Spanish-held part of the island. After Napoleon's failed attempt to restore French control, Haitians and Spain fought for control over the island until Pedro Santana established the Dominican Republic in 1844. Hispaniola has since been periodically torn by violence, and its inhabitants have been chronically poor.

Puerto Rico, the third largest of the Greater Antilles, is about 100 miles long. It has four small mountain ranges, with the highest peak being 4,389 feet. The ranges run east to west. Most of the island's small rivers are on the north side of the ranges and fall to a small coastal plain. The south has a wider coastal plain. The main harbor is San Juan. As with Cuba and Hispaniola, colonial Puerto Rico's major industry was plantation-style farming that relied on slave labor.

Jamaica is 146 miles long and about 50 miles wide at its broadest point. It is situated 90 miles south of Cuba and 120 miles west of Hispaniola. Until 1655, Jamaica was a Spanish territory known as Santiago. The island then came under the control of the British Empire and was one of the world's chief sugar producers. The plantation system there became so dependent on imported slaves from West Africa that by the early 1800s whites were outnumbered by blacks 20 to 1. Although Parliament voted to abolish slavery

throughout the British Empire in 1833 mainly out of the fear that a slave revolt in Jamaica would quickly overwhelm the ruling whites, it took five years to achieve emancipation in Jamaica because slave owners were entitled to compensation and had to present their claims in London. Jamaica was granted full independence in 1962. The chief ports of Jamaica are Montego Bay and Kingston.

The Lesser Antilles, which lie to the south and east of the Greater Antilles, are made up of the Windward and Leeward islands and the Leeward Antilles, situated off the coast of Venezuela. Unlike the islands to the north and west, the Lesser Antilles are both volcanic and coral islands. Their climate is tropical (except at high elevations), although Aruba, Curaçao, and especially Bonaire are quite arid. At the time of the Spanish-American War, neither the Spanish nor the Americans had a naval base in the Lesser Antilles. Some of the Lesser Antilles include Saint Martin, Saint Kitts, Montserrat, Antigua, Barbados, Grenada, Trinidad and Tobago, Aruba, Curaçao, and Bonaire. All of these islands were controlled by either the Spanish, the French, the English, or the Dutch and were valued both for their agricultural potential and natural resources and for their position in the sea routes from Europe. The Bahamas are Atlantic and are not considered part of the Antilles.

During the Spanish-American War, the Lesser Antilles were used as neutral bases by both belligerents. Spanish rear admiral Pascual Cervera y Topete used both French-held Martinique and Dutch-controlled Curaçao as ports of call and coaling stations on his voyage to Cuba. The United States frequently had its scout cruisers visit West Indian harbors for information, dispatches, and coaling.

European colonial powers sought to enforce neutrality laws in their territories, protect their commercial interests, and gain lessons from the war. The Netherlands dispatched a warship to the Netherlands Antilles to help enforce its neutrality in the West Indies, while France added a second cruiser to that station. Italy almost had a protected cruiser attacked by the battleship *New York* in the first days of the war when the Italians innocently saluted the ship at sea, sending the crew of the *New York* to battle stations. After the Battle of Santiago de Cuba on July 3, 1898, an Austro-Hungarian armored cruiser was momentarily mistaken for the Spanish battleship *Pelayo* and narrowly missed being fired on by USS *Brooklyn*.

More importantly but less dramatically, naval operations in the Antilles disrupted the flow of grain from the United States to Europe, increasing prices for foodstuffs. In Italy, this led to bread and pasta riots.

Armistice Protocol

See Peace, Protocol of

Arroyo, Puerto Rico

Town on the southeastern coast of Puerto Rico bordered by the Caribbean Sea. Arroyo is the seaport for Guayama, located five miles inland. On August 1, 1898, under the threat of naval bombardment, U.S. forces came ashore and peacefully occupied Arroyo. Spanish forces had already evacuated the port by the time the U.S. gunboat *Gloucester* and armed yacht *Wasp* arrived. Navy lieutenant Richard Wainwright landed with a party of three dozen men from the *Gloucester* who were then greeted enthusiastically by a large crowd of Puerto Rican citizens. Mayor José María Padilla surrendered the town without protest, offered U.S. forces the use of launches in the harbor, and surrendered all Spanish government property and documents under his control.

On August 3, 5,000 men under the command of Major General John R. Brooke came ashore at Arroyo. Subsequent to the landing there was a brief skirmish between U.S. troops and perhaps 40 mounted Spanish guerrillas on the outskirts of Arroyo. On August 4, Brooke ordered U.S. troops under Brigadier General Peter C. Haines to move on Guayama and secure it. On the morning of August 5, they engaged in a skirmish with Spanish forces on Guayama's outskirts.

Artillery

In 1898 both Spanish and U.S. artillery lagged far behind that of most major European powers. Late 19th-century conflicts such as the 1866 Austro-Prussian War and the 1870–1871 Franco-Prussian War had served as proving grounds for the belligerents' theories and weaponry. In the ensuing years these countries moved decisively to modernize their respective artillery equipment and organizations. Austria, Prussia, and France quickly integrated their

artillery into the general command structure of their armies, and they established professional schools of gunnery to train officers in the latest theories and methods of scientific warfare.

In contrast to much of Europe, the artillery organizations of both the United States and Spain were in deplorable states of readiness. In the decades following the American Civil War, the United States had done little to modernize its arsenal, and the army's command structure had degenerated into bureaucratic inefficiency. For its part, Spain's artillery was in an even more chaotic state than that of its opponent. Although the Spanish Army had some relatively modern weapons, many of its batteries were still armed with bronze muzzle loaders more suitable as museum pieces. Significantly, the most advanced pieces used by both the United States and Spain were not domestically produced but instead were procured from abroad.

During the rapid demobilization following the American Civil War, Congress turned its fiscal attention away from the military and toward the country's economic recovery and settlement of the frontier. Lacking lucrative wartime contracts, most private ordnance manufacturers in the United States subsequently either fell into bankruptcy or retooled for civilian manufacturing. The vast majority of artillery production was thus divided between the two major government arsenals, Watervliet Arsenal in New York and Rock Island Arsenal in Illinois. Although these arsenals registered some significant advances in coastal artillery technology, there was little practical use for modern artillery on the frontier during the Indian Wars, and field artillery languished. Thus during the Spanish-American War, a number of U.S. artillery batteries fought with 3.2-inch bag guns, essentially stop-gap weapons that, although breechloaders, required a separate powder bag rather than the one-piece metallic fixed cartridges used in the modern quick-firing pieces.

The most advanced U.S. field pieces used during the war were designed and manufactured in France by expatriate American engineer Benjamin B. Hotchkiss (1826–1885) at his firm Société Anonyme des Anciens Établissements Hotchkiss et Cie. The 1.65-inch Hotchkiss Mountain Gun first entered U.S. service in 1876 as a replacement for the Civil War–vintage 12-pounder mountain howitzer. At 362 pounds, the Hotchkiss was extremely lightweight and could be transported easily on pack mules or by horse-drawn limber. Both the barrel and carriage were constructed of steel, and the weapon's simple breech mechanism made it easy to operate and maintain in the field. Although accurate and with a respectable range of 3,500 yards, the 1.65-inch Hotchkiss was limited by its light caliber. Too small to be effective with shrapnel ammunition, its loadings were restricted to common shell and canister. The 2.62-pound common shell could accommodate either nose- or base-fused projectiles, and the canister round was filled with 30 lead balls for close-range antipersonnel use. Although the Hotchkiss accepted a fixed metallic cartridge, its rate of fire was somewhat limited, as it was not fitted with an integral primer and thus required a friction primer and lanyard for ignition. In addition, the U.S. Army,

The lightweight (362-pound) U.S. Army 1.65-inch Hotchkiss mountain gun provided effective service during the Spanish-American War. (A. B. Dyer, *Handbook for Light Artillery*, 1908)

unlike its Spanish counterpart, had not yet made the transition from using black powder to the new smokeless powder. As a result, each discharge from a U.S. battery gun produced a dense cloud of white smoke that both revealed the firing position and obscured the gunners' field of view.

Facing stiff competition on the international arms market from the German Krupp firm's powerful 75-millimeter (mm) mountain gun, Hotchkiss redesigned the 1.65-inch gun and introduced the heavier 3-inch Hotchkiss Mountain Gun. Weighing just 570 pounds and with a range of 4,000 yards, the new Hotchkiss proved very effective, firing 12-pound common shell and canister as well as the deadly long-range antipersonnel shrapnel round. Although the 3-inch Hotchkiss proved a match to the 75-mm Krupp, it tended to recoil violently and required considerable effort to be manhandled back into firing position after each discharge. John Jacob Astor IV, scion of one of the country's greatest fortunes, earned the rank of colonel by investing \$100,000 from his personal funds to equip his newly organized Astor Battery with six 3-inch Hotchkiss pieces. The unit fought with distinction in Cuba and later at Manila.

The United States also fielded an early machine gun. Originally patented by Richard Jordan Gatling (1818–1903) and manufactured by Colt in Hartford, Connecticut, the Model 1895 Gatling gun saw service with both the U.S. Army and the U.S. Navy during the war.

Weighing 594 pounds, the Model 1895 mounted 10 .30-caliber barrels attached to a conventional artillery carriage by a traversable mount. Firing was accomplished by turning a crank mounted to the rear of the piece that, in turn, rotated the barrels and automatically loaded the chambers from a vertical box magazine, cocked the mechanism, fired the round, and ejected the spent casing.

In Cuba, Major General William Shafter's V Corps included Lieutenant John Henry Parker's hastily organized Gatling Gun Detachment. Parker and his detachment faced a number of obstacles in that the weapons were new to the men who had recently been reassigned from infantry units and had no previous training in their use. Moreover, no spare parts or repair tools were provided. Parker's detachment, however, performed with distinction at the Battle of San Juan Hill in which it provided close supporting fire to the infantry assault, the first use of machine guns in that role by the U.S. Army. Three of Parker's four guns expended 6,000 rounds of ammunition per gun and proved a key factor in the assault's success.

The primary Spanish field piece during the war was the 75-mm Krupp Mountain Gun, a product of the German arms firm. Designed by Alfred Krupp, it was of all-steel construction and entered production in 1895. It was a relatively modern breechloading rapid-fire gun weighing 855 pounds and had a range of 4,210 yards. It accepted modern smokeless ammunition and was equally effective firing common shell, shrapnel, and canister.

Illustration of the Gatling gun, Model 1895. The Gatling Gun Detachment of the U.S. Army V Corps played an important role in the Santiago Campaign in Cuba. (James Rankin Young and J. Hampton Moore, *History of Our War with Spain*, 1898)

Although artillery played a role in all campaigns of the war, it played its most critical and celebrated role in the July 1, 1898, Battle of San Juan Hill. The Spanish defenses, positioned along the ridge line, consisted of a series of trenches and a blockhouse manned by some 750 troops supported by 5 field pieces. The attacking forces included 15,000 American troops as well as 4,000 local guerrillas equipped with 12 field pieces and 4 Gatling guns. Shortly after dawn, the American artillery opened fire on the blockhouse on San Juan Heights at a range of approximately 2,600 yards. The Spanish then returned fire with shrapnel, and counterbattery fire ensued as the infantry and dismounted cavalry made preparations for the assault. When the infantry finally began the attack in the early afternoon, both the artillery batteries and the Gatling Gun Detachment provided steady and effective supporting fire.

Following the battle, the artillery advanced to the top of the hill's ridge line where, on July 2, the 10th Cavalry's artillery detachment helped repel a Spanish counterattack.

Artists and Illustrators

Artists and illustrators played an important role in the Spanish-American War. U.S. newspapers and journals frequently used the drawings and illustrations of prominent artists and illustrators to stimulate and enhance the American spirit of national assertiveness, the American will to fight, American sympathy for the Cuban revolutionaries, and American disenchantment with autocratic Spanish colonial rule in Cuba.

Although the drawings and illustrations did not by themselves create the hostile American public sentiment that led to the Spanish-American War, they did reflect the growing war fever in the United States and brought it to the forefront of public awareness. Ultimately, this enhanced jingoistic tendencies among the American public. Two newspaper publishers in particular, William Randolph Hearst and Joseph Pulitzer, already engaged in a fierce competition for readers, saw in the impending conflict with Spain a chance to increase newspaper circulation.

Capitalizing on growing American national aggressiveness in the months leading up to the Spanish-American War, Hearst and Pulitzer published vivid anti-Spanish articles augmented with graphic drawings and illustrations. The articles as well as the drawings and illustrations that accompanied them enraged an American public already predisposed to forcibly ending Spanish colonial

rule in Cuba. These illustrations, which illuminated Spanish brutality during the Cuban War of Independence (1895–1898), seldom depicted Cuban acts of barbarism. Drawings vividly depicting the explosion of the U.S. battleship *Maine* in February 1898 inflamed American sentiment against continued Spanish occupation of Cuba. In conjunction with the work of yellow journalists, these drawings and illustrations roused American national sentiment to the point of demanding war with Spain.

Hearst, the owner of the *New York Herald*, took great interest in the plight of Cuban revolutionaries during the Cuban War of Independence. He saw the uprising in Cuba as a chance to boost circulation of his newspaper over his chief rival, Pulitzer, the owner of the *New York World*. When Hearst arrived in New York City in 1896, Pulitzer was already successfully making use of yellow journalism. The term “yellow journalism” came from a popular *New York World* comic strip “Hogan’s Alley” that featured the “Yellow Kid,” named for the color of his clothing. Hearst copied Pulitzer’s sensationalistic style and lured “Hogan’s Alley” artist Richard Felton Outcault, credited with making the comic strip a permanent part of American popular culture, to the *New York Herald* with a substantially increased salary. Pulitzer then hired George B. Luks to draw a second Yellow Kid, and the battle between the Yellow Kids was launched. Both Hearst and Pulitzer

A fanciful illustration from 1898, “A solution to the *Maine* explosion,” depicting two men about to blow up the *Maine* with an underwater mine. Although there was no proof of this, speculation was rife in the American press that the Spanish government was behind the destruction of the American warship. (Library of Congress)

Frederic Remington's painting *Charge of the Rough Riders at San Juan Hill* was very popular and helped foster the image of his friend Colonel Theodore Roosevelt as a war hero. (Wildside Press)

used graphic illustrations and incendiary cartoons to increase circulation. They sent artists and illustrators to record events in Cuba and emphasize (or exaggerate) the most violent aspects of Spanish attempts to end the Cuban War of Independence. Graphic renditions of Spanish brutality usually enhanced the articles written for the yellow journalism tabloids.

In 1896, the Spanish government appointed General Valeriano Nicolau y Weyler to quell the Cuban War of Independence. Weyler's *reconcentrado* (reconcentration) policy, which resulted in the deaths of thousands of Cubans, was a favorite target of American artists and illustrators. Hearst, who nicknamed Weyler "the Butcher," bombarded the American public with gruesome illustrations of atrocities in the concentration camps. Drawings and illustrations of starving children and mass executions appeared on the front pages of the major newspapers. For example, the front page of the March 19, 1897, *Indianapolis News* featured an illustration titled "An Unexpected Feast for Havana Reconcentrados" that portrayed starving Cubans eagerly devouring dead cattle that had washed ashore.

After the Spanish government recalled Weyler to Spain and initiated a more conciliatory policy in late 1897, Hearst searched for new justifications for U.S. intervention in Cuba. To boost readership and further his agenda, he sent Frederic Remington, one of the most popular illustrators of the day, to find new atrocities. Remington, unable to uncover any definite Spanish malfeasance in Cuba, reported to Hearst, "Everything quiet. No trouble here. There will be no war. I wish to return." Hearst reportedly replied, "Please remain. You furnish the pictures and I will furnish the war."

The sinking of the *Maine* on February 15, 1898, increased newspaper coverage of events in Cuba, fueled tensions between the United States and Spain, and increased pressure on President William McKinley to declare war on Spain. Published illustrations purported to show how Spanish saboteurs had fastened an underwater mine to the hull of the ship and then had detonated it from shore. Most American newspapers, without any solid evidence, asserted that the sinking of the *Maine* was not an accident. Americans across the country, fueled by the persuasiveness of yellow journalism, felt justified in demanding that McKinley demand that Spain relinquish control of Cuba. On April 4, 1898, the *New York Journal* issued a 1 million-copy press run dedicated to the war in Cuba. American war sentiment, fueled by yellow journalism and augmented by its vivid illustrations, was an important factor in convincing McKinley to ask Congress for a declaration of war later that month.

Once the war began, American artists and illustrators regularly accompanied American troops into battle. The artists and illustrators highlighted the exploits of American heroes such as Commodore George Dewey and especially Lieutenant Colonel Theodore Roosevelt. Artist Howard Chandler Christy accompanied Roosevelt in the fighting on Kettle Hill and San Juan Hill. Artist Henry Reuter dahl, one of America's leading maritime painters, painted prominent U.S. Navy warships during the war. In October 1898, William Glackens, the only artist sent by the popular *McClure's Magazine* to Cuba, published a series of five drawings depicting Roosevelt's assault on San Juan Heights. His eyewitness account effectively captured the atmosphere of the battle. Remington's *The*

Charge of the Rough Riders vividly (and inaccurately) portrays the charge of the Rough Riders up Kettle Hill and Roosevelt's heroism. Indeed, Remington's portrayal of Roosevelt as a war hero was crucial to the latter's political success after the war.

Aserraderos Conference

Event Date: June 20, 1898

Meeting between top U.S. military commanders and Cuban revolutionary General Calixto García y Iñiguez on June 20, 1898, at Aserraderos, Cuba. Aserraderos is located along the coast in the eastern part of the island some 21 miles west of Santiago de Cuba. Sometimes referred to as the Shafter-García Conference after its two principal figures—General García and U.S. Army major general William R. Shafter—the meeting was convened with the purpose of coordinating U.S. and Cuban Revolutionary Army military efforts in eastern Cuba. This was in anticipation of an imminent American landing in the region. Indeed, on the same day of the conference, June 20, some 16,000 U.S. troops (comprising V Corps) under the command of Shafter had arrived in the territorial waters of eastern Cuba.

On June 19, García had met with Rear Admiral William T. Sampson onboard the battleship *New York* in order to discuss overall strategy for the upcoming campaign. It was agreed upon at that time that García would parley with Shafter the following day. The June 20 conference was held in García's personal tent that doubled as headquarters for the rebels in eastern Cuba. Participants in addition to García and Shafter included Brigadier General William Ludlow, Rear Admiral Sampson, and one of García's aides. Shafter was reportedly immediately impressed with García and his assessment of the strategic situation.

First on the agenda were the details of the landing of U.S. forces on Cuba. Here García urged the Americans to use Daiquirí as an embarkation point and beachhead, counsel that the Americans

wisely followed. García ensured that the Cuban insurgents would demonstrate against the Spanish, drawing the Spanish on themselves in order to allow a rapid and uneventful U.S. landing. He also provided the Americans with intelligence on Spanish positions and troop strength.

With Sampson's apparent agreement, Shafter informed García that he planned for his men to take and occupy all of the defensive positions at the mouth of the harbor at Santiago, which would presumably give American naval forces unfettered access to the Spanish squadron bottled up there. This meant, at least according to unbiased observers, that taking the city of Santiago de Cuba was secondary to the main goal of destroying the Spanish squadron.

The meeting lasted for one and a half hours. What would later make it controversial had nothing at all to do with García or the Cubans. Rather, as the U.S. landing progressed, it quickly became clear that Shafter intended to capture and occupy Santiago de Cuba and, further, to engage in a lengthy land campaign on the eastern part of Cuba. This seemed to have been in contradiction to his pronouncement at Aserraderos as well as his assurances to Sampson. While Shafter's instructions from the War Department authorized him to both seize Santiago de Cuba and aid in the destruction of Admiral Pascual Cervera y Topete's naval forces, he construed it to mean that the city should be taken first before the Spanish squadron was neutralized. Shafter's change in plans—although he denied having done so—resulted in a major rift between the U.S. Navy and the U.S. Army and embroiled Shafter in significant controversy during and after the naval battle at Santiago Bay of July 3, 1898.

Asiatic Squadron

U.S. Navy squadron formed to protect American interests in the Far East. Since 1835 the United States had maintained in Asia a small naval presence originally known as the Asiatic Station. The chief focus of U.S. interest was China and Japan.

In early January 1898, when Commodore George Dewey assumed command at Nagasaki, Japan, the Asiatic Squadron numbered only four ships: the protected cruisers *Olympia* (flagship) and *Boston*, the gunboat *Petrel*, and the side-wheel steamer *Monocacy*. Resupply was a major problem until February of that year when the gunboat *Concord* arrived with much-needed ammunition. Anticipating hostilities

The protected cruiser *Olympia*, flagship of the U.S. Asiatic Squadron, in Hong Kong just prior to the start of the Spanish-American War. The cruiser had been repainted from peacetime white and buff to wartime gray. (Naval Historical Center)

with Spain, Dewey relocated the squadron to Hong Kong. His ships remained at that British colony until the beginning of the war in April.

The squadron was augmented by the arrival in Hong Kong of the protected cruisers *Baltimore* and *Raleigh* and the revenue cutter *McCulloch*. Dewey also purchased two supply steamers, the *Nanshan* and the *Zafiro*. Upon the outbreak of war and the British government's proclamation of neutrality, Dewey was obliged to quit Hong Kong. He moved his ships to Mirs Bay in Chinese territorial waters some 30 miles distant.

On April 23, Dewey received the anticipated orders from Washington to operate against the Spanish Navy squadron in the Philippines. Destruction of the Spanish warships was a necessary condition prior to the dispatch of any U.S. ground troops to the islands. After receiving intelligence on Spanish naval dispositions in the Philippines, Dewey departed Mirs Bay on April 27.

The Asiatic Squadron entered Philippine waters on April 30, 1898. Early on the morning of May 1, Dewey's ships engaged and defeated Spanish rear admiral Patricio Montojo y Pasarón's Philippine Squadron in the Battle of Manila Bay. Dewey then blockaded the city of Manila from the bay and landed limited forces to secure the principal Spanish naval base at Cavite, where he awaited the arrival of American ground forces. Over the next months, additional U.S. warships joined the squadron. These included the protected cruiser *Charleston* and the double-turreted monitors *Monadnock* and *Monterey*. Following the arrival of the U.S. VIII Corps, the squadron provided gunfire support during the First Battle of Manila on August 13, 1898.

The Asiatic Squadron also played an important role in supporting the China Relief Expedition of 1900 against the Boxer Rebellion. U.S. marines and sailors from the squadron participated in the operations at Tianjin (Tientsin), which had been taken over by the Boxers. In 1902, the Asiatic Squadron was redesignated the Asiatic Fleet.

Asomante Hills, Engagement at

Event Date: August 12, 1898

Skirmish between American and Spanish forces that occurred on August 12, 1898, at Aibonito Pass, Puerto Rico. Alternately known as the Battle of Asomante Hills and Aibonito, it was the last engagement of the Puerto Rico Campaign. On August 9, 1898, Spanish forces retreated to the stronghold of Aibonito after their battle

with American forces at Coamo earlier that day. Aibonito is located within the Cayey mountain range to the east of Coamo in east-central Puerto Rico. The terrain between Aibonito and Coamo features many ravines and impassable ridges that made regular military operations through them nearly impossible. Travel between the two cities was conducted on the paved military road, which twisted through crooked valleys, doubled around sharp promontories, skirted steep overhanging cliffs, and hugged the sides of the precipitous slopes.

To prevent Spanish forces from destroying the much-needed bridges along the road, Major General James H. Wilson deployed Troop C (Brooklyn) of the New York Volunteer Cavalry commanded by Captain Bertram T. Clayton to pursue the fleeing Spaniards. Just over five miles beyond Coamo, Clayton's troops came under fire from Spanish batteries placed on two hills north of Aibonito: Asomante and El Penon. Along with the batteries, the Spanish infantry had entrenched four companies of the Cazadores Patria Battalion, 70 mounted guerrillas from the 6th Provision Battalion, two provisional companies from the civilian guards, police units, and the 9th Volunteers. In all, there were some 1,280 Spanish troops on the slopes below their artillery batteries. This gave the Spanish complete coverage of the highway for several miles in either direction. The cross fire produced by the batteries and troops forced Clayton, under heavy Spanish fire, to halt his pursuit.

After reconnoitering the Spanish forces at Aibonito on August 11 and 12, Wilson became convinced that a frontal assault was entirely impossible. The Spanish positions on Asomante and El Penon commanded the steep road, allowing the Spanish to fire down on the Americans and preventing American batteries from deploying. Wilson's men then found two practical routes around both the Spanish positions, which would place American troops across the Spanish line of retreat. Both routes were obscured from Spanish troops and were exceedingly steep paths, but the trail to the left was the shorter distance. Wilson decided to utilize this route for his turning movement, and on the morning of August 12, he instructed Brigadier General Oswald H. Ernst to take the mountain trail that branched westward and northward over the divide to Barranquitas. Once at Barranquitas, Ernst would travel down the highway from the village of Honduras, placing the American forces to the rear of Aibonito.

Knowing that at any minute he might receive word of an armistice, Wilson delayed Ernst's flanking movement and sent Colonel Tasker H. Bliss under a flag of truce through the Spanish lines demanding their surrender. The message was also forwarded to the governor-general in San Juan. While the Americans waited for a response, Spanish forces at Aibonito were being reinforced from Caguas, bringing the total number of Spanish defenders to some 1,300 men. The Spanish then refused the American demands. Wilson now instructed Ernst to begin his flanking movement.

To divert Spanish attention from Ernst's movement, Wilson directed Captain R. D. Potts's Battery F of the 3rd U.S. Artillery with its six 90-millimeter (mm) field pieces to take up a position on a

low ridge some 2,150 yards from the batteries on Asomante and 400 yards below them. Opening fire at 1:25 p.m., the Spanish artillery pieces were silenced by 2:15. The American guns now turned their attention to the Spanish infantry entrenched on the slopes, driving many from their trenches. Subsequently, it appeared that the Spanish had received reinforcements, with the Americans finding themselves under a hail of shells and bullets. With Battery F's position untenable, the guns were withdrawn. The battery suffered one killed (a lieutenant commanding one of the guns) and six wounded.

Shortly before Ernst began his flanking movement, Major General Nelson A. Miles sent word to Wilson that hostilities had been halted with Spain. The Spanish-American War and the engagement at Aibonito were now concluded.

Astor, John Jacob, IV

Birth Date: July 13, 1864

Death Date: April 15, 1912

Investor, businessman, and member of a prominent and wealthy American family who served as a lieutenant colonel during the Spanish-American War. John Jacob Astor IV was born at his family's estate in Rhinebeck, Dutchess County, New York, on July 13, 1864. He was the son of William Backhouse Astor Jr. and the great-grandson of John Jacob Astor, the first American multimillionaire. John Jacob Astor IV studied at St. Paul's School in Concord, New Hampshire, before graduating from Harvard University in 1888. In 1891, he married Ava Lowle Willin, daughter of a wealthy Philadelphia family.

Astor increased his fortune by wisely investing in real estate. In 1897, he built the Astoria Hotel in New York City that became the Waldorf-Astoria when joined to the adjoining hotel built by his cousin William Waldorf Astor. John Jacob Astor also built New York's storied Hotel St. Regis in 1905 and the Hotel Knickerbocker in 1906.

In April 1898, at the outbreak of the Spanish-American War, Astor had just returned from a cruise to Cuba on his yacht, the *Nourmahal*.

Businessman John Jacob Astor IV was the great-grandson of John Jacob Astor, America's first millionaire. Astor IV served as a lieutenant colonel in the Spanish-American War. (Library of Congress)

Favoring war with Spain since 1897, he immediately went to the War Department to volunteer for military service. As a member of one of the wealthiest families in the United States, he could have easily avoided military service. Nevertheless, much like future president Theodore Roosevelt whose family also lived in Dutchess County, Astor believed that it was his patriotic duty to serve his country. Appointed a lieutenant colonel, he received command of a battalion of volunteers. He spent \$100,000 of his own money to equip an artillery battery of volunteers. The Astor Battery served effectively in Cuba as well as the Philippines. He also lent his yacht to the War Department for the duration of the war. He was promoted to the rank of colonel when he was discharged from service in September 1898.

The Spanish-American War was the first U.S. war in which the motion picture camera played a role. Astor appeared in *President McKinley's Inspection of Camp Wikoff* (1898), which reveals the

vastness of the quarantine camp in New York to which the troops arriving home from Cuba were sent to be certain that they were free of communicable diseases. He also appeared in *Col. John Jacob Astor, Staff and Veterans of the Spanish-American War* (1899).

Astor divorced Ava in 1909 and two years later married 18-year-old Madeline Talmadge Force. The marriage caused a scandal in New York high society, and the Astors took an extended honeymoon in Europe and Egypt to avoid incessant gossip. Astor's wife became pregnant on the trip and insisted that the couple return to the United States so that their child could be born on American soil. The Astors booked passage on the maiden voyage of the *Titanic*. Although his wife survived, Astor was one of more than 1,500 people who died when the ship sank in the North Atlantic on April 15, 1912.

Atrocities

Acts of extreme cruelty against individuals or groups during wars or insurrections and that may involve military personnel or civilians. Atrocities were known to have taken place in Cuba and the Philippines. Some occurred prior to the outbreak of war in April 1898, while others took place after the war had officially ended during the ensuing American occupation of the Philippines and the Philippine-American War (1899–1902). No side was immune from committing such acts, which involved the Spanish, the Americans, the Cuban rebels, and the Filipino rebels. Atrocities of this period are somewhat hard to establish for two primary reasons: alleged incidents were often sensationalized by the salacious yellow press, and actions that would today be perceived as atrocities were not always seen that way at the time.

During Cuban efforts to throw off Spanish control during the Cuban War of Independence (1895–1898), both sides engaged in atrocities. Although perceived Spanish brutality in Cuba was a key factor in the U.S. decision to declare war on Spain, the perception that the Spanish deliberately and routinely committed atrocities was primarily the creation of the yellow press, which ran stories reported by Cuban revolutionaries without scrutiny or investigation. Spanish governor-general Valeriano Weyler y Nicolau attempted through his *reconcentrado* (reconcentration) policy of 1896 to weaken the insurgency in the countryside. Weyler initially ordered civilians in one province to detention camps near garrisoned military headquarters. He also gave military commanders wide powers to execute people who evaded the requirement to register, and he subjected those who aided the rebels to military law. Later, the reconcentration camps

Starving Cubans in Matanzas, 1898. Many innocent civilians suffered as a result of Spanish governor-general Valeriano Weyler's *reconcentrado* policy. (Library of Congress)

were greatly expanded. The camps were overcrowded, and shelter consisted mostly of dilapidated warehouses without plumbing. The government also failed to provide adequate food or arable land for the internees. Between 200,000 and 400,000 civilians in the camps died from diseases such as yellow fever and smallpox or starvation during the two years that the policy was in effect.

The Cuban rebels also committed atrocities as part of their military strategy, but few of these are well documented. One major exception is José Maceo Grajales's march at the head of 6,000 men through Havana Province in the spring of 1897. In an effort to put economic pressure on Spain to end its rule of the island, the rebels raided fellow Cubans' shops and killed civilians working on railways and in sugarcane fields.

Atrocities were relatively few during the brief Spanish-American War of the following year. One grisly act occurred when Americans in the Cuban village of El Caney placed some prisoners of war captured during the Battle of San Juan Hill under the control of Cuban rebels, who murdered 40 of the prisoners by decapitation. Some historians have argued that the U.S. Navy's bombardment of the city of Santiago de Cuba for two days prior to the August 12, 1898, truce may also be considered an atrocity.

The irregular character of the Philippine-American War was more brutal and involved frequent atrocities committed by both the American and Filipino insurgents, although actual evidence of Filipino atrocities were somewhat rare. The infamous Sandiko Order, a document supposedly issued by General Teodoro Sandiko in early 1899 that called for Filipinos in Manila to kill all whites in the city, was actually a creation of American propaganda. After con-

ventional methods of resistance failed, Filipino leader Emilio Aguinaldo y Famy adopted guerrilla warfare tactics that Americans considered barbaric and atrocious. In the most remarkable instance of this, the Balangiga Massacre of September 28, 1901, insurgents concealed bolo knives in children's coffins and under women's clothing to prepare for a surprise attack on an American camp at Balangiga on the island of Samar. More than 90 percent of Company C of the U.S. 9th Infantry Regiment became casualties.

American newspapers also routinely reported that Filipino insurgents killed captives and regularly mutilated American military dead. Although the veracity of the accounts is questionable and Aguinaldo had prohibited such behavior, it is likely that there were isolated instances of this.

Americans certainly believed the stories they heard of Filipino cruelty and reacted in part by considering noncombatants to be legitimate targets. One infamous example is Brigadier General Jacob H. Smith's orders to Marine Corps major Littleton W. T. Waller regarding the treatment of natives on Samar. Smith ordered Waller to "kill and burn," to take no prisoners, to turn the interior of Samar into "a howling wilderness," and to regard every male over the age of 10 as a combatant who could be executed. Although Waller refused to apply Smith's standard, his 6th Separate Brigade of 300 marines routinely burned entire villages and slaughtered livestock during an aggressive pacification campaign in the autumn of 1901. Later, Waller ordered the execution of 11 supposedly mutinous Filipino porters without a trial because he did not have the personnel to monitor prisoners.

Another example of atrocities in the Philippines revolved around Brigadier General James Franklin Bell's decision to create concentration camps in the southern province of Batangas on the island of Luzon. Civilians were ordered to move with their possessions into American-controlled areas. All property, including homes and farms, outside the secured areas was subject to destruction to deny support to insurgents. Anyone outside the fences was to be captured or shot. The overcrowded and unsanitary conditions in the camps led to the deaths of more than 11,000 Filipino civilians. With regard to the insurgents themselves, American soldiers are reported to have killed prisoners and those in the act of surrendering. There is also some evidence that the soldiers were occasionally ordered to do so.

In January 1902, Republican senator Henry Cabot Lodge's Committee on Insular Affairs convened hearings on American atrocities, which revealed that American soldiers believed that extreme measures in the Philippines were justified for a variety of reasons. Witnesses testified that American soldiers burned villages and routinely employed torture. Four years later many newspapers condemned Major General Leonard Wood's attack against Moro insurgents holed up in Bud Dajo Crater (March 5–8, 1906) as an atrocity because American artillery killed or wounded many women and children as well as insurgents.

While atrocities have been a part of warfare since the beginning of history, the modern press's reporting of such acts and increased

government scrutiny of them before, during, and after the Spanish-American War led to a general heightened awareness of such acts.

Augustín y Dávila, Basilio

Birth Date: 1840

Death Date: 1910

Spanish Army general and governor-general of the Philippines. In a surprise move on the eve of war with the United States, on April 11, 1898, Spanish premier Práxedes Mateo Sagasta appointed Lieutenant-General Basilio Augustín y Dávila captain-general and governor-general of the Philippines, replacing General Fernando Primo de Rivera y Sobremonte in these posts. Knowing that there would be no military support from Spain before an American attack, Augustín attempted to mobilize the civilian population. On April 23, he issued a proclamation calling on all Filipinos to rally to the “glorious Spanish flag.” He claimed that the United States was responsible for the war and that U.S. naval forces would be coming to the Philippines to destroy the Catholic Church and kidnap Filipinos to serve as agricultural and industrial laborers. He also predicted that Spain would win the war. Commander of the U.S. Asiatic Squadron Commodore George Dewey later distributed Augustín’s proclamation to his ships with instructions that it be read to the crews, who greeted it with derision. Augustín also instituted martial law in Manila.

Believing that Spain could win a naval confrontation with Dewey’s squadron, Augustín opposed Rear Admiral Patricio Montojo y Pasarón’s request that his squadron leave Manila. At the same

time, however, in an effort to control the insurgents, Augustín scattered most of his troops throughout the islands in isolated garrisons instead of concentrating them at Manila. As a consequence, the insurgents were able to defeat many of the isolated garrisons.

As an additional move to mobilize the population, Augustín established an advisory assembly led by Pedro A. Paterno that called on Filipinos to rally to Spain. Infiltrated by proindependence Filipinos, however, it soon disbanded.

Following the American victory in the Battle of Manila Bay on May 1, Augustín established a Consultative Assembly and a Filipino militia on May 4 in the hope of winning broader Filipino support. This effort was a failure by the end of May. With insurgent forces increasingly active, Augustín was forced to withdraw his scattered troops around Manila back to the Zapote Line, a system of blockhouses just outside the city established to prevent an invasion of Cavite Province. It soon proved untenable as well. Augustín was convinced that an attack on Manila was forthcoming and did everything he could to strengthen the immediate city defenses. He realized, however, that he could not defend the city without significant reinforcements from Spain. His appeals to Madrid were supported by Admiral Montojo. These appeals led the Spanish government to order a naval squadron to the Philippines under Admiral Manuel de la Cámara y Liber Moore with supplies and reinforcements.

When he learned that Cámara’s squadron had been recalled to Spain and with insurgent strength growing and unwilling to negotiate with them, Augustín opened surrender talks with Dewey. Learning of this and hoping for a more vigorous prosecution of the war, the Sagasta government replaced Augustín on August 4, 1898, with General of Division Fermín Jáudenes y Alvarez. Augustín was surreptitiously evacuated by a German cruiser the next day.

Auñón y Villalón, Ramón

Birth Date: 1844

Death Date: 1925

Spanish Navy admiral and minister of the navy. Ramón Auñón y Villalón was born in Morón, Spain, in 1844. Joining the navy at age 15, he took part in campaigns in Africa (1859–1860), Santo Domingo (1863), and Cuba (1879). He enjoyed a reputation in the

Spanish Navy captain Ramón Auñón y Villalón replaced Segismundo Bermejo as Spanish minister of the navy following Commodore George Dewey's victory over Rear Admiral Patricio Montojo y Pasarón's squadron in the Battle of Manila Bay. (*Photographic History of the Spanish-American War, 1898*)

navy as an effective manager and had commanded a battleship. In a conference of senior naval officers held in Madrid on April 25, 1898, Auñón sided with the majority that supported sending Rear Admiral Pascual Cervera y Topete's squadron to the West Indies. Following Commodore George Dewey's victory over Rear Admiral Patricio Montojo y Pasarón's squadron in the Battle of Manila Bay on May 1, 1898, Captain Auñón replaced Segismundo Bermejo y Merelo as minister of the navy on May 18.

Auñón had an unrealistic view of the military situation. Political pressure led him on May 19 to cancel the May 12 order by his predecessor for Cervera's squadron to return to Spain. Auñón also ordered part of the Spanish Navy to attack U.S. coastal cities, only to cancel that order on June 15 when he commanded Manuel de la Cámara y Libermore to sail to Manila and engage the American squadron under Dewey.

Auñón was soon forced to deal with the deteriorating situation at Santiago. Captain-general of Cuba General Ramón Blanco y Erenas urged that the squadron sortie and engage Rear Admiral William T. Sampson's much more powerful U.S. North Atlantic Fleet blockading Santiago, while Cervera recommended that the squadron be scuttled to save lives. Cervera considered it ridiculous to risk sacrificing 2,000 lives for the sake of honor. Ultimately Auñón sided with Blanco and placed Cervera under his command, explaining that he had taken this step "to give perfect unity to conduct of war in [the] island." Blanco then ordered Cervera to sortie, and the result was the destruction of the Spanish squadron in the Battle of Santiago de Cuba on July 3. On July 23, Auñón ordered Cámara to return to Cádiz.

Upon leaving the post of naval minister, Auñón served as captain-general of the Maritime Department of Cartagena. Awarded the title of Marqués de Pílares for his services to the nation, he died in 1925.

B

Bacon Amendment

Amendment that would have rejected U.S. acquisition of the Philippine Islands. Introduced in the U.S. Senate on January 11, 1899, by Democrat Augustus O. Bacon of Georgia, the Bacon Amendment was strongly supported by antiexpansionist members of the Democratic Party and by members of the Anti-Imperialist League. It was opposed by most Republicans and those who wanted the United States to acquire an overseas empire. The Bacon Amendment disclaimed any intention by the United States to exercise permanent sovereignty, jurisdiction, or control over the Philippines. Because Bacon believed strongly that the Philippines should become an autonomous nation, the amendment also advocated early recognition of Philippine independence as soon as the islands established a stable government.

Following an animated debate, the Bacon Amendment was defeated by a vote of 30 to 29. Vice President Garret A. Hobart, a Republican, cast the tie-breaking vote.

Bacoor Bay

Shallow inlet located off Manila Bay in Cavite Province, the island of Luzon, in the Philippines. Bacoor Bay is about 10 miles south of Manila. During the Battle of Manila Bay on May 1, 1898, two of the warships of Rear Admiral Patricio Montojo y Pasarón's squadron, the gunboats *General Lezo* and *Velasco*, as well as the transport *Manila* were anchored in Bacoor Bay for repairs. Following the battle, the Spanish burned the *General Lezo* and the *Velasco*, but the U.S. Navy captured the *Manila* on May 4 and used it to transport American troops.

In August 1898, the nearby small town of Bacoor served as the temporary headquarters for Filipino nationalist leader Emilio Aguinaldo y Famy and his nationalist forces.

Bagley, Worth

Birth Date: April 6, 1874

Death Date: May 11, 1898

U.S. Navy officer and the first U.S. officer of any service to be killed in the Spanish-American War. Born in Raleigh, North Carolina,

U.S. Navy ensign Worth Bagley, the first American officer killed in the Spanish-American War. (*Photographic History of the Spanish-American War*, 1898)

on April 6, 1874, Worth Bagley attended the United States Naval Academy at Annapolis, where he starred on the football team and graduated in 1895. He served two years on the battleships *Indiana* and *Maine*. Promoted to ensign on July 1, 1897, he was assigned to the new torpedo boat *Winslow* and became its executive officer on its commissioning.

On the morning of May 11, 1898, the *Winslow*, commanded by Lieutenant John B. Bernadou, accompanied the gunboat *Wilmington* and the armed revenue cutter *Hudson* and entered Cárdenas Harbor, Cuba. There the U.S. ships came under fire from several Spanish gunboats. In the engagement, the *Winslow* was hit and largely disabled. Bagley was supervising the backing of the torpedo boat toward the *Hudson* when the torpedo boat was struck by another Spanish shell. He and four sailors were killed by the shrapnel. The *Hudson* was eventually able to tow the *Winslow* to safety.

Bagley was the only U.S. naval officer killed in battle during the Spanish-American War. His funeral in Raleigh, North Carolina, saw a massive patriotic outpouring, attracting thousands of people. Four U.S. Navy ships—a torpedo boat and three destroyers—have been named for Bagley (the last destroyer for both Bagley and his brother, Admiral David D. Bagley).

Baker, Edward Lee, Jr.

Birth Date: December 28, 1865

Death Date: August 26, 1913

African American soldier and Medal of Honor winner. Born in Laramie County, Wyoming, on December 28, 1865, Edward L. Baker Jr. enlisted in the U.S. Army in Cincinnati, Ohio, in 1882. He served with both the famed African American 9th and 10th U.S. Cavalry in the American West during the Indian Wars and attained the rank of sergeant major in 1892.

Following the start of the Spanish-American War, Baker went to Cuba with V Corps and fought in the Battle of Las Guásimas on June 24, 1898. Twice wounded during the Battle of San Juan Hill on July 1, 1898, he left cover and, while under hostile fire, rescued a wounded comrade in danger of drowning. This heroic act earned him the Medal of Honor in 1902.

Following the Spanish-American War, Baker was promoted to captain in the Philippine Scouts and saw service in the Philippine-American War, commanding an African American infantry unit. He retired from the army in 1902. Baker died in Los Angeles, California, on August 26, 1913.

Balangiga Massacre

Event Date: September 28, 1901

Ambush and killing of U.S. soldiers at Balangiga on the island of Samar by Filipino insurgents on September 28, 1901. During the Philippine-American War (1899–1902), American troops sought to end insurrections on dozens of islands throughout the Philippines. The Americans utilized a wide variety of means to accomplish this. The campaign on the island of Samar, directed by Brigadier General J. Franklin Bell, witnessed some of the bloodiest incidents of the entire war, including the Balangiga Massacre.

During August and September 1901, Company C of the 9th U.S. Infantry Regiment occupied the town of Balangiga, increasing tensions between American troops and Filipino inhabitants. On September 28, 1901, approximately 200 Filipinos, wielding bolos, axes, and farm implements, attacked the American garrison while it was at breakfast. The U.S. troops were completely unprepared, and their firearms were stacked in a separate building. Some of the soldiers managed to resist their attackers with improvised weapons, but 54 of the 78 members of the company were hacked to death in the initial onslaught. Only 4 men emerged unwounded from the vicious assault. The survivors fled from the village, leaving their dead and dying comrades behind. The Balangiga Massacre was one of the worst U.S. defeats in the entire war, and the American response to it would provoke outrage in the United States and throughout the world.

The following day, two American companies returned to Balangiga, which they now found deserted. They recovered the American bodies and subsequently burned the village to the ground. Upon hearing of the incident, Brigadier General Jacob H. Smith received command over the pacification of Samar. Smith promptly ordered Marine Corps major Littleton Waller to take no prisoners in the subjugation of the island. Rather, he and his troops were to burn every settlement and kill any person capable of resistance who did not surrender and immediately collaborate with U.S. forces. In short, Smith ordered Waller to turn Samar into "a howling wilderness." To justify his orders, Smith cited General Orders Number 100, initially issued in April 1863 during the American Civil War as a guide to American troops in the field.

Smith's orders resulted in a massive assault against Filipino civilians. The inhabitants of Samar were massacred by the thousands. Those who were not killed by American troops faced starvation when Smith ordered all trade to Samar halted. He essentially terrorized the population into ceasing support for Filipino guerrillas led by General Vicente Lukban. Although American troops continually patrolled the interior of the island, burning houses and killing inhabitants, they could do little to hinder guerrilla operations.

When the behavior of American troops in Samar and the specific orders issued by Smith became public knowledge in the United States, Americans were outraged. Although subordinate commanders did not pursue Smith's goals to the fullest extent of their capabilities, thousands of civilians died in the American reprisals for the Balangiga Massacre. In 1902 both Waller and Smith were court-martialed for their actions on Samar, including charges of mass attacks upon civilians and the execution of prisoners. Smith was reprimanded and lost his command but received no other formal punishment. Waller was acquitted of all charges, primarily on the grounds that he was a marine and thus not subject to an army court-martial.

To this day, the Balangiga Massacre and the American reprisals remain among the most controversial events of the war. The lack of Filipino records and the scarcity of American survivors have clouded the details of the initial attack. Likewise, the full extent of

American retaliation will probably remain unknown and open to historical debate. Had these incidents occurred in the latter half of the 20th century, they most likely would have been characterized as war crimes.

Baldwin, Frank Dwight

Birth Date: June 26, 1842

Death Date: April 22, 1923

U.S. Army officer. Born in Manchester, Michigan, on June 26, 1842, Frank Dwight Baldwin entered the U.S. Army during the American Civil War from his native state in September 1861. Commissioned a second lieutenant, he advanced to captain during the war and was awarded the Medal of Honor for his role in the Battle of Peachtree Creek, Georgia, on July 20, 1864.

Baldwin remained in the U.S. Army after the war, accepting a commission as a second lieutenant. Posted to Kansas with the 5th Infantry Regiment, he won a second Medal of Honor (1 of only 19 servicemen to be awarded the medal twice), for an engagement at McClellan's Creek, Texas, on November 8, 1874, during the Red River War in which he freed white captives held by Native Americans. He also fought in the Great Sioux War of 1876–1877 and took part in the capture of Chief Joseph of the Nez Perce in 1877. Promoted to captain, Baldwin served on the board that investigated the Wounded Knee Massacre of 1890.

At the beginning of the Spanish-American War, Baldwin, then a major, was assigned as inspector general. Promoted to lieutenant colonel in the regular army in 1900, he was assigned to the Philippines with the 4th Infantry Regiment in Cavite Province in southern Luzon. There he took a leading role in conducting sweeps to capture suspected guerrillas. Commanding troops of the 4th and 46th U.S. Infantry Regiments in January 2, 1902, Baldwin spread his men out along a line from Imus to San Francisco de Malabon to conduct such a sweep, during which his men rounded up more than 1,700 Filipino males of military age for questioning and marched them before informants, often former guerrillas, who identified 61 as insurgents.

Promoted to colonel, Baldwin took command of the 27th Infantry Regiment and sailed to Mindanao, where he established his

forces in the south of the island. On April 13, 1902, following three ambushes of American troops by Moro insurgents, Major General Adna R. Chaffee, military governor of the Philippines, issued a declaration demanding that the *datus* (chiefs) hand over stolen property and the killers of American troops. He also authorized an expedition against Moro strongholds. At the end of April, Baldwin led the 27th Infantry with an attached battery of mountain artillery in a punitive expedition into the interior.

On May 2, 1902, near Lake Lanao, Baldwin's force of nearly 500 men attacked a Moro cotta (fort) in what came to be known as the Battle of Bayang or the Battle of Pandapatan. The Americans found the Moro defenses unexpectedly strong, with 10-foot-high walls and several bronze guns. On the second day, the Americans employed hastily constructed scaling ladders and moat-bridging tools to break through the Moro fortifications. This led to hand-to-hand combat in four lines of ditches under the walls of Pandapatan, resulting in more than 300 Moros killed including all the leading *datus*. Some 84 Moros were taken prisoner. U.S. losses were 8 killed and 41 wounded.

After this battle, Baldwin established Camp Vicars a mile south of Pandapatan. Brigadier General George W. Davis, however, believed that Baldwin had been too quick to use force and assigned Captain John J. Pershing to Baldwin's command as an intelligence officer and director of Moro affairs. This led to an unworkable arrangement in which Pershing, who was three ranks junior to Baldwin, had veto power over his superior's use of force against the Moros. This tenuous arrangement was shortly tested when survivors of the Battle of Bayang began building another cotta at Bacolod. Baldwin wanted to move immediately against the hostile Moros, but Pershing believed that continued force would only create an anti-American coalition of the surrounding *datus* and that patient diplomacy could establish friendly relations with the majority of the Moros and isolate the hostile minority. Baldwin, who was usually quick to react, grudgingly agreed.

On June 30, 1902, Davis appointed Pershing to assume command at Camp Vicars after Baldwin returned to Malabang on being promoted to brigadier general three weeks earlier. In February 1903, Baldwin assumed command of the Department of the Colorado, a post he held until his retirement from the army in June 1906. He died in Denver, Colorado, on April 22, 1923.

Baler, Philippines, Siege of

Start Date: July 1, 1898

End Date: June 2, 1899

The protracted siege of Baler in the Philippines was the last action of the Spanish-American War and an event of considerable pride for the Spanish military. Baler is the capital and oldest municipality of Aurora Province on the east coast of the Philippine island of Luzon. The town of Baler, originally known as Kinagunasan, was founded in 1609. In 1898, it was largely cut off from the outside world and could be reached only by water or on foot by jungle trails.

At Baler an isolated garrison of 57 Spanish soldiers of the 2nd Expeditionary Rifle Battalion came under attack by a large force of Filipino insurgents. At the time the Spanish defenders knew nothing of the American naval victory in the Battle of Manila Bay on May 1, 1898. Captain Enrique de Las Morenas y Foaai had command and was well aware of the threat posed by Filipino insurgents in northern Luzon. On June 1 he had ordered his men to dig a well, lay in food supplies and ammunition, and fortify the church compound of San Luís de Toledo in the town square against possible insurgent attack.

On June 28, the town residents fled into the surrounding jungle, and the next day some 800 Filipino troops under Colonel Calixto Villacorte bombarded the church with primitive cannon formed of hollowed-out palm tree trunks strengthened with iron bands. Their stone shot did little damage, however. Las Morenas rejected a demand that day as well as repeated demands thereafter that he surrender.

The insurgents then completely surrounded the church, and the siege began on July 1. Conditions for the besieged Spanish steadily deteriorated. Sanitary conditions grew steadily worse in the close confines of the church, and the food supply rapidly dwindled through consumption and spoilage. Casualties from insurgent fire claimed some of the defenders, but most of the Spanish fatalities resulted from medical conditions such as beriberi, dysentery, and fever. In September, Las Morenas came down with beriberi. His second-in-command, Lieutenant Juan Alonzo Zayas, died of wounds. When Las Morenas himself died in October, command devolved to Lieutenant Saturnino Martin-Cerezo.

Although in mid-November, under a flag of truce, the insurgents left newspapers on the church steps detailing the course of the war and the signing of the Protocol of Peace of August 12, 1898, Lieutenant Martin-Cerezo regarded it as a Filipino ruse. Nor would he believe several Spanish officials, including a uniformed Spanish officer, also under flags of truce. By December there were only 35 Spanish soldiers left alive. In a sortie in December, the defenders set fire to a nearby house, destroying it. The fire spread to adjacent homes used by the insurgents. During this time, the Spaniards managed to recover some food and vegetable seeds. Then, in early March, the defenders were able to shoot and kill a water buffalo that had wandered near the church. They recovered the carcass and butchered it for their first real meat in months.

In April U.S. lieutenant commander James Gilmore and 25 marines from the gunboat *Yorktown* arrived and attempted to rescue the Spanish, but shortly after coming ashore Gilmore and the marines were ambushed by the Filipino forces. Several marines were wounded, and Gilmore was captured and held prisoner for eight months before he escaped and managed to make his way to Manila.

Among other attempts to get Martin-Cerezo to surrender was the appearance of yet another Spanish officer under a flag of truce on May 28, 1899. Although he too was turned away, he left a copy of a Madrid newspaper, which the lieutenant initially dismissed as bogus until he read in the social column of an upcoming wedding of a fellow officer, whom he knew. The details of this notice convinced Martin-Cerezo that the paper was indeed genuine and that the war was over. On June 2, 1899, he communicated to the Filipinos that he was now ready to surrender on condition that the men be allowed to march out and be granted safe conduct to return to Spain. The Filipinos agreed. The siege had lasted 337 days.

Of the 57 men who entered the church on June 27, 1898, 35 survived. Nineteen men died, 15 from diseases. Only 2 men died from wounds, and they were the only battle casualties. Five men deserted from the garrison, 2 of them Filipino natives. Two men who had assisted in the desertion of 1 of the 5 and who had been held prisoner in the baptistery of the church thereafter were executed on the orders of Martin-Cerezo on June 1, 1899, the day before the surrender.

On September 1, the 33 Spanish survivors, including Martin-Cerezo, arrived in Barcelona to a hero's welcome. All were awarded high Spanish military decorations. Martin-Cerezo was advanced in rank to major and went on to become a major general.

On November 1, 1901, the Americans established a municipal government in Baler. The Spanish role in the siege there so impressed U.S. Army brigadier general Frederick Funston that he had Martin-Cerezo's memoir translated in 1909 and presented copies of it to his officers.

Balfour, Arthur James

Birth Date: July 25, 1848

Death Date: March 19, 1930

British political leader. Born in Edinburgh, Scotland, on July 25, 1848, Arthur James Balfour was a member of the politically powerful and wealthy Cecil family. Balfour attended Eaton and Trinity

Arthur James Balfour was British foreign secretary during the Spanish-American War and a staunch supporter of U.S. policy. (Library of Congress)

College, Cambridge University, where he studied philosophy. He soon entered politics and rapidly rose in the Conservative-Unionist Party.

In 1874 Balfour was elected a member of Parliament for Hertford and represented that constituency until 1885. In 1878 he became private secretary to his maternal uncle, Lord Salisbury, who in 1885 made Balfour president of the Local Government Board and, in 1886, secretary for Scotland with a seat in the cabinet. In 1887 Balfour became chief secretary for Ireland. In this position he rigidly enforced the Crimes Act, earning the nickname "Bloody Balfour" for this but gaining considerable political respect. Balfour was a staunch opponent of Irish home rule.

In 1891, Balfour became first lord of the Treasury and leader of the House of Commons. When the Liberals won the election of 1892, he became the leader of the Opposition in Parliament. On the return of the Conservatives to power in 1895, he resumed leadership of the House of Commons.

During the illness of Lord Salisbury in 1898 and again during the latter's absence abroad, Balfour took charge of the Foreign Office. Much of his time was spent on negotiations with Russia over its railroads in northern China and on diplomacy in southern Africa. Believing that Great Britain would need the future support of the United States, Balfour repeatedly rejected overtures by the

Spanish government and assured U.S. ambassador to Great Britain John Hay that Britain would support U.S. policy regarding Cuba. Balfour also rejected the request of British ambassador to the United States Julian Pauncefote for a Great Power meeting in Washington in April 1898 that might have forestalled the Spanish-American War because he believed that it would undermine President William McKinley.

In 1902 Balfour succeeded Lord Salisbury as prime minister and held that post until 1905. He continued as leader of the parliamentary Opposition until 1911, when he returned as a member of a coalition cabinet, serving as first lord of the Admiralty (1915–1916) and foreign secretary (1916–1919). As foreign secretary, in November 1917 he issued the Balfour Declaration by which the British government supported a national homeland for the Jews in Palestine.

Balfour played a major role in the peacemaking process at the end of World War I. Although he resigned as foreign minister in October 1919, he continued in the cabinet as president of the council and led the British delegation to the first meeting of the League of Nations in 1920 and to the Washington Naval Conference of 1921–1922. He resigned in 1922 and that same year was created Earl Balfour, Viscount Traprain. He was again president of the

council during 1925–1929. Balfour, who was also the author of several influential books of philosophy, died at Woking outside London on March 19, 1930.

Balloons, U.S. Signal Corps

A single balloon was used in just one battle during the Spanish-American War. On June 30 and July 1, 1898, a hydrogen-filled bal-

A single Signal Corps balloon provided observation support for U.S. forces in the Battle of San Juan Heights on July 1, 1898. Unfortunately, it also revealed the location of U.S. troops for the Spanish artillery. (Library of Congress)

loon was used by the U.S. Army Signal Corps to provide observation support during the land advance to Santiago de Cuba in the attack on San Juan Heights (July 1). Although observation balloons had been employed by both Union and Confederate forces during the American Civil War (1861–1865), these capabilities had been eliminated from the army until Brigadier General Adolphus Washington Greely, chief signal officer of the army, initiated a new balloon program in 1893. As tensions increased prior to the Spanish-American War, Greely ordered the balloon unit to the New York City area with the intent of providing coastal surveillance against a potential raid by the Spanish Navy. However, before the balloons could be utilized in this role, the unit was ordered to Tampa, Florida, for transport to Cuba with its single available balloon.

On joining the U.S. invasion force, the unit became the 1st Balloon Company, U.S. Army Volunteer Signal Corps. Commanded by Major (later Lieutenant Colonel) Joseph E. Maxfield, the company consisted of 4 officers and 24 enlisted personnel, including Sergeant Ivy Baldwin, an experienced balloonist responsible for the original construction of the balloon taken on the expedition. The company traveled to the landing site on the transport ship *Rio Grande* as part of the main invasion convoy to Cuba.

Major General William R. Shafter, commander of the V Corps expeditionary force, did not order the 1st Balloon Company to land immediately but instead brought it ashore to perform reconnaissance flights as he prepared for the assault on Santiago. The company finally came ashore on June 28, 1898, but was slowed by bad weather and the deterioration of the balloon's skin caused by the railcar and shipboard conditions. The balloon, which was not new, had been named *Santiago*.

The balloon was repaired sufficiently to fly three missions on June 30. The first flight carried no crew and was conducted to test its airworthiness. The second flight carried an officer of the Cuban insurgent forces. The third ascension was a formal reconnaissance mission conducted by Major Maxfield and Lieutenant Colonel George McClellan Derby, chief engineering officer for Shafter.

The reconnaissance confirmed that the ships of Rear Admiral Pascual Cervera y Topete's Spanish squadron were still in Santiago Harbor and provided some general information on the terrain and routes of approach to the Spanish defenses before Santiago. However, the observers were unable to accurately locate the Spanish forces or to learn specific details of their defensive positions.

To improve the quality of the reconnaissance in support of the attack on San Juan Heights on the morning of July 1, Derby ordered a mission conducted closer to the Spanish lines. Maxfield and Derby moved to a low altitude, and then the wagon that contained the winch device for altitude control was pulled forward, bringing the balloon into a more advantageous position. Unfortunately, the balloon moved along the primary line of advance for the troops moving up for the assault, and the progress of the force was therefore clearly marked for the Spanish defenders. As the balloon unit reached a location approximately 2,000 feet from the Spanish lines, it drew considerable artillery and rifle fire. As the crew attempted

to raise the balloon to a higher altitude to allow the desired observation effort, the balloon began losing gas and was forced down.

Contemporary reports indicated substantial dissatisfaction among combat forces that the balloon had marked their location for the Spanish artillery, especially in the area of action known as Hell's Corner. Although the 1st Balloon Company did not have any substantial effect on the outcome of the battle, it did provide some useful information and suggested the potential value for aerial reconnaissance in future conflicts.

Bandholtz, Harry Hill

Birth Date: December 18, 1864

Death Date: May 7, 1925

U.S. Army officer and prominent American colonial official in the Philippines. Harry Hill Bandholtz was born on December 18, 1864, in Constantine, Michigan. He graduated from the United States Military Academy, West Point, in 1890. Until 1898, he saw duty at various military installations and outposts and lectured at the Michigan Agricultural College (now Michigan State University). Once the Spanish-American War began in April 1898, he was deployed to Cuba.

In 1900 during the Philippine-American War (1899–1902), Bandholtz was assigned to the Philippines as a captain in the 7th Infantry Regiment and saw action in numerous skirmishes with Filipino rebels. Initially, he served on Marinduque Island, south of Luzon. On one occasion, with only an aide, he entered a guerrilla encampment and convinced its chief to give up his entire force. Bandholtz was indeed talented as a diplomat and worked closely with Filipino locals. In 1901, he transferred to Tayabas Province in southern Luzon, where he served in the quartermaster and intelligence units at Lucena. Now a major, he helped track down guerrillas and bandits, aided the Philippine Commission in establishing local administration, and collected data on enemy leader Brigadier General Miguel Malvar's following in the region. While in Tayabas, Bandholtz became popular with the provincial aristocracy. He mastered Spanish and acquired some understanding of Tagalog. The municipal councils of Filipinos that he helped to establish backed

the U.S. regime, and he gained the friendship of the province's planters, traders, attorneys, physicians, and clergy.

In February 1902, municipal authorities in Tayabas selected Bandholtz as governor to succeed Colonel Cornelius Gardener. Bandholtz occupied that post for just more than 12 months, and during his tenure he held most of the political authority in the province. He gained the trust of local chiefs and, through the use of threats and incentives, brought about a gradual pacification of the region. His political skills were evident in dealings with local and provincial officeholders as he acquainted himself with the socio-political cliques in most of the significant towns.

In April 1903, Bandholtz resigned his governorship to accept a colonelcy in and command of the newly created Philippine Constabulary's 2nd District in southeastern Luzon. He became well known for arranging the capitulation of guerrilla commander Simeon Ola in Albay Province. As constabulary chief, Bandholtz's dominion ranged from Sorsogon Province to Tayabas.

In October 1905, Bandholtz was made commander of the constabulary's 1st District with jurisdiction over central and southern Luzon and its base in Manila. Before departing for Manila, he groomed for leadership some of the younger native political leaders. His best-known pupil was Manuel Quezon. Bandholtz became Quezon's adviser and continued close personal ties with the future president of the Commonwealth of the Philippines. Following his transfer to Manila, Bandholtz instructed his successor, Colonel James G. Harbord, to aid Quezon. The following year, Bandholtz endorsed Quezon for the governor's office in Tayabas. In 1907, Bandholtz became director of the Philippine Constabulary. He thus maintained his influence over Philippine political affairs until his exit in 1913, following 13 years of service in the archipelago.

Bandholtz failed in his bid to secure appointment as head of the Bureau of Insular Affairs in Washington, D.C., and in 1913 he began a four-year stint of garrison service in the United States. He served as a military instructor at the Plattsburg training camp and saw duty along the Mexican border with the New York National Guard. When the United States entered World War I in 1917, he deployed to France and served with Allied and U.S. contingents there. For a short time Brigadier General Bandholtz served as provost marshal general, commanding the military police of the American Expeditionary Forces (AEF). In August 1919, he arrived in Budapest, Hungary, as part of the Inter-Allied Military Mission to supervise the disengagement of Romanian troops from Hungary.

Subsequent to his return to the United States, Bandholtz helped to resolve a miners' strike in West Virginia in 1921. He lived in the Washington, D.C., area until his retirement from the military on November 5, 1923. Bandholtz died of heart disease on May 7, 1925, in Constantine, Michigan.

Bandholtz is today remembered by a statue in Szabadság tér (Freedom Square) in Budapest facing the U.S. Embassy. On the night of October 5, 1919, mainly through bluff and armed only with a riding crop, he prevented Romanian soldiers from removing Transylvanian treasures from the National Museum. The statue

was erected in 1936 and stood throughout World War II with the English inscription "I simply carried out the instructions of my Government, as I understood them, as an officer and a gentleman of the United States Army." During the period of communist rule, the statue was removed, but it was replaced in its original location in 1989. The new inscription reads "General Harry Hill Bandholtz, head of the American Military Mission, who on October 5, 1919, blocked the removal of the treasures of the National Museum to Romania."

Barbosa, José Celso

Birth Date: July 27, 1857

Death Date: September 21, 1921

Puerto Rican political leader, doctor, and sociologist. Born in Bayamón, Puerto Rico, on July 27, 1857, the descendant of African slaves, José Celso Barbosa was the first mixed-race Puerto Rican to graduate from the Jesuit Seminary in Puerto Rico. He then tutored students to gain money to attend college in the United States.

In 1875 Barbosa moved to New York City and learned English. He had planned to become a lawyer, but a serious illness led to his decision to become a doctor. In 1876 he was admitted to the medical school of the University of Michigan from which he graduated first in his class in 1880, the first Puerto Rican to secure a U.S. medical degree.

Barbosa then returned to Puerto Rico to practice medicine, but Spanish authorities on the island refused to recognize the validity of his degree. It took intervention by the U.S. consul to prompt the authorities to relent. Barbosa then practiced medicine on the island, introducing the practice of employers paying a fee to cover future medical expenses of their employees.

In 1893, Barbosa founded the first Puerto Rican cooperative. He was an early supporter of the Autonomous Party led by Román Baldorioty de Castro but resigned from that party as a result of ideological differences. Barbosa was a minority member of the autonomous government but withdrew from it shortly before the U.S. invasion. Following the end of the Spanish-American War, he became a staunch advocate of U.S. statehood for Puerto Rico,

founding the prostatehood Puerto Rican Republican Party on July 4, 1899.

In 1900 Barbosa became a member of the executive cabinet, a position he held until 1917. He then served in the Puerto Rican Senate from 1917 to 1921. In 1907 he founded *El Tempo*, the first bilingual newspaper in Puerto Rico. Barbosa died in San Juan, Puerto Rico, on September 21, 1921. In honor of his accomplishments, Puerto Rico declared his birthday, July 27, an official holiday.

Barrett, John

Birth Date: November 28, 1866

Death Date: October 17, 1938

U.S. diplomat. Born on November 28, 1866, in Grafton, Vermont, John Barrett studied at both Vanderbilt University and Dartmouth College, graduating from the latter institution in 1889. As a jour-

John Barrett was a war correspondent during the Spanish-American War. He went on to be a diplomat and director general of the Pan-American Union. (Library of Congress)

nalist, he so impressed President Grover Cleveland that the president appointed Barrett as the U.S. minister to Siam in 1894. He served in that post until 1898 and became identified as a staunch advocate of U.S. commercial expansion in East Asia.

Barrett then returned to his career as a journalist and was a war correspondent during the Spanish-American War. He attempted to join Commodore George Dewey's squadron at Hong Kong but arrived there after it had already sailed for the Philippines. Newspaper publisher William R. Hearst then asked Barrett to report on the war for the *New York Journal*. On his arrival in the Philippines, Barrett also served as an adviser to Dewey. Barrett was a staunch advocate of U.S. acquisition of the Philippines, a position he trumpeted in his articles.

Barrett was a delegate to the Second Pan-American Conference during 1901–1902. He then served as U.S. minister to Argentina during 1903–1904, to Panama during 1904–1905, and to Colombia in 1905–1906. During 1907–1920, he was director general of the Pan-American Union. Barrett died at Bellows Falls, Vermont, on October 17, 1938.

Barton, Clara

Birth Date: December 25, 1821

Death Date: April 12, 1912

Nurse, philanthropist, humanitarian, and founder of the American National Red Cross (ANRC). Clara (Clarissa) Harlowe Barton was born in Oxford, Massachusetts, on December 25, 1821. A former schoolteacher, she first attracted attention for her humanitarian work during the American Civil War when she nursed wounded soldiers in army camps and also searched for those missing in action. Barton cared for both Union and Confederate soldiers, and her experience after the 1861 First Battle of Bull Run (Manassas) convinced her that the federal government was not adequately organized to deal with mass casualties. Thus, she created a local agency in Washington, D.C., that cared for wounded soldiers and distributed supplies to them. In the summer of 1862, she was permitted to extend her work behind the combat lines. From then on, her work was done chiefly on the battlefields, where she administered to soldiers from the North and the South.

Beginning in 1865, with the blessing of President Abraham Lincoln, Barton aided in the search for soldiers missing and killed in

Universally hailed as the “Angel of the Battlefield,” Clara Harlowe Barton devoted herself to bringing medical supplies and comfort to soldiers on the battlefield. She also founded the American chapter of the Red Cross. (Library of Congress)

action. It is believed that she helped locate some 30,000 such soldiers. When the war was over, she went to Andersonville, Georgia, to identify and properly mark the graves of Union soldiers who had been buried there. She went to considerable lengths to locate missing servicemen, including the publication of lists of names in newspapers and direct communication with missing soldiers’ families and friends.

All of this work proved to be the beginning of a lifelong commitment to humanitarian causes. In 1870, during a visit to Western Europe, Barton became active in the International Red Cross (founded in 1864), which led her to found the ANRC in 1881. Before long, Barton, with the help of President James Garfield’s administration, had broadened the scope of the ANRC to include not only neutral aid in wartime but also responses to other emergencies and natural disasters. Upon its founding, the industrialist John D. Rockefeller gave the ANRC a large monetary gift that provided for its headquarters in Washington, D.C. Quite naturally, Barton served as the president of the organization.

Barton advocated Cuban independence so that “it might come to the United States.” In early 1898 she went to Cuba as part of the

Central Cuban Relief Committee to help aid Cuban victims of the Spanish *reconcentrado* (reconcentration) policy. She then worked with Spanish officials to distribute relief supplies, especially in the Matanzas area, and also to aid those wounded during the sinking of the battleship *Maine*.

With the outbreak of the Spanish-American War, Barton frequently found herself at odds with the U.S. military, which was reluctant to allow nonmilitary personnel to enter Cuba. Rear Admiral William T. Sampson denied her request to go to Cuba under a flag of truce. She then attended to the needs of Spanish prisoners of war and refugees at Key West, Florida.

Following the landing of the U.S. Army 5th Corps in Cuba, Barton arrived with ANRC nurses off Cuba in the chartered steamer *State of Texas* on June 26. Informed by the U.S. Army that her services were not required, she and her nurses ministered to the Cuban insurgents instead. Nevertheless, by the end of the war, Barton found herself increasingly at odds with others in the organization. Her somewhat authoritarian manner and refusal to delegate authority eventually led to her resignation in 1904, when she retired to her home outside Washington, D.C.

In 1900, President William McKinley, long a staunch admirer of Barton, supported a Senate resolution officially recognizing her work. In addition to her humanitarian efforts, she was active in the women’s suffrage movement and the African American fight for civil rights (she was a friend of Frederick Douglass). She also wrote several books, including a volume on the early history and work of the ANRC. Barton died in Glen Echo, Maryland, on April 12, 1912.

Bates, John Coalter

Birth Date: August 26, 1842

Death Date: February 4, 1919

U.S. Army officer. John Coalter Bates was born on August 26, 1842, in St. Charles County, Missouri, the son of Edward Bates, who served as President Abraham Lincoln’s attorney general. A student at Washington University in St. Louis when the American Civil War erupted in 1861, the younger Bates joined the Union Army in May 1861, being commissioned as a first lieutenant and

serving with the Army of the Potomac. He participated in a number of important battles, including Antietam, Fredericksburg, Chancellorsville, Gettysburg, and Petersburg and the Appomattox Campaign. He was promoted to captain in 1863, breveted a major in August 1864, and breveted a lieutenant colonel in April 1865. During the war, he also served two years as an aide-de-camp to Army of the Potomac commander Major General George Meade.

Continuing in the army after the war, Bates served in the 2nd, 5th, 13th, and 20th Infantry Regiments. He served in a variety of assignments at posts on the frontier in the Northwest and along the Mexican border as a captain and was promoted to major in May 1882, lieutenant colonel in October 1886, and colonel in April 1892.

In May 1898, after the beginning of war with Spain, Bates was promoted to brigadier general of volunteers and given command of what became known as Bates' Independent Brigade in V Corps. Taking part in the initial invasion of Cuba, he commanded the U.S. Army base at Siboney and, in early July, took part in the Battle of El Caney and the Battle of San Juan Hill. His forces then guarded Spanish prisoners of war. Bates was appointed major general of volunteers before he and his men were recalled to the United States in August 1898.

One year later, Bates returned briefly to Cuba as commander of U.S. troops in the Santa Clara district before being transferred to the Philippines as a brigadier general of volunteers to fight in the Philippine-American War. In August 1899, Bates successfully negotiated a treaty with the Muslim religious leader, the sultan of Sulu, and several Moro datus (chiefs). The resulting Bates Treaty of August 20, 1899, sought to ensure Moro neutrality during the Philippine-American War, recognized American sovereignty over the archipelago, and permitted the Moros to practice many of their traditional ways of life, including slavery and polygamy, thereby causing much criticism from the United States. The agreement lasted until 1904 and was nevertheless considered an important success. Major General Elwell S. Otis, military governor of the Philippines, claimed that the agreement saved the United States 15,000 men who would otherwise have had to garrison the Moro provinces.

In late 1899, Bates commanded the Department of Southern Luzon, being advanced to major general of the volunteers in 1900. There and on the island of Mindanao he fought against the insurgency but was unable to contain the guerrilla activity. A cautious but competent commander, Bates held that the only way to suppress the insurgency was through conquest. He set up posts at strategic locations along the coast from which punitive expeditions were launched into the surrounding countryside. His take-no-prisoners approach to pacification was not without its detractors and may indeed have hindered the effort.

Bates was advanced to brigadier general in the regular army in 1901 and was transferred to Fort Riley, Kansas, where he subsequently received an appointment as major general commanding the Department of the Missouri and the Department of the Lakes (1902–1904). He then commanded the Northern Division until late 1905 and served briefly as chief of staff of the U.S. Army from Jan-

uary 15 to April 13, 1906, when he retired. During his time as chief of staff he was advanced to lieutenant general. Bates died in San Diego, California, on February 4, 1919.

Bates, Katherine Lee

Birth Date: August 12, 1859

Death Date: March 28, 1929

Poet, academic, and writer of the poem “America the Beautiful” (1893). Katherine Lee Bates was born in Falmouth, Massachusetts, on August 12, 1859, the fifth and last child of William and Cornelia Frances Lee Bates. Her father, a congregational minister in Falmouth, died tragically when she was only a month old. Her mother was entirely devoted to her youngest child, and her brothers went to work at young ages to help support the family and to ensure that Katherine received a sound education. A bright and precocious child, Bates showed an inclination toward academic disciplines and writing at a very young age. When she turned 12, her family relocated to Granitville, Massachusetts (now known as Wellesley Hills). There she attended public high schools and entered Wellesley College, from which she graduated with top honors in 1880.

Bates then studied at Oxford University in Great Britain for a year and went on to earn a master's degree from her undergraduate alma mater and a doctorate in literature from Oberlin College in Oberlin, Ohio. Beginning in 1882, she held a teaching position at Wellesley, was eventually tenured, and taught there for some 40 years. In 1893, during a visiting professorship at Colorado College in Colorado Springs, she embarked on a trip through the high prairies of Colorado to the top of Pike's Peak. She was so moved by the scenic splendor there that she composed all four verses of “America the Beautiful” before she returned home.

In 1895, her poem was published in *The Congregationalist* in commemoration of Independence Day. It became a minor sensation and was used for patriotic purposes during the remainder of the decade and especially during and after the Spanish-American War. Somewhat ironically, Bates was an opponent of the war and of U.S. expansionism and wrote a number of poems expressing her views. “America the Beautiful” would receive international acclaim

Professor Katherine Lee Bates, author of the poem “America the Beautiful,” written in 1893 and wildly popular during and after the Spanish-American War. In 1904 the poem was set to music. (Hayward Cirkner and Blanche Cirkner, eds., *Dictionary of American Portraits*, 1967)

in 1904 when it was published, in a slightly revised version, in the *Boston Evening Transcript*. It was quickly set to music and early on was sung to several different melodies before Samuel A. Ward’s hymn “Materna” (1882) became the standard tune known today.

Over the years, there have been numerous attempts to make “America the Beautiful” the official anthem of the United States. Compared to Francis Scott Keyes’s “The Star-Spangled Banner,” the lyrics of Bates’s work are inspiring and pacifistic and its melody far easier to sing. Be that as it may, traditionalists have continued to dominate the debate, and so “The Star-Spangled Banner,” penned in 1814, continues as the official national anthem.

Long after her famous poem had been accepted as a virtual second national anthem, Bates continued to teach and write prolifically. Her works include numerous poetry volumes, short stories, travel memoirs, and children’s literature. Bates died in Wellesley, Massachusetts, on March 28, 1929.

Bates Treaty

Agreement between U.S. Army brigadier general John C. Bates and Jamalul Kiram II, the sultan of Sulu, in the southern Philippines, signed on August 29, 1899, during the Philippine-American War. The Bates Treaty was designed to purchase time while U.S. forces defeated the major Filipino insurgency in the northern Philippines.

Prior to the Spanish-American War, Spain had claimed the territories of Moroland. In actuality, however, Spanish military leaders had little control over the region. The Muslim populations of Sulu and Mindanao vehemently resisted any attempt by Spanish authorities to convert them to Catholicism. Based on this stiff resistance, Spanish forces were restricted to a handful of coastal garrisons there. In 1876, Spanish forces captured the city of Jolo on Jolo Island in the Sulu Archipelago, the capital of the sultanate of Sulu. A peace treaty was signed on July 22, 1878, granting control of Sulu outside of the Spanish garrisons to the sultan. The treaty itself, however, was rife with translation errors. The Spanish-language version claimed complete control over Sulu, a source of considerable confusion when Spain ceded all its claims to the Philippine Islands after the U.S. victory.

The Spanish-American War was officially concluded with the Treaty of Paris in December 1898. According to that treaty, Spain recognized the independence of Cuba and ceded Puerto Rico and Guam to the United States. All of the Philippines were turned over to the United States in exchange for \$20 million. Included in this cession were the territories of Mindanao and Sulu, despite the inhabitants’ claim that they were never under complete Spanish control. Full control by the United States would begin on November 7, 1900, when the U.S. government paid an additional \$100,000 to Spain.

Prior to the American military victory over Spain, the Filipinos had been waging their own war of independence. Many were disappointed that the United States, long considered their ally, took possession of the Philippines instead of granting full autonomy to the native peoples. Filipino nationalist leader Emilio Aguinaldo y Famy immediately began waging his own battle against U.S. forces. The Philippine-American War, which began on February 4, 1899, was labeled an insurrection. It would last almost three years and result in more than 4,000 Americans and thousands more Filipinos killed. Pockets of resistance, as in Mindanao, would endure until at least 1913.

The start of the insurrection quickly led to the American occupation of the northern Philippine Islands in 1899. Serious concerns were raised about the southern islands as well. On May 18, 1899, U.S. troops took control of the Spanish fort in Jolo. Waging a bitter fight against Aguinaldo’s forces on the one hand and keeping the Muslim population at bay in the Sulu Archipelago on the other presented a major problem for American control of the Philippines.

The arrival of U.S. troops at Jolo proved to be timely and important. The Moros had been poised to take over the fort once occupied by the Spanish, and the sultan had a standing army of close to 25,000 troops. After the occupation of Jolo by American forces, Brigadier General Bates was dispatched to negotiate a treaty with the sultan. The sultan had expected sovereignty for his people after the defeat of the Spanish and was displeased with the Americans taking control. Bates's goals were to secure Moro neutrality in the Philippine-American War and to maintain order in the region.

On August 20, 1899, a conditional agreement was put in place between Bates and Kiram. Although the sultan had proposed 16 points, Bates countered with a 15-point offer that became the basis of the treaty. Bates's chief objective was to guarantee U.S. sovereignty over Sulu and its dependencies. The most important provisions of the treaty were (1) sovereignty of the United States over the whole archipelago of Sulu and its dependencies; (2) the U.S. flag was to fly in the archipelago of Sulu and its dependencies; (3) the United States was to guarantee that it would not sell any lands of the Sulu Archipelago, including the island of Jolo, to any foreign nation without the sultan's consent; (4) a strict U.S. guarantee of non-interference in the Moros' religion and customs; and (5) monthly payments of 250 pesos to the sultan and 15–25 pesos to his *datus* (local chiefs). Specifically, the Bates Treaty secured Moro neutrality in the Philippine-American War and enabled American forces, under Bates's command, to establish a few outposts in the region. More importantly, it initiated the eventual demise of Moro sovereignty and the breakup of the sultanate of Sulu. With the defeat of Aguinaldo and the suppression of resistance in the northern Philippines, the U.S. government unilaterally abrogated the treaty on March 2, 1904, and ended payments to the sultan and his *datus*. The U.S. government claimed that the sultan had failed to end Moro resistance and had not cooperated with American attempts to abolish slavery in the region. Abrogation of the treaty and U.S. attempts to impose its sovereignty resulted in intense Moro resistance, including the Battle of Bud Dajo in 1906 and the Bud Dajo Campaign of 1911, that was not effectively suppressed until 1915.

Bayang, Battle of

Start Date: May 2, 1902

End Date: May 3, 1902

Battle on May 2–3, 1902, part of the Moro Campaign designed to seek the pacification of the island of Mindanao. The Moros were Filipino Muslim natives who were located largely on Mindanao. When Spain ceded the entire Philippine archipelago to the United States in the Treaty of Paris (December 10, 1898), many Filipinos revolted against the American occupation. Most historians conceive of the Philippine-American War as a series of disjointed rebellions by various ethnic groups on different islands. The American response varied from island to island. Mindanao was one of the last areas to be pacified by the Americans. U.S. authorities ordered the Moro tribesmen to cease raiding other islands and to surrender their weapons. It is not surprising, however, that the Moros, who had never been conquered by the Spanish, refused to submit to U.S. authority. Despite continued patterns of internecine strife among the Moro tribes, many of the Moros united against the common threat presented by the United States.

The first American attempts to pacify Mindanao consisted largely of diplomatic efforts to secure the allegiance of Moro rulers. The highest-ranking Moros were called sultans, while less-powerful leaders were typically referred to as *datus*. During the Spanish colonial era, sultans received financial support in exchange for slowing the number of raids upon other islands. This situation was continued by American diplomats for the first two years of contact with the Moros. However, the Moros discovered that the American response to raids was diplomatic protest rather than forcible retaliation, and the number of raids rapidly increased, most originating from the Lake Lanao region. In early 1902 Colonel Frank D. Baldwin, commander of the 27th Infantry Regiment, was ordered to build a road from the coastal city of Iligan to Lake Lanao. In March as the work began, a Moro band ambushed and killed two American soldiers. U.S. military governor of the Philippines Lieutenant General Adna R. Chaffee ordered an immediate punitive expedition against the Moros near Lake Lanao.

Baldwin led his three infantry battalions and a single battery of mountain guns, approximately 1,200 men in all, in an advance across Lake Lanao. He demanded that the sultan of Bayang hand over the Moros responsible for the ambush. When the sultan refused, Baldwin ordered an assault on a Moro cotta (fortification) at Bindayan, two miles west of the village of Bayang. On May 2, 1902, after a preparatory artillery barrage, Baldwin's infantry charged the cotta, capturing it in less than two hours. He then reformed his forces and attacked another cotta at Pandapatan, 1,000 yards south of Binidayan, using the same tactics.

The fort at Pandapatan withstood the U.S. artillery fire until nightfall, when Baldwin halted the attack. At dawn on May 3 white flags flew over Pandapatan, which Baldwin interpreted as a desire to surrender. As American troops cautiously entered the cotta, they were attacked by bolo- and kris-wielding Moros led by the sultan of

Bayang and his brother. A brief, bloody hand-to-hand engagement followed in which the sultan and his brother were killed. When the carnage ended, 10 American troops lay dead, and 40 more were wounded. Moro casualties were estimated at between 300 and 400 dead with an unknown number wounded.

In the aftermath of the fighting, American forces established Camp Vicars near Bayang to serve as the center of pacification operations in the region. Major Robert Bullard constructed a road around Lake Lanao, while Captain John J. Pershing assumed control of the pacification campaign. Pershing fought notable engagements at Bud Dajo and Bud Bagsak.

Beam, Beebe

Birth Date: December 9, 1869

Death Date: September 19, 1936

Journalist, nurse, and adventurer who accompanied U.S. Army forces to the Philippines in 1899. Born Elvira Virginia Mugarrieta in San Francisco, California, on December 9, 1869, Beebe Beam was the daughter of the Mexican consul in San Francisco. In 1897, she moved to Stockton, California, assumed a male identity, and took a job with *The Stockton Evening Mail* under the name Babe Bean.

Hoping to write about the conflict in the Philippines from a soldier's point of view, on October 5, 1899, Beam assumed the male identity of Beebe Beam and sought passage to Manila aboard the transport ship *City of Para*. Although she took the job of cabin boy to pay her way to the Philippines, her identity was revealed when she became sick on the journey, leading the outraged captain to set her ashore in Honolulu. Although soldiers onboard the ship took up a collection to pay for her passage, the captain refused to allow her back on the ship. Undaunted, she obtained a uniform from the soldiers, who helped hide her until the ship departed Hawaii. Discovered again and confined to quarters, Beam, dressed as a soldier, managed to escape the ship upon its arrival in Manila.

Although Beam did not participate in combat, she did witness an engagement at San Mateo and joined several marches in Luzon. Over the next year, she served as a Spanish-language interpreter and nurse, living in military camps at Santa Cruz, Laguna de Bey,

Camarineo, and Caloccan with the 16th, 29th, 42nd, and 45th Infantry Regiments before returning to the United States. On October 21, 1900, the *San Francisco Examiner Magazine* published her story "My Life as a Soldier," which was marketed as the product of a woman soldier in the Philippines.

Shortly after publishing her Philippine adventure, Beam abandoned journalism and assumed her final identity, Jack Bee Garland. Living as a man for the remainder of her life, she worked for the American National Red Cross (ANRC) and other charitable organizations.

Upon her death of peritonitis in San Francisco on September 19, 1936, at the age of 67, Beam's identity was revealed, in part because of a tattoo on her arm that showed an American flag under the word "Manila" alongside an infantry insignia. This resulted in numerous newspaper articles after her death and suggestions that she should be buried with military honors as a veteran. Her sister, Victoria Shadbourn, supported the effort with the claim that Beam had been an army lieutenant, but a military burial was denied because there was no record to prove Beam's military service.

Bell, Alexander Graham

Birth Date: March 3, 1847

Death Date: August 2, 1922

Scottish-born scientist and inventor, best known for holding the first U.S. patent for the telephone. Alexander Graham Bell was born in Edinburgh, Scotland, on March 3, 1847, to a middle-class family. His grandfather and father were both involved in the teaching of speech and voice (then called elocution). Bell's father also worked with individuals who had speech impediments and hearing deficits. From an early age, Bell was keenly interested in vocal communications, which would serve him well in his forthcoming career.

Bell attended Edinburgh University for a time, beginning when he was age 16, and in 1867 he moved to London, where he studied at the University College of London. He did not graduate, however, leaving school because of poor health. In 1870, Bell and his father went to Canada and settled in Ontario.

Once in Canada, Bell began experimenting with various electronic forms of sound and voice transmission. In 1872, he was invited to join the faculty of Boston University, where he became a professor of vocal physiology and elocution. There he taught his fa-

Spread of the Telegraph and Telephone, 1880–1910

ther's visible speech system, which was a written form of speech that used symbols to show the position of the lips, tongue, and throat during speech.

During the early 1870s, Bell engaged in a number of scientific pursuits, but his greatest emphasis was on the transmission of voice and sound over distances. When students in one of Bell's classes learned of his attempt to transmit tones over a telegraph wire using a reed device, they decided to back his experiment financially. This allowed him more freedom to work on his device and to hire a full-time assistant, Thomas A. Watson, an accomplished engineer and mechanic. In June 1875, when tones were first transmitted via the reed device, Bell and Watson tried to transmit voices in a similar manner. They accomplished this on July 1, 1875. Although the voices were not clear enough to be understood, they had indeed been transmitted electronically.

In February 1876, Bell's lawyer applied for a patent for the telephone, beating another inventor by only a few hours. On March 6, 1876, just days after the patent had been approved, Bell attempted to transmit his voice using a water-based transmitter, which used a mixture of acid and water. When the sound waves caused the needle in the water to vibrate, the electrical current in the circuit changed, which helped transmit the sound of the voice. This time, Watson distinctly heard Bell's voice utter the now-famous "Mr. Watson, come here, I want to see you." Bell and his partners immediately offered to sell the invention for \$100,000 to Western Union, the leading telegraph company. Western Union declined the offer, and the Bell Telephone Company was born. Just a year or two later, a Western Union official lamented the company's decision, saying that he now thought \$25 million would be a bargain for the telephone patent, then a staggering amount of money.

In the succeeding years, Bell continued with a dizzying array of experiments and new inventions, including constant improvements to the telephone. It was the telephone, however, that made him a very wealthy man. In just a few years' time, the telephone became immensely popular, and by 1885 close to 100,000 Americans had telephone service and owned at least one telephone, all of them supplied by the Bell Telephone Company. Some of Bell's other notable enterprises include the photophone, which used light beams to transmit sound over great distances; a crude form of the tape recorder; the metal detector; the hydrofoil; and the audiometer, designed to detect hearing loss.

While Bell may have held the first U.S. patent for the telephone, he was not the first inventor of it. Indeed, Italian-born Antonio Meucci first transmitted the human voice electronically as early as 1849, and in 1850 he publicly demonstrated his telephone in New York City. Meucci challenged Bell's patent in the courts but did not prevail largely because he could not provide irrefutable proof that his work had preceded that of Bell. In the United States, Elisha Gray also conducted many experiments with the telephone and nearly beat Bell to the rights to the patent.

Alexander Graham Bell is best remembered for his invention in 1875 of the telephone, which he presented the next year at the Centennial Exposition in Philadelphia. (Library of Congress)

It is no exaggeration to say that Bell's telephone revolutionized communications and the way in which people interacted. As the 19th century progressed, more and more Americans had telephone service as the price continued to fall amid heavy demand. In December 1878, President Rutherford B. Hayes ordered a telephone installed in the White House. The first telephone in the White House used the single-digit phone number "1."

By the time of the Spanish-American War, much of the United States was served by telephone lines, although only a small percentage of Americans actually had phone service. Indeed, the tax of one cent per call imposed by Congress as a means to pay for the Spanish-American War was considered a luxury tax at the time of its passage; ironically, it was not repealed until 2006. During the Spanish-American War, President William McKinley used the telephone extensively to speak with his field commanders as well as with diplomats and cabinet members. As such, he is credited with being the first modern president in terms of communication. Indeed, McKinley was a devotee of the telephone, whereas his successor, Theodore Roosevelt, was not.

Bell continued his many scientific endeavors and also became involved in the eugenics movement during the early years of the 20th century. He died at Baddeck, Nova Scotia, Canada, on August 2, 1922.

Bell, James Franklin

Birth Date: January 9, 1856

Death Date: January 8, 1919

Career officer in the U.S. Army, counterinsurgency tactician, and Medal of Honor winner. James Franklin Bell was born on a farm near Shelbyville, Kentucky, on January 9, 1856. In 1874, he entered the United States Military Academy, West Point, graduating with honors four years later and being commissioned as a second lieutenant. Assigned to the 9th Cavalry later that year, he transferred to the 7th Cavalry, taking part in actions against Native Americans in the Dakota Territory. From 1882 to 1886, he trained troops at Fort Buford in the Dakota Territory. From 1886 to 1889, he taught military science and tactics at Southern Illinois Normal School (now Southern Illinois University), where he also earned a law degree. Promoted to first lieutenant in 1890, he was assigned to South Dakota in 1891 before taking a teaching position at the Cavalry and

Light Artillery School at Fort Riley, Kansas. In 1894, he was transferred to California and then undertook garrison duty at Fort Apache, Arizona, before becoming judge advocate of the Department of the Columbia in 1898.

When war with Spain began in April 1898, Bell asked to be sent to Cuba but was instead ordered to the Philippines as a major of volunteers and engineer officer to fight the Filipino insurrection. In June, he became head of military information and was assigned to Manila to gather intelligence. Serving for a time as chief of scouts, in the war against the Filipino insurgents Bell sought to employ tactics he had learned earlier while fighting Native Americans. In July 1899, he became colonel of the 36th Volunteer Infantry Regiment, fighting the insurgency in various parts of the Philippines. Later he was awarded the Medal of Honor for gallantry in charging a Filipino patrol and forcing its surrender in September 1899 near Porac, Luzon. He was subsequently appointed a brigadier general of volunteers in December 1899. Later, he commanded several districts on Luzon and became provost marshal of Manila. Although popular with his commanding officers, his tactics against Filipino insurgents remain highly controversial for their uncompromising harshness, even brutality, and he was accused of war crimes and of planning a war of extermination.

In February 1901, Bell earned promotion to brigadier general in the regular army while commanding the first district of the Department of Luzon and the 3rd Brigade. Transferred stateside to become commandant of the Army Service and Staff College at Fort Leavenworth, Kansas, in 1902, he left that post to become chief of staff of the army during 1906–1910. He was appointed major general in January 1907. During this time, he oversaw the early development of army aviation and San Francisco earthquake relief efforts. He also commanded the Army of Cuban Pacification in 1905.

Bell commanded the Department of the Philippines during 1911–1914. He subsequently led the 4th Division in Texas when war seemed possible with Mexico, then the Department of the West and, in 1917, the Department of the East, and in that capacity he was responsible for the first officer training camps. In August 1917, he took command of the 77th Division at Camp Upton. Sent as an observer to the Western Front in December 1917 during World War I, he returned in March 1918 but failed to pass the physical examination required of those being sent overseas and instead resumed command of the Department of the East, which he held until his death in New York City on January 8, 1919.

Benevolent Assimilation

The concept of benevolent assimilation refers to the rationale for the United States to annex the Philippine Islands in the aftermath of the Spanish-American War. In a proclamation on December 21, 1898, President William McKinley formally asserted American control over the islands. This occurred just 11 days after the signing of the Treaty of Paris, which ended the Spanish-American War. In his proclamation, McKinley attempted to assure Filipinos, Americans, and the larger world that the United States would rule the islands with beneficence.

At the conclusion of the Spanish-American War, the United States was faced with the dilemma of what to do with the lands conquered from the Spanish. At the time, the United States found itself in de facto possession of the Philippines, Cuba (although the 1898 Teller Amendment barred annexation of Cuba, and the United States had declined formal acceptance of sovereignty over the island), and Puerto Rico. There were several options available to U.S. policy makers in the autumn of 1898. They could return

the islands to the Spanish, grant them independence, or assert colonial rule over them. The first two options were never widely considered.

A fierce debate over annexation raged in Congress, in the press, and among other sectors of society. Before, during, and after the Spanish-American War, a significant and vocal group of political and religious leaders as well as a significant part of the general population opposed the acquisition of any lands gained from the Spanish. Those objecting to the U.S. acquisition of colonies—led by the Anti-Imperialist League—opposed assuming control over any former Spanish colonies for reasons ranging from the lack of constitutional authority for colonization to arguments against diluting America's Anglo-Saxon majority with other, presumably inferior, races.

Proponents of annexation were led by President McKinley, assisted especially by Republican expansionists in Congress. Those who supported American overseas possession also included industrialists, investors, and journalists. A number of Protestant

Political cartoon published in the *Minneapolis Journal* in 1898 depicts eaglets labeled "Philippines," "Hawaii," "Cuba," and "Porto Rico" gathering around a large eagle labeled "U.S." (Library of Congress)

leaders were anxious to spread their gospel to the so-called heathen and Roman Catholic natives. The Philippines seemed to offer an especially attractive opening into the purportedly lucrative China Market, a long-sought goal of many business leaders.

Ultimately, the decision to annex the Philippines rested upon the shoulders of McKinley. The Republican president was not at all averse to American expansion overseas, but his decision was complicated by the fact that Filipino rebels controlled the countryside in what was becoming a U.S. war against insurgents. Initially, McKinley wanted to annex only the port of Manila, but his military advisers pointed out that Manila alone was indefensible and that even annexing the island of Luzon alone was not feasible. After a night that he claimed to have spent on his knees in prayer, McKinley decided that the only reasonable alternative was to annex all of the Philippines. This was affected with the Treaty of Paris, signed on December 10, 1898, and ratified by the U.S. Senate on February 6, 1899.

Just as McKinley had used benevolent assimilation to usher through Congress the annexation of Hawaii on July 7, 1898, he would use it to win the debate to annex the islands of the Philippines, Puerto Rico, and Guam. Benevolent assimilation asserted that American control of overseas possessions would be different—and more enlightened—than European-style imperial rule. On the whole, Americans were reluctant to assume the mantle of a colonial power, so the notion of a benevolent colonial lordship enabled McKinley to combat opponents of annexations and sell his idea to the American public. The notion of benevolent assimilation further enabled the president to show the world how different the United States was from its European rivals. U.S. colonial policies were not designed to exploit the lands under its control but instead were designed to bring colonial inhabitants the blessings of liberty. U.S. control would also result in the education of the natives, gradually transforming them into productive citizens who would be steeped in American values.

In the end, rhetoric notwithstanding, benevolent assimilation was predicated upon traditional U.S. expansionism and American exceptionalism augmented by paternalism, racism, social Darwinism, and the prevailing ideologies of colonialism and imperialism.

Benjamin, Anna Northend

Birth Date: 1874

Death Date: 1902

Journalist and one of the first female American war correspondents. Born in 1874, Anna Northend Benjamin wrote for *Leslie's Weekly* during the Spanish-American War. In July 1898, she detailed the dearth of rations for soldiers camped in Tampa and waiting to embark for Cuba. She and Kathleen Blake Watkins, a correspondent with the *Toronto Mail and Express*, sought to sail to Cuba with Major General William Shafter's V Corps expeditionary force, but both were turned away as a result of a U.S. government ban on female reporters in the war zone. Benjamin subsequently paid her own passage on a collier bound for Guantánamo. Once in Cuba she made her way to Santiago, where she wrote several articles for *Leslie's Weekly*.

Returning to New York on a troop transport, Benjamin nursed sick soldiers and correspondents aboard the ship. Her reputation as a female war correspondent led to a widespread demand for her services as a lecturer after the war. She eventually traveled to the Philippines and reported on the war there before dying in 1902.

Bennett, James Gordon, Jr.

Birth Date: May 10, 1841

Death Date: May 14, 1918

Flamboyant, controversial American journalist and publisher. James Gordon Bennett Jr. was born in New York City on May 10, 1841. His father, also a journalist and publisher, had founded the widely read *New York Herald*, which the younger Bennett would eventually take over. Money was no object for the senior Bennett, and so his son was schooled mostly in France. Upon the outbreak of the American Civil War, the younger Bennett served as a junior officer in the U.S. Navy. He gained control of the *New York Herald* in 1866 and immediately began a program to increase its readership. In so doing, he became the prototype for the sensationalism that would be called yellow journalism by the late 1880s.

In 1869, Bennett bankrolled an expedition led by Henry Morton Stanley, a famed explorer and journalist, to find the medical missionary and explorer David Livingstone, who had presumably disappeared in Africa. Stanley finally tracked down the sickly Livingstone encamped along a lake in Zambia in 1871. For nearly two years, Bennett's newspapers ran regular dispatches from Stanley

James Gordon Bennett Jr. was heir to the *New York Herald*, a newspaper that his father, James Gordon Bennett, had started in the 1830s. The younger Bennett took over the paper shortly after the American Civil War and became one of the best-known newspaper publishers of the 19th century. (Library of Congress)

and tracked his movements, which garnered much attention and increased readership. At the time, Bennett was eagerly engaged in readership wars with fellow New York newspaper moguls William Randolph Hearst and Joseph Pulitzer.

Although infamous for his drinking binges and sometimes loutish behavior, Bennett was a staple of New York high society. He lived life large, with huge parties, lavish private railcars, rambling mansions, and expensive yachts, in one of which he won the first official transoceanic boat race in 1866. In 1877, he left New York after an incident that terminated his engagement to socialite Caroline May. He arrived late and drunk for a party at the May family mansion and then relieved himself into a fireplace in full view of the shocked hosts and guests. Bennett moved to Paris, where he founded the *International Herald Tribune* while continuing to run the *New York Herald* by long-distance cable and telegram. In 1879, he sponsored an expedition to the North Pole through the Bering Strait. The two-year odyssey, chronicled meticulously in the newspaper, ended in tragedy when the expedition's ships became entrapped by ice in 1881. Although 20 of the crew members died, the expedition provided great grist for Bennett's yellow journalism.

Bennett eventually returned to New York City, where he became heavily involved in polo and yacht racing. His nose for news never wavered, however, and by the early 1890s he was locked in a circula-

tion war with Hearst and Pulitzer. At first, Bennett's newspaper took a hard line against the Spanish and their colonial escapades in Cuba and the Philippines. However, as the Cuban War of Independence (1895–1898) unfolded, he softened his criticism of the Spanish at a time in which Hearst and Pulitzer were running increasingly salacious stories of Spanish excesses. By 1898, some of Bennett's critics were spreading rumors that he secretly supported the Spanish because of his far-flung financial interests. Bennett denied the accusations. In July 1898, Hearst himself leveled charges at Bennett that he had "everything to gain" from a Spanish victory. Bennett blasted Hearst, and the two men engaged in a long and bitter war of words.

After the war, in 1899, the *New York Herald* became a vociferous critic of Secretary of War Russell A. Alger, whom the newspaper charged had run a hopelessly incompetent war effort. Indeed, Bennett took particular delight in airing the testimony of the War Department Investigating Commission (Dodge Commission), which showcased some of the worst cases of malfeasance during the Spanish-American War. Bennett was especially aggressive in airing the charges that had resulted from the Embalmed Beef Scandal.

Bennett returned to France and, at the age of 73, married a French baroness. He lived out his last days in that country, still running his newspapers, and died on May 14, 1918, in Beaulieu-sur-Mer, France. After his death, his newspaper was bought out by his longtime archrival, the *New York Tribune*, and was renamed the *New York Herald Tribune*.

Bermejo y Merelo, Segismundo

Birth Date: 1832

Death Date: 1899

Spanish Navy rear admiral and minister of the navy. Segismundo Bermejo y Merelo was born in San Fernando, Spain, in 1832. Enlisting in the navy at age 14 in 1846, he served in both Cuba and the Philippines. As a professor at the Naval College, he directed the Torpedo School and created the first division of torpedo boats in the Spanish Navy. He opposed the recall to Spain of Valeriano Weyler y Nicolau, believing that had Weyler stayed, Cuba might have accepted autonomy.

Bermejo was commanding the Cádiz Squadron when he was appointed minister of the navy on October 4, 1897. He was followed at Cádiz by Rear Admiral Pascual Cervera y Topete. In the several

months leading up to the war, Bermejo repeatedly expressed confidence in the Spanish Navy and denigrated the capabilities of the U.S. Navy. Claiming that the Spanish Navy was better trained and that the Americans would have to divide their navy, he laid plans to blockade the U.S. coasts and attack Key West, Florida. Cervera insisted that these were totally unrealistic goals and told Bermejo that it was simply beyond Spain's ability to reinforce its army in Cuba in the face of U.S. naval power. Nonetheless, Bermejo continued to exude optimism and did not pass along Cervera's hard information about U.S. Navy superiority to members of the Spanish government.

On March 13, 1898, with war seemingly imminent, Bermejo oversaw deployment of Spanish naval forces with the plan to send one squadron to Cuba while retaining another to defend the Spanish coast. On April 23, the day that Spain declared war on the United States, Bermejo called a meeting in Madrid of high-ranking Spanish naval officers. The great majority supported sending Cervera and his squadron to Puerto Rico, which Bermejo ordered that same day.

Following Commodore George Dewey's crushing defeat of Rear Admiral Patricio Montojo y Pasarón's squadron in the Battle of Manila Bay on May 1, 1898, Bermejo came under intense criticism in Spain and was replaced as minister of the navy by Captain Ramón Auñón y Villalón on May 18. Unfortunately for the Spanish Navy, Auñón promptly countermanded Bermejo's decision of May 12, which would have permitted Cervera to return his squadron to Spain. This decision set up the subsequent Battle of Santiago de Cuba. Bermejo died in Madrid in 1899.

Betances, Ramón Emeterio

Birth Date: April 8, 1827

Death Date: September 16, 1898

Medical doctor and Puerto Rican political leader. Born in Cabo Rojo, Puerto Rico, on April 8, 1827, into a wealthy landowning family, Ramón Emeterio Betances studied at private schools in Puerto Rico. Sent by his father to France, he earned a medical degree from the University of Paris in 1855. Returning to Puerto Rico, he then established a hospital at Mayagüez and was actively involved in fighting the 1856 cholera epidemic. He also made significant charitable donations to the poor.

Betances and others also founded the clandestine Secret Abolitionist Society with the aim of ending slavery in Puerto Rico. Exiled by Spanish authorities for his political activities, he fled first to

what is now the Dominican Republic and then to New York, where he and Segundo Ruiz Belvis established the Revolutionary Committee of Puerto Rico. The two men subsequently returned to the Dominican Republic, and from there in 1868 they launched an expedition to Puerto Rico with the aim of overthrowing Spanish rule. The resulting insurrection of September 23, 1868, known as the Grito de Lares, was a failure.

Returning to France, Betances was active in emigré groups working to free Cuba and Puerto Rico from Spanish rule and was a staunch advocate of combining the Cuban and Puerto Rican independence movements. While in France, he also founded the Society of Latin American Union. Although in exile at the time, he was pleased with the abolition of slavery in Puerto Rico on March 22, 1873. At the beginning of the Spanish-American War, he called on Puerto Ricans to rise up and end Spanish rule. He was convinced that if they failed to do so before the Americans invaded the island, Puerto Rico would be a U.S. colony forever. Following the American invasion, Betances was one of very few Puerto Rican nationalist leaders to urge armed resistance against the United States. A talented writer, he wrote several books and was awarded the French Legion of Honor. Betances died in Neuilly, a suburb of Paris, on September 16, 1898. His remains were returned to Puerto Rico in 1920.

Betancourt, Salvador Cisneros

Birth Date: February 10, 1828

Death Date: February 28, 1914

Cuban revolutionary leader, politician, and president of the provisional Cuban Revolutionary Government (October 27, 1873–June 28, 1875) during the Ten Years' War and the Cuban War of Independence from September 16, 1895, to October 30, 1897. Salvador Cisneros Betancourt was born in Camagüey, Cuba, on February 10, 1828, to a family with purported ties to the Spanish monarchy. His life as a youth, however, was powerfully influenced by the adverse effects of Spanish colonialism. After being educated by private tutors, he went to the United States, where he studied civil engineering. After returning to Cuba, he entered politics and served as the elected mayor of Camagüey.

Before long, Betancourt became involved in revolutionary politics, believing that Cuba should be independent and that Cubans themselves should determine their own political and economic des-

tinies. He joined the locally prestigious Masonic Order, which put him in contact with more Cuban revolutionaries. He fully supported the Ten Years' War of 1868–1878 and was instrumental in drafting the constitution of Cuba's first provisional revolutionary government. In recognition of his education and his passion for the Cuban movement, he was elected president of the provisional government, serving from October 1873 to June 1875.

When the revolt ended in 1878, Betancourt returned to his native Camagüey, but he was never far removed from his fellow revolutionaries and stayed active in the underground Cuban movement. He believed fervently in a Cuba free of foreign influence and domination and thus rejected calls for accommodations with—or annexation to—the United States. Yet he was also a democrat in the purest sense of the word and believed that a civilian government, as opposed to a military junta, was the best way in which to organize a new government for the island. In this he was supported by the great heart and voice of the revolutionary movement, José Martí y Pérez.

Following the death of Martí in May 1895, Betancourt took up the responsibility of establishing a civilian government when the Cuban War of Independence broke out again shortly thereafter. After convincing Antonio Maceo Grajales to convene a meeting of revolutionary leaders at Camagüey, Betancourt prevailed upon Maceo and most of the other leaders to create a civilian Cuban Revolutionary Government. After promising the military virtually unlimited powers in the new government, Betancourt became the government's first president on September 16, 1895. He served until October 30, 1897. After the defeat of the Spanish in 1898, he remained active in Cuban politics but often proved to be a thorn in the side of the United States by insisting that the Americans speed up their withdrawal from Cuba. He also vigorously objected to the mandatory inclusion of the Platt Amendment in the new Cuban government's constitution. Betancourt died in Havana on February 28, 1914.

Beveridge, Albert Jeremiah

Birth Date: October 6, 1862

Death Date: April 27, 1927

Lawyer, U.S. senator, distinguished historian, and ardent American expansionist. Born on a farm in Highland County, Ohio, on October 6, 1862, Albert Jeremiah Beveridge moved with his family to Illinois

Albert Beveridge, distinguished historian and progressive Republican senator from Indiana (1899–1911), was a staunch advocate of U.S. expansionism. (Library of Congress)

after the American Civil War. When his father's business failed in 1874, young Beveridge was obliged to go to work to help support the family. He held a series of manual labor jobs but was able to attend high school and graduated in 1881. A former employer loaned him money for tuition, and Beveridge was able to enter Indiana Asbury University (now DePauw University), graduating in 1885. While a student, he became known for his fine oratorical skill.

Following a year spent in land speculation in Kansas, Beveridge read for the law in Indianapolis. Admitted to the bar in 1887, he entered private practice and established a national reputation for arguing and winning a difficult case before the U.S. Supreme Court in 1892. Beveridge ran for the U.S. Senate as a Republican in 1898 and served two terms, although he failed to win reelection for a third term in 1910.

As a senator, Beveridge strongly supported progressive legislation. Influenced by Upton Sinclair's *The Jungle* (1905), Beveridge sponsored the Federal Meat Inspection Act of 1906. He also helped pass child labor legislation.

Beveridge is also remembered as one of the strongest advocates of American imperialism. He believed that the United States was God's chosen nation and was destined to spread Christianity around the world. He called the Spanish-American War a "holy war" and a "war for civilization," and on the outbreak of fighting he called on the United States to seize the Philippines as a means of securing the China Market. Following his election to the Senate, Beveridge toured the Philippines in November 1899. In a speech in January 1900, Senator Beveridge declared that the Philippines belonged to the United States "forever" and that beyond the islands lay the vast markets of China. The United States, he declared, would not abandon its role in the Far

East. Declaring the Pacific to be “our ocean,” he said that the United States would “not renounce our part in the mission of our race, trustee under God, of the civilization of the world.”

After leaving the Senate, Beveridge chaired the Progressive (Bull Moose) Party’s national convention in Chicago in 1912 and gave the keynote address nominating Theodore Roosevelt for president on that third-party ticket.

Beveridge was also a distinguished historian and secretary of the American Historical Association. He is best known for his definitive four-volume *Life of John Marshall* (1916), which won a Pulitzer Prize. Two volumes of his unfinished biography of Abraham Lincoln were published in 1928 after Beveridge’s death. Beveridge died in Indianapolis on April 27, 1927.

Biak-na-Bato, Pact of

Agreement of December 15, 1897, between Filipino insurgents and Spanish authorities that ended the Filipino revolt that had begun

in 1896. The pact was negotiated at Biak-na-Bato, a village located in San Miguel, Bulacan Province, in central Luzon about 60 miles north of Manila.

Emilio Aguinaldo y Famy, leader of the uprising against Spain, had won some military engagements and had then retreated to his mountain refuge of Biak-na-Bato. Many insurgents, disheartened by a series of setbacks, desired a cease-fire, however. The Spaniards also sought peace, hoping to avoid a costly campaign in the highlands that would divert forces and funds needed to quell the rebellion in Cuba.

After Spanish officials made several proposals that were rejected by Aguinaldo, Pedro Alejandro Paterno y Debera Ignacio, chosen as an envoy acceptable to both adversaries, mediated discussions in August 1897 that produced the Pact of Biak-na-Bato. According to the agreement, the Spanish governor-general promised the expulsion of the Spanish friars, Philippine representation in Spain’s parliament, equality of treatment for Filipinos in the justice system, Filipino employment in public offices, freedom of the press, and liberty to form associations.

Also under the accord, Aguinaldo and some 30 comrades were to go into exile in Hong Kong in exchange for a monetary settlement in three payments. An initial 400,000 pesos would be followed by 200,000 pesos once the insurgents relinquished 700 firearms. A final payment of 200,000 pesos would attend the singing of the Te Deum, a liturgical Christian hymn, symbolizing the rebellion’s conclusion. The Spanish authorities also consented to the announcement of a universal pardon and earmarked another 900,000 pesos to compensate Filipinos who had suffered losses during the insur-

Filipino nationalist leader Emilio Aguinaldo and his aides depart the Philippines for Hong Kong under the terms of the Pact of Biak-na-Bato, December 1897. (Library of Congress)

gency. Contrary to Aguinaldo's interpretation, the Spaniards alleged that the pact contained no provisions calling for reform.

To ensure the sincerity of Spanish officials, the insurgents required the detention of two Spanish generals at Biak-na-Bato as hostages while a third officer, Colonel Miguel Primo de Rivera, Governor-General Fernando Primo de Rivera y Sobremonte's blood relation, escorted the expatriates to Hong Kong. The governor-general consented, and the pact was signed on December 15. On December 23, the Spanish officers, Celestino Tejeiro and Ricardo Monet, reached Biak-na-Bato to act as detainees. On December 27, Aguinaldo and his associates departed from the port of Sual in Pangasinan Province for Hong Kong carrying a check for 400,000 pesos.

Spanish authorities applauded the pact as signaling the end of the uprising. Although the archipelago was now peaceful, the goal of independence and the mood of revolt remained. Aguinaldo and his companions, who had not taken the pact very seriously, accepted the 400,000 pesos and schemed to employ the funds for a later insurgency. The next installment of 200,000 pesos never arrived in Hong Kong because the Spaniards distributed it among insurgents still in the Philippines. They also failed to make the final installment, and the indemnity of 900,000 pesos was never paid. Spain also failed to implement the reforms that the Filipinos thought had been promised, and Spanish rule continued much as before. By May 1898, Aguinaldo and his cohorts, encouraged by American authorities, returned to the Philippines to resume the insurgency.

Biddle, William Phillips

Birth Date: December 17, 1853

Death Date: February 25, 1923

U.S. Marine Corps officer and commandant. William Phillips Biddle was born into a prominent family in Philadelphia, Pennsylvania, on December 17, 1853. He received a private secondary education and graduated from the University of Pennsylvania in 1875. That same year, he was commissioned a second lieutenant in the U.S. Marine Corps. He served several brief tours of duty in New York City; Washington, D.C.; and Philadelphia. He then began his first

sea duty and served consecutive tours aboard four different ships. In February 1894, following three years' shore service at Philadelphia, he was promoted to captain. In April 1895 he went to sea again, this time aboard the cruiser *Baltimore*. Just prior to the beginning of the Spanish-American War, he took up duties as commander of the Marine Corps detachment aboard the cruiser *Olympia*, Commodore George Dewey's flagship, and was present at the decisive Battle of Manila Bay on May 1, 1898.

Following a brief return to Philadelphia in 1899, Biddle was advanced to major and, in 1900, took command of the 1st Regiment of the 1st Marine Brigade dispatched as part of the American contingent sent to Beijing, China, as part of the international effort against the Boxer Rebellion. Biddle and his regiment were then dispatched to the Philippines, where the Philippine-American War was already under way. He subsequently commanded the Marine Corps barracks at Cavite Naval Base in the Philippines until 1903, when he was promoted to lieutenant colonel. During 1903–1904, he went to Panama with a Marine Corps battalion to help secure Panamanian independence from Colombia. In 1904–1905, he commanded the Marine Corps barracks at Philadelphia and was promoted to colonel in 1905.

During 1906–1908, Biddle returned to the Philippines, where he commanded the 1st Marine Brigade at Manila. He then had commands stateside during 1908–1909 before returning to Panama in 1909, where he remained until 1910. In February 1911, he was appointed commandant of the Marine Corps and promoted to major general. He retained the post until 1914, at which point he retired from active duty. In 1917, when the United States entered World War I, he returned to active duty and served at the San Diego Naval Base. Biddle died on February 25, 1923, in Nice, France, and was buried at Arlington National Cemetery.

Bigelow, Poultney

Birth Date: September 10, 1855

Death Date: May 28, 1954

American journalist, lawyer, and prolific writer. Poultney Bigelow was born in New York City on September 10, 1855, to a prominent New York family. At the time of his birth, his father, John Bigelow, was the coeditor and co-owner of the *New York Evening Post*, a well-read daily newspaper. At the beginning of the American Civil War, the elder Bigelow was appointed U.S. consul in France, and the

family moved to Paris. When the war ended, Bigelow's father became U.S. minister to France. The younger Bigelow was educated in the United States, France, and Germany. While attending an elite preparatory school in Potsdam, Germany, he met Crown Prince Wilhelm of Hohenzollern (who would later become Kaiser Wilhelm II) and his younger brother, Prince Heinrich. The three youths forged a friendship that was to endure for many years, and for most of his life Bigelow maintained a regular correspondence with Wilhelm.

Bigelow entered Yale University in the autumn of 1873, but health concerns compelled him to take a two-year leave from his studies. During this interim period, the ever-inquisitive young Bigelow decided to travel to East Asia, and he booked passage on a passenger vessel bound for Japan. The ship ran aground and foundered only miles from the Japanese coast. For Bigelow, the voyage and the shipwreck were the beginning of a lasting love of travel and adventure that became the subject of many of the books and newspaper stories he later wrote.

Bigelow returned to Yale and earned a degree there in 1879. Believing that the study of law might be useful to him, he went on to Columbia Law School in New York City. He passed the bar and opened a law practice but found the profession too staid and sedentary for his liking. Using his father's contacts, he embarked on a journalism and writing career, although he continued to practice law intermittently.

Beginning in the early 1880s, Bigelow served as a correspondent in New York and London. He traveled extensively, and his adventures and keen observances garnered him many readers and admirers. In the meantime, he authored numerous books on subjects ranging from history to contemporary politics, travel, and colonial studies including *The German Emperor* (1889), *Paddles and Politics down the Danube* (1892), *White Man's Africa* (1897), *China against the World* (1900), and *Britain, Mother of Colonies* (1918). An inveterate letter writer, Bigelow developed long and rich correspondences with Mark Twain, Percy Grainger, Frederic Remington, Henry Mills Alden, and other luminaries of the day.

During the Cuban crisis and resultant Spanish-American War, Bigelow covered events on the island as a correspondent for the London *Times*, a paper with which he had a considerable professional relationship. His descriptions of the locale and of the war itself were typical of his writing, evocative and thoughtful yet sometimes a bit too eager. His coverage of the Spanish-American War was one of the main vehicles by which Europeans learned of the war and its progress.

After the war, Bigelow continued to travel, write, and report on various newsworthy events. Around 1906, he all but stopped writing for periodicals to devote more time to writing books and correspondence. In 1915, he penned *Prussian Memories, 1864–1914*, in which he recalled his many experiences in Germany and with Wilhelm. Ten years later, Bigelow published *Seventy Summers*, an autobiographical work. In the early 1930s, he famously wrote about his admiration for Italian dictator Benito Mussolini and German

dictator Adolf Hitler. Bigelow's admiration turned to horror, however, later in the decade. He died in Malden, New York, on May 28, 1954.

Black Powder

Black powder was the original gunpowder. Of Chinese invention, it arrived in Europe in the 13th century and remained virtually the only known propellant for firearms until the mid-19th century. Black powder consisted of three principal ingredients: saltpeter (roughly 75 percent), which provided oxygen for burning; sulfur (about 10 percent), which lowered the temperature at which ignition of the powder occurred; and charcoal (about 15 percent), which added bulk and acted as a burning agent.

When ignited, black powder releases energy in the form of powerfully expanding gases. Properly channeled, these gasses can propel a projectile from a barrel at considerable velocity and distance. Black powder changed little over the years and remained the principal propellant for firearms until the late 19th century. Black powder burned imperfectly, leaving behind a considerable residue in the bore of the weapon's barrel. Known as fouling, it built up with successive firings, and the resulting difference between the projectile's diameter and the barrel's bore negatively impacted accuracy. This space was known as windage. The chief drawback of black powder on the battlefield, however, was the dense cloud of smoke it produced on ignition, which both revealed the weapon's location and made it difficult for the shooter to aim. Both problems persisted until the introduction of smokeless gunpowder at the end of the 19th century.

Unfortunately for the United States in the Spanish-American War, a shortage of modern small arms and artillery meant that virtually all volunteer units were armed with weapons that utilized black powder, while Spanish troops were armed with modern smokeless powder weapons.

Blaine, James Gillespie

Birth Date: January 31, 1830

Death Date: January 27, 1893

Republican Party politician and two-time U.S. secretary of state (1881, 1889–1892). Born on January 31, 1830, in West Brownsville, Pennsylvania, James Blaine was educated by a private tutor before entering Washington College (now Washington and Jefferson College) in Washington, Pennsylvania, at the age of 13. He developed an interest in politics and, at his graduation in 1847, delivered the commencement address in which he advocated American expansion.

Blaine worked as a teacher and studied law. In 1850, he married Harriet Stanwood. He moved to his wife's hometown of Augusta, Maine, in 1854, where he became editor and part owner of the *Kennebec Journal*. He used the Whig newspaper as a platform to denounce slavery, and his abolitionist views led him to help organize Maine's Republican Party in 1856, the first year in which the Republicans fielded a presidential candidate. He was a delegate to the Republican National Convention (RNC) that year and two years later was elected to the state legislature.

Traveling west to report on congressional elections for his newspaper, Blaine witnessed one of the legendary debates between Abraham Lincoln and Stephen Douglas. Greatly impressed by Lincoln,

Prominent Republican politician James G. Blaine, who served as speaker of the House and as secretary of state under President Benjamin Harrison. (Library of Congress)

Blaine worked to secure his presidential nomination at the 1860 RNC and, as a journalist and the Speaker of the Maine legislature, he used all his influence to secure Lincoln's election.

When the American Civil War began in 1861, Maine governor Israel Washburn appointed Blaine military agent for the state, and in that capacity, Blaine worked to recruit troops and provide supplies for the Union Army. He later avoided conscription by hiring a substitute to serve in his place. In 1862, Blaine successfully ran for the U.S. House of Representatives, where he staunchly supported Lincoln's wartime policies and gained national attention for his speeches demanding an all-out effort to achieve victory. Blaine repeatedly declared that a glorious future lay ahead for the reunited nation.

After the war, Blaine aligned himself with the Radical Republicans in Congress and opposed President Andrew Johnson's Reconstruction policies. An advocate of full equality for African Americans, Blaine supported the Fourteenth and Fifteenth Amendments and other legislation to secure political rights for former slaves. He supported General Ulysses S. Grant's presidential candidacy in 1868, and in 1869, Blaine was chosen Speaker of the U.S. House of Representatives.

Blaine sought the Republican presidential nomination in 1876 but lost the nomination to Rutherford B. Hayes in part because of allegations that Blaine had accepted bribes in exchange for securing funds for railroads. Appointed to fill Maine's vacant seat in the U.S. Senate in 1876, he supported James Garfield for president in 1880 and was named secretary of state in March 1881. Blaine's position became precarious, however, after Garfield's assassination (Garfield was mortally wounded by an assassin in July and died in September 1881) and Chester A. Arthur became president. In December 1881, Blaine resigned in protest after Arthur canceled Blaine's proposed Pan-American Conference.

In 1884, Blaine was the Republican nominee for president, but he lost a close election to Democrat Grover Cleveland. Blaine remained a leading Republican spokesman, however, and when Republican Benjamin Harrison was elected president in 1888, Blaine was again named secretary of state. He assumed his duties in March 1889.

As secretary of state, Blaine actively promoted American commercial interests abroad and in 1889 hosted the Pan-American Congress in Washington, D.C. He advocated diplomatic intervention in Latin America to secure peace and promote hemispheric unity under American domination. He also favored territorial expansion and identified Hawaii, Cuba, and Puerto Rico as prospective acquisitions. He successfully negotiated a partition of the Samoan Islands with Great Britain and Germany and deftly managed the crisis that resulted when U.S. Navy personnel were attacked in Chile in October 1891. Illness forced him to resign on June 4, 1892. Blaine died in Washington, D.C., on January 27, 1893.

Blanco y Erenas, Ramón

Birth Date: May 15, 1833

Death Date: April 4, 1906

Spanish Army officer and captain-general of Cuba during the Spanish-American War. Ramón Blanco y Erenas was born in San Sebastián on May 15, 1833, and became the Marqués de Peña Plata. His military career included significant action both at home and abroad. He fought in Santo Domingo (1863) and the Third Carlist War (1872–1876), and he was captain-general of Cuba from 1879 to 1881 and captain-general of the Philippines from 1893 to 1896. His attempt at reconciliation with the Filipino insurgents led the Spanish government to replace him with Camilo García de Polavieja in December 1896. Ironically, it was Blanco's reputation as a proponent of reconciliation that convinced Madrid to appoint him captain-general of Cuba in 1897.

On October 31, 1897, Spanish prime minister Práxedes Mateo Sagasta, pressed by U.S. government officials outraged by the bru-

Spanish general Ramón Blanco y Erenas, captain-general of Cuba during the Spanish-American War, sought to carry out a conciliatory policy. (Library of Congress)

ality of the Cuban *reconcentrado* (reconcentration) policy, replaced Captain-General Valeriano Weyler y Nicolau with the more conciliatory Blanco. On January 1, 1898, in an attempt to quell the Cuban insurgency, Blanco unveiled a program of local autonomy for the Cubans. For the most part, the criollos (whites born in Cuba) thought that local autonomy was too little, too late. The peninsulares (whites born in Spain), however, felt betrayed by the new policy. On April 10, 1898, when it had become apparent that war with the United States was imminent, Blanco suspended hostilities with the Cuban insurgents in the hope that they would assist Spanish troops in resisting a U.S. invasion. After Máximo Gómez y Báez, the leader of the Cuban insurgents, refused Blanco's offer of cooperation against the United States, Blanco ordered hostilities against the insurgents resumed on April 30, 1898.

Blanco thus faced the difficult task of defending the island from American attack while simultaneously fighting the Cuban insurgents in the interior. On July 3, 1898, he ordered the Spanish Atlantic Squadron, led by Admiral Pascual Cervera y Topete, to break the American blockade of Santiago Harbor. Cervera disagreed with Blanco's decision but followed orders, with the ultimate result that all of his ships were promptly sunk in the Battle of Santiago de Cuba. Blanco resigned his position in Cuba on November 26, 1898, and returned to Spain. He died in Madrid on April 4, 1906.

Bliss, Tasker Howard

Birth Date: December 31, 1853

Death Date: November 9, 1930

U.S. Army general and army chief of staff. Born in Lewisburg, Pennsylvania, on December 31, 1853, Tasker Bliss attended Lewisburg University (now Bucknell) but transferred in his second year to the United States Military Academy, West Point, from which he graduated in 1875. Commissioned in the artillery, he early on won recognition for being both cerebral and a linguist and served as an instructor at West Point (1876–1880) and at the Naval War College (1885–1888). He was also a special assistant to the secretary of war, and during 1897–1898, he was military attaché in Madrid, where he served as chief adviser to U.S. minister Stewart L. Woodford. In this position, Bliss counseled moderation and sought to prevent a war with Spain.

U.S. Army colonel Tasker Howard Bliss served in the Spanish-American War and was then collector of customs in Havana. He was later a general and chief of staff. (Library of Congress)

On the eve of the Spanish-American War, Bliss was recalled to the United States and promoted to lieutenant colonel. He subsequently went to Puerto Rico as chief of staff of the 1st Division, commanded by Major General James H. Wilson. Bliss's fluency in Spanish proved invaluable, and he personally carried news of the August 12 Protocol of Peace to Spanish forces at Asomante Hills.

Promoted to colonel on August 12, 1898, Bliss next served in Cuba, where he helped select camp locations for U.S. occupation forces on the island. That December he was appointed collector of customs in Cuba. He held this post until May 1902 and was able to generate enough customs revenue to make the island essentially self-supporting for the duration of the American occupation.

Promoted to brigadier general in April 1901, Bliss served as adviser to Secretary of War Elihu Root on the army reorganization that resulted in the formation of the General Staff. Bliss became the first president of the Army War College in 1903. Ordered to the Philippines, he commanded the Department of Luzon in the Philippines during 1905–1906. He then headed the Department of Mindanao, where he managed to keep the peace between the fractious rival Moro leaders. He also helped establish a progressive educational program on the island. During 1908–1909 he commanded the Philippine Division. Upon his return to the United States in 1909, he was interim president of the War College and briefly assistant chief of staff, and he then successively commanded the Department of California (1910–1911), the Department of the East (1911–1913), and the Department of the South (1913–1915). In

February 1915 he became assistant chief of staff of the army under Major General Hugh L. Scott.

Promoted to major general in November 1915, Bliss became acting chief of staff of the army in May 1917 and chief of staff of the army in September. In October 1917 he was promoted to general. As chief of staff when the United States entered World War I in April 1917, he supervised the rapid U.S. Army mobilization and expansion. Although Bliss reached the mandatory retirement age of 64 in December, President Woodrow Wilson continued him on active duty, and he remained chief of staff until May 1918.

In October 1917, Wilson named Bliss military representative in the U.S. mission to Europe headed by Edward M. House. Following the formation the next month of the Supreme War Council, which was charged with coordinating Allied military strategy, Bliss became its U.S. representative. He opposed the splitting up of U.S. units to serve with British and French forces and under their command, but he changed his position in response to the crisis resulting from the Ludendorff Offensive in the spring of 1918 and supported limited amalgamation. His relations with American Expeditionary Forces (AEF) commander General John J. Pershing were correct but not cordial. In 1918 Bliss initially favored Allied military intervention in Russia against the Bolsheviks, but he turned against it as the year wore on.

Bliss shared Wilson's views regarding the peace and was named a member of the U.S. delegation to the Paris Peace Conference in 1919. He advocated the admission of Germany and Russia to the League of Nations and also advocated postwar disarmament. He strongly disagreed with Wilson, however, on the granting of concessions to Japan in the Shandong Province of Manchuria.

Following his return to the United States, Bliss actively promoted the League of Nations and international disarmament in a series of speeches and articles. In 1920 he was appointed governor of the Soldiers' Home in Washington, D.C., and served in that capacity until 1927. Bliss died in Washington, D.C., on November 9, 1930.

Blue, Victor

Birth Date: December 7, 1865

Death Date: January 22, 1928

U.S. Navy officer. Victor Blue was born in Richmond County, North Carolina, on December 7, 1865. Deciding on a naval career, he entered the United States Naval Academy, Annapolis, as a cadet in May 1883 and graduated in 1887. Named an assistant engineer in July 1889 and promoted to ensign in 1892 and lieutenant junior grade in December 1897, he was assigned to the armed yacht *Suwanee* during the Spanish-American War. On May 31, 1898, he participated in an effort to land munitions in Cuba for insurgent forces.

Blue won renown for a daring mission behind Spanish lines. During June 11–13, dressed in full uniform to avoid execution as a spy if captured, he traveled some 72 miles into Cuba in order to ascertain for certain the presence of Rear Admiral Pascual Cervera y Topete's squadron in Santiago Harbor. Blue's affirmative report led Washington to issue the orders dispatching Major General William R. Shafter's V Corps to Cuba with the goal of taking Santiago by land.

On a second daring mission ashore in Cuba during June 25–27, Blue determined the precise location of each of Cervera's ships in

preparation for a U.S. Navy torpedo attack that, however, did not occur. Following the surrender of Santiago on July 17, Blue assumed command of the former Spanish gunboat *Alvaredo*. He was subsequently advanced five numbers in grade for extraordinary heroism during the war.

Assigned to the Philippines, Blue served as flag lieutenant in the Pacific Squadron in Philippine waters during 1900–1901. He was inspector of ordnance during 1905–1907. He was promoted to commander in 1909, and the next year, he was assigned as chief of staff of the Pacific Fleet. He then served as a member of the General Board of the Navy Department and chief of the Bureau of Navigation (1913–1916 and again in 1919). Following U.S. entry into World War I in April 1917, he commanded the battleship *Texas*, which saw service (but no action) with the British Grand Fleet in the North Sea. Advanced to rear admiral in April 1919, he retired that June. Blue died on January 22, 1928.

Operating behind Spanish lines on an intelligence mission, U.S. Navy lieutenant junior grade Victor Blue established the presence of Spanish rear admiral Pascual Cervera y Topete's squadron in Santiago Harbor. (*Photographic History of the Spanish-American War*, 1898)

Boca Grande

The southern (and largest) channel leading into Manila Bay. Before the Spanish-American War, Spanish authorities did what they could to strengthen defenses at the mouth of Manila Bay in the expectation that if war came it would bring an American naval effort against Manila and its nearby naval base. The mouth of Manila Bay, about 10 miles broad, had numerous large rocks as well as several small islands and was split into two main passages by the island of Corregidor. Boca Chica (Little Mouth) is the northern passage, and Boca Grande (Big Mouth) is the southern passage. Caballo Island, one mile below Corregidor and inside Boca Grande, deployed a battery of three 5.9-inch guns transferred from the Spanish warship *Velasco*. On El Fraile, an islet in Boca Grande between Caballo Island and coastal Luzon, the Spaniards mounted three 4.7-inch naval guns from the gunboat *General Lezo*. In addition, three 6.3-inch artillery pieces were posted on the southern cape of the mouth at Punta Restinga.

In March 1898, before the declaration of war, U.S. consul in Manila Oscar Williams informed Commodore George Dewey in Hong Kong that the entrances to the bay were not mined because the Spaniards lacked insulated arming wires. Yet on April 26, E. Spencer Pratt, the U.S. consul in Singapore, reported Spanish mining operations in the Boca Grande channel. That account coincided with later intelligence from Williams before he left Manila and from captains of commercial vessels docked in Hong Kong. On

April 27, another report claimed that Boca Chica was thoroughly seeded with mines.

Dewey examined the various intelligence data and judged the mining danger inconsequential. Furthermore, the commodore believed that planting mines in Boca Grande's deep waters required technological expertise that the Spanish did not possess. He also assumed that floating contact devices would break down mechanically in the warm waters and become useless.

Meanwhile, Rear Admiral Patricio Montojo y Pasarón, commander of Spanish naval forces at Manila, had decided against engaging Dewey's ships at Corregidor. Discouraged by Boca Grande's depth and his lack of mines, Montojo selected the Cavite anchorage in Cañacao Bay inside Manila Bay and near to Sangley Point's artillery cover for his defense.

On his arrival in Philippine waters, Dewey sent two ships to scout Subic Bay on the other side of Luzon. Determining that the Spanish warships were not there, he assumed that they were in Manila Bay. After cutting the transoceanic cable that allowed Montojo to communicate with Madrid, Dewey headed into Boca Grande in the early hours of May 1, 1898. The ships of his Asiatic Squadron advanced into the channel in a straight line, each separated by 400 yards, heading toward El Fraile. His squadron consisted of the protected cruisers *Olympia* (flagship), *Baltimore*, *Boston*, and *Raleigh*; the gunboats *Concord* and *Petrel*; and the revenue cutter *McCulloch*. Each vessel displayed one covered light at its poop.

Dewey expressed surprise that the Spanish guns trained on Boca Grande failed to fire on his ships as they traversed the passage. The squadron avoided detection until it passed El Fraile. Then the Spaniards fired several shots, and Dewey's ships returned fire before steaming toward battle with Montojo's vessels later that same day in the Battle of Manila Bay.

the Philippines. Andrés Bonifacio was born to an indio (native) father and a part-Spanish mestiza mother on November 30, 1863, in Tondo, a shanty town on the outskirts of Manila. His father and mother died before he was 10 years old. Little is known of Bonifacio's early life except that he went to work at an early age to support his siblings. He learned to read and write but evidently was largely self-taught, reportedly becoming a clerk for several foreign firms. He especially admired the French revolutionaries of 1789.

On July 3, 1892, José Rizal, a middle-class Filipino, established the Liga Filipina (Filipino League), a nonviolent group dedicated to reforming Spanish colonialism in the Philippines, and Bonifacio became one of its first members. Ramón Blanco y Erenas, Spanish captain-general of the Philippines, considered the group dangerous, however, and sent Rizal into exile.

Believing that peaceful reform of colonialism was now unrealistic, on July 7, 1892, Bonifacio organized the Katipunan (Highest and Most Respected Association of the Sons of the Country) with the goal of overthrowing Spanish rule in the Philippines by force. Most members of the middle class, however, continued to hope for a peaceful resolution of their demands for colonial reform and did not support Bonifacio's organization. By 1896, the Katipunan claimed more than 30,000 members, mostly from the lower classes. Within the organization, Bonifacio's nom de guerre was Maypagasa (He Who Hopes), and he held the title of *supremo*. Ultimately he came to be known as the Father of the Revolution. In 1896 he wrote *The Duties of the Sons of the People*.

When an informer betrayed the Katipunan to the Spanish authorities, on August 23, 1896, Bonifacio initiated the "Grito de Balintawak," a call to armed revolt against Spain. On August 30, 1896, with a promise for radical social change, he led 8,000 men in the first battle in the struggle for Filipino independence at San Juan del Monte. Bonifacio proved inept as a military commander, however, and by December 1896 his men had suffered a calamitous series of defeats at the hands of the Spanish forces.

Meanwhile, a group of Katipunan rebels from Cavite, led by Emilio Aguinaldo y Famy, grew rapidly in strength and were much more successful in fighting the Spanish. Following a brief power struggle between Bonifacio and Aguinaldo, men loyal to Aguinaldo arrested Bonifacio and executed him and his brother Procopio on May 10, 1897. The orders came from General Mariano Noriel, but it has been suggested, although not proven, that Aguinaldo was behind it. Most Filipinos remember Bonifacio as a genuine hero in the struggle for Philippine independence, and his birthday is commemorated in the Philippines.

Death Date: June 8, 1951

American correspondent, linguist, and historian. Stephen Bonsal was born in Baltimore, Maryland, on March 29, 1865. He traveled extensively overseas as a newspaper correspondent, spending time in Asia before joining the *New York Herald* and *Harper's Weekly* to report on the Cuban revolt against Spain. Returning from Cuba in April 1897, he testified before the U.S. Senate Foreign Relations Committee on his experiences and published *The Real Conditions of Cuba Today* (1897). In that book, he adopted a sympathetic position toward the insurrectionists and sharply criticized the Spanish *reconcentrado* (reconcentration) system. He returned to Cuba with Major General William R. Shafter's V Corps during the Spanish-American War to cover the Santiago Campaign for *McClure's Magazine*. Following the war, Bonsal published *The Fight for Santiago: The Story of the Soldier in the Cuban Campaign, from Tampa to the Surrender* (1899). In this book he praised the service of African American U.S. Army soldiers during the war.

During 1910–1911, Bonsal was a correspondent for the *New York Times*. Following U.S. entry into World War I, he was employed in psychological warfare operations for the U.S. Army. Fluent in French, he served as President Woodrow Wilson's private translator during the 1919 Paris Peace Conference. Bonsal's book on the conference, *Unfinished Business*, won the Pulitzer Prize in 1944. Among his other books is *American Mediterranean* (1912). Bonsal died on June 8, 1951.

Fists (known in the West as the Boxers). The movement developed in northern China, and the Boxer Rebellion occurred during November 1897–September 1901. Its objective was the removal of foreign influence over Chinese trade, politics, religion, and technology. The Boxers were so-named because most of the adherents of the movement practiced martial arts, including Eastern-style boxing.

The Opium Wars of the 1840s and 1850s had led to Western nations imposing what became known as the Unequal Treaties on the Chinese. Those asymmetrical agreements gave the European powers substantial control over China's principal ports, dominance of the Chinese Customs Service (and hence of much of the imperial revenue), and extraterritorial rights for their citizens, rendering them immune from prosecution in Chinese courts. This environment provided Western businessmen a dominant position in the most lucrative parts of the Chinese economy and also encouraged the influx of Christian missionaries, who came to be seen as agents for the further spread of Western influence in China. Furthermore, because the missionaries were exempt from much of Chinese law, Christian churches often attracted miscreants who used the religion to invoke Western protection, inflaming further resentment against foreign influence.

China's humiliating defeat by Japan in the Sino-Japanese War of 1894–1895, despite efforts to reform the government and promote self-generated development, was followed by still further demands for mining and railroad concessions and seizures of territory by Britain, France, Germany, and Russia. In November 1897, the German government retaliated against China for the murder of two missionaries in Shandong Province by occupying the port of Qingdao. In December 1897, the Russians seized Lushun, located in southern Liaoning. The British joined in by occupying Weihai, while the French seized Zhanjiang. The U.S. Open Door Policy, initiated in 1899, was also seen by Chinese Nationalists as a further incursion on Chinese sovereignty.

The Boxers came together as a nationalistic, antiforeign movement determined to reverse the expansion of Western influence in China and restore Chinese independence. Its influence was greatest in northern China, where Western dominance was most widespread. The initial stages of the Boxer Rebellion were simultaneous with the Guangzu emperor's so-called Hundred Days' Reform (June 11–September 21, 1898), an attempt to reorganize the imperial bureaucracy and make it more efficient. The plan was opposed by his powerful aunt, Dowager Empress Cixi. The Boxers at first were hostile toward the ruling Manchu Qing dynasty. However, after they suffered a stinging defeat during an engagement with imperial troops in October 1898, they suspended their antigovernment campaign to focus their assaults on Christian missionaries and converts, whom they saw as agents of Western imperialism.

The growing strength of the Boxers encouraged Cixi to deploy them both as a force to expel the Western powers from China and as a means to reverse the emperor's reform program. The Imperial Court, soon firmly under her control, issued edicts in January 1900

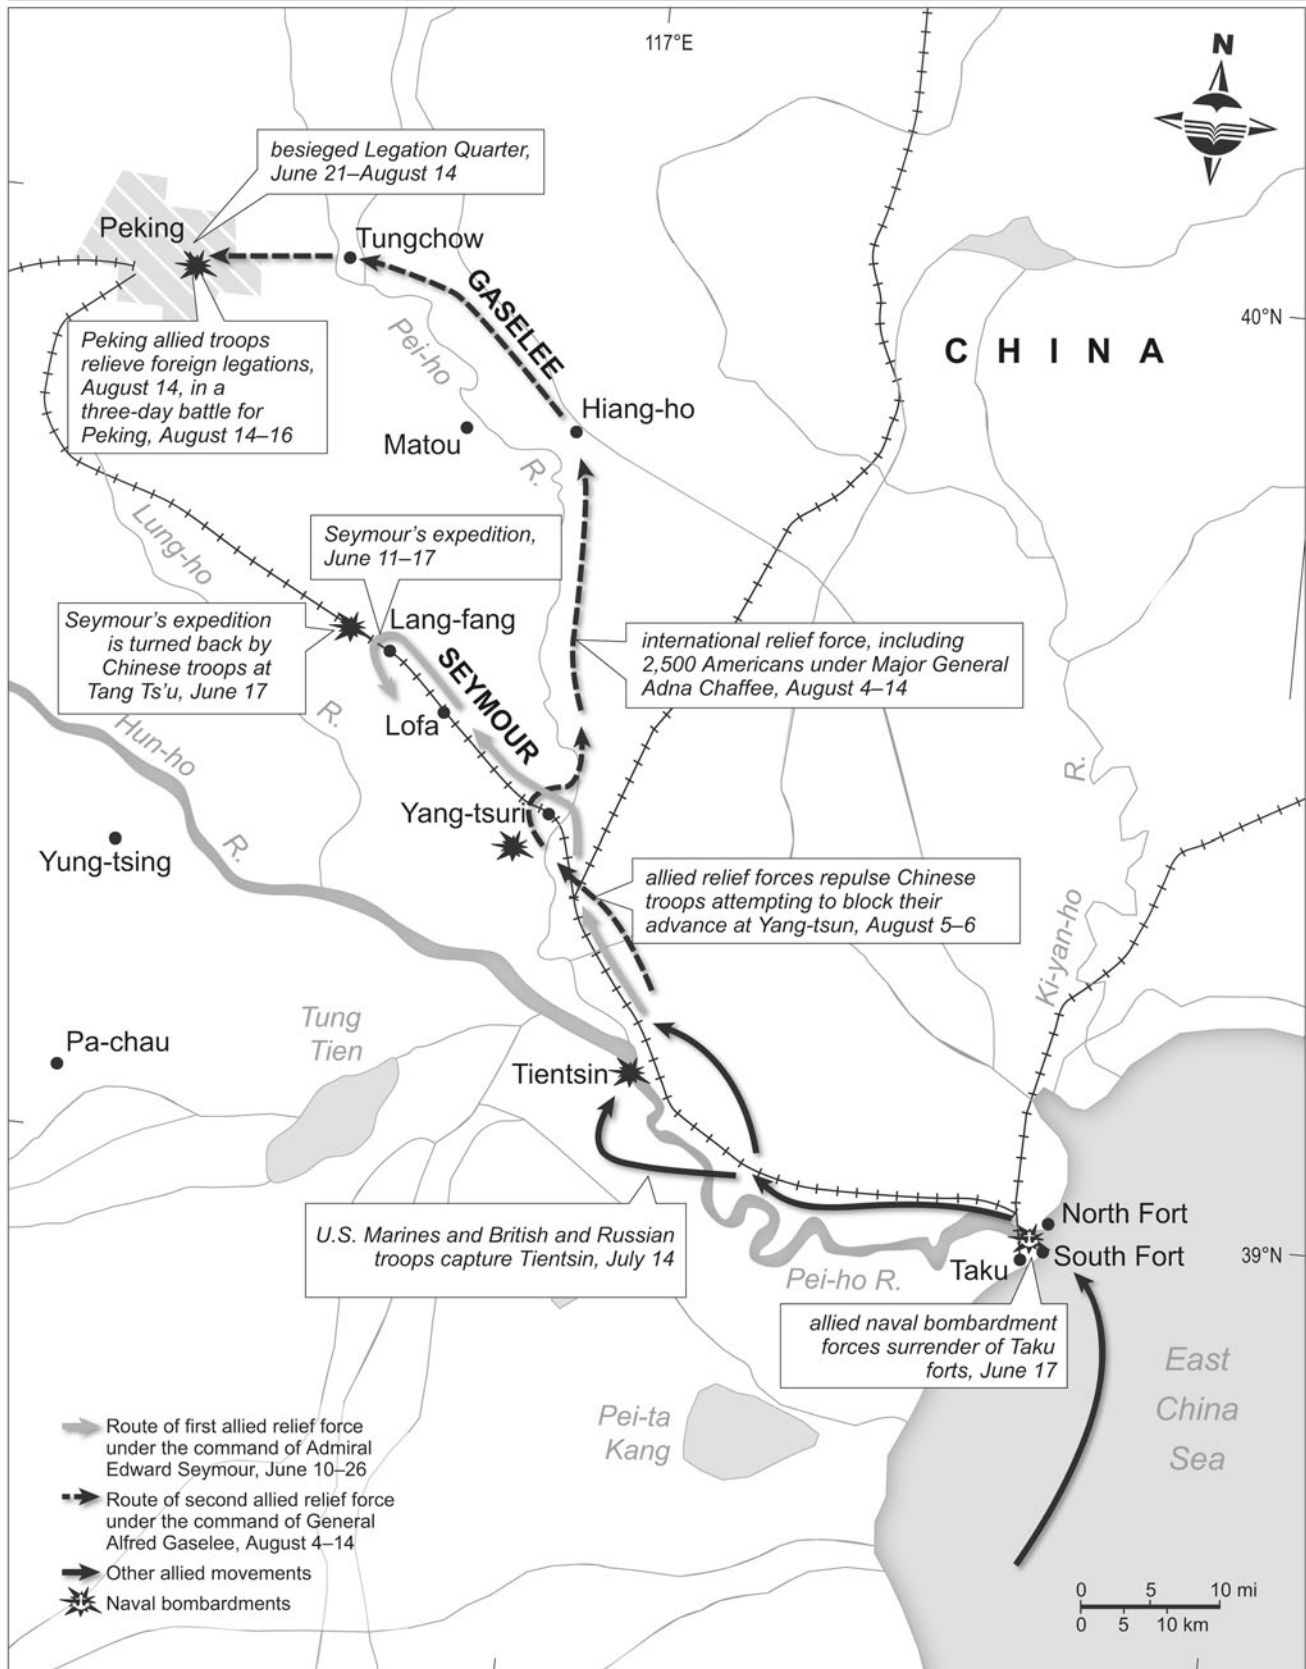

Boxer Rebellion

Start Date: November 1897

End Date: September 1901

A nationalist uprising in China. The so-called Boxer Rebellion was initiated by the secret organization known as the Righteous and Harmonious Society Movement or Righteous and Harmonious

RELIEF OF FOREIGN LEGATIONS IN PEKING, JUNE–AUGUST 1900

Men of the 9th U.S. Infantry Regiment in camp inside the Forbidden City, Beijing (Peking), China. (Library of Congress)

defending the Boxers. This move drew vociferous complaints from foreign diplomats. By November 1899, the Boxers had begun to launch widespread attacks against Western interests throughout northern China.

In response to spreading Boxer depredations, Western nations began to build up their forces on the Chinese coast in April 1900. A mixed force of 4,500 troops was landed to safeguard Western interests in Tianjin, and on May 31, 430 marines and sailors from eight nations were dispatched to Beijing to reinforce the forces guarding the legations there. The nations that sent troops were Japan, Russia, Great Britain, France, the United States, Germany, Italy, and Austria. On June 9, 1900, Boxers severed the telegraph line to Beijing. The following day, British vice admiral Sir Edward Seymour led a multinational force of some 2,100 troops (mostly marines and sailors) to go to the aid of troops already in place defending foreign embassies at Beijing.

The troops met stiff resistance from imperial troops and had to retreat to Tianjin, arriving there on June 25 after losing 350 men. The imperial government ordered all foreigners to leave Beijing, and the following day the Boxers, joined by elements of the Imperial Army, attacked the foreign compounds inside Beijing. The American, British, Dutch, French, and Russian legations, all in close proximity to the imperial compound known as the Forbidden City, were joined together to form a fortified compound into which the staff of the Belgian and Spanish legations and other foreign citizens fled. The German legation, however, was on the other side of the city and was stormed before the staff could escape.

Imperial Chinese troops, in the meantime, had reinforced the Dagukou forts at the mouth of the Haihe River, cutting off the allied

fleet from the forces it had landed. On June 16, a joint allied conference presented the Chinese with an ultimatum demanding the surrender of the forts. At 1:00 a.m. on June 17, a fierce artillery interchange between the forts and shoal-draft elements of the allied fleet commenced, after which allied landing forces assaulted the forts. By 6:30 a.m., the forts had been captured along with four destroyers that had been seized by naval boarding parties.

Dagukou became a beachhead for the buildup of strong forces to relieve the troops at Tianjin and advance on Beijing. By early July, 51 warships from eight nations were deployed in the mouth of the Haihe River. They brought with them 4,750 marines and naval landing forces along with almost 50,000 other troops, the great majority from Japan (20,840), Russia (13,150), and Britain (12,020), with smaller contingents from France (3,520), the United States (3,420), Germany (900), Italy (80), and Austria-Hungary (75). This allied force successfully assaulted Tianjin on July 13 and commenced its advance to Beijing on August 4.

The march to Beijing was opposed by approximately 70,000 imperial troops and between 50,000 and 100,000 Boxers. On August 5, 1900, Beicheng fell, and the following day American and British troops prevailed in a fierce engagement at Yangcun. The allied force arrived at Beijing on August 14, where troops from the U.S. Army's 14th Infantry Regiment scaled the Tartar Wall and opened the way into the Outer City. The following day, the allied force successfully assaulted the Inner City, ending the siege of the legations.

Following the capture of Beijing, allied troops spread out over northern China, breaking up Boxer concentrations. On February 1, 1901, the imperial government officially abolished the Boxers. On September 7, 1901, imperial officials had no choice but to sign the so-called Boxer Protocol, sometimes referred to as the Peace Agreement between the Eight-Nation Alliance and China. The Qing government was obliged to permit fortifications of foreign legations and the installation of foreign garrisons along the Beijing–Tianjin railroad. It was also compelled to execute 10 officials linked to the outbreak of the rebellion and pay war reparations of \$333 million. Both Britain and the United States subsequently remitted much of their portions of the indemnity, allocating it for the education of Chinese students at overseas institutions.

This humiliating defeat greatly contributed to the growth of Chinese nationalism and movements dedicated to the nation's modernization and the overthrow of the "foreign" Qing dynasty (originally of Manchurian origin). This eventually led to the 1911 revolution and the establishment of the Republic of China in 1912. In the short term, however, it also paved the way for aggressive foreign expansion into China, especially by Russia and Japan in the north. The large number of American troops and ships deployed in the Philippines after the Spanish-American War allowed the United States to make a significant contribution to suppressing the Boxer Rebellion. This success reinforced the importance of the Philippines in maintaining America's interests in the Far East.

Breckinridge, Joseph Cabell

Birth Date: January 14, 1842

Death Date: August 18, 1920

U.S. Army officer and inspector general during the Spanish-American War. Joseph Cabell Breckinridge was born on January 14, 1842, in Baltimore, Maryland, into a well-known American political family. He attended Centre College in Danville, Kentucky, and the University of Virginia. In 1861, he entered the U.S. Army, initially serving on the staff of Brigadier General William Nelson. Within a year Breckinridge was the acting adjutant general with the 4th Division of the Army of the Ohio. On April 14, 1862, he was commissioned a second lieutenant of the 2nd U.S. Artillery in recognition of his gallantry during the January 19, 1862, Battle of Mills Springs in Kentucky. He earned a brevet promotion to captain on July 22, 1864, for his services during the Atlanta Campaign but was taken prisoner later in that same campaign. In March 1865, he received a brevet promotion to major.

Following the American Civil War, Breckinridge remained in the U.S. Army, where he continued to excel and advanced from regular artillery captain in 1874 to brigadier general in 1890, securing an assignment as inspector general. He left this post in 1898, however, to serve with V Corps in the Santiago Campaign in Cuba.

On July 2, 1898, while Breckinridge was observing troops charging up the hill at Las Guásimas, his horse was shot out from under him. He concluded from his stay in Cuba that U.S. troops there were poorly equipped, and he expressed the hope that the war would educate the army about the need for proper readiness and provisioning. He also praised African American soldiers for their courage under fire.

On August 2, 1898, U.S. secretary of war Russell A. Alger directed Breckinridge, now a major general of volunteers, to take command of Camp Thomas in Chickamauga National Park, Georgia, replacing Brigadier General James Franklin Wade. On August 2, 1898, Breckinridge assumed command of I Corps.

Army officials had described the conditions at Camp Thomas as close to anarchy, and Breckinridge had the task of bringing about order. At Camp Thomas, he had command of some 44,000 troops, mostly volunteer troops along with part of III Corps. A considerable percentage of his troops were poorly equipped.

As a result of inadequate sanitation, insufficient water supplies, and poor drainage, Breckinridge had to contend with a massive outbreak of typhoid fever. Mid-August saw almost 4,000 men in Camp Thomas stricken with the disease. Breckinridge took decisive steps to deal with the disease, including establishing two hospitals. Because of this outbreak, however, most of the men at Camp Thomas were either mustered out of the service or assigned to other camps by the end of August. The camp was deemed too filthy to be salvaged and was closed entirely at the end of September.

Breckinridge then moved his men to Lexington, Kentucky, and was relieved of command on October 20, 1898, by Major General James H. Wilson. Breckinridge's support for his good friend Major General Nelson A. Miles during the Embalmed Beef Scandal ruined Breckinridge's reputation and led to his voluntary retirement on April 12, 1903, after which he returned to his estates in Kentucky and Canada. He died in Washington, D.C., on August 18, 1920.

Brooke, John Rutter

Birth Date: July 21, 1838

Death Date: September 5, 1926

U.S. Army general and military governor of Cuba. Born in Montgomery County, Pennsylvania, on July 21, 1838, John Rutter Brooke was educated at Collegeville and West Chester. Commissioned a captain of volunteers in the 4th Pennsylvania Infantry in April 1861

U.S. Army major general John Rutter Brooke was military governor of Puerto Rico (1898) and then governor of Cuba (1898–1902). (John Clark Ridpath, *Ridpath's History of the World*, 1901)

at the beginning of the American Civil War, he suffered the embarrassment of having to watch his regiment march away just prior to the First Battle of Bull Run (Manassas) on July 21, 1861, on the expiration of its three-month term of enlistment.

Promoted to colonel of the 53rd Pennsylvania that November, Brooke took part in the ensuing Peninsula Campaign and then temporarily commanded a brigade of II Corps in the Battle of Antietam (Sharpsburg) on September 17, 1862. Reverting to his regimental command, he took part in the Battle of Fredericksburg on December 13, 1862, when he took permanent command of the 4th Brigade of the 2nd Division of II Corps, which he commanded in the Battle of Chancellorsville (May 1–4, 1863) and at Gettysburg (July 1–3, 1863), where he was wounded. On recovering from his wounds, he took part in the Overland Campaign and fought in the Battle of the Wilderness (May 5–7, 1864) and the Battle of Cold Harbor (June 1–3, 1864). For his distinguished service, he was advanced to brigadier general, backdated to May 12, 1864. Critically wounded at Cold Harbor, he returned to duty in September but was incapable of field service until November. He served on court-martial duty until the spring of 1865 when he took command of a division under

Major General Winfield Scott Hancock in the Shenandoah Valley. Brooke was then breveted a major general of volunteers.

Brooke remained in the regular army after the war and was promoted to lieutenant colonel in the 27th Infantry Regiment in July 1866. He was promoted to colonel in 1879 and served in the West in various posts. In 1888 he was advanced to brigadier general, receiving command of the Department of the Platte, and in 1897 he was advanced to major general.

Following the declaration of war with Spain, Brooke was named to command the I Corps at Camp Thomas in Chickamauga, Georgia, before being assigned to the Department of the Gulf. Named a senior commander under Major General Nelson Miles for the Puerto Rico Campaign, Brooke departed with his 5,000-man force from Newport News, Virginia, on July 28, 1898, and began coming ashore at Arroyo on August 3. He commanded the right flank of the U.S. advance across the island, fighting at Guayama on August 5 and then moving northeast in an effort to cut off the Spanish retreat from Ponce and isolate the garrison at Aibonito. Following the war, he served as the first governor of Puerto Rico until he was replaced by Brigadier General Guy Vernon Henry on December 9. While governor, Brooke allowed the former autonomous government officials to remain in place and appointed a new supreme court for the island. On January 1, 1899, following the signing of the Protocol of Peace between the United States and Spain, he accepted the formal surrender of Spanish forces in Cuba.

Appointed military governor of Cuba, Brooke was faced with bringing order to a country that had suffered privation from years of war, a challenge he met with reasonable success. After the restoration of order, he oversaw the distribution of food and the reestablishment of civil government. He also initiated work on improving Cuba's road system, harbors, and public buildings and negotiated the surrender of the Cuban Revolutionary Army. Nevertheless, he came to be viewed as something less than an able administrator. Among other things, critics charged that he relied too heavily on his Cuban advisers and lacked a firm hand. In December 1899, he was replaced by the younger and more aggressive Brigadier General Leonard Wood.

Following his Cuban service, Brooke returned to the United States to command the Department of the East. He retired on July 21, 1902, having reached the statutory age of 64. Brooke died in Philadelphia on September 5, 1926.

Brooklyn, USS

U.S. armored cruiser and Commodore Winfield Scott Schley's flagship during the pivotal Battle of Santiago de Cuba on July 3, 1898. The *Brooklyn* was laid down in 1893 and commissioned on December 1, 1896. Captain Francis Augustus Cook commanded the ship from 1896 to 1899. The *Brooklyn*, with a maximum speed of 20 knots, was 402 feet, 7 inches in length and 64 feet, 8.5 inches in beam and had a maximum draft when fully loaded of 26 feet, 2 inches. It displaced 9,215 tons. Its armaments included 8 8-inch guns; 12 5-inch guns; 12 6-pounders, 4 1-pounders, 4 Colt Gatling guns, 2 3-inch field guns for landing parties, and 4 Whitehead 18-inch torpedo tubes. The *Brooklyn* was protected by 3 inches of armor on its sides, 5.5 inches of armor on its turrets, and 4 to 8 inches of armor on its barbettes. Crew complement numbered 525 men, including 45 officers.

Commodore Schley took command of the Flying Squadron on March 17, 1898, and took the *Brooklyn* as his flagship. When war with Spain began that April, he was directed to patrol the U.S. East Coast and remain prepared to steam to the Caribbean when necessary. On May 13, he was ordered to steam to Key West, Florida, and link up with Rear Admiral William T. Sampson's North Atlantic Squadron to take up a blockading position off Cienfuegos, Cuba. Schley did not arrive until May 22, much to the annoyance of Sampson. By then, it had already been ascertained that Spanish admiral Pascual Cervera y

Topete's squadron was at Santiago de Cuba. Sampson ordered an immediate blockade of the harbor to prevent the Spanish ships from escaping. Ordered to join the blockade of Santiago immediately, Schley dithered and did not arrive until May 26.

On the morning of July 3, 1898, Sampson left the blockaders at Santiago de Cuba for a meeting with Major General William R. Shafter in Siboney. When Cervera tried to break out of the harbor a short time later, Schley had effective command of the entire squadron and issued the orders to attack the Spanish ships. Because the *Brooklyn* was closest to the outgoing Spanish ships, it became Cervera's immediate objective, with the Spanish cruiser *Maria Teresa* initiating fire. Fearing that the *Brooklyn* was in jeopardy and vulnerable to a Spanish broadside, Schley allegedly ordered Cook to execute a 360-degree turn away from the Spanish vessels before coming around to face them head-on for pursuit. In the midst of the controversial turn, the *Brooklyn* almost collided with the battleship *Texas*. The near miss slowed the advance of both ships, although the incident did not imperil the impending battle, which U.S. forces won easily in a matter of a few short hours. During the battle, the *Brooklyn* was hit by at least 20 Spanish shells, but none of these were serious. Amazingly, only one sailor died on the U.S. ship.

On July 11 and 12, 1898, the *Brooklyn* played a role in the eventual surrender of Santiago de Cuba. In order to put pressure on the

The U.S. Navy armored (heavy) cruiser *Brooklyn*, Commodore Winfield Scott Schley's flagship during the Battle of Santiago de Cuba, July 3, 1898. (Library of Congress)

Spaniards to surrender, the *Brooklyn*, along with the *Indiana*, the *Texas*, and the *New York*, shelled the city while Major General William R. Shafter's forces engaged the Spanish in a fairly light ground battle. The city surrendered on July 17.

The *Brooklyn* saw extensive postwar service. From June 7, 1905, to June 1, 1906, it served as Rear Admiral Charles Sigsbee's flagship during his command of the European Squadron. The ship was decommissioned in June 1908. It was recommissioned in 1915 during World War I. The *Brooklyn* was decommissioned for a final time in 1921 and sold that same year.

Browning-Colt .45 Semiautomatic Pistol

Designated as the United States Pistol, Caliber .45, M1911, the Browning-Colt .45 is one of the most famous firearms and probably the most enduring pistols in history. It was designed by American John M. Browning for Colt Patent Firearms Manufacturing Company and was semiautomatic, firing one shot each time the trigger was pulled. Browning, born in 1855 and the son of a gunsmith, was perhaps the most innovative firearms designer in history. Among his weapons were a wide variety of machine guns and the Browning Automatic Rifle (BAR), but he was perhaps best known for his semiautomatic pistol. Indeed, his name became synonymous with this weapon type.

By the 1890s Browning had developed a self-loading pistol, initially in .38 caliber, that he demonstrated for officials at Colt. In 1896 the two parties agreed that Colt would develop, manufacture, and distribute Browning's designs in the United States, while Browning struck a similar deal with the Belgian firm of Fabrique Nationale in Europe.

Browning's first Model 1900 semiautomatic pistol was the basis of the later M1911 .45-caliber pistol. It fired a .38-caliber rimless cartridge and had a seven-round detachable box magazine. The barrel was attached to the slide with corresponding grooves and lugs. When the pistol was fired, these disengaged, allowing the barrel to slide backward to eject the spent cartridge, cock the exposed hammer, and then strip a new round from the magazine when carried forward by a spring. The Model 1902 and a shorter-barrel

Model 1903 followed. The Model 1903 .32-caliber pistol, with a 4-inch (later 3.75-inch) barrel, was highly successful. With its slide lock and concealed hammer and weighing only 23 ounces, it remained in production until 1946. Browning also designed a Model 1908 .38-caliber and a .25-caliber that were produced until 1941.

Colt and other firearms manufacturers were most interested in winning the competition for a new U.S. government side arm. The army's experience during the Philippine-American War (1899–1902), in which its .38-caliber pistols had not been able to halt hard-charging Moro insurgents, led the Ordnance Bureau to require that the new weapon be no less than .45 caliber. Following extensive tests including those in the field and against cadavers and animals, the Browning-Colt .45 won out over a half dozen other designs to enter service in May 1911. It replaced a wide range of revolvers and semiautomatic pistols to equip all the U.S. armed forces.

Although heavy at 39 ounces with an empty magazine and having a hefty recoil, the Browning-Colt .45 was absolutely reliable and accurate. It also had great knock-down power, thanks to the large and relatively slow-moving 230-grain bullet (muzzle velocity of 830 feet per second). Magazine capacity was eight rimless .45 rounds. The M1911 also featured both a thumb-operated and grip safety.

With World War I, demand for the pistol increased tremendously, and 380,000 were manufactured between April 1917 and November 1918 alone. During World War II, the government ordered 1.9 million produced. The Browning-Colt .45 remained in service with the U.S. military (and many foreign militaries) from 1911 until 1985 and the changeover to the standard 9-millimeter NATO model Beretta.

Brumby, Thomas Mason

Birth Date: November 20, 1855

Death Date: December 17, 1899

U.S. Navy officer. Thomas Mason Brumby was born on November 20, 1855, in Marietta, Georgia. His father, Arnoldus Brumby, had served as a colonel in the Confederate Army during the American Civil War and had been the superintendent of the Georgia Military Institute. First attending the University of Georgia, the younger Brumby transferred to the United States Naval Academy, Annapolis, becoming a cadet midshipman on September 27, 1873, and graduating on June 18, 1879. On November 26, 1880, he made ensign and soon thereafter profited from the decision to build a modern

all-steel navy. On April 21, 1887, Brumby made lieutenant, junior grade, and on August 24, 1892, he made lieutenant.

After serving in a variety of posts at sea and surviving a typhoon off the coast of Samoa in 1889, during which he was barely able to swim ashore, Brumby volunteered to serve as one of Commodore George Dewey's aides when the latter took command of the Asiatic Squadron. Impressed with the young officer, Dewey accepted Brumby's application. Soon, Brumby was flag lieutenant aboard Dewey's flagship, the cruiser *Olympia*. As such, Brumby was actively involved in the May 1, 1898, Battle of Manila Bay, which saw the prompt destruction of the Spanish squadron by Dewey's ships. During the brief battle, Brumby narrowly escaped death from a Spanish shell that severed a signal halyard he was holding.

Before and during the First Battle of Manila on August 13, 1898, Dewey selected Brumby as his chief emissary and negotiator with the Spanish side. Indeed, Brumby helped negotiate a surrender agreement with Spanish general Fermín Jáudenes y Alvarez whereby the Spanish would stage a token defense of their outer defense works at Manila to salvage Spanish honor. The negotiations had actually begun on August 7 with an ultimatum from Major General Wesley Merritt and Dewey that the Spanish surrender Manila at the end of a 48-hour truce or face an American assault. At the end of the day on August 13 when the bogus battle was over and Manila had been captured by the Americans, Brumby helped raise the first American flag over the city.

After Manila had been secured, Brumby returned home with Dewey aboard the *Olympia*. Brumby was feted upon his return to Georgia, where the governor presented him with a ceremonial sword for his wartime service. Brumby returned to Washington, D.C., to redeploy overseas, where he contracted typhoid fever and died on December 17, 1899.

Bryan, William Jennings

Birth Date: March 19, 1860

Death Date: July 26, 1925

Lawyer, Democratic Party politician, populist, and anti-imperialist. One of the grand figures in U.S. political history, William Jennings

U.S. Democratic Party politician William Jennings Bryan was a tireless advocate of reform and a staunch anti-imperialist. He served in Congress and as secretary of state and was a presidential candidate in three elections. (Library of Congress)

Bryan was a speaker of rare and powerful eloquence in an era in which oratory was still highly regarded. Not surprisingly, he was quite active regarding the U.S. wars in Cuba and the Philippines. Bryan was born in Salem, Illinois, on March 19, 1860, to devout Christian parents. His father, Silas Bryan, was a well-known Democratic politician who served in the Illinois Senate with Abraham Lincoln and Stephen Douglas.

Although the elder Bryan had become something of a well-to-do gentleman farmer by the time his son had reached his teens, the younger Bryan was nevertheless immersed in the traditions and ideology of rural midwestern agriculture. Thus, he would identify with this mind-set for the entirety of his political life. Bryan graduated from Illinois College in 1881 and went on to study at the Union College of Law in Chicago. After practicing law in Jacksonville, Illinois, he moved to Lincoln, Nebraska, where his oratorical gifts and deep, melodious voice soon earned him the sobriquet "Boy Orator of the Plains." He was also known as the "Great Commoner" because he often allied himself with the working man and with Populism.

Bryan was elected to the U.S. House of Representatives in 1891 but failed in his bid to reach the U.S. Senate in the 1894 elections, which the Republican Party swept. He was an ardent supporter of

free silver, a political movement that advocated the unlimited coinage of silver as a means of relieving the debt burden of many, especially farmers in the midwestern and western states.

In 1896, Bryan ran for president on the Democratic ticket. In so doing, he successfully beat back the so-called Bourbon Democrats, who were backing President Grover Cleveland's reelection bid. Delivering his famous "Cross of Gold" speech at the Democratic National Convention in Chicago, Bryan declared that mankind should not be crucified on a cross of gold or be held hostage to the Eastern Establishment. With this electrifying speech, he galvanized support from the agrarian populists and free silverites, which ultimately garnered him the nomination by both the Democrats and the Populist Party. Despite the power of his oratory and his considerable appeal to many voters, he lost the election to William McKinley in November 1896. In the end, Bryan was unable to overcome the momentum of the Republican McKinley, who ran a staid, perfectly organized campaign that promised prosperity based upon the gold standard, high tariffs, and continued industrial and economic growth.

On the beginning of war with Spain in 1898, Bryan requested and was given a commission as colonel of the 3rd Nebraska Infantry, a regiment he was largely responsible for developing. The regiment, however, remained in Florida and saw no action in Cuba or the Philippines. Whether the decision to keep the unit at home was part of McKinley's strategy to prevent a powerful political opponent from enhancing his reputation by winning glory on the field of battle remains a subject of conjecture. The 3rd Nebraska was not the only regiment to have remained at home, of course.

When the war ended, Bryan returned to his more familiar role as a political activist and leader of the Democratic Party. A staunch anti-imperialist, he was initially adamantly opposed to the subjugation of the Philippines. He later altered his views, supporting McKinley's position to acquire the Philippine archipelago and backing the Treaty of Paris with the proviso that Filipinos be given the assurance of independence in the future.

In 1900, Bryan sought the presidential office for a second time. He now ran as an ardent anti-imperialist and a proponent of free silver, but he soon found himself in an ironic and awkward alliance with the likes of Andrew Carnegie and other wealthy anti-imperialists, which compromised Bryan's image as the "Great Commoner" and populist leader. Not surprisingly, he lost again to McKinley. A third presidential try also proved unsuccessful when Bryan lost to William Howard Taft in 1908. From 1900 to 1912, Bryan, a fundamentalist Christian, embarked on a grueling speaking circuit during which he defended the Christian faith and spoke on issues of morality and values. From 1913 to 1915, he was secretary of state in the Woodrow Wilson administration. Bryan resigned that post, however, in protest of Wilson's response to the German sinking of the *Lusitania* in 1915, which he feared would bring the United States into World War I.

Following his resignation, Bryan left government service and concentrated his efforts on winning support for Prohibition

(achieved in 1919) and fighting the teaching of evolution in public schools. Bryan was one of the prosecuting attorneys in the famous Scopes Monkey Trial of 1925, which pitted him against attorney Clarence Darrow. Just five days after the trial ended, Bryan died in Dayton, Ohio, on July 26, 1925. His role in the Scopes trial was immortalized in the film *Inherit the Wind*.

Bud Bagsak, Battle of

Start Date: June 11, 1913

End Date: June 15, 1913

A battle that occurred during June 11–15, 1913, in Moro Province near the site of the Battle of Bud Dajo (March 5–8, 1906), the Philippines, between government forces (U.S. and Filipino) and the Moros (Muslims). The Battle of Bud Bagsak was the last major engagement in the long-running campaign to break the Moro insurrection. The Lati Moros continued their attacks on Jolo Island (part of Sulu Province) despite earlier, mostly successful, attempts at disarmament by American authorities in 1912. Their success prompted a new military operation in January 1913 that was designed to defeat the Moros and was spearheaded by Brigadier General John J. Pershing, who was also the provincial governor.

In several early engagements, the Americans—working with the Philippine Scouts and the Philippine Constabulary—attempted to pacify the region. Two Moro cottas (forts) were seized, but the leaders of the insurgency, Naquib Amil, Sahipa, and Jami, eluded capture. Over the next several months, as many as 10,000 Lati Moros, mostly women and children, gathered at Bud Bagsak, a fortified extinct volcano mountaintop surrounded by sheer rock. Many were herded to the foreboding site against their will.

With an attack on the mountaintop likely to result in the slaughter of many noncombatants, an agreement was reached whereby the Moro civilians returned to their homes as the troops were withdrawn. However, approximately 400 Moros refused to disarm, causing Pershing to act decisively to force their surrender.

On June 11, Pershing's forces, consisting of American infantry and members of the Philippine Scouts, arrived undetected on the scene and cut off the belligerents from most of the noncombatants.

For almost five days, intense fighting, some of it hand to hand, occurred. Equipped with two mountain guns, Pershing's troops withstood several Moro rushes and were able to destroy the Moro cottas beneath the main stone fortress. The Moros, screaming, running in their brightest clothing, and waving kris (a Malayan-style dagger) and bolos, were easily cut down. On the final day of the battle, June 15, the mountain guns continued to bombard the main fort before soldiers climbed over the walls and fought fiercely to seize it. During the battle, government forces suffered 14 killed and 13 wounded, while nearly every Moro defender perished.

Several American newspapers described the Battle of Bud Bagsak as a massacre, with more than 2,000 killed, but little came out of these allegations, which were greatly exaggerated. The U.S. Army stood by Pershing's actions, claiming that he had acted properly and in accordance with the rules of engagement. At first, few journalists mentioned the fact that Pershing had carefully avoided a much larger catastrophe by safely moving Moro civilians off the mountain. The battle largely ended Moro resistance on the island of Jolo and sent a message to other pockets of resistance in the Philippines that the government would act forcefully to end violence.

Bud Dajo, Battle of

Start Date: March 5, 1906
End Date: March 8, 1906

Battle during March 5–8, 1906, on Jolo Island, Moro Province, the Philippines, between U.S. and Philippine government forces and the Moro insurgents. After the United States revoked the Bates Treaty in March 1904, the Moros renewed their resistance to American authority. This took the form of sporadic violence and a refusal to pay taxes. The governor of Moro Province, Major General Leonard Wood, had been unsuccessful in efforts to pacify the insurgents on Jolo Island. Consequently, Moro attacks became more frequent, and the insurgents came to believe that the Americans were too weak to stop them.

In response to rumors that the Americans planned to exterminate them, several hundred Moros, including women and children,

moved to Bud Dajo, where legend held that spirits at the site would help warriors in times of need. Bud Dajo, the crater of an extinct volcano, is about six miles from the city of Jolo. Rising some 2,100 feet with steep, heavily jungled slopes, it was accessible only by three narrow paths. As such, it provided an easily defended position and was well stocked with provisions.

When negotiations between several friendly *datus* (chiefs) and hostile Moros failed to bring about the surrender of the insurgents, Wood commenced a campaign on March 5, 1906, to end the stand-off at Bud Dajo. He sent U.S. and Philippine Constabulary troops under Colonel Joseph W. Duncan to put down the insurgents. Meanwhile, another attempt to negotiate ended in failure on March 6.

As their artillery bombarded Bud Dajo to weaken resistance, the attackers hacked their way through the dense jungle and up the slope. On the evening of March 6, Duncan's men paused midway up the mountain and bivouacked for the night. In the darkness, Moro drums and chanting could be heard from the crater, while Moro snipers periodically fired at the troops.

The following day, the advance up the summit continued as American artillery fired ineffectively at the defenders. On March 7, while taking heavy casualties, many of the Moros feigned death and then attempted to ambush Duncan's forces when they neared the top of the mountain. The Americans and Philippine Constabulary troops then attacked the cottas (forts) and other Moro positions, taking Bud Dajo on March 8. Once the outer rim had been secured, artillery—worked to the top with block and tackle—and machine guns were employed. As Wood reported, "All the defenders were killed as near as could be counted."

In the battle, 18 Americans lost their lives, and another 52 were wounded. Wood estimated the number of enemy dead at 600, including women and children, although some estimates ran as high as 900. He censored telegrams from Jolo describing the casualties. Although U.S. authorities considered the Battle of Bud Dajo to be a significant victory and commended Wood for his actions, some in the U.S. press viewed it as little more than a massacre, particularly given the deaths of so many noncombatants. Moro practice was for warriors to take their wives and children with them, but some in the press said that Wood should have merely laid siege to the mountain. Wood's friend, President Theodore Roosevelt, sent him a congratulatory telegram, and Secretary of War William Howard Taft also approved. The controversy soon died down, as local *datus* and the sultan of Sulu, religious leader of the region, believed that the action at Bud Dajo would bring about long-term stability. Unfortunately, Moro resistance continued, leading to Brigadier General John J. Pershing's Bud Dajo Campaign of 1911 and the Battle of Bud Bagsak in June 1913.

Bud Dajo Campaign

Start Date: December 3, 1911

End Date: December 26, 1911

Campaign on Jolo Island, Moro Province, the Philippines, in December 1911. Moro Province had been notorious for attacks on Christians as well as for murders, robbery, slavery, and general lawlessness. For these reasons, the governor of the province, U.S. Army brigadier general John J. Pershing, decided to disarm the Moros. Pershing was determined, however, to spare noncombatants as

much as possible. This would not be easy, for Moro warriors had a practice of taking their wives and children with them on campaign. In 1906 a U.S.–Philippine government assault of the Moro stronghold of Bud Dajo on Jolo Island ordered by then-governor of Moro Province Major General Leonard Wood had resulted in the deaths of many Moro women and children.

Pershing understood the risks, for some Moros were bound to resist disarmament, and this could bring on war. Before proceeding, Pershing ordered roads built and others improved to ensure that his men could reach all areas of the province and protect cooperative Moros. He also consulted with moderate Moro leaders to convince them of the wisdom of complete disarmament.

Pershing issued his disarmament order, Executive Order No. 24, on September 8, 1911, which made it unlawful for a Moro to possess either a gun or a cutting weapon. December 1 was the deadline for turning in guns and receiving cash payments in return. Even Moros friendly to the government expected a general uprising if the order was enforced, but Pershing was determined to proceed.

Trouble did indeed occur on Jolo, where militant Moros mounted a night attack on the U.S. camp at Seit Lake, killing one

American and wounding three others. Pershing decided on action and immediately departed for Jolo to take personal charge. On Jolo, Pershing divided the command into two field forces: one east to Seit Lake and the other west to Taglibi, eight miles west of Jolo City. Because the latter area had been rife with anti-American sentiment, Pershing suspected that an attack would not be long in coming. As a precaution the troops entrenched, strung barbed wire, and cleared fields of fire. On the night of November 18, the Moros did attack. Although no Americans died, Pershing was determined to teach the Moros a lesson but was also determined to spare noncombatants if at all possible.

On December 3, Pershing ordered three columns out in the Taglibi area. The Moros attacked but were driven back. Two days later, Pershing sent out five columns, moving in different directions to comb the area carefully. The Moros seemed impressed by the show of force, and on the afternoon of December 5, an influential Moro reported that the militants were ready to disarm. Pershing suspected a trick but did order a suspension of operations pending negotiations. These dragged on but without result.

On December 14, Pershing received word that many Moros were occupying Bud Dajo, their sacred mountain. An extinct volcano, it had steep sides and would be difficult to assail. Some 800 Moros, armed with between 150 and 250 rifles in addition to cutting weapons, took up position in the crater and began preparing fortifications.

Pershing took personal command of operations. He was determined to avoid unnecessary loss of life, especially noncombatants. Pershing ordered up reinforcements in the form of three American infantry companies, three companies of Philippine Scouts, and a machine-gun platoon. These gave him a total of about 1,000 men. He conducted a personal reconnaissance of the three Bud Dajo approaches and ordered camps established at each in order to cut off supplies. By December 22, Bud Dajo had been completely isolated.

The Moro decision to occupy Bud Dajo had been a precipitate one, and the Moros there were soon running short of food and supplies. Meanwhile, Pershing was determined to avoid unnecessary bloodshed and ordered his men to avoid contact if possible and not to return fire. In the meantime, he used friendly Moros to send messages to those on the mountain. Hundreds of Moros responded over the next days, surrendering in groups of 20 or more.

On December 23, Pershing informed the remaining Moros on the mountain that the next day there would be no chance for them to surrender except unconditionally. He then prepared his men for the assault.

On the morning of December 24, Pershing again sent friendly Moros up the mountain. They returned to say that the holdouts, perhaps 60–100 in all, had left the crater, probably that same morning. Rushing the crater with two companies of Philippine Scouts, Pershing now had the Moros trapped in the woods between his own force and the line below. He then fortified, expecting the Moros, without food or water, to try to escape that night. They did so, but very few made it. The operation concluded on December 26. Per-

shing reported 300 Moros taken prisoner. Casualties for the entire campaign on the American side were 3 wounded. On the Moro side, 12 were killed and a few others wounded. Pershing sent the prisoners to Mindanao to be tried for insurrection. Later he decided to drop the charges if a prisoner's friends could collect sufficient arms for his release. Although it had been a very successful operation, Moro resistance was not ended until the Battle of Bud Bagsak in June 1913.

Buenaventura

Spanish merchant ship. The *Buenaventura*, a 1,714-ton Spanish merchantman from Bilbao, Spain, commanded by Captain Lazarraga, was transporting lumber from Pascagoula, Mississippi, to Rotterdam, the Netherlands, when it was intercepted by warships of the U.S. North Atlantic Squadron within sight of Key West, Florida, early on the morning of April 22, 1898. Not knowing that war had been declared, Lazarraga ordered the Spanish colors hoisted, only to have a shot fired across his ship's bow by the U.S. gunboat *Nashville*, which then fired a second warning shot, causing Lazarraga to order his ship to stop.

An American prize crew went aboard the Spanish ship and directed the *Buenaventura* into Key West. This Spanish ship was the first prize capture of the war, and the shot fired across the *Buenaventura*'s bow is sometimes reckoned as the first of the war. In a subsequent ruling, a prize court held that the ship's cargo was neutral property, and it was then restored to its owners.

Bullard, Robert E. Lee

Birth Date: January 5, 1861

Death Date: September 11, 1947

U.S. Army general. William Robert Bullard was born in Yonkers, New York, on January 5, 1861. At age six he persuaded his parents to change his name to Robert Edward Lee Bullard for the American Civil War general and commander of the Confederate Army of Northern Virginia. Bullard graduated from the United States Military Academy, West Point, in 1885. He then served in the American Southwest with the 10th Infantry, participating in the Apache Campaigns, until 1898. His requested transfer to the Quartermaster Corps, which would have brought promotion to captain, was interrupted by the Spanish-American War in April 1898.

Following the U.S. declaration of war against Spain, the fastest route of advancement was as an officer in a volunteer unit, and in May 1898 Bullard received promotion to temporary major and command of the 3rd Alabama Volunteers, an African American outfit. Although the unit failed to make it to Cuba during the war, Bullard received praise for his leadership of the unit and his deft handling of racial issues.

Following the war, Bullard received promotion to colonel and command of the 39th Volunteer Infantry, raised to fight in the Philippine-American War. The unit soon became known as Bullard's Indians because it employed Bullard's Apache-style tactics

in combating the Filipino guerrillas who were fighting against the U.S. occupation. In 1901, Bullard managed to transfer back to the regular U.S. Army infantry with the rank of major.

In 1902, Bullard was sent to negotiate a peace arrangement with the Lanao Moros in southern Mindanao. Successful in this endeavor, he then employed Moro laborers to construct a road at Lake Lanao, making it the only road around this large body of water. He completed this difficult task in just 10 months. Perhaps even more significant, Bullard gained the confidence and respect of many Moros because he not only treated them fairly but also expressed a serious interest in their language and customs. Previously, most Moros had known Americans only as adversaries. This confidence placed Bullard in good stead when a cholera epidemic struck the Lanao area and he was able to persuade the Moros that the Americans were not responsible for it. Appointed head of the Lanao District in 1903, he reluctantly led several expeditions against several bands of Moros who steadfastly refused to accept the U.S. presence in the area. Poor health, however, compelled him to resign his post and return to the United States in 1904.

Bullard then served as an official in the provisional government of Cuba and as a National Guard instructor in California and Hawaii. In 1912, he attended the Army War College. He then assumed command of the 26th Infantry Regiment. During heightened tensions with Mexico following Pancho Villa's incursion into the United States, Bullard's unit became part of the U.S. Army 2nd Division stationed along the Mexican border.

When the United States entered World War I in April 1917, Bullard was initially assigned to command a training camp but then took command of the 2nd Brigade in the newly formed 1st Division as a brigadier general. He arrived in France in June. That September, his friend and American Expeditionary Forces (AEF) commander General John J. Pershing assigned Bullard command of the AEF officer and specialist school. In December 1917 he took command of the 1st Infantry Division as a major general. In April 1918, his 1st Division mounted the first major AEF offensive operation at Cantigny. Fluent in French, Bullard proved adept in dealing with his French counterparts. In July 1918, he took command of III Corps as a lieutenant general, participating in the Battle of Soissons and the Aisne-Marne Counteroffensive and then the Meuse-Argonne Offensive, when he took command of the newly formed Second Army at the close of the war.

Following the war, Bullard served on classification boards and commanded departments and administrative headquarters until his retirement in January 1925. In June 1930, he was advanced to the rank of lieutenant general on the retired list. Bullard died at Fort Jay, New York, on September 11, 1947.

Bülow, Bernhard Heinrich Martin Karl von

Birth Date: May 3, 1849

Death Date: October 28, 1929

German diplomat and politician. Born on May 3, 1849, in Klein-Flottbeck (near Altona), Germany, Karl von Bülow pursued a diplomatic career as had several members of his family before him. He studied law at the universities of Lausanne, Berlin, and Leipzig and served as a volunteer in the Franco-Prussian War of 1870–1871.

After the war, Bülow remained in Metz to finish his education in the judicial administration and entered the diplomatic service in 1874. After holding diplomatic posts in Rome, St. Petersburg, Vienna, Athens, and Paris, he was appointed envoy in Bucharest in 1888, and in 1893 he was sent to Rome as ambassador. In 1886, he married Countess Marie von Dönhoff, née Princess di Camporeale.

Through the influence of his mentor Friedrich von Holstein, Bülow was appointed state secretary of the Foreign Office (foreign minister) in 1897. As an imperialist latecomer, imperial Germany

Karl von Bülow was foreign minister of Germany during the Spanish-American War. In 1899 he arranged the purchase of the Caroline Islands from Spain. (Library of Congress)

was determined to extend its influence in Africa, Asia, and the Pacific. In cooperation with Kaiser Wilhelm II, Bülow therefore pursued a policy of colonial expansion through the acquisition of territories and a vigorous German naval construction program.

After the start of the Spanish-American War, Bülow informed the British government that Germany did not intend to be left out of the Spanish “liquidation” and was resolved “not to go empty-handed at any new division of the globe.” Bülow, however, opposed any aggressive German action to secure a protectorate over the Philippines, fearing that hasty unilateral action would drive the Americans into the arms of the British. He also pointed out that Germany lacked the naval power to back up its claims. Bülow did hold out hope for a division of the islands among the interested powers or at least their neutrality along the lines of what the major powers had worked out for Belgium in 1839. In 1899, after the war, Bülow successfully negotiated the acquisition of the Caroline Islands from Spain and was then raised to the rank of count by Wilhelm II.

In October 1900, Bülow succeeded Prince Chlodwig of Hohenlohe-Schillingsfürst as chancellor of the empire and prime minister of Prussia. In his policy of German aggrandizement, Bülow won the support of the conservative and central parties in the Reichstag, whose agrarian and industrial interests had the most to

gain from German expansionism. Because the emperor's constant interference in state politics reduced Bülow's room with which to resolve some of the country's urgent internal problems, he had to find a more productive field of interest. His endeavor to please Wilhelm II, who had high expectations of Bülow's abilities to further the imperialist cause, therefore led to the continuation of an aggressive foreign policy.

Germany's foreign policy had the effect of increasing the country's diplomatic isolation in Europe, however. In 1901, German-British alliance talks collapsed because Bülow supported the plans of Admiral Alfred von Tirpitz, state secretary of the navy, to expand the German Navy. Bülow aggravated the crisis a few months later when he denigrated British colonial secretary Joseph Chamberlain in a parliamentary speech. On the occasion of Crown Prince Wilhelm's marriage in June 1905, Bülow was raised to the rank of prince (Fürst). Although he had antagonized France by his threats in the Moroccan Crisis of 1905 and, in addition, had alienated Russia in the Bosnian Crisis of 1908, he feared that Germany was being encircled by enemies when France, Britain, and Russia declared an entente.

Bülow lost the confidence of Wilhelm II in the *Daily Telegraph* Affair in October 1908 in which the emperor indiscreetly revealed his foreign policy toward Britain in an interview with the London-based newspaper. Bülow had approved Wilhelm II's interview without reading it. The British government and public reacted with indignation, and the German political parties were infuriated and asked for restrictions on the monarch's power. Bülow lost not only the support of the emperor, who blamed Bülow for not shielding him from the critics, but also the necessary support in the Reichstag on budget matters, and he was forced to resign in July 1909.

During 1914–1915, when Bülow's successor to the chancellery, Theobald von Bethmann-Hollweg, feared that Italy would not fight on Germany's side during World War I, Bülow was sent to Rome as ambassador to persuade the Italian government to at least maintain its neutrality. When Bülow realized that he would not be able to influence the Italians, he blamed the chancellor for not supporting him enough in his difficult task. After Bethmann-Hollweg's dismissal in 1917, many influential politicians hoped that Bülow would replace him, yet Wilhelm II would hear none of it. In his later years, Bülow moved to his palace in Rome, where he died on October 28, 1929.

Bundy, Omar

Birth Date: June 17, 1861

Death Date: January 20, 1940

U.S. Army officer. Born on June 17, 1861, in New Castle, Indiana, Omar Bundy attended Asbury College (now DePauw University) before entering the United States Military Academy, West Point, in 1879. He graduated 50th out of 52 cadets in the class of 1883. Upon graduation, Second Lieutenant Bundy joined the 2nd Infantry Regiment at Fort Lapwai, Idaho. Transferring to the 3rd Infantry Regiment in May 1884, he served at frontier posts in Montana, South Dakota, and Minnesota until 1898. Promoted to first lieutenant in May 1890, he participated in the Pine Ridge Campaign against the Sioux Indians during the winter of 1890–1891. From 1891 to 1898, he served at Fort Snelling, Minnesota, eventually assuming the duties of regimental and post quartermaster. In April 1898, he was promoted to captain.

At the beginning of the Spanish-American War, Bundy traveled by train with his regiment to Mobile, Alabama, and then shipped from there to Tampa and from Tampa to Cuba. Captain Bundy's regiment, commanded by Colonel John H. Page, formed part of Brigadier General John C. Bates's independent brigade of V Corps, commanded by Major General William R. Shafter. Bates's brigade landed at Daiquirí, Cuba, on June 22, 1898. On July 1, his brigade was ordered to reinforce Brigadier General Henry W. Lawton's 2nd Division during its attack on El Caney. For his role in the battle, Bundy was later awarded the Silver Star. He then participated in the siege of Santiago, during which he was breveted major.

Following the Spanish-American War, Bundy saw combat in the Philippine-American War from 1899 to 1902 and then against the Moros in 1905 and 1906, when he distinguished himself in an action on Jolo Island. He was promoted to lieutenant colonel in March 1911 and then attended the Army War College. In 1914, he was advanced to colonel and took command of the 16th Infantry Regiment at El Paso, Texas.

Advanced to brigadier general in June 1917, Bundy was ordered to France to command the 1st Brigade, 1st Division, of the American Expeditionary Forces (AEF). In November 1917, he was temporarily advanced to major general and assumed command of the newly formed 2nd Division, which helped stop the German spring 1918 offensive near Château-Thierry. Bundy's men distinguished themselves in the Battle of Belleau Wood but also suffered heavy casualties. In the summer of 1918, he took command of VI Corps, and in September, he assumed command of VII Corps. With the end of the war, he returned to the United States and assumed command of Camp Lee, Virginia. In September 1920, he commanded VII Corps area from Fort Crooks, Nebraska, and in 1922, he was again promoted to major general, taking command of the Philippine Division. In 1924, he commanded the V Corps area from Columbus, Ohio. Bundy retired in 1925 and died in Washington, D.C., on January 20, 1940.

Bustamante y Quevedí, Joaquín

Birth Date: 1847

Death Date: July 19, 1898

Spanish naval officer. A captain, Joaquín Bustamante y Quevedí was highly regarded as an expert on torpedoes and had commanded the Torpedo School at Cartagena. At the onset of the Spanish-American War, he was chief of staff to Rear Admiral Pascual Cervera y Topete, whose squadron had steamed across the Atlantic to Santiago de Cuba.

On May 26, 1898, Cervera, reconsidering his decision to remain at Santiago, ordered a sortie for San Juan, Puerto Rico, at 5:00 p.m. Learning at 2:00 p.m., three hours before the scheduled departure, that three American ships, absent the previous day, had returned, he again met with his captains. Cervera also learned that heavy swells might preclude one of his cruisers clearing the rock in the channel at Punta Murillo. Bustamante was one of two captains who disagreed. Bustamante claimed that a decision to remain in the harbor would ultimately lead to the squadron's capitulation.

On May 29, Commodore Winfield Scott Schley and his Flying Squadron finally took up a blockading position off Santiago, and on June 1, Rear Admiral William T. Sampson arrived with his ships of the North Atlantic Squadron, no doubt ending the possibility of Cervera making a successful sortie. On June 8, however, Cervera again met with his captains to consider a plan advanced by Bustamante for a night sortie. Bustamante suggested that the destroyers exit the harbor first and make for the American battleships. The cruisers would then depart and steam in different directions. He hoped that the ensuing confusion would allow half of the Spanish ships to escape. A strong majority of the Spanish captains rejected the proposal, however.

On June 3, Bustamante personally informed Sampson that the U.S. crew of the *Merrimac*, who had attempted to scuttle the collier in the Santiago Harbor channel, had all survived and were prisoners of the Spanish. On June 22, Bustamante led ashore 1,000 men—about two-thirds of the crews of the Spanish ships—to assist in the land defense of Santiago. On July 1, Bustamante was mortally wounded in the Battle of San Juan Hill and was thus in the hospital in Santiago during the Battle of Santiago de Cuba on July 3. He died in Santiago on July 19, 1898, and was subsequently buried in San Fernando, Spain.

C

Cabañas Bay

Bay located 3 miles west off the entrance to Santiago Harbor, Cuba, and 10 miles by road from the city of Santiago de Cuba. As early as 1895, the U.S. Naval War College began planning for a possible descent on Cuba with this broad, shallow bay as a possible landing site for the U.S. expeditionary force. Still under active consideration as an invasion site early in the war, U.S. planners rejected Cabañas Bay as a landing site for Major General William R. Shafter's V Corps because it was within range of naval gunfire from the ships of Rear Admiral Pascual Cervera y Topete's Spanish squadron in Santiago Harbor.

Cabañas Bay marked the eastern end of the U.S. blockade of Santiago, and on June 17, 1898, cutters from the U.S. battleships *New York* and *Massachusetts* came under heavy Spanish shore fire while trying to enter the bay. Naval gunfire from other ships of the U.S. North Atlantic Fleet allowed the cutters to withdraw without casualties or damage. Spanish installations defending the bay came under attack on June 22 both from the battleship *Texas* and armed yachts *Scorpion* and *Vixen* as well as from the land by Cuban insurgents led by General Jesús Rabí. The sole purpose of this operation, however, was to divert Spanish attention from the actual V Corps landing at Daiquirí. Had Santiago not surrendered when it did, plans called for marines to land at Cabañas Bay on July 9.

Cables and Cable-Cutting Operations

Submarine cables laid on the floor of the world's oceans allowed the transmission of telegraph messages and greatly increased the rate at which information could be transferred internationally. During the Spanish-American War, these cables facilitated the transfer of military information and orders, war reports by journalists, and diplomatic exchanges. Although both Spain and the United States imposed censorship during the war, a diplomatic agreement between the two powers kept open the Havana to Key West cable. Great Britain, while technically a neutral nation in the war, allowed U.S. military planners use of its extensive undersea cables, particularly those leading from Hong Kong.

The importance of these cables was obvious to war planners, although operations to cut them raised questions of international law. Nonetheless, in April 1898, the U.S. Navy planned operations to cut the Spanish cables at Cárdenas, Cienfuegos, Guantánamo, and Santiago in Cuba. Cable-cutting operations, such as the one at Cienfuegos, were hazardous. They required getting in close to shore in shallow-draft vessels, and once the cable was located, cutting it was a difficult and time-consuming process, for the cables themselves were well protected. Despite cable-cutting operations, the United States did not succeed in cutting off all communications between Spain and Cuba and Puerto Rico.

The U.S. Navy auxiliary cruiser *St. Louis*, built as a passenger liner, undertook numerous cable-cutting operations at the start of the Spanish-American War. The ship was rigged with heavy lines

that were dragged along the ocean floor, and the crew was charged with destroying cables in the Caribbean and those leading to South America. On May 13, 1898, the ship cut the cable linking San Juan, Puerto Rico, and St. Thomas. On May 18, the *St. Louis* exchanged fire with the Morro Heights batteries at Santiago de Cuba while it cut the cable linking the port city to Jamaica. It also severed the cable linking Guantánamo to Haiti (Santo Domingo). Perhaps the most famous and most daring cable-cutting mission came on May 11, 1898, when U.S. naval vessels severed Spanish cables at Cienfuegos, Cuba.

In the Philippines following the Battle of Manila Bay on May 1, 1898, Commodore George Dewey requested permission to send messages via the cable at Manila. On May 2, after Spanish officials at Manila refused Dewey's request, he ordered the crew of the U.S. Navy supply ship *Zafiro* to cut the cable between Manila and Hong Kong. This action greatly delayed news of Dewey's victory. The Manila to Hong Kong cable link was not reopened until August 23, 1898, after the U.S. VIII Corps had secured Manila.

Cailles, Juan

Birth Date: November 10, 1871

Death Date: June 28, 1951

Filipino guerrilla general and friend and confidante of General Emilio Aguinaldo y Famy during the Philippine-American War (1899–1902). Born in Batangas Province on November 10, 1871, Juan Cailles attended the Jesuit Normal School for Teachers in Manila. He taught school for five years before joining the revolutionaries in the insurgency against Spain in 1896. Among the insurgents, he was praised as “Maestro” Cailles because of his confidence, charisma, and commanding presence.

In the months leading up to the Spanish-American War of 1898, Cailles was a member of Andrés Bonifacio's Magdiwang Council, a revolutionary faction. Cailles then identified himself with the Magdalo, a competing clique led by Aguinaldo, gaining the latter's favor. Cailles led the Batallon Trias of General Mariano Noriel's regiment and engaged the Spanish in many costly actions in Cavite Province and in the Manila area. Cailles subsequently quit the rebel party and spied for the Spaniards for a time. He also commanded a force under General José Lachambre in Cavite.

Once Aguinaldo returned to the Philippines in May 1898 from an exile in Hong Kong that had begun in December 1897, he com-

Filipino insurgent general Juan Cailles, a capable military commander and close associate of Emilio Aguinaldo. (Library of Congress)

missioned Cailles as a lieutenant colonel. At first viewed with considerable mistrust by the other revolutionaries, Cailles soon demonstrated his fidelity by his opposition to the U.S. occupation of the Philippines. Between September 1898 and early February 1899, he and his troops helped defend Manila. After the city's occupation by American forces, Cailles warned Aguinaldo about shortages of money and ammunition. Cailles's refusal to negotiate with the Americans was fully supported by Aguinaldo.

By mid-1899, Cailles was serving as a brigadier general and as governor of Laguna Province. Responsible for the first zone of Manila, he operated out of Santa Cruz, the capital of Laguna, and fought against U.S. forces commanded by Major General Henry W. Lawton. On September 17, 1900, Cailles repelled Lieutenant Colonel Benjamin F. Cheatham's assault of his dug-in troops at Mabitac, killing 21 Americans and wounding 23 others. On other occasions, however, when Cailles massed his army to mount large maneuvers, he was unsuccessful. As soon as U.S. forces occupied the Second District, Department of Southern Luzon, which included Laguna, Cailles resorted to guerrilla operations.

Cailles generally evaded major engagements and conducted unconventional warfare. Arson, abductions, ambushes, and killings of Americans and Filipino collaborators were typical of his strategy. Aided by capable deputies and merciless tactics, he won the grudging respect of American authorities. Cailles frequently employed executions and assassinations to deter defections from his own ranks, including ordering the murders of 28 men in one eight-month span.

Notwithstanding his competent and charismatic leadership, Cailles encountered a string of setbacks in 1900 and 1901. U.S. forces implemented protracted campaigns during the summer of 1900 that wrecked some encampments, seized records, and compelled his flight. By 1901, his position had become hopeless. Under intense military pressure and informed in April of Aguinaldo's surrender in March, Cailles realized that his compatriots favored surrender and that the people longed for peace. Following an attack on his principal base by the U.S. 21st Infantry Regiment on April 27, 1901, and a series of raids and arrests, Cailles and 600 of his comrades marched into Santa Cruz and capitulated on June 24, 1901.

Cailles went on to serve as governor of Laguna from 1902 to 1910, again between 1916 and 1925, and finally in 1945. He died of heart disease on June 28, 1951, at the Philippine General Hospital in Manila.

Cámara y Libermore, Manuel de la

Birth Date: May 7, 1835

Death Date: 1920

Spanish admiral. Manuel de la Cámara y Libermore was born in Málaga, Spain, on May 7, 1835. He joined the navy and served as an officer in the Caribbean and in the Philippines and later headed Spanish naval commissions to both Washington and London. When the Spanish-American War began in April 1898, he was a rear admiral commanding the squadron at Cádiz, Spain. In the fateful meeting of senior Spanish naval officers in Madrid on April 23, 1898, concerning Rear Admiral Pascual Cervera y Topete's squadron, Cámara voted with the majority favoring the immediate dispatch of the ships to the West Indies.

In late May, Spanish naval minister Ramón Auñón y Villalón made plans to send Cámara's squadron against the U.S. Atlantic coast. Cámara's squadron of one armored cruiser, three auxiliary cruisers, and a dispatch boat was to steam to a coastal city, preferably Charleston, South Carolina, because of its location, and shell it before continuing on to San Juan, Puerto Rico, or Havana or Santiago, Cuba.

On June 15, however, Auñón ordered Cámara to steam to Mindanao in the Philippines by way of the Suez Canal and Indian Ocean in order to help ensure Spanish sovereignty of the islands. Cámara's orders called for him to avoid "notoriously unfavorable encounters" so as to prevent the "useless sacrifice" of his squadron. The decision to send the squadron east would, it was hoped, keep the squadron away from the principal U.S. naval strength.

Cámara departed Cádiz with his ships on June 16. His squadron now included the battleship *Pelayo*. The other ships in the squadron included the armored cruiser *Emperador Carlos V*; the unprotected cruisers *Patriota* and *Rápido*; the torpedo boat destroyers *Audaz*, *Proserpina*, and *Osado* (which were ordered to return to Spain when the squadron reached the Suez Canal); the transports *Buenos Aires* and *Isla de Panay* (lifting a total of 4,000 troops); and four colliers carrying 20,000 tons of coal. Informed of the squadron's formation by intelligence operatives in Spain, the U.S. Navy established the Eastern Squadron and also commenced a disinformation campaign designed to force the recall of the Spanish squadron.

The Spanish squadron arrived off Port Said, Egypt, on June 26. The British government, however, had instructed its authorities in Egypt, which was under British control, to pursue a policy of strict neutrality and not to allow coaling on the grounds that the squadron had sufficient coal to allow it to return to its home port. Unaware of the British decision, Ethelbert Watts, deputy U.S. consul general in Cairo, had secured a lien on all coal available at Suez. On June 29, Cámara was informed that he could not coal in Egyptian territorial waters and would have to depart Port Said in 24 hours.

Cámara's squadron then passed through the Suez Canal during July 5–6 and proceeded into the Red Sea. Following the naval battle at Santiago Bay on July 3, however, orders went out on July 7 from Madrid recalling Cámara and his squadron to Spain with all possible speed in order to enable it to help protect the Spanish coasts against a possible U.S. naval attack. The squadron returned to Cartagena on July 23 and from there made its way back to Cádiz.

Cámara retired from the Spanish Navy as a vice admiral. He died in Málaga in 1920.

Cambon, Jules-Martin

Birth Date: April 5, 1845

Death Date: September 19, 1935

French civil servant and diplomat. Born in Paris on April 5, 1845, Jules-Martin Cambon began a career in law in 1866. He served in the Garde Mobile as a captain during the siege of Paris in the Franco-Prussian War of 1870–1871 and entered the French Civil Service in 1871.

Cambon held increasingly important administrative posts. He was prefect of Constantine in Algeria (1878–1879), secretary general of the prefecture of police in Paris (1879–1882), prefect of the Department of the Nord (1882–1887), prefect of the Department of the Rhône (1887–1891), and governor-general of Algeria (1891–1897).

In 1897, Cambon was appointed French ambassador to the United States. He arrived in Washington that December and presented his credentials in January 1898. His chief diplomatic objectives were to keep the United States out of involvement in European affairs and prevent a treaty between the United States and Britain. In the crisis leading up to the Spanish-American War, Cambon believed that President William McKinley genuinely wanted peace but thought that he was weak and would bow to the wishes of Congress. Certainly Cambon disagreed with the American decision to go to war with Spain. On several occasions he referred to the Americans as ignorant barbarians. On the outbreak of the war, he recommended French involvement in order to limit American successes.

During the war, Cambon represented Spanish interests in Washington. In that capacity he served as the intermediary for Spain in negotiations leading to the armistice agreement of August 12, 1898. Although Cambon worked hard to limit Spanish territorial losses to Cuba alone, excluding Puerto Rico, there was little he could do. He duly informed the Spanish government that McKinley was firm in his position, that prolonging the negotiations would only “aggravate the severity of the conditions,” and that it would be best for Madrid to arrive at a quick peace. Cambon suggested to McKinley that Paris, rather than Washington (as the president had wanted), be the site for negotiations for the final peace treaty, which the president accepted. Cambon concluded that his activities during the war had been successful, for the war had ended with “the Americans in America.” Certainly, his activities on behalf of Spain in the war helped to cement Franco-Spanish relations after the conflict.

In 1902, Cambon moved to Madrid, where he served as French ambassador to Spain until 1907. In that capacity he played a key role in developing the Franco-Spanish Agreement on Morocco in 1904, and he was also a major figure at the Algeciras Conference of 1906. In 1907, Cambon became French ambassador to Germany. There he was involved in negotiations that led to the Franco-German Morocco Treaty of 1909 and settlement of the Agadir Crisis of 1911. He considered the latter his greatest contribution to maintaining the peace. Strongly committed to avoiding war between France and Germany, he worked hard to mitigate the belli-

French diplomat Jules-Martin Cambon. As ambassador to the United States during the Spanish-American War, Cambon served as a conduit for the Spanish government and helped negotiate peace. (Library of Congress)

cose statements on both sides in the years immediately before World War I. At the same time, however, his warnings to Paris about German military preparations helped produce his government’s decision to seek a three-year military service bill.

Cambon’s brother, Paul Cambon, served as French ambassador to Great Britain during 1898–1920. Jules-Martin Cambon remained French ambassador to Germany until the German declaration of war against France in August 1914.

During World War I, Cambon headed the Political Section of the French Foreign Ministry. After the war, he was one of five French plenipotentiaries to the Paris Peace Conference (1919–1920). In that capacity he chaired the important commissions on Polish, Czechoslovak, and Greek and Armenian affairs. During 1920–1931, he was president of the Council of Ambassadors charged with supervising implementation of the peace treaties. Cambon died in Vevey, Switzerland, on September 19, 1935.

Camp Alger

Temporary U.S. Army encampment located just west of Washington, D.C., in northern Virginia. Camp Alger was, for a brief time, named Camp Harries and was designed as the initial mobilization and mustering point for soldiers of II Corps during the Spanish-American War. It began receiving troops on May 13, 1898, and by May 19, nearly the entire corps had arrived at the camp for processing. On May 23, the name of the camp was changed to Camp Alger after U.S. secretary of war Russell A. Alger. By the end of the month, 18,308 men were residing in the camp waiting to be mobilized.

Camp Alger was situated on a sprawling farm west of Falls Church, Virginia, and south of Dunn Loring. Today the site is denoted by a historical marker on the southern side of Route 50 just east of its intersection with Interstate 495.

As with many of the camps hastily built for the Spanish-American War, Camp Alger suffered from an appalling lack of adequate facilities, including housing. Water supplies were scant, and because the closest body of water, the Potomac River, lay seven miles distant from

the camp, hygiene and sanitary conditions suffered greatly. Not until the close of June, when some 40 water wells had been dug, did the water situation ease (although the wells did not meet all water needs). During the first six weeks or so as men continued to pour into the camp, the housing situation became dire. A shortage of tents meant that as many as eight men were sleeping in a space designed for just four. On May 28, 1898, President William McKinley and his cabinet traveled from Washington to Camp Alger to meet and review the troops. The record of the visit survives in rare motion picture footage.

Camp Alger was put under the command of Major General of Volunteers William M. Graham, who became quickly disillusioned with the grim conditions at the post. He struggled to secure sufficient fresh water, food, and tents for the camp's quickly growing population.

In short order, Camp Alger and its environs had taken on all of the hallmarks of a typical military post of the era. Outside the perimeter of the compound, gambling establishments, bars and saloons, greasy-spoon restaurants, and brothels sprang up. Particularly bothersome for Graham was a risqué burlesque theater that operated just beyond the camp's fences. Deeming it "immoral," Graham had the show closed down.

Only two brigades—one commanded by Brigadier General Henry M. Duffield and the other by Brigadier General George A. Garretson—actually departed the camp for war. In the first week of September 1898, the U.S. Army closed Camp Alger, and its remaining

Camp Alger, Virginia. The tent in the immediate foreground is a photographic gallery where soldiers could obtain a tintype of themselves. Next to it is a tobacconist's store and then another photographic gallery. (*Photographic History of the Spanish-American War*, 1898)

troops were sent to Camp Meade in Middletown, Pennsylvania. During Camp Alger's short existence, approximately 32,000 men passed through it, and, by the time of its closure, 107 men had died there, most of them from communicable diseases.

Camp Cuba Libre

U.S. Army staging and training area for VII Corps and a number of volunteer units during the Spanish-American War. Established on May 30, 1898, Camp Cuba Libre was located along the banks of the St. Johns River in Jacksonville, Florida, about three miles from the central business district. The area offered easy access to the Atlantic Ocean via the river and was also well served by roads and rail lines, making it an ideal spot for a camp.

The camp was created mainly to house Major General Fitzhugh Lee's VII Corps, which had initially been stationed near Tampa, Florida. However, overcrowding there led to the decision to build a new camp farther north and relocate VII Corps. Lee was commanding officer of Camp Cuba Libre for its entire duration, from late May until late October 1898.

Although the camp would subsequently become a model of such temporary facilities, an initial shortage of eating utensils compelled the men to eat their meals with their fingers off of shingles or boards. Lee, a Confederate Civil War veteran and an able commander and administrator, quickly rectified the situation, and the camp soon enjoyed plentiful supplies of food along with clean fresh water, which he had piped in from Jacksonville. He also obtained scarce medical supplies and constructed bathing facilities, the lack of which was the bane of many other camps during the war. Camp Cuba Libre therefore largely escaped hygiene problems and the results they wrought. When the U.S. government failed to procure an adequate supply of tent floors, Lee bought them himself in Jacksonville. The generally good conditions in the camp were a testament to his leadership and to his long military experience. For example, it was Lee himself who scouted the area and chose the site for the camp because of its sandy soil, which mitigated flooding and mosquito problems and aided in sewage disposal.

Almost none of the soldiers housed at Cuba Libre participated in the war. Because they were all volunteers, they were extensively drilled and trained in marksmanship at the camp's rifle range. Lee

ran a tight ship, which prevented many of the discipline problems that plagued other camps. There is, however, an inherent problem in allowing troops to stay idle for long periods of time far removed from the action. As time progressed, Lee was faced with an often restive group of men, who numbered almost 29,000 at the camp's peak. Because the military operations in Cuba had ended sooner than anyone had thought, VII Corps was not required there. When an armistice was declared on August 12, 1898, a large number of Camp Cuba Libre troops reportedly engaged in a drunken riot in Jacksonville.

In October 1898, the army decided to transfer VII Corps to nearby Savannah, Georgia, and by October 23, 1898, Camp Cuba Libre was largely empty. The camp was entirely abandoned by the first week in November. From the end of May to the end of September, 246 men had died at the camp, almost all from disease.

Camp Dewey

Camp established in June 1898 to receive U.S. soldiers arriving in the Philippines. Camp Dewey was designed to accommodate VIII Corps, which had been stationed in Camp Merriam and Camp Merritt near San Francisco, California. In late May, the first contingent of troops from VIII Corps shipped out to the Philippines and arrived in Manila on June 30, 1898.

Brigadier General Thomas M. Anderson commanded this contingent. His immediate task was to find a suitable location to bivouac his troops. After examining several potential spots along the beach near Manila and along Manila Bay, he settled on an abandoned peanut farm several miles south of Manila. It offered good access to the capital city and was fairly well served by rail lines and telegraph and telephone facilities. The land upon which the camp was constructed was firm and relatively flat, and the location also offered easy egress to the sea. It was believed that the prevailing on-shore winds would make the locale less susceptible to communicable diseases, including yellow fever, typhoid, and malaria.

In late July, as more troops disembarked and the population of the camp grew, the installation was named Camp Dewey for Commodore George Dewey, commander of the U.S. Asiatic Squadron that had won the Battle of Manila Bay on May 1, 1898. Camp Dewey was used not only as a disembarkation point but also as a staging and operations area for the First Battle of Manila (July 25–August 13, 1898) and the Second Battle of Manila (Feb-

ruary 4–5, 1899). Like most of the camps of the Spanish-American War era, there were few permanent buildings, and most soldiers lived in tents.

Hospital facilities were also built on the site, most of them in large tents or hastily built wooden structures meant to treat both the sick and those who had been wounded in battle. Camp Dewey's initial mortality rate was surprisingly small. Only 63 men had died in the camp by the end of September, a period covering the First Battle of Manila.

Camp McCalla

The first U.S. camp erected on the island of Cuba and the staging area for the 1st U.S. Marine Battalion. When the battalion first shipped out of the New York Naval Yard on April 22, 1898, it consisted of 650 men organized into six companies. The contingent was larger than a typical marine battalion of the time but not large enough to justify being split in two. The men left New York aboard the U.S. Navy auxiliary cruiser *Panther*. The ship made stops at Fort Monroe at Hampton Roads, Virginia, and Key West, Florida, before moving on to Cuba. The *Panther* arrived in Cuba on June 10 and made landfall on the eastern sector of the outer harbor of Guantánamo Bay. That same day the marines went ashore and began setting up camp.

The 1st Marine Battalion's commander, Colonel Robert W. Huntington, ordered the camp to be established slightly inland on a hill approximately 150 feet above sea level. Huntington dubbed the staging area Camp McCalla after U.S. Navy commander Bowman Hendry McCalla, who was the force commander at Guantánamo Bay and commanded the *Marblehead*, a ship that proved

The U.S. flag and Marine Corps colors outside a tent at Camp McCalla, Guantánamo, Cuba. (Marine Corps Association)

invaluable to the marines at Guantánamo. The first night at the camp remained quiet; however, on June 11 Spanish troops attacked Marine Corps positions and killed at least two marines. A heavier and more sustained Spanish assault against the camp occurred on June 12, which brought more U.S. casualties. More Spanish sniping and several additional Spanish assaults against the camp on June 13 convinced Huntington to mount an offensive aimed at Spanish-held positions on the beach about six miles southeast of the camp.

Convinced that Camp McCalla should be located closer to the water, Huntington ordered the camp dismantled on June 13; it was rebuilt nearer the beach and within sight of U.S. warships in the harbor. Huntington's offensive, meanwhile, was successful and cut the Spanish off from their only reliable source of fresh water. This forced a Spanish withdrawal and drastically diminished their raids against the battalion. For the next six weeks or so, the marines protected American ships in the harbor from land-based attacks.

On August 5, 1898, Huntington was ordered to break camp, effectively bringing an end to Camp McCalla. That same day, the battalion boarded the auxiliary cruiser USS *Resolute*, which was to steam to Manzanillo and capture that town on the Cuban coast northwest of Guantánamo Bay.

During its short life span, Camp McCalla was efficiently run. Conditions in the camp were excellent. Hygiene was good, and discipline was not a problem. No deaths occurred in the camp due to illness or disease, and just 2 percent of the camp's population had fallen ill.

Camp Meade

Temporary camp built by the U.S. Army to house troops during the Spanish-American War and the Philippine-American War. The camp was named for Major General George Gordon Meade, a Pennsylvania native and commander of the Army of the Potomac during the last two years of the American Civil War.

Camp Meade was located in south-central Pennsylvania south of Harrisburg and less than a mile west of Middletown. The area was centrally located and was well served by railroads, making it an ideal place to mobilize and process troops. Created in mid-August 1898, the camp served as the housing and processing center for II Corps, which had initially been stationed at Camp Alger in

northern Virginia before unsanitary conditions and fear of a major typhoid outbreak forced army officials to vacate the camp.

Most of the troops sent to Camp Meade were either mustered out or were reassigned to other facilities farther south. Major General of Volunteers William H. Graham took command of the camp in early September 1898, by which time some 22,000 troops of II Corps had arrived by rail. As with the other army camps of its day, Camp Meade was hastily built and offered rudimentary comforts at best. Nonetheless, conditions at the camp were superior to those at Camp Alger. Water and food were abundant at Camp Meade, and bathing facilities—the lack of which had plagued Camp Alger—were more than adequate. Alcohol consumption did become a problem for many soldiers at Camp Meade, and discipline suffered accordingly. Attempts to forbid the sale of liquor in regimental canteens only backfired, however, as soldiers found other sources from which to imbibe.

In October, a volunteer infantry regiment was moved out of Camp Meade to a makeshift camp at Conewago, Pennsylvania, situated southeast of Middletown. An outbreak of typhoid had prompted the move.

On November 17, 1898, the last unit departed Camp Meade, and the facility stood all but deserted. It was not vacant for long, however, for in April 1899, several volunteer units arrived at the camp to muster out. The last of them left in June. From July to November 1899, Camp Meade was again pressed into service as a mobilization point for volunteer units going to the Philippines to fight the growing insurgency there. A shooting range, known as the Mt. Gretna Rifle Range, was created at that time to allow the new volunteer units to polish their marksmanship. Camp Meade was no longer in use by the start of 1900.

Camp Merriam and Camp Merritt

Mobilization and staging camps for soldiers of VIII Corps who were bound for the war in the Philippines. Camp Merriam was located on a series of hills just beyond the Lombard Street entrance to the San Francisco Presidio. The camp was named after Major General Henry C. Merriam who at the time was commanding general of the Department of California. He also initially commanded the camp.

Camp Merriam was officially created on May 7, 1898. Conditions at the camp were deemed satisfactory, and there were ample

supplies of fresh water and adequate bathing facilities. However, Camp Merriam was not a large camp in area, and it soon became crowded. Indeed, at its peak, it housed about 10,000 troops. Most of them were volunteers from Iowa, Kansas, South Dakota, and California who were to be trained and quartered there until ships arrived to take them to the Philippines.

Shortly after Camp Merriam opened, the U.S. Army decided to increase the size of VIII Corps and designated San Francisco to be the staging area for the Philippine Islands Expeditionary Forces. As such, Camp Merriam was now deemed too small to house the additional soldiers. Toward the end of May, a second camp, located along the northern border of Golden Gate Park, was established. It was named for Major General Wesley Merritt, who was the first commander of VIII Corps and the Philippine Expeditionary Forces. The camp was probably known as Camp Richmond prior to the naming of Merritt as its commander. Toward the end of May, most of the soldiers from Camp Merriam were moved to Camp Merritt as the new recruits began arriving.

Conditions at Camp Merritt were deemed adequate, although many soldiers believed that they had been better off at Camp Merriam. At its peak, the population of Camp Merritt was approximately 18,000 men. As the contingent grew, several additions were made to the facility, mostly by renting adjacent land from property owners. Still, however, there was not enough room for the soldiers to drill within the confines of the camp, so they often drilled in the nearby streets outside the facility. Camp Merritt had an adequate supply of fresh water and bathing facilities, and overall hygiene was considered good.

In late August 1898, several large contingents of troops shipped out, making two camps unnecessary. Thus, on August 27, the remaining soldiers at Camp Merritt were transferred to Camp Merriam, as the latter had better facilities. In the meantime, numerous units had remained at Camp Merriam, as that post had never been emptied.

An outbreak of measles and reported cases of typhoid resulted in numerous deaths at Camp Merritt before it was temporarily decommissioned. From May to the end of September 1898, at which time both camps had been largely abandoned, 139 men had died, most from communicable diseases. Some soldiers remained at Camp Merriam until November 1898 when it was closed, temporarily as it turned out. With the advent of the Philippine-American War in 1899, Camp Merriam was again used to house soldiers going to and arriving home from the Philippines.

Camp Onward

Camp established in the autumn of 1898 in Savannah, Georgia. Camp Onward was established to serve as the embarkation point for VII Corps, which was being deployed to Cuba as part of the U.S. occupation forces. VII Corps commander Major General Fitzhugh Lee had control of the camp. Early on, the camp was known as Camp Lee in honor of its commander. Lee, however, wanting no such honor, renamed it Camp Onward.

Nearly all of the men from VII Corps sent to Camp Onward had been relocated there from Camp Cuba Libre (Jacksonville, Florida), about 130 miles to the south of Savannah. The first contingent of troops from Jacksonville began arriving at the camp in mid-October 1898, and Camp Onward quickly filled up. By November 1, there were an estimated 13,000 soldiers living in the makeshift camp. Most of the tents had been set up in the Thunderbolt section of Savannah in the southeastern quadrant of the city. The greatest concentration of troops was housed along Victory Drive and Shell Road. Encampments were also located along Dale Avenue and on the banks of the Savannah River on Savannah's east side, which provided easy access to the Atlantic Ocean. A preexisting rifle range in the vicinity of the camp known as the Avondale Range was pressed into service and was used by VII Corps soldiers for target practice.

Conditions in Camp Onward were satisfactory, and its location had relatively high ground and access to reliable fresh water. As elsewhere, there were sporadic discipline problems at Camp Onward, particularly as the duration of the temporary encampment wore on.

During the first week of December, President William McKinley and members of his cabinet visited Savannah and toured Camp Onward. The troops passed in review before the president in what is now known as Forsyth Park. By mid-December 1898, VII Corps had embarked for its tour of occupation duty in Cuba. The sprawling camp lay largely abandoned, although some troops returning from Cuba temporarily stayed there until Camp Onward was permanently decommissioned in late May 1899.

Camp Thomas

The largest of the U.S. Army camps in the United States and the chief mobilization point for I and III Corps. Camp Thomas was officially established on April 14, 1898, in northern Georgia at

Camp Thomas, Chickamauga, Georgia. Volunteer units underwent training here. (*Photographic History of the Spanish-American War*, 1898)

Chickamauga National Park, some nine miles from Chattanooga, Tennessee. Named after Union brigadier general George H. Thomas who had earned the nickname “Rock of Chickamauga” for his rearguard action there in September 1863, Camp Thomas sprawled across 7,000 acres of land and was headed in succession by Major General John R. Brooke (April 20–July 23, 1898), Major General James F. Wade (July 23–August 2, 1898), and Major General Joseph C. Breckinridge (August 2 through September 1898).

Most of the soldiers gathered at Camp Thomas were sent on to Tampa, Florida, from where they would ship out to Cuba. Both regular troops and volunteers were assembled at Camp Thomas. At least six regiments of regular infantry totaling 7,283 men rotated through the camp, but almost all had departed by mid-May 1898. After mid-May, volunteer troops began to flood into the camp, but they too would be gone by the end of September, at which point Camp Thomas was decommissioned. In all, Camp Thomas processed some 69,000 volunteers.

The average census of Camp Thomas was about 46,950 men, and many were trained in large-scale maneuvers. Conditions at the camp were far from ideal, and discipline became a significant problem. Poor food prompted two regiments to refuse to drill in protest, while subpar water supplies and a paucity of medical supplies con-

tributed to widespread disease among the camp’s inhabitants. By early August, medical personnel reported a staggering 4,400 cases of typhoid. Outside the camp, much to the commander’s chagrin, lay a seedy mélange of greasy-spoon restaurants, saloons, brothels, and illegal gambling parlors.

Because of the huge typhoid outbreak, most of the men at Camp Thomas either mustered out or went to other camps by the end of August. By the middle of September, the 6th U.S. Volunteer Infantry Regiment was the only unit left at the camp, which closed with the regiment’s departure at the end of the month. A total of 425 men died at the camp, the vast majority of them from disease.

The lack of sufficient medical facilities and the soaring rate of typhoid that ravaged the camp resulted in the creation of two hospitals just outside the camp to take in overflow patients. The first was the Leiter General Hospital, set up in a hotel that had been donated to the U.S. government. Although intended to house just 130 patients, more than 255 beds were crammed into the facility as the typhoid outbreak crested. When medical officials ran out of room at Leiter, a second hospital, with a capacity of 750 beds, was established. The Sternberg Hospital (named after George M. Sternberg, U.S. Army surgeon general) began accepting patients on August 16, 1898.

Camp Wikoff

Military camp and quarantine center located on Montauk Point at the easternmost tip of Long Island, New York. Worried that thousands of soldiers might return from Cuba and Puerto Rico with diseases such as malaria and yellow fever, the U.S. government authorized the construction of Camp Wikoff to certify that returning soldiers were disease-free before releasing them from military duty. The site for Camp Wikoff was chosen because of its proximity to railroad lines and deep-water access for large ships and for its remoteness from population centers. Because of its relative isolation and prevailing offshore winds, officials believed that the location would limit the potential for diseases to spread beyond the confines of the camp.

The U.S. government obtained approximately 5,000 acres from the Long Island Railroad for \$15,000 on a lease that was to run from August 1898 to May 1899. The government also had full access to rail lines and spurs as well as docks on the property. The camp was named for Colonel Charles Wikoff of the 22nd U.S. Infantry who died in the Battle of El Caney.

Construction was begun in early August 1898 under the direction of Brigadier General Samuel Baldwin Marks Young, who had charge of the camp. The first projects were to dig water wells, increase rail capacities, and erect warehouses for food and other supplies. Young and the men tasked with erecting the camp were racing against time. Colonel Theodore Roosevelt and the general officers serving in Cuba had publicly demanded that their men be sent home before a yellow fever epidemic broke out, and the first shipments of troops were due to arrive within days of the beginning of construction on August 2, 1898. Construction work was hampered by continual supply interruptions and labor strikes.

On August 8, just six days after construction commenced, 3,500 soldiers arrived at the camp along with almost 5,000 horses. There were no standard facilities in which to house the soldiers or the horses, and their presence seriously impeded construction. On August 14, the first large troop detachments arrived from the Caribbean. The camp was woefully unprepared to house and feed them and had only rudimentary medical services in place. On August 15, Major General Joseph Wheeler arrived and took command

of the camp and its construction. He brought about order out of chaos and had the camp running with relative ease by the end of the month.

Camp Wikoff was divided into two sections. One was a quarantine area dedicated to housing and caring for soldiers with various communicable diseases. The other section was reserved for healthy soldiers and was designed as a place where they could rest and regain their strength before reassignment or mustering out. Each area had its own hospital and medical facilities, which Wheeler made sure were well staffed with physicians and nurses. He also ordered the construction of laundry facilities and a water purification plant and the laying of some 12 miles of water pipes.

Between August and October 1898, approximately 28,000 soldiers passed through Camp Wikoff, including Roosevelt and his Rough Riders. At its peak, the camp's population was nearly 22,000 soldiers. In the span of a single month, from late August to late September 1898, the two hospitals and their 300 staff treated more than 10,000 men.

Despite Young's and Wheeler's efforts, conditions in the camp were primitive, and construction never kept up with the influx of soldiers. These circumstances did not escape the eye of the probing press, and a small army of reporters from New York City arrived to report on alleged gross mismanagement of the sprawling facility. Many of these reports may have been inaccurate or exaggerated, but once the word was out, U.S. Army officials scrambled to shut down the operation as quickly as possible. Both President William McKinley and Secretary of War Russell Alger toured the camp, but their presence failed to allay the concerns about the camp and its soldiers.

In the third week of September, Major General William Shafter took command of the camp from Wheeler. By then, the population of the camp had been reduced substantially, and by September 23, 1898, there were just seven regiments housed there. The last of the soldiers left Camp Wikoff on October 28, and the army disassembled what it could and vacated the area. Some 20 years later, Camp Wikoff was reactivated for National Guard maneuvers.

Camp Wood

Mustering point and training area for the 1st United States Volunteer Cavalry Regiment (popularly known as the Rough Riders).

Camp Wood, located in San Antonio, Texas, was named for the regiment's commanding officer, Colonel Leonard Wood, who personally selected the camp's site on May 5, 1898. The camp was in operation for less than a month. Troops began arriving on May 7, at which time drill and training exercises were begun.

Camp Wood was located adjacent to a large fairgrounds and exposition complex, Riverside Park, that is today partially occupied by a golf course. Wood selected the site because it already had buildings that could be pressed into temporary military use. The large exposition hall and adjacent grandstand were used as barracks for enlisted men. Officers slept in tents on the fairgrounds, but once an adequate number of tents had arrived, all of the regiment was bivouacked in these. Wood established a parade ground and training area not far from the San José Mission that had previously been used as a military staging area for troops from Texas and surrounding states.

The most famous of the Rough Riders and the regiment's second-in-command, Lieutenant Colonel Theodore Roosevelt, did not arrive at Camp Wood until May 15. Prior to that, he had been in Washington, D.C., wrapping up business and attempting to procure needed arms and supplies for the regiment. Although Roosevelt has been credited with providing khaki uniforms for the Rough Riders instead of the heavy wool uniforms issued to most soldiers in the war, it was actually Wood who opted to use canvas fatigues that had been worn while doing maintenance chores around camps. He chose those because wool uniforms were unavailable except for the New Mexico regiments, which brought their own. Roosevelt dressed the uniforms up with polka dot handkerchiefs to be worn around the neck. Some of the officers (including Wood and Roosevelt) had fancier khaki uniforms tailored by Brooks Brothers.

Roosevelt, who lacked any prior military experience, participated in training and drilling the men of the regiment, whom he complained to Wood as being too independently minded. By the same token, Roosevelt sought to earn the trust and admiration of his men and sometimes went too far in his attempts to have his men like him. On a particularly hot day, he stopped his men at a nearby hotel and permitted them to drink at his expense. When Wood discovered this obvious lapse in protocol and discipline, he rebuked Roosevelt rather severely. Roosevelt, realizing his mistake, agreed. Training continued, and by the end of May, the regiment had made great strides in becoming a cohesive and effective fighting unit. On May 30, 1898, Camp Wood was abandoned when the regiment departed by train to Tampa, Florida, for eventual deployment to Cuba.

Camps, U.S. Army

Although the Spanish-American War was relatively brief, it spawned a great number of military camps that served as temporary housing and training areas, staging and mobilization areas, and embarkation points. Further complicating this picture is the fact that both state governments and the federal government established camps, many of which were designed to mobilize, house, and train volunteer units. In all, there were at least 150 camps spread across the continent, and, of course, camps were established in Cuba and the Philippines as well. The sheer number of temporary camps and their geographic distribution was a telling sign of the U.S. Army's lack of preparedness and its reliance on volunteers to augment its small contingent of regulars.

There were four primary embarkation points for U.S. soldiers shipping out to the war fronts. Three were in the eastern United States and served units destined for Cuba and Puerto Rico. The largest one was located in Tampa, Florida, while the remaining two were in Mobile, Alabama, and New Orleans, Louisiana. For troops bound for the Philippines, Camp Merriam and then Camp Merritt in San Francisco served as the mobilization camps. The cities were carefully selected by the War Department based on certain essential criteria. First, they had to have modern port facilities and deep-water access for large commercial and naval vessels. Second, they had to be well served by rail lines, depots, and sidings. Third, they had to be geographically close to the war front or at least as close as possible given the distances involved. Tampa, Mobile, and New Orleans, all situated on the Gulf Coast, were the closest large ports to Cuba. San Francisco was the largest and closest port facility to the Philippines.

Army camps fell into a number of different categories. The first were the mustering-in camps, where soldiers were initially mobilized. There were two classifications of such camps: those created by the individual states for state volunteers and those reserved for U.S. volunteers. The second were the staging camps for the various army corps. Each had its own camp (such as Camp Cuba Libre for VII Corps). The third were a relatively small number of winter camps, utilized in the winter of 1898–1899. These were created in states of the Deep South (including such facilities as Camp Foran in South Carolina) to move troops out of inclement northern climates. The fourth were the recruitment camps. The fifth were the embarkation point facilities, such as at Tampa, from which soldiers shipped out to the war front. The sixth were occupation camps in Cuba and the Philippines. The seventh and last category included the mustering-out camps, such as Camp Wikoff in New York.

The sizes of camps varied greatly in terms of both land area and population. Small state-created camps might house only a few hundred volunteers. The largest of the camps was the U.S. Army's Camp Thomas in Chickamauga, Georgia. It served as the primary mobilization point for II Corps and III Corps and sprawled across some 7,000 acres. During its life span it processed about 69,000 soldiers. In some instances, more than one camp was created in the same city, based on the War Department's call for volunteers. The

Men of the 1st North Dakota Volunteer Regiment line the decks of the *Valencia* as the ship departs San Francisco, California, for Manila, Philippines, in June 1898. (Naval Historical Center)

War Department issued two separate calls at two distinct times, leading to the creation of two camps in the same general area.

In some cases, military officials were able to make use of existing buildings for the housing of troops or for hospital facilities. Some camps, for example, were set up on state fairgrounds, which usually had a number of permanent buildings. Most camps, however, were hastily erected from scratch and constituted little more than huge tent cities. Even medical facilities were housed in tents, although in some camps a limited number of semipermanent buildings were created for such purposes. The two cities with the most number of camps during the Spanish-American War were Lexington, Kentucky, with as many as eight, and Macon, Georgia, with five.

Conditions in the camps varied greatly and were often based on the installation's water supply and bathing facilities, which had a direct impact on overall hygiene and disease prevention. Other important factors included the presence of adequate sewage disposal systems, the physical location of the camp (high ground versus low, well-drained versus poorly drained), and, of course, the camp commander, who directly influenced discipline and morale.

Conditions in the volunteer camps tended to be the most problematic. Untrained and unaccustomed to military discipline, these men tended to pose significant discipline problems for their officers. Idleness was a real problem, particularly because many volunteers never made it to the war zone. Gambling and drinking were rampant in these camps, and hygiene left much to be desired. Poor

hygiene brought increased illness and disease, and if communicable disease took hold in a camp, it was likely to spread quickly and furiously. Although most camps had quarantine facilities to stanch the spread of such outbreaks, they were often inadequate to prevent a serious epidemic.

Boredom and poor discipline often led to fights within the camps as well as physical confrontation between soldiers and locals, many of whom were less than thrilled with their new and temporary neighbors. Not surprisingly, a cottage industry of bars, saloons, cheap restaurants, burlesque shows, and brothels sprang up on the fringes of many camps. These did nothing but encourage poor behavior among the soldiers and were the bane of many camp commanders. At Camp Alger in Virginia, camp commander Major General William H. Graham became so appalled by such titillations that he ordered a bawdy burlesque show located just outside the camp closed.

A number of mustering-in camps in the North were miserable affairs because of an unusually cold and rainy spring in 1898. The frequent rains turned many camps, even those on high ground, into muddy quagmires in which volunteers struggled to keep warm. In camps in the South, just the opposite was frequently the case. Usually supplied only with heavy woolen uniforms, soldiers in these camps suffered from heat exhaustion, heat stroke, and worse.

Camps located in Cuba and the Philippines were usually grim affairs. In addition to the sweltering heat and high humidity of these regions, malaria and yellow fever were a constant concern. Located several thousand miles from the United States, the camps were not as well stocked with food and medical supplies as were camps state-side. Finding potable water and providing adequate sewage disposal facilities were also a challenge.

Most larger camps had on-site hospital facilities. Those in the United States had a quarantine section, which included hospital facilities. In camps overseas, hospitals fulfilled two roles: caring for those injured in battle and tending soldiers who were ill. At Camp Wikoff in New York, a major mustering-out facility, the hospitals there employed 300 staff and treated as many as 10,000 men in just a month's time.

All in all, these temporary camps—some of which were in operation for just a few weeks—served the nation's war effort quite well. They handled and processed an enormous number of men and served as vast laboratories for the study of infectious diseases. They also presented officers with new challenges in leadership and discipline and acted as models for the construction of future armed forces facilities.

Canary Islands

The Canary Islands, known in Spanish as las Islas Canarias, are an Atlantic Ocean archipelago of seven major islands—Gran Canaria, Tenerife, Lanzarote, La Palma, La Gomera, El Hierro, and Fuerteventura—and six small islets. The islands are of volcanic origin, and the Tiede Volcano on Tenerife is the world's third-largest volcano. Located off the northwestern coast of Africa, the Canary Islands are currently an autonomous community of Spain. The name of the islands is thought to be derived from a North African Berber tribe (the Canarii) that settled the islands or from the Latin name Insularia Canaria (Island of the Dogs), the name that the ancient Romans gave to the islands because of the multitude of large dogs they encountered there. The bird canary (*serinus canarius*) was named after the islands.

Although the islands were known to the Phoenicians, Greeks, Romans, and Arabs for centuries, the local population was largely ignored until the 15th century. The climate is dry subtropical to tropical, with some islands receiving more rainfall than others owing to their position relative to the trade winds. Many of the islands have high and craggy mountains.

In 1402, vassals of King Henry III of Castile began the conquest of the Canaries. The native population, known as Guanches, fiercely resisted European attempts at colonization, which delayed complete Spanish conquest until 1495. The Spaniards imposed a monocultural economy based initially on sugar and then on wine. Two ports—Las Palmas de Gran Canaria and Santa Cruz de Tenerife—became important transit points for Spanish explorers, merchants, and traders on their way to the Americas. A rivalry between the elites in Las Palmas and Santa Cruz has lasted into the contemporary period. The location of the islands on the sea route to the Americas led to a period of significant prosperity. During the 19th century, cochineal, a crimson-colored dye extracted from insects, became the basis of the local economy. Because of overpopulation, during the 19th century a large number of people from the islands immigrated to the Americas, especially Cuba and the Dominican Republic, and this profoundly affected speech patterns on those islands.

During the Spanish-American War, the Spanish government suspected that the United States might try to capture the Canary Islands. Although the United States considered attacking the Canaries, it never attempted to do so and did not try to claim the islands in the negotiations leading to the Treaty of Paris that ended the Spanish-American War.

Following the war, significant numbers of people from the Canary Islands continued to immigrate to Cuba. In the early 20th century, bananas were introduced and became the primary agricultural activity in the Canary Islands. In 1927, owing to the continued rivalry between the elites of Santa Cruz and Las Palmas, the archipelago was divided into two provinces. On July 17, 1936, Spanish general Francisco Franco launched a military uprising in the Canary Islands that led to the Spanish Civil War (1936–1939). There was considerable opposition in the islands to Franco's rule, and after the dictator's death in 1975, plans were initiated by the Spanish government that led to making the Canary Islands an autonomous region of Spain in 1982.

Cannon, Joseph Gurney

Birth Date: May 7, 1836

Death Date: November 12, 1926

Acerbic Republican congressman (1873–1891, 1893–1913, 1915–1923) and arguably the most powerful Speaker of the House of Representatives in U.S. history (1903–1911). Joseph Gurney Cannon was born in Guilford, North Carolina, on May 7, 1836. His father was a country doctor. When Cannon was 4 years old, his family moved to Annapolis, Indiana, located some 35 miles from Terre Haute, Indiana. His father drowned when the younger Cannon was just 10 years old, and from then on he took over the modest family farm to help his family make ends meet. He received a public education until his midteens and then became interested in the practice of law. He studied law under the tutelage of a Terre Haute lawyer and attended the University of Cincinnati Law School for a short time before being admitted to the bar in 1858. In 1859, Cannon moved to Tuscola, Illinois, to practice law, and from 1861 to 1868, he served as the local state attorney.

By the late 1850s, Cannon had become an ardent Republican and supported Abraham Lincoln's 1860 presidential bid in return for which he received an appointment as a federal prosecutor. First elected to the House of Representatives in 1872, Cannon took his seat in 1873. He held the seat uninterrupted for 18 years and garnered a reputation as an effective legislator who took no prisoners, did not suffer fools gladly, and used profanity with abandon. Many in Washington viewed him as a buffoonish country bumpkin, but under the veneer of a midwestern farmer that he purposely culti-

Powerful speaker of the House Joseph Gurney Cannon, Republican from Illinois, was instrumental in supporting a U.S. defense buildup, including the Fifty Million Dollar Bill, that helped prepare the nation for the Spanish-American War. (Library of Congress)

vated was a man of considerable intellect and, above all, great political acuity.

Although Cannon lost his reelection bid in 1890, he regained his seat in 1893, serving uninterrupted until 1913. This was his most productive and powerful tenure in Congress. He was instrumental in passing numerous spending bills designed to beef up the U.S. Navy and armed forces, including the so-called Fifty Million Dollar Bill aimed at preparing the country for a potential war with Spain. He was not a proponent of using the power of the federal government to effect change or induce reform, which placed him in the conservative wing of the Republican Party. It also placed him at loggerheads with progressives such as Theodore Roosevelt.

Cannon was, however, an effective proponent of U.S. expansionism and used his considerable skills and influence to coerce other Republicans to support President William McKinley. Cannon's political skills were most evident on April 20, 1898, when the U.S. Congress passed a joint resolution for war against Spain. Indeed, Cannon's influence in the House contributed to the overwhelming 311 to 6 vote in favor of the legislation. The joint resolution, which included the Teller Amendment that disclaimed any U.S. intention of exercising U.S. jurisdiction over Cuba after the war, was an attempt to allay suspicions that McKinley had an imperialistic agenda. Cannon could be combative and acerbic, but his party loyalty was unwavering. He admired McKinley, having

served with him for many years in the House, and believed that the president had great political savvy. Cannon once said of McKinley that he "keeps his ear so close to the ground that it's always full of grasshoppers."

The wiry, cigar-chomping congressman actively sought the coveted position of Speaker of the House, which he finally attained in 1903. He instantly became the most powerful Speaker in U.S. history but often used questionable means to exercise his powers. He immediately ran afoul of the White House when President Theodore Roosevelt attempted to legislate progressive reforms. Believing that the president was overstepping his authority and trampling on congressional prerogative, Cannon bluntly stated that Roosevelt had "no more use for the [U.S.] Constitution than a tomcat has for a marriage license." When a conservation bill championed by Roosevelt went to the floor of Congress, Cannon chortled, "Not one cent for scenery." Of Progressivism in general, Cannon declared, "I'm [expletive deleted] tired of listening to all this babble for reform. America is a hell of a success."

In the end, Cannon's combativeness and heavy-handed management style proved his undoing. Beginning in 1909, his obstreperous refusal to embrace progressive reforms led to a series of attacks on his power as Speaker. Within two years, he was forced to step down as Speaker of the House after Congress repeatedly trimmed his powers. The attacks against Cannon were bipartisan, and by 1911, he had been stripped of his powers to control committee assignments, his chairmanship of the Rules Committee, and his unquestioned authority to recognize House members on the floor.

Cannon left office after his defeat in 1912 but returned to the House of Representatives in 1915, where he remained until his retirement in 1923. He served for an astonishing 46 years. Despite his arbitrary rule and salty personality, many lawmakers liked Cannon personally, so much so that he garnered the moniker "Uncle Joe." Cannon left Washington for Illinois in 1923 and died in Danville, Illinois, on November 12, 1926.

Cánovas del Castillo y Vallejo, Antonio

Birth Date: February 8, 1828

Death Date: August 8, 1897

Conservative Spanish politician, historian, and prime minister of Spain six times between 1874 and 1897 (December 1874–September 1875, December 1875–March 1879, December 1879–February

Spanish political leader and historian Antonio Cánovas del Castillo was prime minister of Spain six times between 1874 and 1897. (Martin Hume, *Modern Spain*, 1899)

1881, January 1884–November 1885, July 1890–December 1892, and March 1895–August 1897). Antonio Cánovas del Castillo y Vallejo was born on February 8, 1828, in Málaga, Spain, but moved to Madrid to live with his uncle Serafín Estébanez Calderón after his father died in 1843. In 1852 Cánovas published *The History of the Decline of Spain*, the first of numerous historical studies written by him. He supported the July 7, 1854, military movement led by General Leopoldo O'Donnell that toppled the Partido Moderado government that had ruled Spain since 1844. Cánovas also wrote the *Manifiesto de Manzanares*, which outlined the goals of the new Partido Progresista government.

Cánovas held a number of government posts during the turbulent period from 1854 until 1868, when Queen Isabel II was overthrown. Significantly, he was the minister of overseas colonies from 1865 to 1866. After a revolution overthrew Isabel II in 1868, Cánovas temporarily retired from politics.

Cánovas supported the overthrow of the First Spanish Republic in 1874 and restoration of the Bourbon monarchy that same year. He returned to active politics on December 31, 1874, as the first prime minister for Isabel II's son, King Alfonso XII. With the exception of two brief periods, Cánovas was prime minister from 1874 to 1881.

Between 1874 and 1881, Cánovas was instrumental in solidifying the power of the newly restored monarchy. He was the principal author of the Constitution of 1876, which legitimized the

constitutional monarchy and provided for limited suffrage. He was also instrumental in defusing the appeal of the dissident Carlist movement. By opening up the political system to the middle class while simultaneously excluding the working class, he laid the basis for a two-party political system in which political power alternated between his Conservatives and Práxedes Mateo Sagasta's Liberals. Cánovas also oversaw the end of the Ten Years' War (1868–1878) in Cuba. Although promising reforms in Cuba, his government in fact pursued a policy of repression against Cuban nationalists that eventually led to La Guerra Chiquita (1878–1880) and the Cuban War of Independence.

While prime minister between 1890 and 1892, Cánovas continued a policy of repression against Cuban nationalists. Returning to power in 1895, he insisted on an aggressive policy to crush the Cuban nationalists and supported General Valeriano Weyler y Nicolau's *reconcentrado* (reconcentration) system to crush Cuban resistance. Although largely successful, the implementation of Weyler's draconian policy generated sharp criticism in the American press, which contributed to U.S. intervention in the Cuban crisis in 1898.

Cánovas's suppression of the Spanish working class as well as attempts to crush Catalan and Basque nationalist movements caused great instability in Spain. He was assassinated by Italian anarchist Michele Angiolillo at a spa in Guipúzcoa, Spain, on August 8, 1897. Angiolillo was executed by Spanish authorities on August 20, 1897.

Cape Tunas

Original landing point planned for the U.S. invasion of Cuba at the beginning of the Spanish-American War. Cape Tunas is located on Cuba's south-central coast about 70 miles east-southeast of Cienfuegos. The initial U.S. war plans called for a naval blockade of Cuban ports and the landing of a U.S. expeditionary force at Cape Tunas. The Americans were then to join forces with units of the Cuban Revolutionary Army commanded by General Máximo Báez y Gómez, who was operating inland.

After the U.S. declaration of war on April 25, 1898, U.S. rear admiral William T. Sampson instituted a naval blockade of Cuba's

northern ports with the ships of his North Atlantic Squadron. A lack of ships, however, meant that Sampson was compelled for the time being to leave Cuba's southern coast uncovered. On April 29, the War Department ordered Major General William R. Shafter to mobilize some 6,000 troops at Tampa, Florida. They were to include cavalry, field artillery, and regular infantry units. Shafter was then to embark from Tampa aboard transport ships and, accompanied by a naval escort, proceed to Cuba and land at Cape Tunas. After the landing, he was to march inland and join Gómez. The plan called for Shafter to provide Gómez with weapons and ammunition so that he could continue the fight against the Spanish. Shafter was also to gather military intelligence during the operation to be used for the subsequent main U.S. attack on Cuba sometime in June. Finally, he was encouraged to help Gómez organize assaults against the Spanish but had been directed not to have U.S. troops participate in any major engagements.

Shafter's expedition was designed to be a brief one, more of a spur to the Cuban resistance and reconnaissance than anything else. Major General Nelson A. Miles had directed Shafter to depart Cuba with his men in no more than five days. He was then to return immediately to the United States in order to brief U.S. war planners on the situation.

As it turned out, however, Shafter's reconnaissance expedition never took place. On April 29, the same day that Miles's orders had been issued, Rear Admiral Pascual Cervera y Topete's squadron departed the Cape Verde Islands, its final destination unknown. This news prompted Sampson to divert some of his ships, which meant that they would not be available to provide escort for Shafter's forces. The War Department then canceled the operation, and no landing at Cape Tunas ever took place. Shafter, however, continued to mobilize his forces, and by May 6, all 6,000 men stood ready to deploy to Cuba when ordered.

Cape Verde Islands

The Cape Verde Islands, known in Portuguese as the Ilhas do Cabo Verde, are an archipelago off the western coast of Africa. The name is derived from Cape Verde (Green Cape), a promontory on the coast of West Africa. The 10 islands of the archipelago are divided into the Ilhas do Barlavento (Windward Islands), consisting of

Santo Antao, São Vicente, Santa Luzia, São Nicolau, Sal, and Boa Vista, and the Ilhas do Sotavento (Leeward Islands), consisting of Maio, Santiago, Fogo, and Brava. These volcanic islands cover approximately 1,500 square miles. The Portuguese arrived in 1456 to settle the mostly uninhabited islands. The Cape Verde Islands soon became an important watering station, sugar colony, and slave trading depot. The harbor on the northern coast of São Vicente afforded complete shelter from the wind. In July 1975, the Portuguese acknowledged the independence of the Cape Verde Islands.

Following the sinking of the U.S. battleship *Maine* in Havana Harbor on February 15, 1898, the Spanish government realized that the possibility of war with the United States had increased dramatically. Spanish military officials deployed ships and reorganized expeditionary forces. The most important of these expeditionary forces was the Atlantic Squadron, led by Rear Admiral Pascual Cervera y Topete. On March 14, 1898, Cervera's squadron, consisting of four armored cruisers—the *Almirante Oquendo*, the *Infanta Maria Teresa*, the *Cristóbal Colón*, and the *Vizcaya*—and the torpedo boat destroyers *Furor*, *Plutón*, and *Terror* proceeded to the Cape Verde Islands. Cervera's ships were now poised for a dash across the Atlantic Ocean should war with the United States erupt. On April 23, Spain declared war on the United States. The next day, Spanish minister of defense Segismundo Bermejo y Merelo sent instructions to Cervera to proceed from the Cape Verde Islands to the West Indies. Cervera's squadron departed the Cape Verde Islands for the Caribbean on April 29. Two months later, on July 3, 1898, Cervera's entire squadron was destroyed as it exited Santiago de Cuba Harbor.

Capron, Allyn Kissam, Jr.

Birth Date: 1871

Death Date: June 24, 1898

Captain of volunteers in command of L Troop of the 1st U.S. Volunteers (Rough Riders) who was killed at Las Guásimas. Born in 1871, Allyn Kissam Capron Jr. was a fifth-generation member of

the U.S. Army whose ancestors had fought in the American Revolutionary War, the War of 1812, the Mexican-American War (in which his grandfather was killed), and the American Civil War. Capron enlisted in the army as a private in the 4th Cavalry Regiment on October 20, 1890. He was commissioned a second lieutenant with the 5th Infantry Regiment on October 7, 1893, and transferred to the 7th U.S. Cavalry in November 1894. When the Spanish-American War began, Capron, a lieutenant serving with the 7th Cavalry, was promoted to captain in the United States Volunteers and given command of the Indian Territory Volunteers recruited from what later became Oklahoma. Tall, blond, and blue-eyed, Capron was popular with his men and was considered by Theodore Roosevelt to be the best soldier in the Rough Riders. Capron was a boxer and an expert horseman and was repeatedly held out as the archetype of the American military man.

Brigadier General Leonard Wood granted Capron's request that he be allowed to lead the vanguard of the June 24, 1898, American advance on Las Guásimas. Early in the battle, Capron was shot in the chest and died in the arms of one of his men. He was posthumously awarded the Silver Star. Capron's father, also named Allyn and also a captain, commanded the 4th Artillery and furnished artillery support for Major General Henry Lawton's assault on El Caney. The senior Capron survived the war and also led the 21-gun salute celebrating the American occupation of Santiago de Cuba. Shortly thereafter, he contracted typhoid, from which he died after returning to the United States.

Cárdenas, Cuba

Port city on the northwestern coast of Cuba and the site of a brief naval engagement between Spanish and American forces on May 11, 1898. Located in Matanzas Province approximately 75 miles east of Havana, in 1898 Cárdenas was a thriving port city with approximately 20,000 inhabitants. The surrounding land is quite fertile and was extensively farmed.

Formally established only in 1828, the city grew quickly owing to the rich surrounding lands and its access to Cárdenas Bay (Bahía de Cárdenas), a wide but shallow body of water that limited access to smaller vessels only. Cárdenas is protected by a large promontory and is strategically positioned between the ocean to the north and hills to the south and southeast.

In 1841, a railway linking Cárdenas with Havana and other key cities in Cuba increased the city's importance and prompted an economic boom in the area. In 1850, the city became momentarily famous when the Venezuelan soldier of fortune Narcisco Lopez

launched a filibustering expedition there. After occupying the town for nearly a day, he abandoned it when it had become clear that the locals were not flocking to his cause. It had been his intention to free Cuba from Spanish colonial rule.

Although the bay at Cárdenas was too shallow for most naval vessels, including blockade runners, U.S. North Atlantic Squadron commander Rear Admiral William Sampson sought to prevent supplies from reaching the Spanish through the city. In late April 1898, just days after the declaration of war, a minor naval skirmish took place off the coast of Cárdenas between American and Spanish ships. The following month, on May 8, the U.S. torpedo boat *Winslow* entered the bay and fired on a Spanish gunboat and armed tugs in an effort to draw them out of the bay where the cruiser *Wilmington* and the gunboat *Macias* were lying in wait. This attempt failed, but three days later, on May 11, the *Wilmington*, the *Macias*, and the *Winslow* and the revenue cutter *Hudson* returned to Cárdenas. The American ships dueled with the Spanish shore batteries and the gunboats *Alerta* and *Ligera* and the armed tug *Antonio López*. The *Winslow* was seriously damaged in the exchange with a Spanish shore battery and had to be towed out to sea by the *Hudson*. Five crewmen died, and three others were wounded. Among the dead was Ensign Worth Bagley, believed to be the first naval officer killed in the war. On the Spanish side, two ships were damaged, part of Cárdenas was set on fire, and seven people were killed.

In the first years of the 20th century, Cárdenas became one of the principal cities in Cuba involved in the export of sugar. This fueled another surge in its population so that by 1907 it boasted more than 24,000 people, an increase of 20 percent in less than 10 years. The surrounding areas continued to be farmed thanks to the fertile soil, abundant rainfall, and moderating sea breezes.

Caribbean Sea

A suboceanic basin of approximately 1.049 million square miles. The Caribbean Sea consists of the Greater Antilles island chain in the west (which includes Cuba and Puerto Rico) and the Lesser Antilles in the east. The Caribbean, a tropical body of water, covers all the area north of the South American continental mainland, east of Central America and the Yucatan Peninsula, west of the Lesser Antilles, and south of the Greater Antilles.

The name "Caribbean" derives from the Carib Indians, who lived in the Lesser Antilles. Other indigenous groups present at the time

of first European contact in the 15th and 16th centuries were the Tainos, who inhabited most of the Greater Antilles, and the Guanahatabeys, who inhabited the westernmost end of Cuba. In more recent times, control of the Caribbean has been critically important to the United States because of the Caribbean's proximity to the Gulf of Mexico and southern Florida and its access to the Panama Canal.

European colonization began with the arrival of Christopher Columbus in 1492. Spain held uncontested dominion in the region, except for piracy, until the first quarter of the 17th century, at which time settlements in the Lesser Antilles by Great Britain, France, and the Netherlands began to appear. After the demise of much of the native population, slavery based on the importation of Africans became prominent. Indeed, Spain, Great Britain, France, and the Netherlands all employed slave labor in large sugar and tobacco plantations on the many tropical islands that dot the Caribbean Sea. This arrangement set up a system of triangular trade among Africa, the Caribbean islands, and European nations. Ships would transport African slaves to the Caribbean islands; load molasses, tobacco, and other goods for Europe or the British colonies of North America; and then return to Africa to begin anew. The heavy importation of Africans to the region has given the population of the Caribbean a unique diversity that blends European, indigenous, and African traditions.

The advent of the 19th century saw many nations surrounding the Caribbean basin gain their independence from Spain. In the West Indies, the French colony of St. Domingue on the western portion of the island of Hispaniola gained its independence, out of which Haiti was formed. The eastern portion of the island was annexed by Haiti until 1844, when it became the Dominican Republic. By the end of the 19th century, the only remaining large colonies in the Caribbean were the Spanish-held islands of Cuba and Puerto Rico and the British-held island of Jamaica.

The Caribbean Sea is home to about 90 percent of the world's coral reefs, which are believed to cover 20,000 square miles. As such, parts of the Caribbean are host to some of the most diverse and numerous marine wildlife populations in the world. These reefs have come under great pressure in recent years, however, thanks to overfishing, careless human handling, and rising sea temperatures.

The climate in the Caribbean generally reflects that of a warm, humid tropical region. Tourism has become a big industry on many Caribbean islands owing to their seaside locale and consistently warm temperatures, even in the winter months. The downside of this balminess are hurricanes, however. Indeed, many of the Western Hemisphere's hurricanes are spawned annually in the Caribbean. These fierce storms have become a part of life on Caribbean islands, as virtually no one is immune from them. Caribbean hurricanes posed constant problems for colonial powers in the region over the centuries, but U.S. forces were largely spared from this threat during the Spanish-American War mainly because the majority of the fighting had ended before hurricane season swung into high gear. They were not spared, however, from the torrid heat and humidity. Dispatched to Cuba and Puerto Rico in the

warm months of 1898 with heavy wool uniforms, many U.S. soldiers suffered from and succumbed to heat-related illnesses.

In the 20th century, the Caribbean became one of the world's largest areas of commercial fishing. By the same token, the area's growing population, many of whom live at or below the poverty line, contributed to a mounting pollution problem. A 1993 study suggested that only about 10 percent of the sewage that the area dumped into the Caribbean and adjacent waters is adequately treated. Perhaps the largest boon in the Caribbean is tourism, which brings an estimated 20 million people per year onto the islands and into the ports of the region.

The Spanish-American War thrust the United States into the international arena and began its rise as a world leader and military power. Control of the Caribbean Sea has been vital to maintaining U.S. influence in the region.

Carlists

The Carlists were members of a political movement in Spain seeking to establish a different line of the Bourbon family on the throne of Spain. Carlism originated in 1833 when King Ferdinand VII, under the influence of Queen María Cristina and in order to ensure the succession of their infant daughter Isabella, set aside the Salic Law that completely excluded females of the dynasty and their descendants from the succession. This deprived his brother Don Carlos of the chance to rule. The Carlist movement took its name from the now excluded Don Carlos. Supporters of Don Carlos engaged in three Carlist civil wars in Spain (1834–1839, 1847–1849, and 1872–1876).

Carlism was also a deeply traditionalist political movement that strongly supported the conservative views of the Catholic Church as opposed to Enlightenment values. Although the movement had been greatly weakened in Spain by the eve of the Spanish-American War, Carlists demanded a strong stance by Madrid in rejecting U.S. demands for reform in Cuba. During the war, Carlists rejected compromise and negotiations with the United States, believing that a superior Spanish Army would triumph over that of the United States. Carlists also called for Spain to forge a Spanish-language coalition with Latin American states against the United States.

SPENCER C. TUCKER

Don Carlos, brother of King Ferdinand VII of Spain. Don Carlos would have succeeded to the throne had Ferdinand not changed the law and arranged for his daughter Isabella to be his successor. (*Photographic History of the Spanish-American War*, 1898)

Carnegie, Andrew

Birth Date: November 25, 1835

Death Date: August 11, 1919

Scottish-born U.S. industrialist and philanthropist. Born in Dunfermline, Scotland, on November 25, 1835, Andrew Carnegie hailed from humble circumstances. His only formal education consisted of four years of primary schooling. Seeking to better itself, the Carnegie family immigrated to the United States in 1848 when young Andrew was 13 years old. The family eventually settled in

Allegheny, Pennsylvania, a highly industrial area across the river from Pittsburgh. As a youth, Carnegie held a series of menial but instructive jobs in which he was able to learn much about commerce and industry.

In 1852, Carnegie was offered a job as a telegrapher and personal assistant to the superintendent of the western division of the Pennsylvania Railroad. Carnegie excelled in the position and was making \$35 per month in salary, then a princely sum for a 17-year-old with little education. Carnegie's rise in the railroad business corresponded with the managerial revolution that was sweeping the industry during the 1850s. As such, he learned much about modern management and organizational techniques. By 1859, Carnegie had taken the place of his boss, becoming head of the Pennsylvania Railroad's western division.

A proponent of social equality and an avowed abolitionist, Carnegie wrote numerous antislavery editorials for the *New York Tribune*, a widely read newspaper published by the noted abolitionist Horace Greeley. By 1856, Carnegie had joined the Republican Party. After the American Civil War began, the pro-Union Carnegie became chief of telegraphic communications for the Washington, D.C., area, a critical post given the importance of that city. In May 1861, he also helped create the U.S. Military Telegraphers Corps. That same year, he invested in the formation of the Columbia Oil Company, a move that made him almost instantly wealthy. Indeed, he turned his \$11,000 initial investment into a profit of more than \$1 million. In 1862, he formed the Keystone Bridge Company, which eventually constructed some of the nation's first iron bridges. In 1865, he formed the iron-producing conglomerate Union Mills, which supplied many iron and iron-made products to American railways. By now, he had turned his full attention to assembling his far-flung industrial empire.

In the 1870s, Carnegie formed the world's most advanced and efficient steel-manufacturing plant, the Edgar Thompson Works. This facility also best utilized the Bessemer process by which to make steel in a rapid and cost-effective manner. Carnegie had also acquired a 50 percent partnership in the Frick Coke Company by the 1880s as well as controlling interest in the Duquesne Steel Works and Hartman Steel. From these various acquisitions, he formed the Carnegie Steel Company, which became the world's largest steel-manufacturing facility. Working with business-savvy partners and investors such as Charles M. Schwab and Henry Clay Frick, Carnegie Steel grew exponentially because Carnegie initially insisted that almost all of the profits be reinvested in the company.

Carnegie also mastered modern industrial concepts such as vertical integration, which gave him complete control of the production and distribution process. Thus, he owned and controlled his own raw materials and also transported, distributed, and sold his own products. This enabled him to eliminate any middlemen and keep production costs down and profits up. By adhering to concepts such as economies of scale, scientific management, consolidation, and horizontal combination, Carnegie cornered the market in steel production and amassed a huge personal fortune.

Andrew Carnegie rose from poverty to become one of the richest men in the world by gaining virtual control of the U.S. steel industry. Later he sold off his holdings and devoted himself to charitable causes. (Library of Congress)

Severe labor disruptions in the 1890s, most infamously the 1892 Homestead Steel Strike that affected thousands of Carnegie's workers, unfortunately tarnished his image in the public eye. The violence and associated deaths during that strike were precipitated largely by the actions of Henry Clay Frick, but Carnegie was nevertheless unfairly viewed as a greedy, heartless industrialist. Toward the end of the decade, the strains of running a huge industrial empire had taken their toll on Carnegie, and he sought to slowly disengage himself from day-to-day operations. Instead of retiring with his millions to some idyll far from the spotlight, however, he instead threw himself into charitable work, believing that his power and money dictated that he become a good steward and return to society what he had gained from it. In the aftermath of the Spanish-American War, he joined the Anti-Imperialist League in opposition to U.S. annexation of the Philippines.

In March 1901, Carnegie sold his steel empire to the financier J. P. Morgan, who formed the world's first billion-dollar corporation, the United States Steel Corporation. This freed up Carnegie to work full-time for his charitable causes. Among the many things he funded from his own fortune were public libraries, museums, universities, the Carnegie Institute of Technology (Pittsburgh), the

Carnegie Corporation of New York, and the Carnegie Endowment for International Peace.

Carnegie's legacy is a long-reaching one. His managerial acumen and industrial prowess had revolutionized the way in which the American business world worked, aided in America's rise to an industrial superpower, and ensured that high-quality steel was plentiful and inexpensive. This helped drive U.S. naval expansion in the 1880s and 1890s. Carnegie died in Lennox, Massachusetts, on August 11, 1919.

Caroline Islands

Archipelago of more than 500 islands located in the western Pacific Ocean. Spread across more than 2,000 miles in Micronesia, most of the islands are small coral atolls. The five main islands of Palau, Yap, Truk, Ponape, and Kosrae account for most of the territory and population. The islands were first discovered by Portuguese explorer Diego da Rocha in 1527. In 1686, Spanish admiral Francesco Lazeano named them the Caroline Islands in honor of King Charles II. Jesuit missionaries arrived in 1732 but were unsuccessful in converting the indigenous people to Roman Catholicism. The Caroline Islands were never considered very important by the Spanish government, and colonization attempts were only haphazard.

As such, Spain did not voice particular interest in the Caroline Islands during the 1870s when Germany expressed an interest in the area. Nevertheless, the German colonization of Yap in the early 1880s led to a diplomatic impasse between Spain and Germany. In 1885, Pope Leo XIII arbitrated the dispute in favor of Spain but granted Germany free trading rights in the Carolines. In 1886, Spain began colonizing the islands and sent Capuchin missionaries. The indigenous people, however, rebuffed Spanish attempts at colonization. While the 1898 Treaty of Paris was being negotiated, Germany applied diplomatic pressure to block American acquisition of the Caroline Islands.

On June 1, 1899, Spain sold to Germany the Caroline Islands and the Mariana Islands (less Guam, which had been annexed by the United States) for 25 million pesetas. Thereafter the islands were known as Karolinen, and the Germans governed them under their German New Guinea Department.

During World War I, Japan occupied the Caroline Islands and was awarded a League of Nations mandate over them in 1920. During World War II, the United States captured the islands from Japan and was granted a United Nations (UN) trusteeship over them in 1947. The Caroline Islands, with the exception of Palau, were granted independence in 1986 as the Federated States of Micronesia. Palau obtained independence in 1994.

Castillo Duany, Demetrio

Birth Date: November 17, 1856

Death Date: November 27, 1922

Cuban revolutionary and military officer who supported the end of Spanish colonialism in Cuba during the last quarter of the 19th century. Demetrio Castillo Duany was born into an affluent Cuban family on November 17, 1856, in Santiago, Cuba. His family sent him to study at a lycée in Bordeaux, France. After completing his studies in France, he went to the United States, where he studied English. He then returned to Cuba in 1878 to work on his family's estate. In 1879, following the outbreak of La Guerra Chiquita (1879–1880), the second of three revolutionary attempts to secure Cuban independence, Castillo returned to the United States, where he lived until 1885. Returning to Cuba, he clandestinely supported the struggle for Cuban independence.

In 1895, at the outbreak of the Cuban War of Independence (1895–1898), Castillo joined the revolutionary army led by Victoriano Garzón, a black general in the Cuban insurrection. Within weeks Castillo was transferred to revolutionary forces led by José Maceo Grajales, who promoted him to lieutenant colonel following the Battle of Yerba de Guinea. Following the Battle of Sao del Indio on August 31, 1895, Castillo was promoted to colonel. Just prior to the Battle of Loma de Gato on July 5, 1896, Maceo promoted Castillo to brigadier general. After Maceo's death at the Battle of Loma de Gato, Castillo was transferred to the revolutionary forces led by Calixto García y Iníiguez.

Following the U.S. declaration of war against Spain in April 1898, García appointed Castillo his liaison with the Americans. In June 1898, Castillo met with Major General William Shafter and Rear Admiral William Sampson aboard the U.S. battleship *New York* to coordinate the American campaign against Santiago. Sampson initially proposed that Shafter's forces storm the fort guarding the eastern

bank of the bay entrance to Santiago and drive the Spanish forces from their post. Sampson argued that his squadron could then enter the bay and deal with the Spanish squadron led by Rear Admiral Pascual Cervera y Topete. Shafter, however, was uncertain as to whether his troops could successfully dislodge the Spanish forces from the fort. García had instructed Castillo to recommend that the Americans land their troops 18 miles to the east of Santiago at Daiquirí. Shafter and Sampson accepted Castillo's recommendation.

Following his meeting with the American commanders, Castillo led the Cuban forces in the engagement at Siboney. This facilitated the landing of the U.S. V Corps at Daiquirí, which began on June 22, 1898. For the remainder of the war, Castillo continued to coordinate activities with American forces. The Cuban insurgent forces in the east, which numbered almost 5,000 men, were an asset to the Americans in their capture of Santiago.

At the conclusion of the Spanish-American War, U.S. officials appointed Castillo governor of Santiago. His success at this post prompted the Americans to make him governor of Oriente Province. Initially a member of the Republican Party, he joined the Liberal Party. In 1906, following a disputed presidential election and Conservative president Tomás Estrada Palma's attempt to stay in office, the Liberals rebelled. Castillo was arrested by Conservative forces. Following its intervention in 1906 to restore order, the United States established a provisional government and promptly released Castillo from jail. Provisional Governor Charles Magoon appointed Castillo superintendent of the Cuban prison system. Castillo retired from public office following Conservative president Mario García Menocal's reelection to the presidency in 1916. Castillo died at his home in the exclusive Vedado neighborhood of Havana on November 27, 1922.

Casualties

The Spanish-American War is generally recognized as one of the last conflicts involving modern Western armies in which casualties from sickness and disease outnumbered those related to accidents and combat. The most significant combat action took place during V Corps's invasion of Cuba. Between April and September 1898, 23 officers and 237 enlisted men were killed in Cuba, with another 99

Coffins of Spanish-American War dead lined up for burial in Arlington National Cemetery in 1898. (Library of Congress)

officers and 1,332 enlisted men wounded in action. The U.S. Navy suffered 15 sailors and 9 marines dead and another 48 wounded.

The Philippines followed Cuba in combat casualties. Between April and September 1898, 17 enlisted men were killed, and another 10 officers and 96 enlisted men were wounded in action. Only 9 sailors and marines were wounded in action in the same period in the Philippines.

In addition to the casualties listed above, another 3 soldiers and 1 sailor were killed during the invasion of Puerto Rico, and 4 officers, 36 enlisted men, and 7 sailors were wounded. Finally, 7 sailors died at sea as a result of various accidents, and 2 more were injured.

Casualty figures for the Spanish are nearly impossible to determine with any degree of accuracy. The best estimate is between 5,000 and 6,000, although those figures do not include any combat-related deaths in the Philippines, where action against U.S. forces was far less involved.

During the Philippine-American War, which began in February 1899, 4,325 U.S. soldiers died, and an additional 3,000 or so were wounded. This does not include approximately 2,000 men in the Philippine Constabulary who died or were wounded. Because limited operations continued against Filipino insurgents as late as

1913, the above figures are inclusive of some 14 years. On the Filipino side, casualty figures are far more grim: as many as 16,000 insurgents and soldiers are believed to have perished, and there were anywhere from 250,000 to 1 million civilian deaths, most from starvation and disease.

Medical officers attached to U.S. forces in Cuba noted that high-velocity jacketed rounds fired by the Spanish Mauser rifles often passed through the body and left less tissue damage than the easily deformed heavy lead projectiles characteristic of the American Civil War. Ironically, the improved weapons, including the Krag-Jorgenson weapons favored by the U.S. Army, were hailed as a more humanitarian form of warfare. In fact, mortality from battle wounds in Cuba was 4.1 percent of those wounded as compared to 17.5 percent in the Civil War. A good part of that improvement was

Estimated Casualties of the Spanish-American War

	<i>Killed in Action or Died of Wounds</i>	<i>Died of Disease</i>	<i>Wounded</i>	<i>Captured</i>
Spain	1,000	15,000	800	30,000
United States	392	2,621	1,645	8

related to the advent of aseptic surgical techniques and the fact that unlike in the earlier conflict, the vast majority of extremity injuries were treated without amputation, an operation that still carried a mortality rate of more than 20 percent.

The rate of death and disability from disease was a more dismal story. The ratio of death from disease to that from battle related wounds in the Cuban phase of the Spanish-American War was 7.4:1 as compared to 2:1 in the Civil War, and the majority of the disease-related deaths occurred in training camps before the men were ever deployed. Most of the disease in the camps was related to inadequate sanitation, with typhoid fever being particularly prominent. In Cuba, the men were exposed not only to diarrheal diseases but also to malaria and yellow fever.

Cavite, Philippines

A city, province, and narrow peninsula all located on the eastern side of Manila Bay in central Luzon in the Philippine Islands. In 1898, Cavite was the site of the principal Spanish naval base in the Philippines. Commander Enrique Sostoa y Ordóñez had charge of the base and arsenal. There at the start of the Spanish-American War, Spanish rear admiral Patricio Pasaron y Montojo awaited the arrival of the American squadron under Commodore George Dewey.

The Cavite batteries mounted two 8-inch (64-pounder) muzzle-loading Armstrong rifled guns, three 6.3-inch rifled guns (two of which were breech-loading Hontorita guns), and one 4.7-inch breech-loading Hontorita. In the ensuing Battle of Manila Bay (May 1, 1898), the American warships fired not only on the Spanish ships but also against the Cavite shore batteries.

At the close of the naval battle, the U.S. gunboat *Petrel* opened fire on the government buildings, and a white flag was soon raised. On May 2, however, the Spanish flag was again raised over Cavite, whereupon U.S. forces under Commander Benjamin P. Lamberton landed. Cavite promptly again surrendered, and its garrison was allowed to depart for Manila. Marines went ashore the next day, May 3, and seized control of the arsenal. At the end of the war on his return to Spain, Sostoa was court-martialed for causing the white flag to be hoisted without orders to do so but was acquitted.

The province of Cavite is primarily populated by Tagalogs and was the home of Emilio Aguinaldo y Famy, leader of the Filipino

insurgency against American control. During the initial conventional operations of the Philippine-American War (1899–1902), Cavite was a major source of insurgent forces. On January 4, 1900, Major General John C. Bates took command of the 1st Infantry Division and moved to occupy Cavite Province, home to more than 3,000 active but poorly armed and undisciplined insurgents. Bates captured all of the major settlements in the Cavite region but failed to locate Mariano Trias, leader of the insurgent forces there. The province remained in revolt until the capture of Aguinaldo on March 23, 1901, which induced Trias and his followers to seek amnesty.

Censorship

Censorship in the military sense is the suppression of information considered damaging to military operations or morale by those in power, be it civilian, military, or both. Spain's repressive censorship of the Cuban press prior to the Spanish-American War was one of the policies that Americans pointed to when arguing for U.S. intervention. The Spanish had required reporters to submit their dispatches to a military censor who often drastically revised the copy. After the U.S. battleship *Maine* exploded on February 15, 1898, the Havana cable office was closed to all reporters. During the brief Spanish-American War, independent reporting to Madrid virtually ceased; what did make its way to Madrid was so sanitized and vague as to make it virtually useless. Not until after the hostilities ended did Spaniards learn of the various battles in any detail.

The United States also engaged in censorship involving cable, telegraph, and postal communications during the war. The U.S. War Department initially stationed censors at telegraph and cable offices in Tampa and Key West, Florida, after sensationalist yellow journalism reporters occasionally delivered news of military actions before official reports had arrived. Censorship proved necessary, as the reporters often included troop and ship movements in their dispatches. Early in the summer of 1898, the U.S. military installed a censor in New York City and eventually stationed one in Cuba. The fact that ships played an important role in blockad-

including officers, upon their return to San Francisco. Many of them were deeply frustrated and willing to talk about the actual situation in the Philippines. Newspaper editors focused on the problems in the Philippines, and those problems became an issue in both the 1900 presidential and 1902 congressional elections. Censorship waned as the United States liberalized its policies toward the Philippines in the decade after 1902, allowing a moderately nationalistic press to develop in the archipelago that helped change the relationship between the two countries.

Cervera y Topete, Pascual

Birth Date: February 18, 1839

Death Date: April 3, 1909

Spanish admiral. Pascual Cervera y Topete was born on February 18, 1839, in Medina Sidonia, Spain. His naval career began in 1852 when he attended the San Fernando Naval Academy. He saw service in Spanish naval operations off Africa, the Philippines, and Cuba. He was promoted to captain in 1891, and Queen Regent María Cristina requested that he direct operations at the Nervion Shipyards, then building three Vizcaya-class armored cruisers, the *Vizcaya*, the *Alimrante Oquendo*, and the *Infanta Maria Teresa*. In 1893, Cervera, promoted to rear admiral, accepted appointment as secretary of the navy. Although he believed that a more senior official should occupy the post, he accepted it on the condition that the Spanish politicians not reduce the naval budget. Spanish premier Práxedes Mateo Sagasta acceded to Cervera's request, but three months later the Spanish government reduced the naval budget, and Cervera promptly resigned.

In September 1893, Cervera was appointed chief of a naval commission sent to Britain. While there, he had ample opportunity to

Rear Admiral Pascual Cervera y Topete commanded the Spanish squadron in the Battle of Santiago de Cuba. (Library of Congress)

learn of the considerable advances in naval construction and armament by other powers. He foresaw that independence movements in Cuba and the Philippines during the 1890s could bring Spain into a conflict with the United States for which Spain was not prepared.

On October 27, 1897, the Spanish government appointed Rear Admiral Cervera commander of the Spanish squadron at Cádiz. He did what he could to prepare his ships and men for war, but he also understood all too well that the Spanish ships were for the most part antiquated and that the men were inadequately trained. Aware of the strength of the new ships of the U.S. Navy, he argued for a defensive strategy. The government's tight-fisted fiscal policy, however, sharply limited what he was able to accomplish. As late as April 1898, the secretary of the navy had yet to develop a strategic plan for war with the United States.

After the war began, Cervera was ordered to move his squadron to the Caribbean in order to break the U.S. blockade of Cuba. His pleas that he be allowed time to refit and supply his ships were rejected. He arrived in Santiago, Cuba, which had not been blockaded by the U.S. Navy, on May 19, 1898. Spanish governor-general Ramón Blanco y Erenas unwisely publicized Cervera's arrival. The Americans promptly learned of the situation, and Rear Admiral

William T. Sampson implemented a U.S. Navy blockade of Santiago Harbor on May 28.

Blanco ordered Cervera, over the latter's objections, to take his squadron to sea. Cervera knew that his ships lacked the firepower to match those of the U.S. Navy, but on July 3, 1898, he sortied. In the span of only four hours, the American ships had either sunk or run ashore all the Spanish ships. Cervera was among those taken prisoner. He was detained in the United States but repatriated to Spain in September 1898.

Court-martialed for the Santiago action, Cervera was exonerated and resumed his naval career. He was promoted to vice admiral in February 1901 and was appointed chief of the Naval Staff in December 1902. In May 1903, King Alfonso XIII appointed Cervera senator for life. In 1906, he was placed in charge of the Maritime Department of Ferrol. In 1907, he retired to his home of Puerto Real in southern Spain, dying there on April 3, 1909.

Céspedes y del Castillo, Carlos Manuel de

Birth Date: April 18, 1819

Death Date: February 27, 1874

Cuban revolutionary who launched the Ten Years' War (1868–1878) on October 10, 1868, from his Cuban plantation, La Demajagua. Carlos Manuel de Céspedes y del Castillo was born on April 18, 1819, in Bayamo, Cuba. His family owned extensive lands in Cuba. Although he began his university education at the University of Havana, he went to Spain, where he earned a bachelor of law degree from the University of Barcelona and a doctorate of law degree from the University of Madrid.

In 1843, Céspedes joined Juan Prim's failed attempt to overthrow the Spanish government. After fleeing Spain, Céspedes returned to Cuba in 1844 and purchased La Demajagua. In Cuba, he became an outspoken critic of Spanish colonial rule. Following the overthrow of Queen Isabella II in September 1868, Céspedes became more vocal in his disenchantment with Spanish rule. On October 8, the Spanish governor-general of Cuba, realizing that Céspedes was plotting rebellion, sent a telegram to the provincial governor ordering Céspedes's arrest. The telegraph clerk, a member of Céspedes's extended family, warned the would-be revolu-

Cuban independence leader Carlos Manuel de Céspedes y del Castillo, who began the Ten Years' War in 1868. (Library of Congress)

tionary, who proceeded to launch a preemptive strike against the Spanish authorities in his province.

The Ten Years' War began on October 10, 1868, when Céspedes rang the slave bell on his plantation in eastern Cuba. Once the slaves were assembled, he announced their immediate freedom (and conscription into his revolutionary army) and proclaimed Cuban independence from Spain. At the time, slavery was still legal in Cuba.

The Ten Years' War, the first in a series of three wars for Cuban independence during the 19th century, set the stage for the final Cuban War of Independence (1895–1898), which directly contributed to American intervention in Cuba's internal affairs and to the Spanish-American War. On October 11, Céspedes and a small band of supporters attacked the nearby town of Yara. Although the attack was a failure, the event, commonly known as the Grito de Yara (Shout of Yara), unleashed both a war of independence and a slave revolt throughout the island nation.

The revolutionary spirit quickly spread throughout the eastern half of Cuba. By the end of the year, the rebellion counted more than 10,000 revolutionaries, many of whom were former slaves. Hoping to win the support of plantation owners in the western half of the island, Céspedes, who preferred gradual emancipation, proclaimed the death penalty for any revolutionary who attacked sugar estates

or slave property. Following the Grito de Yara, Céspedes organized a provisional government. On October 20, the revolutionaries captured Bayamo, which became the seat of the new government. They held the city until January 11, 1869, when, faced with a superior Spanish force, the revolutionaries burned Bayamo to the ground rather than surrender.

The revolutionary forces, although moderately successful in the countryside, were unable to capture many cities and towns on the eastern half of the island. On April 10, 1869, a constitutional assembly met in Guáimaro under Céspedes's leadership. Two days later, the assembly transformed itself into the Congress of Representatives, electing Céspedes president and appointing Manuel de Quesada, Céspedes's brother-in-law, the first chief of the armed forces.

Neither the Spanish nor the revolutionary forces were able to achieve any notable victories by 1873. Céspedes's inability to expand the war into the prosperous western half of the island cost him support. On October 27, 1873, the Congress of Representatives removed Céspedes from power, and Salvador Cisneros became president. Spanish troops captured and executed Céspedes in San Lorenzo, Cuba, on February 27, 1874. His son, Carlos Manuel de Céspedes Quesada, was provisional president of Cuba from August 12 to September 5, 1933, following the overthrow of President Gerardo Machado.

Chadwick, French Ensor

Birth Date: February 29, 1844

Death Date: January 27, 1919

U.S. Navy officer, naval reformer, historian, and president of the Naval War College (1900–1905). Born in Morgantown, Virginia (present-day West Virginia), on February 29, 1844, French Ensor Chadwick grew up in Virginia and graduated from the United States Naval Academy at Annapolis on November 22, 1864. He joined the fleet just in time for a brief tour of duty before the American Civil War ended in April 1865. Over the next decade and a half, he served in a variety of posts at sea and on shore that included teaching mathematics at the Naval Academy and studying seamanship training in foreign navies.

The U.S. Navy declined markedly following the American Civil War, a victim of low budgets and poor administration, and Chadwick attached himself to other officers of his generation who sought to modernize the navy's administration and warships. These officers included Stephen B. Luce and Alfred Thayer Mahan.

In 1882, the U.S. Navy dispatched Chadwick to Great Britain as the first permanent overseas U.S. naval attaché. Reporting to both the secretary of the navy and the newly created Office of Naval Intelligence, Chadwick sent home information that ranged from life-saving and medical care to armor, munitions, and ship design that proved vital to the fleet's modernization in the 1880s and the construction of its first new warships in more than a decade. Chadwick's value was such that the navy did not order him home until 1889, when he received command of the new gunboat *Yorktown*, which sailed with the Squadron of Evolution that included all the navy's new warships.

In the 1890s, Chadwick headed first the Office of Naval Intelligence and then the Bureau of Equipment. In 1897, he assumed command of the cruiser *New York*, which he commanded during the Spanish-American War. Rear Admiral William T. Sampson, who commanded the North Atlantic Squadron during the war, chose the *New York* as his flagship, and Chadwick, recently promoted to captain, as his chief of staff.

Chadwick then took part in the naval blockade of Cuba. The *New York*, which Sampson had elected to utilize for a conference with Major General William R. Shafter, the U.S. ground force commander in Cuba, missed most of the Battle of Santiago de Cuba on July 3, 1898. In Sampson's absence, Commodore Winfield Scott Schley, on the cruiser *Brooklyn*, commanded the American warships in the one-sided battle. Sampson, Schley, and their respective advocates then bickered over who deserved credit for winning the Battle of Santiago de Cuba. Chadwick became Sampson's most outspoken advocate and publicly criticized Schley for his strange maneuvering of the *Brooklyn* in the battle and other command decisions. Well-publicized by the press, this bitter feud led to a court of inquiry that failed to resolve the issue. Many senior officers, however, blamed Chadwick for publicizing what should have been an internal naval matter and that, by being publicized, did much to harm the navy.

Chadwick served as president of the Naval War College from 1900 to 1905 but failed to achieve other prestigious assignments despite his promotion to rear admiral on October 6, 1905. He served briefly as commander of the South Atlantic Squadron and retired on February 28, 1906, a day before his 60th birthday.

Chadwick then embarked on a new career as a writer and historian. He wrote several acclaimed books, including the three-volume *The Relations of the United States and Spain: The Spanish-American War* (1909–1911), a work that continued to win scholarly praise long after Chadwick's death, and *The Causes of the Civil War, 1859–1861* (1906). Chadwick died of pneumonia at his home in Morgantown, West Virginia, on January 27, 1919.

Chaffee, Adna Romanza, Sr.

Birth Date: April 14, 1842

Death Date: November 1, 1914

U.S. military officer and army chief of staff. Born on April 14, 1842, in Orwell, Ohio, Adna Romanza Chaffee served in the U.S. Army from 1861 to 1906, taking part in the American Civil War, the Indian Wars, the Spanish-American War, and the 1900 Boxer Rebellion. At the outset of the Civil War, he enlisted in the Union Army. On July 22, 1861, he was assigned to the 6th Cavalry as a private and would remain with the same regiment for more than a quarter century. He won promotion to sergeant for his performance in the 1862 Peninsula Campaign. He fought in the bloody Battle of Antietam (September 17, 1862) and in May 1863 was commissioned a second lieutenant. Wounded at the Battle of Gettysburg (July 1–3, 1863), he narrowly escaped capture. In February 1865, he was promoted to first lieutenant, and because of his valor at the Battle of Dinwiddie Court House on March 31, 1865, he was breveted captain.

Chaffee remained in the U.S. Army following the war. Promoted to captain in 1867, he was posted to Fort Griffin in 1868. In March 1868, he won a brevet promotion to major following an engagement against the Comanches at Paint Creek, Texas. For three decades, he fought in a series of Indian wars on the Great Plains and in the Southwest against the Cheyenne, Kiowas, and Apaches.

On March 31, 1875, Chaffee married Annie Frances Rockwell. His son, Adna Romanza Chaffee Jr., who also became a U.S. Army officer, was a pioneer in the creation of U.S. armored forces.

In 1888, the elder Chaffee was promoted to major and transferred to the 9th Cavalry, which was composed of African American enlisted men. In 1894, he was assigned to Fort Leavenworth, where he taught military tactics for two years. In 1897, he was transferred to the 3rd Cavalry and was promoted to lieutenant colonel.

Following the beginning of war with Spain in April 1898, Chaffee was promoted to brigadier general of volunteers and assumed command of a brigade of volunteers in May. Following his important role in the U.S. victory in the Battle of El Caney on July 1, 1898, he was promoted to major general of volunteers. From the conclu-

sion of the Spanish-American War to May 1900, he served as chief of staff to Lieutenant General Leonard Wood, U.S. military governor of Cuba.

In July 1900, Chaffee was assigned to command the U.S. Army's China Relief Expedition, a force of 2,500 men charged with relieving the foreign legations at Beijing during the Boxer Rebellion. On August 14, 1900, his troops entered the city.

Promoted to major general in the regular army in 1901, from July to October 1902 Chaffee served as military governor of the Philippines during the latter part of the Philippine-American War. Returning to the United States, he commanded the Department of the East from October 1902 to October 1903. Promoted to lieutenant general in January 1904, he then served as army chief of staff during 1904–1906. In that position, he implemented significant organizational reforms. He retired from active duty in February 1906. Chaffee died of typhoid on November 1, 1914, in Los Angeles, California.

Chandler, William Eaton

Birth Date: December 28, 1835

Death Date: November 30, 1917

Attorney, politician, secretary of the navy (1882–1885), and founder of the Naval War College in Newport, Rhode Island. William Eaton Chandler was born on December 28, 1835, in Concord, New Hampshire, where he grew up. He attended Harvard Law School from which he graduated in 1854 and returned to Concord to establish his legal practice.

Chandler soon became active in the new Republican Party and won election to the New Hampshire Assembly in 1863. In March 1865, President Abraham Lincoln appointed Chandler naval solicitor and judge advocate general. After Lincoln's April 1865 assassination, President Andrew Johnson appointed Chandler assistant secretary of the treasury, a post he held through 1867. The following year, the Republican Party elected him secretary of its National Committee. Over the next 12 years, Chandler helped direct Republican campaign strategy.

At the 1880 Republican National Convention, Chandler helped sway critical votes to James Garfield. After winning the presidency in November 1880, Garfield appointed Chandler U.S. solicitor general. After Garfield's death, President Chester A. Arthur reshuffled the cabinet and appointed Chandler secretary of the navy on April 16, 1882. Chandler replaced William H. Hunt, who had launched an ambitious program to modernize the navy and reform its administration. Chandler continued Hunt's work and helped convince Congress to fund the construction of the navy's first new warships in a decade. This essentially initiated the steel warship program in the U.S. Navy that would prove so valuable during the Spanish-American War.

In 1883, Congress authorized the construction of the ABCD warships, the first vessels in a modernization plan produced by a special Naval Advisory Board appointed by Chandler. The cruisers *Atlanta* (3,000 tons), *Boston* (3,000 tons), and *Chicago* (4,500 tons) and the dispatch boat *Dolphin* (1,500 tons) were the U.S. Navy's first steel warships. Their main armament included 8-inch and 6-inch guns, but as an economy measure a full set of sails supplemented their steam engines. Only the *Dolphin* was completed before William C. Whitney replaced Chandler as secretary of the navy on

Republican politician William Eaton Chandler was U.S. secretary of the navy during 1882–1885 and oversaw the effort to build a modern battle fleet. (Chaiba Media)

March 6, 1885, following Democrat Grover Cleveland's presidential victory the previous November.

Shortly before he left office, Chandler convinced Congress to authorize four more warships: the gunboats *Yorktown* and *Petrel* and the cruisers *Charleston* and *Newark*. The latter were the navy's first cruisers to dispense with auxiliary sails, relying entirely on their steam engines. Design problems and American shipbuilders' lack of experience with steel ships slowed construction of the ABCDs and produced substantial cost overruns. President Arthur's and Chandler's political critics accused them of collusion with the ships' builder, John Roach, who had been previously accused of corruption in the nation's naval purchasing. In a decision that still remains controversial, Whitney used his authority as secretary of the navy to seize the *Atlanta*, the *Boston*, and the *Chicago* and complete them in the navy's own yards.

Perhaps Chandler's greatest legacy remains the Naval War College, which he founded in October 1884 at Newport, Rhode Island. Stephen B. Luce, the navy's leading reformer, had originally conceived the idea for a postgraduate school for naval officers that would teach them strategy and other skills beyond ship handling, and Chandler appointed him the college's first president. Over the next decade, many of the navy's most promising officers taught or

attended classes at the college, including Alfred Thayer Mahan, William T. Sampson, and Henry C. Taylor. These officers transformed the navy's ships, administration, and strategic thought over the next generation.

Chandler remained active in politics after his tenure as secretary of the navy. Elected to the U.S. Senate in 1886, he served until an electoral defeat in 1900. President William McKinley then appointed him to chair the Spanish Treaty Claims Commission, and Chandler served on it for six years. Afterward, he retired from public service to resume his legal practice. Chandler died on November 30, 1917, in Concord, New Hampshire.

Chapman, Carlton Theodore

Birth Date: September 18, 1860

Death Date: February 12, 1925

Prominent American maritime and landscape painter who produced a number of works treating the Spanish-American War. Born in Oberlin, Ohio, on September 18, 1860, Carlton Theodore Chapman was educated in local schools. His interest in the sea was kindled by spending summers at an uncle's shipyard in Maine. Moving to New York City, Chapman studied at the Art Students League and the National Academy. He also traveled and studied art in both France and England. A student of marine architecture, Chapman's naval paintings are prized for their attention to detail and historical accuracy.

The U.S. Navy commissioned Chapman to execute a series of paintings treating naval actions that had occurred during the War of 1812. His works also found their way into a number of books on naval history. During the Spanish-American War, *Harper's Magazine Weekly* of New York sent Chapman to record scenes of the war in Cuba. He remained with Rear Admiral William T. Sampson's North Atlantic Fleet during the war and witnessed a number of engagements, including the Battle of Santiago de Cuba and the Puerto Rico Campaign. Chapman supplied the magazine with both art and articles, which it then published. His illustrations also appeared in

Harper's Monthly. Later he was employed by *Scribner's Magazine* to illustrate Captain Alfred T. Mahan's articles on famous U.S. naval battles.

Chapman won numerous prestigious awards for his paintings, which are today included in a number of prominent museum collections. The United States Naval Academy, Annapolis, owns a number of his works. Chapman died in New York City on February 12, 1925.

Chichester, Edward

Birth Date: November 20, 1849

Death Date: September 17, 1906

British rear admiral whose actions following the Battle of Manila Bay (May 1, 1898) helped foster the growing rapprochement between the United States and Great Britain. Born on November 20, 1849, at Shirwell, Devonshire, England, Edward Chichester became the 9th Baronet and head of an ancient house in Devonshire. He joined the Royal Navy in 1863 and became a lieutenant in 1870. After serving in the First South African (Boer) War as a transport officer in 1881, he participated in British operations against Alexandria, Egypt, in 1882 and was promoted to commander that same year and to captain in 1889.

At the time of the Spanish-American War, Chichester commanded the cruiser *Immortalité* on the China Station. He was friendly with U.S. Asiatic Squadron commander Commodore George Dewey, having paid him courtesy visits when the American squadron was at Hong Kong. Following Dewey's victory in the Battle of Manila Bay on May 1, 1898, Chichester was ordered to Manila with a squadron consisting of the *Immortalité*, the cruiser *Iphigenia*, and the gunboat *Linnet*.

Chichester was steadfast in observing rules governing the American blockade of Manila, and he also let it be known in no uncertain terms that he supported the Americans. In addition to the British vessels, there were five German warships under Vice Admiral Otto von Diederichs and one each from France and Japan. It appeared that by the size of the German squadron, Germany was more interested in laying claim to the Philippines than protecting its limited interests in Manila. Because the German squadron was more powerful than that of the Americans, this alarmed Dewey greatly.

While the other foreign vessels observed internationally accepted diplomatic and naval rules of engagement by informing Dewey's squadron of their presence, Diederichs's apparent disregard for the rules of blockade seemed to indicate the possibility of hostile action against the American squadron. On August 13, 1898, when Dewey moved his ships into position to be able to bombard Manila in support of American troops ashore, Diederichs placed his squadron behind Dewey's ships. During the subsequent American bombardment, two of Chichester's ships repositioned in order to provide a better view of the bombardment. This innocent maneuver gave rise to the myth that Chichester had deliberately placed his ships between the Germans and the Americans to demonstrate his support for the latter. Following the U.S. capture of Manila, Chichester ordered the *Immortalité* to fire a 21-gun salute honoring the U.S. flag flying over Manila.

Chichester's role was subsequently celebrated on both sides of the Atlantic. The British rewarded him for his handling of the situation with the position of commander of the Order of St. Michael and St. George, while the Americans applauded him for preventing a possible German attack. Chichester, in fact, had official orders to comply with Dewey's terms for the blockade. Nonetheless, Chichester's supposed gesture of Anglo-American solidarity did much to strengthen relations between the United States and Britain.

Between 1899 and 1901, Chichester took part in the Second South African (Boer) War. He commanded the Fleet Reserve at Devonport in 1901 and was promoted to rear admiral in 1902. From 1904 to 1906, he served as admiral superintendent of all naval establishments in Gibraltar. Chichester died at Gibraltar on September 17, 1906.

China

China remained neutral during the Spanish-American War, a conflict whose reverberations nonetheless had a significant impact on the country's own affairs. The acquisition of the Philippines,

Hawaii, and Guam by the United States brought American power far closer to China, making the U.S. government more assertive in its efforts to influence developments within and affecting China. For several decades, the sizable Chinese population of the Philippines had looked to China for redress of grievances. In the 20th century, many Philippine Chinese would become enthusiastic supporters of the nationalist Chinese revolution.

When the Spanish-American War began in April 1898, China was preoccupied with internal affairs. In the aftermath of China's defeat in the Sino-Japanese War (1894–1895), the youthful emperor Guangxu sought to escape the tutelage of his aunt, the more traditional Dowager Empress Cixi, and institute a broad program of modernizing reforms. Between June and August 1898, the emperor and his supporters attempted to initiate radical changes in China. On September 21, 1898, they were overthrown in a palace coup orchestrated by Cixi, who revoked all their policy innovations. Chinese official preoccupation with this political struggle meant that except for proclaiming its formal neutrality in the struggle, China's involvement in the Spanish-American War was minimal.

The Chinese territory of Hong Kong, then under British colonial rule, was much more involved in the war. During the 1890s, many Filipino would-be revolutionaries had based themselves in largely Chinese Hong Kong, which for decades provided a hospitable haven for dissidents from China and elsewhere in Asia. Before the United States declared war on Spain in April 1898, the U.S. Asiatic Squadron, commanded by Commodore George Dewey, spent considerable time in Hong Kong Harbor. This location, together with the companion British colony of Singapore farther south, provided useful opportunities for Dewey and American diplomats to meet with Filipino independence activists, including Emilio Aguinaldo y Famy, and reach an informal understanding that both American forces and Filipino nationalists would move against the Spanish in the Philippines.

Although Britain was officially neutral in the war, the British authorities were generally sympathetic to the United States and eager to give all legal assistance to the Americans. Dewey accorded the rehearsals and training maneuvers that he had conducted in and around Hong Kong waters in the previous months much of the credit for his victory over the Spanish squadron at Manila Bay on May 1, 1898.

The outcome of the war brought American military and diplomatic power several thousand miles closer to China's shores. Those Americans who favored permanent retention of the Philippines after the war depicted the islands as valuable stepping-stones that would facilitate the development of U.S. trade with China, a country that some American businessmen believed offered unparalleled opportunities as a market for their goods. American annexation of the Philippines was only one among a number of near-simultaneous foreign acquisitions of territorial concessions and rights in Asia, many of them at China's expense, that dramatically highlighted how intense the international struggle for strategic and economic advantage around the Pacific had become. In 1895, China

Dowager Empress Cixi, whose policies proved unfortunate for China.
(Library of Congress)

ceded the island of Taiwan to Japan, and Japanese expansionists also had ambitions to take over Manchuria.

In the late 1890s, Russia meanwhile tightened its hold on Manchuria, apparently seeking to exclude other foreigners from the region, and completed construction of much of the Trans-Siberian Railroad, which eventually linked Vladivostok to St. Petersburg. In 1897, Germany seized Qingdao and Jiaozhou Bay in Shandong Province. In 1899, Great Britain obtained a 99-year lease on the New Territories, adjoining its existing colony of Hong Kong on the coast of China, and also took the port of Weihai on the Shandong Peninsula.

American leaders feared that if competition for Chinese spheres of influence continued unchecked, the struggle among the rival powers would precipitate the breakup of China into territorial regions from which American businessmen might well be excluded. In the autumn of 1899, Secretary of State John Hay therefore dispatched simultaneous notes to the major powers—Britain, France, Italy, Germany, Japan, and Russia—asking each to declare formally that it would respect China's territorial and administrative integrity, not interfere with existing interests within territories leased from China, and not discriminate against the nationals of any other state in trade and commerce. Very reluctantly in negotiations over the next nine months, the various powers agreed in principle to accept these conditions. The U.S. government presented these undertak-

ings, not all of which were subsequently honored, as a major triumph and a shining example of its own benevolent intentions toward China. A more cynical interpretation was that the United States sought with minimum effort to ensure that its own nationals could enjoy the most favorable terms on which to profit from the economic opportunities that China offered foreigners while avoiding the trouble and expense of seeking special concessions of its own from China.

The Open Door Notes were one example of the enhanced self-confidence and assertiveness that characterized American dealings with other powers in the aftermath of victory in the Spanish-American War. Despite American diplomats' stated concern to maintain the viability of the Chinese government, in 1900 the United States contributed forces to the relief expedition dispatched to suppress the Boxer Rebellion. This popular movement, launched by aggressive young Chinese nationalists who deeply resented the concessions that foreign powers extorted from China in 1899, sought to drive all foreigners out of China. The Boxers, or Righteous Fists, initially attacked foreign missionaries and their Christian converts but soon expanded their targets to include all foreigners, including businessmen and diplomats. The Boxers received tacit support from Cixi and many of her officials. Facing escalating violence against all foreigners, legations in Beijing, where the diplomatic quarter endured a lengthy siege by the rebels, sent urgent requests to their own governments for military and naval assistance. In July and August 1900, U.S. naval forces and marines and the 14th Infantry Regiment took part, together with German, Japanese, French, British, and Russian troops, in an international rescue expedition that first took the port of Tianjin and then marched on Beijing, capturing the capital in mid-August.

China was later forced to pay a substantial indemnity to all the powers involved. Most U.S. forces soon returned to the Philippines, from which they had come, to continue their suppression of the Filipino rebels seeking independence. From then until 1941, the United States maintained a permanent military and naval presence in China, concentrated in Beijing, Tianjin, and Shanghai and on the Yangtze River. The lingering Chinese sense of humiliation was also a significant factor impelling many nationalist revolutionaries to turn away from reform, repudiate their country's existing regime, and seek to overthrow the Manchu dynasty entirely and replace it with a new and, they hoped, more effective form of government.

While China's direct part in the Spanish-American War was almost nonexistent, the wider ramifications of the conflict and its outcome nonetheless had an important bearing on domestic developments within China and on its international position.

China Market

The concept of the China Market first developed in the mid-19th century with the British, who sought to maintain open trade relations with China in the aftermath of the First Opium War (1839–1842). For the remainder of the 19th century, the allure of the China Market ostensibly promised a huge and ready-made market for Western-made goods in China. This drove imperial interests in the area, in particular those of the British, Japanese, Russians, Ger-

mans, French, and Portuguese. Even before the Spanish-American War, the United States had been involved in that market. With the war, however, it became a significant power in Asia with its annexation of Guam and the Philippines. One of the reasons advanced for securing the Philippine Islands was their proximity to China.

In reality, however, the China Market was far more myth than reality. While it is true that China was among the most populous nations on earth by the turn of the 20th century, there is scant evidence to suggest that the Chinese were eagerly seeking to buy Western-made goods. First, the vast majority of Chinese were peasants who barely eked out a subsistence living and had little or no money to purchase manufactured products. Second, Chinese culture at the time was not at all conducive to the mass introduction of Western-manufactured goods. Finally, none of the Western industrial powers took any concrete steps to make their goods more attractive or useful to potential Chinese consumers.

Be that as it may, the prevailing thought among many policy makers in the West was that the China Market could help stave off economic downturns in their own nations and promote increased prosperity at home by absorbing excess inventories of finished

View of Fuzhou (Foochow), China, one of the first ports in China opened to outside trade following the First Opium War of 1839–1842. (Library of Congress)

goods. While all of the imperial contenders with interests in China were also interested in exploiting China's natural resources and raw materials, they seemed primarily concerned with locking up Chinese markets for their manufactured products. A number of nations—most notably Britain, Russia, and Japan—invested millions of dollars in China around the turn of the century, including the construction of railroads to open up the Chinese interior. Again, the purpose for such activity was thought to be essential for expanding trade with the Chinese.

In the United States, expansionists invariably pointed to the mythical China Market as a prime factor for their championing of U.S. imperialism in the Far East. This perceived need was made far more urgent by the economic instability of the 1890s, which included the nation's deepest economic depression to date that lasted from 1893 to 1897. Meanwhile, industrialization, which had the United States poised to become the world's leading producer of finished goods by 1914 or so, had produced a huge export surplus. Indeed, in 1890 the United States exported \$855 million in finished goods, but by 1900, that number had increased to \$1.4 billion. Thus, expansionists and industrialists could not help but believe that the China Market was the next major market to exploit.

What began in September 1899 with the first of Secretary of State John Hay's so-called Open Door Notes to Great Britain, France, Germany, Russia, Italy, and Japan soon ushered in the concept of the Open Door Policy in China, wherein all nations were urged to respect China's territorial and political integrity and to maintain an open door to trade for all nations. In essence, Hay was trying to prevent the establishment of rigid spheres of influence in China that would hamper or impede free trade. In this sense, the United States was trying to keep the China Market open to its own interests without engaging in military rivalry or confrontation in China. This establishment of what some historians have labeled an informal American empire in the Far East was based largely on the preservation and expansion of the China Market. Hay's approach also made it appear that the United States had more altruistic concerns in China, which was certainly the case, but this was very much overplayed by American policy makers. The Open Door Notes were also the genesis of the idea—at least among Americans—that the United States had a special relationship with China.

When foreign interests in China were threatened by the Boxer Rebellion (1897–1901), the major powers, including the United States, dispatched troops to quell the disturbance and protect its citizens and interests there. Significantly, when the rebels seized control of the Legation Quarter in Beijing in the winter of 1900, President William McKinley sent 10,000 U.S. troops under the command of Brigadier General Adna R. Chaffee. This marked the first time in American history that U.S. troops participated in a multinational relief effort. It also demonstrates that U.S. policy makers were serious in their attempts to preserve the mythical China Market and keep trade with that nation open and unfettered. Following World War I, U.S. interest in China receded a bit, exacerbated by the isolationism of the 1930s. However, the Americans took renewed

interest in China during World War II and actively aided the Nationalists (Guomindang) during the 1945–1949 resumption of the Chinese Civil War. Today, as China's leaders open their nation and economy to foreign investors, the West now seems far more concerned with industrial competition from China than preserving the illusory China Market.

Christy, Howard Chandler

Birth Date: January 10, 1873

Death Date: March 3, 1952

American artist and illustrator. Howard Chandler Christy was born in rural Morgan County, Ohio, on January 10, 1873. After completing local schools in Ohio, he went to New York City at age 17 to study art at the National Academy of Design and the Art Students League, studying under William Merritt Chase, best known for his paintings in impressionism.

At a time in which many magazines in New York were demanding more and more illustrations to attract new readership, the talented Christy had little trouble finding work. In 1895, his *Christy Girl* painting that appeared in *The Century* magazine drew much praise. By age 24, he had earned the reputation as a top illustrator. His illustrations for an 1897 edition of *Hamlet* are not well known today but drew much attention when they were published. Sometime in 1897 or 1898, Christy met Theodore Roosevelt, then assistant secretary of the navy. This began a long friendship between the two men and also inspired Christy to create numerous illustrations of Roosevelt and the Rough Riders during the Spanish-American War.

When the war broke out in April 1898, Christy was sent to Cuba as chief illustrator for *Leslie's Magazine*. He produced numerous illustrations while in Cuba, including scenes from the Battle of Las Guásimas, the Battle of San Juan Hill (where he helped immortalize Roosevelt and the Rough Riders), and other smaller engagements during the campaign for Santiago de Cuba. His first illustration in Cuba, that of several wounded Rough Riders straggling toward Siboney, accompanied an article by famed war correspondent Richard Harding Davis. Christy's work was so evocative that it ended up in the pages of *Scribner's Magazine*, *Harper's Magazine*, and *Leslie's Magazine*, among others. Readers were drawn to the young artist's renderings, which made it appear that the viewers were themselves part

of the scene. Christy's series titled "Men of the Army and Navy" that ran in *Collier's Weekly* in 1899 was especially well received.

By 1899, Christy, now very well known, embarked on ever more elaborate and complex projects, including the celebrated portfolio *Pastel Portraits from the Romanic Drama*. By the early 1900s, his illustrations graced the pages of *McClure's Magazine*, *Ladies Home Journal*, *Harper's Magazine*, and numerous others. Christy preferred to work in black and white, although he did work in color and to good effect. His work portrays a singular facility, a bold but not excessive style, and usually represents a strong sense of contemporary American values. The so-called *Christy Girl*, which he first drew in 1895, featured a somewhat romantic view of women.

During World War I, Christy created a number of recruitment posters for both the Red Cross and the U.S. Navy. Perhaps his most famous war poster portrayed a stylized woman in a navy uniform with the tag "Gee!! I wish I were a man—I'd join the Navy!" In addition to his prolific art production, he also found time to teach at the Art Students League, the New York School of Art, the Cooper Union, and the Chase School, the latter founded by his former mentor. After Christy had gained fame and fortune, he lived mostly in his native Ohio, where he had constructed an elaborate studio.

When photography and printing improvements rendered illustrations increasingly obsolete after World War I, Christy turned to portrait painting. He produced portraits of Presidents Calvin Coolidge, Herbert Hoover, and Franklin D. Roosevelt; celebrities such as Will Rogers, Eddie Rickenbacker, Amelia Earhart, Norman Vincent Peale, and Mrs. William Randolph Hearst; and Italian dictator Benito Mussolini. Christy worked nonstop, even during the lean years of the Great Depression, producing portraits and paintings with astounding quality and regularity. Perhaps his most famous color painting is the almost mural-sized *Scenes of the Signing of the Constitution of the United States* (1940), which currently hangs in the Capitol in Washington, D.C. During World War II, he once again lent his talent to the production of war posters. Christy died at his home near Duncan Falls, Ohio, on March 3, 1952.

expansion, and nationalism. American churches, particularly Evangelical Protestant denominations, had long been involved in national and international political issues. When the nation was at war, American churches provided chaplains, ministers, and social services to the U.S. military. During the American Civil War, Northern and Southern churches had split along sectional lines over the issue of slavery, and although denominational splits remained, after that conflict American churches refocused much of their energy toward rebuilding a prewar vision of the American republic.

Throughout the 19th century, American churches generally supported American expansionist goals, falling squarely in line with the philosophy of Manifest Destiny, so-named by John O'Sullivan in 1845, that suggested that white Americans had a God-given destiny to spread the country's territory, culture, and influence over the entire North American continent. Manifest Destiny had been used to promote the annexation of the West and Southwest from Mexico before and during the Mexican-American War of 1846–1848.

By the end of the 19th century, as the United States controlled territory from the Atlantic Ocean to the Pacific Ocean, Americans began looking overseas for additional territory. Additionally, American politicians began searching for ways to increase American influence on the international stage. In addition to a generally expansionist point of view, American Protestants had begun a concerted effort to send missionaries to so-called uncivilized parts of the world, especially in Asia and Africa.

At the time of the Spanish-American War, the Methodist Church was the largest denomination in the United States, and although denominational differences occasionally appeared, the Methodist Church can be used as a guidepost for religious sentiment within the United States. Since the 1860s, the Methodist Church, through its general and annual conferences, bishops' statements, and national publications, made its support for expansion quite clear. It couched its arguments in primarily theological terms but also advanced the ideas that American Protestantism and culture could act as a civilizing force, which would lead to divinely ordained prosperity and morality throughout the world.

As the Cuban rebellion against Spanish control coalesced in the late 1890s, Methodists and other Protestants were generally sympathetic to the rebels' cause but officially proclaimed neutrality on the issue (mirroring the U.S. government's stance). Not surprisingly, American Protestants were unsympathetic to Catholic Spain's claims to Cuba and to other territories and considered the Spaniards to be unjust and cruel rulers of less-civilized peoples. As the rebellion grew more violent, American Protestants leaned toward intervention, although they encouraged President William McKinley, himself a devout Methodist, to work for a solution short of war.

Generally, churches in the South were less in favor of intervention and war than those in the North, yet once the war began, churches rallied around the flag in support of American intervention regardless of their geographical location. Once the conflict was under way, American successes in the Caribbean and the Pacific as well as a renewed relationship with Great Britain served to unify

Churches and the War

In the lead-up to and in the aftermath of the Spanish-American War, American Protestant churches participated actively in discussions about American foreign policy, imperialism, overseas

Protestant denominations still divided over the Civil War and its bitter aftermath.

By the turn of the 20th century, American Protestants were deeply involved in Progressivism and progressive movements worldwide. These movements emphasized the ability of humans to do God's work in the world and included such domestic movements as temperance and social assistance for poverty-stricken and immigrant communities. Globally, however, missionaries and church groups were slower to accept the humanitarian side of Progressivism, and they continued to view schools and hospitals as the primary avenues for converting foreign populations. American churches viewed foreign missions as a way to elevate societies and to introduce them to modern reform. Some churches even framed the Spanish-American War as one that was being waged against evil and social injustice in the world.

When the war ended in August 1898, American churches had to take positions on the issue of annexation and expansion. After extensive discussions, most churches supported the idea of the United States retaining control of the Philippines and Cuba, again couching their arguments in terms of Christian duty and benevolence. Popular and influential ministers such as Josiah Strong, a leader of the Social Gospel Movement, provided vocal and adamant theological justifications for expansion and American cultural imperialism. Such adamant support for imperialistic goals provided justification and credence for the religious support of nationalist goals. During and after the Spanish-American War, American churches provided vital justifications for American actions abroad and helped to create a national consensus on the role of the United States in the world.

Cienfuegos, Naval Engagements off

Event Dates: April 29, May 11, and June 13, 1898

The first naval engagement of the Spanish-American War and operations beginning on May 11, 1898, undertaken by the U.S. Navy to sever underwater cables linking Cuba with Madrid via the West In-

Illustration depicting sailors in boats from USS *Nashville* and *Marblehead* cutting telegraph cables off Cienfuegos, Cuba, on May 11, 1898, while under fire from the Spanish on shore. (Naval Historical Center)

dies. There were three such cables at Cienfuegos at the beginning of the war. Cienfuegos, with an 1898 population of 65,000 people, was an important Spanish naval base on the south coast of Cuba, some 140 miles southeast of Havana. Three minor naval actions would be fought off the coast there, including the cable-cutting expedition. The United States knew of two underwater telegraph cables there, one to Trinidad and the other to Batabano farther to the west on the Cuban coast. It would be discovered during the war, however, that there was a third cable. Cienfuegos's garrison was made up of elements of the Santa Clara Infantry Division, headquartered in that city. Also present were some smaller warships, including the torpedo-gunboat *Galicia*, the first-class gunboat *Vasco Núñez de Balboa*, the second-class gunboat *Diego Velasquez*, the *Alsedo*, and the third-class gunboats *Cometa*, *Gaviota*, *Lince*, and *Satélite*.

On the morning of April 29, 1898, Commander Bowman H. McCalla of the unprotected cruiser *Marblehead* in company with the gunboats *Nashville* and *Eagle* arrived off Cienfuegos to enforce the blockade. The *Nashville* ran down and captured an approaching steamer, the *Argonauta*, that was carrying mail, munitions, and some Spanish Army officers and men. The *Galicia* then appeared at the head of the harbor supported by two small gunboats, which were covered by light shore batteries. The Spanish ships then exchanged fire with the *Eagle*. With the arrival of the *Marblehead*, the *Galicia* withdrew deeper into the harbor. The only damage in the exchange of fire occurred from two shells that landed in a small village and a Spanish hit on the *Galicia* that required repairs.

On May 11, 1898, McCalla returned, reinforced by the revenue cutter *Windom* and collier *Saturn* to attempt a cable-cutting operation close to shore and near the harbor entrance. The *Eagle* was detached to the west to cut another cable, which it failed to locate. With the *Nashville* and the *Marblehead* close to shore providing covering fire, 52 men led by Lieutenant Cameron M. Winslow in two steam and two sailing launches closed on the shore.

Winslow's men located two large cables and one small one. His men then dragged the two large cables up and cut both. Spanish small-arms fire and fire from the shore increased as the operation unfolded, and the Americans thus did not attempt to cut the small cable, which provided telegraphic communication with Jamaica and continued to operate throughout the war. The lighthouse at Cienfuegos, also used by the Spanish for a firing position, was destroyed by gunfire from the two supporting warships, joined by the *Windom*.

Three Americans were killed and several more wounded in the cable-cutting operation. Spanish losses are unknown but are believed to have been higher. The men in the launches who took part in the actual cable-cutting operation were each awarded the Medal of Honor.

The third and last engagement at Cienfuegos occurred on June 13 at about 1:15 p.m. The *Diego Velasquez* was off the harbor entrance on patrol when the U.S. Navy auxiliary cruiser *Yankee* approached but had not raised its flag. The *Velasquez* turned toward the *Yankee* to investigate, and after the *Yankee* showed its colors, a brisk fire opened between the two ships at a range of about 1,500 yards, the *Yankee* chasing the *Diego Velasquez* back toward the harbor in a running gunfight. As it neared the entrance, shore batteries joined the fight, as did the *Lince*, then the *Cometa*, and finally the *Balboa*. The *Diego Velasquez* succeeded in gaining the harbor, and the action was over at about 3:00 p.m. During this action, the *Diego Velasquez* was struck once with a 5-inch round, killing 3 of its crew and wounding 10. The *Yankee* was hit once and had 1 man wounded.

"Civilize 'em with a Krag"

A phrase from a popular war song that originated during the Philippine-American War. The song, which ignored the nationalistic aspirations of the Filipinos, was an expression of the anger, frustration, and ignorance exhibited by U.S. Army personnel fighting the Filipino revolutionaries, led by Emilio Aguinaldo y Famy. The refrain from one version of the song reads:

Damn, Damn, Damn the Filipinos
Cut-throat khakiac ladrones
Underneath our starry flag
Civilize'em with a Krag
And return us to our own beloved homes

The Krag-Jorgensen was a repeating bolt-action rifle designed by Norwegians Ole Krag and Erik Jorgensen in 1886. Superior to the meager weapons possessed by most of the Filipino revolutionaries, it was the primary weapon employed by U.S. Army regulars during the Philippine-American War. Because of the Filipinos' guerrilla tactics, soldiers often referred to them as cutthroat *ladrones* (thieves). The implication of the song is that there was justification for the U.S. military's occupation of the Philippines after the Spanish-American War. The phrase "civilize 'em with a Krag" was of course reflective of the paternalistic racism that permeated the thinking of most Americans during this era. It smacks of the concept of the white man's burden and stands in sharp contrast with the alleged benevolent assimilation associated with the American occupation of the Philippines.

Clark, Charles Edgar

Birth Date: August 10, 1843

Death Date: October 1, 1922

U.S. Navy officer. Born in Bradford, Vermont, on August 10, 1843, Charles Edgar Clark received a warrant as an acting midshipman in the U.S. Navy on September 29, 1860. Graduating from the

U.S. Navy captain Charles Edgar Clark commanded the battleship *Oregon* during its historic voyage around Cape Horn to join the U.S. fleet in the Caribbean during the Spanish-American War. (Library of Congress)

United States Naval Academy, Annapolis, he became an acting ensign on October 21, 1863. His American Civil War service included command of the screw sloop *Ossipee* during the Battle of Mobile Bay in August 1864. He was promoted to master on May 10, 1866; lieutenant on February 21, 1867; lieutenant commander on March 12, 1868; commander on November 15, 1881; and captain on June 21, 1896.

After having commanded the double-turreted monitor *Monterey*, on March 17, 1898, Clark assumed command of the battleship *Oregon* at the Mare Island Naval Shipyard in San Francisco. The battleship had left Bremerton, Washington, on March 9 for San Francisco. Receiving orders to proceed to Callao, Peru, Clark commanded the *Oregon* on its historic voyage around Cape Horn to join the U.S. ships off Cuba during the Spanish-American War. The battleship departed San Francisco on March 19, 1898, and steamed around Cape Horn through very severe weather. Learning of the outbreak of war while at Rio de Janeiro on April 30, Clark proceeded to Key West, Florida, arriving there on May 26 after an epic voyage of more than 14,000 miles, during which the *Oregon* had made five stops for coal. This highly publicized voyage resulted in Clark becoming known as “Clark of the *Oregon*.”

On July 3, Clark commanded his ship against the Spanish squadron led by Rear Admiral Pascual Cervera y Topete in the Bat-

tle of Santiago de Cuba. The *Oregon* played a key role in the destruction of the Spanish squadron, and Clark received advancement in seniority. He was named to command a squadron intended to attack Spain, but illness forced him to give up that position in August. He then commanded the Philadelphia Navy Yard. Promoted to rear admiral on June 16, 1902, he retired from the navy in 1905. In 1917, he published his memoirs, *My Fifty Years in the Navy*. Clark died at Long Beach, California, on October 1, 1922.

Clayton-Bulwer Treaty

Treaty signed between the United States and Great Britain on April 19, 1850, that guaranteed British rights to a joint isthmian canal venture in Central America. The treaty remained in effect until November 1901 when the Hay-Pauncefote Treaty superseded it.

A passage connecting the Atlantic and Pacific oceans had long been a dream of American naval and shipping interests. In the mid-19th century, a canal across Nicaragua had been considered the most feasible isthmian waterway. Following the Mexican-American War (1846–1848), the British government became concerned about increasing American influence in the Caribbean and Central America.

In 1850, British foreign minister Henry Lytton Bulwer negotiated a treaty with U.S. secretary of state John M. Clayton. The treaty was signed on April 19, 1850. In it, both countries agreed to cooperate in the construction of an isthmian canal and pledged never to fortify or exercise exclusive control over it. Article I of the treaty also provided that neither party was to occupy, colonize, or exercise dominion over any part of Central America. After a short debate, the U.S. Senate approved the treaty by a vote of 42 to 11.

Considering that the United States was not at the time a major world power, the treaty was something of a triumph for American diplomacy. It was certainly in keeping with the 1823 Monroe Doctrine. Yet the Clayton-Bulwer Treaty was persistently perceived as a poor agreement by most Americans. Some critics charged that it violated the principles established in the Monroe Doctrine. They believed that it allowed Britain to maintain territories in Central America despite the fact that this treaty actually placed a roadblock to British expansion in the region and thereby strengthened the

Monroe Doctrine. The unpopularity of the treaty largely resulted from the fact that the U.S. government had abandoned its plans for a canal exclusively under American control.

The successful outcome of the Spanish-American War and the appearance of the United States as a world power renewed desires for exclusive American control of an isthmian waterway. As the U.S. empire continued to grow in both the Atlantic and Pacific, Washington realized that it needed two navies, one to protect its interests in the Pacific and the other to safeguard investments in the Atlantic and Caribbean. A viable alternative to a two-ocean navy, which would have been prohibitively expensive, was construction of a canal across the Central American isthmus. Such a canal would enable a fleet to pass quickly from one ocean to another, shaving many days off the voyage and saving much fuel. A canal would also be of enormous commercial value to the United States. Determined to control the canal by itself, the United States began negotiations with the British to abrogate the Clayton-Bulwer Treaty, which would be dissolved by the Hay-Pauncefote Treaty of 1901.

Clemens, Samuel Langhorne

See Twain, Mark

Cleveland, Stephen Grover

Birth Date: March 18, 1837

Death Date: June 24, 1908

Democratic Party politician, anti-imperialist, and the only man to serve two nonconsecutive terms as president of the United States (1885–1889 and 1893–1897). The fifth child of a Presbyterian clergyman, Stephen Grover Cleveland was born on March 18, 1837, at the parsonage in Caldwell, New Jersey. Four years later, the family moved to Fayetteville, New York, and then in 1850 to Clinton, New York, where Cleveland's father died in 1853. Cleveland worked at the New York Institution for the Blind and, through the financial

help of an uncle, also read for the law. He was admitted to the bar in 1859 and in 1863 became an assistant district attorney of Erie County, New York. The financial burden of caring for his mother and sister prevented him from enlisting in the Union Army during the American Civil War. Thus, he paid a substitute to go in his place, a legitimate practice at the time.

A 44-year-old bachelor with a modest law practice, Cleveland was selected by the Democratic Party in 1881 to be its reform candidate for mayor of Buffalo, New York. His campaign motto was "Public office is a public trust." He did such a thorough job of cleaning out corruption in Buffalo that the party chose him to be its candidate for governor in 1882. His refusal to accept the spoils system or to support legislation favored by the party leaders and by Tammany Hall earned him powerful enemies as well as the dismay of some of his supporters, but it certainly endeared him to voters.

When the Republicans nominated the scandal-tainted James G. Blaine for the presidency in 1884, the Democrats saw in Cleveland a candidate who, because of his record of honesty, could win the general election by drawing disenchanted Republican votes. During the campaign, the Republicans savagely attacked Cleveland for not having served in the Civil War and for fathering an illegitimate child. When Cleveland's supporters asked how they should respond to the charge that he had a child out of wedlock, he replied, "Tell the truth." He had indeed fathered an illegitimate child and, although he had refused to marry the woman, had faithfully contributed to the child's financial support. Cleveland was elected in a close race and thus, at the age of 48, became the first Democrat to be elected president after the Civil War.

In the heated debate over civil service reform, Cleveland attempted to chart a middle course concerning patronage appointments, but his efforts enraged party regulars and disappointed civil service reformers. Cleveland accomplished little during his first two years in office, partly because he believed that the president should not do much and partly because the Republicans retained control of the Senate. His marriage to his former ward, the 21-year-old Francis Folsom, in 1886 created a public sensation, making the new First Lady a public celebrity.

In 1887, Cleveland signed the Interstate Commerce Act into law and risked considerable political popularity by resisting pension abuse. A generous Congress with a surplus in the treasury and the desire to win votes had made it extremely profitable for its constituents to find excuses to claim military pensions. Fraudulent claims were frequently being granted through the passage of private pension bills. In 1886, Cleveland began vetoing pension bills that he believed were without merit, and in 1887, he vetoed a general pension bill that allowed any veteran who had served 90 days and was in need to receive financial benefits. Republican supporters of the bill branded Cleveland an enemy of old Civil War soldiers.

Later that same year, Cleveland made a potentially damaging political mistake. He decided to return Confederate battle flags that were in the possession of the War Department to their states of origin. The same act 20 years later would be applauded, but in 1887,

Democrat Grover Cleveland was president of the United States during 1885–1889 and 1893–1897. An isolationist, he opposed imperialistic policies that would have brought confrontation with Spain over Cuba. (Library of Congress)

it was still too soon for a Democrat and someone who had not fought in the war to make such a symbolic gesture of generosity to the South.

Cleveland incurred more political wrath when he decided to push for a reduction in tariff rates to eliminate the federal budget surplus. He was convinced that surplus revenue invited extravagant government spending and was determined to end “unnecessary taxation.” The Republicans reasserted their typical defense of tariffs and protectionism by advocating even higher tariff rates. Their platform in the presidential campaign of 1888 stressed the need for a high tariff to protect “the general business, the labor, the farming interests of the country.”

In his bid for reelection in the 1888 election, Cleveland won the popular vote but lost the election to Benjamin Harrison by 233 electoral votes to 168. Cleveland returned to New York in 1889 to resume his law practice. Harrison’s high-tariff policy led to growing discontent among voters, the formation of the Populist Party, and eventual defeat for the Republican Party in the congressional elections of 1890. Cleveland was renominated on the first ballot of the 1892 Democratic convention and went on to defeat Harrison by a wide margin, primarily because Populist Party candidate James B. Weaver drew votes away from Harrison, thereby enabling Cleveland to win in states normally carried by Republicans.

Cleveland’s second term in office was beset with difficulties and overwhelmed by the effects of the Panic of 1893, a deep financial depression that began shortly after his second inauguration. One immediate problem stemmed from the large outflow of gold from the U.S. Treasury. Under the Sherman Silver Purchase Act of 1890, treasury notes issued to buy silver could be redeemed for gold. Because the public preferred gold to silver, masses of people turned in their silver treasury notes and demanded payment in gold. By law, the treasury had to keep reissuing the notes even though they were being turned in for gold, and thus, the treasury’s gold reserves fell below \$100 million. Before Cleveland could deal with the crisis, however, his doctor discovered a mouth cancer that required surgery in July 1893, something that was kept secret to prevent a further panic in financial markets.

After his recovery, Cleveland called a special session of Congress and managed, after both parties split on the issue, to have the Sherman Silver Purchase Act repealed.

When the repeal of the Sherman Silver Purchase Act did not provide sufficient relief in time to protect the nation’s gold supply, Cleveland asked millionaire industrialist J. P. Morgan for help. Morgan organized a group of bankers who sold \$65 million in U.S. bonds in Europe. Morgan’s success alleviated the nation’s financial problems, but the fortune that Morgan earned only served as further evidence to millions of Americans that Cleveland had sold out to the wealthy. Meanwhile, civil and labor unrest added to his burdens. In 1894, he authorized the use of federal troops in Chicago, over the objections of Governor John Peter Altgeld of Illinois, to restore order when serious violence occurred during the infamous Pullman Strike. In congressional elections that same year, the Republicans regained control of the House and Senate in a massive public display of anger and disappointment over Democratic management of national affairs.

Cleveland took foreign policy actions that were just as unpopular as his domestic policies. He refused to support the annexation of Hawaii, where American plantation owners had overthrown Hawaiian queen Liliuokalani on January 17, 1893. Despite Cleveland’s denunciation of the Hawaiian coup and his calls for Liliuokalani’s reinstatement, Cleveland was a firm proponent of free trade with Hawaii and reluctantly permitted the presence of a U.S. naval installation and coaling station there. Upon the outbreak of the Cuban War of Independence in 1895, Cleveland refused to recognize the revolutionary government despite tremendous public pressure to do so and the passage of resolutions by both the House and the Senate. The situation in Cuba continued to deteriorate, and Cleveland’s isolationist policies handed his successor, William McKinley, a festering problem with which he would be forced to deal. Cleveland’s one major foreign policy success occurred in 1895, when he pressured Great Britain into accepting American arbitration of a boundary dispute involving Venezuela and British Guiana.

Cleveland had lost any hope of renomination long before the Democratic convention in 1896, but the lengths to which his fellow Democrats went to denounce him and his support for the gold

standard were exceptional. Cleveland retired to Princeton, New Jersey, where he wrote articles and gradually regained the grudging admiration of the public for his refusal to sacrifice his principles to popular opinion. In the aftermath of the Spanish-American War, he lent his support to the Anti-Imperialist League, which firmly opposed annexation of the Philippines. Cleveland died in Princeton, New Jersey, on June 24, 1908.

Coaling Stations

Seaports at which warships could refuel from coal stockpiles. During the latter half of the 19th century, the term came to indicate ports beyond a nation's borders yet under either its direct or indirect control. The U.S. Navy quickly learned the importance of coaling stations during the American Civil War, when creation of such establishments became essential for supporting the ships enforcing the blockade of the Confederacy. When hostilities terminated and the navy reverted to coastal defense and support of overseas commerce, the need for coaling stations lessened, as fuel could be obtained under contract from civilian suppliers abroad. There was also strong popular and political sentiment against the colonial adventures that establishing overseas coaling stations usually entailed. Nevertheless, the United States, by treaty in 1878, established a coaling station to refuel ships transiting to the Far East on Pago Pago in Samoa.

As the influence of Captain Alfred Thayer Mahan's writing on sea power grew and the United States began to create a modern blue-water navy, fueling its overseas operations loomed large. Implementation of Mahan's thesis of the strategic reach of a powerful battle fleet required the acquisition of overseas coaling stations. In the 1880s and 1890s, such figures as Secretary of the Navy Benjamin F. Tracy and Naval War College president Captain Stephen B. Luce endorsed the acquisition of coaling stations despite the nation's reluctance to undertake colonial ventures. Hawaii, the crossroads of the Pacific, in particular became the focus of their interest, leading to support for efforts by American businessmen in the islands to assert control over the native monarchy there.

While coaling stations formed one solution to the problem of maintaining a fleet distant from the continental United States, there was some exploration of other options. The navy observed with interest experiments in refueling from colliers at sea conducted by

Workers loading coal into SS *Siberia* at a coaling station in Nagasaki, Japan, in 1904. Coaling a ship was a time-consuming and often difficult process. (Library of Congress)

the Royal Navy during its 1892 naval maneuvers as well as the Japanese fleet's use of colliers located in sheltered waters close to the zone of operations during the Sino-Japanese War of 1894–1895.

As war with Spain loomed in the spring of 1898, the navy was forced to face the prospect of operating in the Philippines without adequate coaling facilities at hand. In the weeks before war broke out, the Asiatic Squadron was ordered to base itself at Hong Kong to keep its bunkers full. When war erupted, Commodore George Dewey departed Hong Kong for the Philippines but refueled his squadron from two accompanying unarmed colliers, the *Zafiro* and the *Nanshan* in the shelter of Dapeng Wan (Mirs Bay) in violation of Chinese neutrality during April 25–26, before setting out for Manila Bay.

Simultaneously, the navy purchased as many suitable colliers as possible to support operations against Cuba. Rear Admiral William T. Sampson maintained his blockade of Santiago for more than a month, refueling at sea or from an extemporized coaling station established at Guantánamo Bay, before destroying the Spanish squadron on July 3.

The balance of American naval opinion regarding coaling stations tipped decisively in their favor during the Spanish-American War. The United States annexed Hawaii, the Philippines, and Guam, and a treaty in 1903 with Cuba established an indefinitely renewable lease at Guantánamo Bay as a coaling station.

Coamo, Battle of
Event Date: August 9, 1898

Battle between U.S. and Spanish forces at Coamo, Puerto Rico, that occurred on August 9, 1898. Coamo lies in a broad valley in south-central Puerto Rico. Prior to the American landing at Guánica, Puerto Rico, on July 25, 1898, Spanish commander Lieutenant Colonel Rafael Martinez-Illesas fell back with his 248 men to Coamo, 20 miles inland, where they dug entrenchments. During the night of August 8, Major General James H. Wilson sent the 16th Pennsylvania Volunteer Regiment through the cross trails and valleys to flank the Spanish troops at Coamo. The following day, the 2nd and 3rd Wisconsin, along with the 2nd and 3rd U.S. Regular Artillery batteries, led by Wilson and Brigadier General Oswald H. Ernst, traveled down the military highway against the town. Wilson’s plan was for all troops to reach the Spanish position shortly after daylight on August 9 in hopes of cutting Spanish communications north to San Juan. The assignment for Troop C (Brooklyn) of the New York Volunteer Cavalry was to cover the right side against a flanking attack from Spanish troops believed to be at Los Banos.

At 6:00 a.m. on August 9, the 3rd and 4th U.S. Artillery took positions in an open field south of the road leading to Coamo and began sighting their guns on the blockhouse that defended the Banos Road 2,000 yards in front of them. They commenced firing at 8:00 a.m. At this time, the 2nd Wisconsin under Colonel Martin T. Moore and the 3rd Wisconsin under Colonel Charles A. Born moved east toward the town, with Troop C under Captain Bertram T. Clayton headed southeast to engage the Spanish at Los Banos. However, Colonel Martinez had been advised of the advancing Americans troops and ordered a majority of his troops and wagons eastward to Aibonito in the central highlands. He positioned the rest of his infantry west of Coamo in hopes of delaying the Americans.

During the night of August 9, under the guidance of Lieutenant Colonel John Biddle of General Wilson’s staff, Colonel Thomas M. Hulings and soldiers of the 16th Pennsylvania headed northeasterly along trails toward Barranquitas. Having been delayed until 9:00 p.m. owing to the rough terrain, they still caught Colonel Martinez’s retreating troops off guard. The Pennsylvanians met the Spanish troops 3.5 miles beyond Coamo where the Spaniards had

taken cover in the trees and ditches. The first battalion opened fire, while the second battalion, which had formed in the rear, moved to the left and took a position along the road. After slightly more than an hour of fighting during which Colonel Martinez was killed, the main body of Spanish troops surrendered. Spanish losses totaled 5 killed, 8 wounded, and 167 prisoners. The Pennsylvanians suffered 1 killed and 6 wounded.

At the same time, the Spanish delaying action in front of Coamo had collapsed under American artillery pressure. Colonel Moore with the 2nd Wisconsin and Colonel Born with the 3rd Wisconsin entered Coamo at 9:40 p.m. However, the Wisconsin troops were beaten to the city by Captain Clayton’s cavalry, who had entered the town after galloping north from Los Banos after discovering that the Spanish had abandoned the area. Clayton’s troops pursued the retreating Spaniards five miles down the military road but were stopped by Spanish artillery posted on Asomante Hill and El Penon, above the town of Aibonito.

Coastal Defenses, U.S.

In the several decades prior to the Spanish-American War, revolutionary changes occurred in artillery, especially with the large-scale manufacture of steel guns, the perfection of breech-loading techniques, and the introduction of more effective propellants that were slower burning and provided greater velocity to the shell being fired. These developments, coupled with improved metallurgical and machinery techniques, led to lighter, stronger, and more lethal artillery. Improved manufacturing techniques also made possible the near universal adoption of rifling, which in turn led to improved projectiles and more accurate fire. New lighter carriages on which

A heavy U.S. coastal defense gun. Its carriage is mounted on a track so that the gun can be more easily trained. (James Rankin Young and J. Hampton Moore, *History of Our War with Spain*, 1898)

the guns were mounted were developed, often of a design that allowed the recoil energy from the gun being fired to withdraw it behind the parapet so that it could be reloaded there in comparative safety. Such changes were in wide use by 1890 and dramatically impacted coastal defense arrangements.

These dramatic developments, which found their way onto new ships, heightened interest in the United States in improving the nation's coastal defenses, which had languished since the termination of congressional appropriations for harbor defense in 1875. Members of Congress and influential army and navy officers eventually sounded the alarm, however, and in 1885 President Grover Cleveland assembled a board of military and civilian leaders headed by Secretary of War William C. Endicott to study U.S. coastal defenses and to recommend a plan of action. The resulting Endicott Report presented early in 1886 called for a vast \$126 million program for new defensive works that would include armored turrets housing large artillery pieces of unprecedented size and power. In addition to construction of these at 26 coastal works and 3 on the Great Lakes, the Endicott Plan provided for floating batteries, torpedo boats, underwater mines, searchlights, and machine guns. In all, the plan called for the procurement of some 1,300 heavy guns and mortars of 8-inch or greater caliber.

The heavy guns of the Endicott era were of 8-, 10-, and 12-inch calibers. The largest of these could hurl a 1,000-pound projectile 7–8 miles. All were flat-trajectory weapons limited to about 15 degrees of elevation, and they compared favorably to and could even outrange the main armament of contemporary battleships. The guns were mounted on highly sophisticated (and expensive) disappearing or barbette carriages. Ultimately, only about 300 of these guns were ever installed.

In addition to the long guns, there were also large 12-inch mortars, designed to fire their 700-pound shells at a high arc. The shells would descend almost vertically, exploding above a target ship and showering it with fragments. These weapons were usually grouped in batteries of four mortars each in pitlike emplacements.

A third class of guns were rapid-firing (5–15 rounds per minute) pieces of from 3-inch to 6-inch caliber. These were designed to defend against smaller ships that might be sent in to sweep mines and also shallow-draft torpedo craft. Such weapons were usually protected by steel shields. Eventually, some 500 of the light guns were installed during 1896–1908.

Finally, there were submarine or underwater mines. Considerable work had been done on these weapons since their first effective employment in the American Civil War. Mines were usually stowed

ashore and were only planted when an emergency arose. Special mine-laying vessels were used to deploy them.

By the eve of war with Spain, only a small portion of the Endicott Plan had been met. By then, only 30 of the prescribed 500 heavy guns and 70 of the 1,000 mortars were in place in the fortifications. Not until 1888 did Congress begin funding the program and even then only a small part of it. The failure to fully implement the plan was in part because of the high costs associated with the new ordnance and its sophisticated carriages but also because of the unrealistic nature of the plan. Also, the high performance of the new armament meant that the number of weapons required could be substantially reduced. Thus, of the 1,300 heavy guns and mortars envisioned, fewer than 700 were ever actually installed. Despite the failure to implement it fully, however, the Endicott Plan formed the basis for the modern U.S. seacoast defenses of the Spanish-American War extending into the first decade of the 20th century.

Even more troublesome was the refusal to provide the manpower required to man the fortifications. Estimates for staffing the works ranged up to 85,000 men, although only about 8,500 would require extensive training. The funding shortfall ensured that the fortifications remained poorly staffed throughout the period. As war with Spain loomed in early 1898, however, Congress finally added two new artillery regiments (the 6th and 7th), which would bring to 8,000 men the number of trained personnel needed to man the fortifications. This was part of the Fifty Million Dollar Bill, signed in March 1898. Then both the Corps of Engineers and the Ordnance Department embarked on a crash program to remedy deficiencies in coastal defense operations, especially on the East Coast. Still, building and procurement lagged, and this meant that the coastal defenses were hardly ready for the war with Spain. Indeed, the Endicott Plan was not largely implemented until 1910, when advances in weapons and naval technology had begun to render such installations increasingly obsolete. Nonetheless, they survived, with steady modification and modernization, to World War II.

Cohen, John Sanford

Birth Date: February 6, 1870

Death Date: May 13, 1935

Journalist, war correspondent, soldier, and briefly U.S. senator from Georgia (1932–1933). John Sanford Cohen was born on February 6, 1870, in Augusta, Georgia, the scion of a distinguished Jewish family whose roots dated to the pre-American Revolutionary War era. His father, Philip Lawrence Cohen, abandoned his studies at the Citadel in Charleston, South Carolina, to fight in the Confederate Army in 1862. The younger Cohen pursued studies in several private schools, including one in Augusta, Georgia; the Richmond Academy; and the Shenandoah Valley Academy in Winchester, Virginia. In 1885, he entered the United States Naval Academy at Annapolis, but his tenure there was short. He left the next year to pursue his passion for writing and journalism.

Cohen's first assignment as a reporter came in 1886 with the *New York World* newspaper. There he came under the tutelage of the publishing magnate Joseph Pulitzer, who had purchased the paper in 1883. Determined to make the paper successful and profitable, Pulitzer inaugurated investigative journalism and often stirred up publicity for the paper by staging pseudo news events and offering up sensationalistic reporting. Cohen soon became wrapped up in this new journalism, and the *New York World* became so successful by 1890 that Pulitzer built New York City's tallest building to date, then an astonishing 18 floors, that housed the offices of the newspaper. By the mid-1890s, Pulitzer was also engaged in a war for readers and circulation with his arch rival, William Randolph Hearst. Both men sought to outdo the other by stirring up public sentiments about alleged Spanish atrocities in Cuba.

Cohen, a staunch Democrat, continued his journalism career and from 1893 to 1896 served as the secretary to Secretary of the Interior Hoke Smith. From 1893 to 1897, Cohen also covered congressional happenings as a member of the press gallery of Congress. When the Spanish-American War began in April 1898, Cohen asked his employer—now the *Atlanta Journal*—to send him to the war front, which it immediately did. Caught up in the war frenzy, Cohen soon enlisted with the 3rd Georgia Volunteer Infantry, attaining the rank of major. He stayed on in Cuba after the war for a time serving with U.S. occupation forces. During his active service, he continued to report on the progress of the war and its immediate aftermath, making him (in modern parlance) an embedded reporter who wrote firsthand of battlefield events from within his own unit.

After the war, Cohen remained in journalism. In 1917, he was named president and editor in chief of the *Atlanta Journal*, perhaps the South's largest and most important newspaper at the time. He retained this position until his death in 1935.

In the early 1930s, with the ascendancy of the Democratic Party and the beginnings of the New Deal, Cohen became more actively involved in politics. From 1932 to 1935, he was the vice chairman of the Democratic National Committee and submitted a proposal to

Congress—on his own initiative—for the U.S. government to build a modern, uninterrupted national highway that connected New York City and Jacksonville, Florida. The plan was later implemented, and the highway served as the major north-south route along the East Coast until it was made obsolete by the interstate highway system in the 1960s and 1970s.

In April 1932, when U.S. senator William J. Harris (D-Ga.) died, Cohen was appointed to replace him. Cohen, however, was a reluctant politician and chose not to run for election on his own in the November 1932 elections. On January 11, 1933, his duly elected successor took the oath of office, thereby ending Cohen's nine-month stint in the Senate. Cohen returned full-time to his publishing and editing duties with the *Atlanta Journal*. He died in Atlanta on May 13, 1935.

Collazo y Tejada, Enrique

Birth Date: May 28, 1848

Death Date: March 13, 1925

Cuban general and commander of the Mayarí Brigade in the Cuban Revolutionary Army. Enrique Collazo y Tejada was born in Santiago de Cuba on May 28, 1848. At the age of 14, he was sent to study in Spain at the Colegio in Segovia and graduated as an artillery cadet with the rank of second lieutenant.

Collazo fought against Spain in the Ten Years' War (1868–1878), at which time he renounced his Spanish military career. In 1868, he left Spain via France and went to the United States, where he joined a small group of Cuban insurrectionists under the command of Manuel Suarez. In May 1869, Collazo joined a filibustering expedition to Cuba aboard the *Perritt*. Two years later, he departed for Jamaica as part of a revolutionary commission. He returned to Cuba in 1875 in another filibustering expedition under Pio Rosado and remained on the island, with the rank of major, until the war ended with the Treaty of Zánjon.

During the Cuban War of Independence (1895–1898), Collazo served under General Calixto García y Iñiguez. In January 1895,

Colonial Policies, U.S.

The colonial policies pursued by the United States in the overseas territories acquired during the Spanish-American War of 1898 were designed to maximize white American control over the native populations, exploit their natural and labor resources, and expand markets for U.S.-produced finished products. Before this overseas expansion, the United States was inexperienced in ruling nonwhite peoples outside North America. Faced with the problem of directly controlling and administering the former Spanish possessions of the Philippines, Puerto Rico, and Guam (along with newly annexed Hawaii), American officials had to test, invent, and improvise economic, political, and social policies that would affirm and define their right to rule foreign lands and peoples.

Confronted with this challenge, U.S. policy makers turned to the colonial administrations of the European imperial powers (particularly Great Britain) for models upon which to build. At the same time, American leaders saw themselves as promoting democracy and American ideals abroad. Thus, they had to deal with conflicts inherent in colonial administrations based on the assumptions of white peoples' rights to dominate nonwhite populations in the new territories while preserving the democratic values of the American political system. The result was a uniquely American form of colonialism that combined dominance with a limited form of democratization. The peoples in the new territories were subject to the

Political cartoon from 1898 depicting Uncle Sam standing on a map of the United States reeling in fishing lines that have hooked Hawaii, the Philippines, Cuba, and Puerto Rico. Following the Spanish-American War, the United States had to develop colonial policies for its new overseas territories. (Library of Congress)

protections provided by the U.S. Constitution, but informal controls limited the ability of the native peoples to make full use of those rights and liberties.

As they asserted their rule over their new possessions, U.S. officials scoured the European colonies of Southeast Asia in search of practical models of colonial state building. Americans sought advice on everything from the nature of Islam (the prevailing religion in the southern Philippines) to how much rubber could be planted on a hectare of Southeast Asian lowland. American administrators in the Philippines took their place in a network of colonial officials from the Dutch East Indies, the British Straits settlements, Malaya, and Singapore. Americans compared notes with their British and Dutch colleagues on regime organization, schooling, public health, plantation agriculture, opium, and vice control.

The colonial societies that evolved in the new possessions (particularly in the Philippines) reflected the same assumptions about American altruism, racial supremacy, and masculinity that had propelled the United States into war with Spain in the first place. The acquisition of colonial territories provided opportunities for young white American males to prove their manhood. Like the European colonial powers (the Netherlands, France, Germany, and Great Britain), the United States initially promoted a system of imperial governance that viewed white males—whether administrators, soldiers, missionaries, or businessmen—as the embodiment of the masculine virtues of strength, courage, and resourcefulness that were needed to govern and exploit the new territories. The assumptions that white Americans brought to their new duties as colonial administrators clearly reflected the social values that

prevailed in late 19th- and early 20th-century American society. These, of course, had led to the subjugation of both blacks in the South and Native Americans in the West under the guise that whites of European descent were inherently superior and far better suited to govern than nonwhites were.

American colonial policies grew from a well-grounded set of values and assumptions regarding the relations of white and non-white peoples. In this system, colonial administration involved the teaching of native apprentices by white American father/teachers. Strict codes of conduct separated white rulers from native subjects. In the Philippines, for example, the U.S. colonial administration barred Filipino men from senior positions in the government and minimized their social contacts with white males and females. The restriction of social contact extended to social clubs such as the Army-Navy Club and the Young Men's Christian Association (YMCA) in Manila. Both of these facilities provided opportunities for athletics and other activities that American culture defined as masculine. Membership was limited to members of the white elite.

As in the possessions of the European powers, American colonial policies grew from a culture of fear that sought to affirm white masculinity through the subordination of native peoples to a position of inferiority. American administrators believed that any display of weakness or breakdown in the social hierarchy would undermine the established system, resulting in chaos, violence, and the possible massacre of white men, women, and children. These fears were particularly strong in the Philippines, where the United States faced a stubborn peasant-based insurgency from 1899 to 1913.

At the same time, however, American officials felt obliged to teach their subjects democratic virtues. The colonial governments therefore undertook limited reforms, which they viewed as efforts to uplift their subjects. Colonial administrators undertook extensive efforts to build schools in rural areas, improve public health, and increase the number of native teachers and doctors. Americans often pointed to these reforms as examples of benevolent American exceptionalism, selflessness, uplift, assimilation, and the promise of eventual self-government. Filipinos and Puerto Ricans were brought into the lower levels of the governing bureaucracy and became teachers, district administrators, and noncommissioned officers in military and police organizations such as the Philippine Scouts.

In regard to Puerto Rico, the U.S. Congress established a democratic structure there through passage of the Foraker Amendment in 1899. This legislation provided for a lower house elected by literate male adults. Nevertheless, policy making was left in the hands of an appointed governor and an Executive Council, both appointed by the American president. Only five Puerto Ricans were allowed to serve on the council at the same time. The rest of the council members were drawn from the upper echelons of government and were invariably white Americans. The Foraker Amendment also created a supreme court, subject to U.S. laws and presided over by political appointees.

The immediate impact of these reforms was limited by assumptions concerning native capabilities and the social relations between rulers and ruled. They were aimed less at ensuring self-government and improving the quality of life of the people than at co-opting the male native elites into collaboration with American rule. As such, they had little effect on native laborers and peasants. Indeed, American economic policies aimed at developing commercial agriculture and mining industries disrupted traditional patterns of life in the countryside and caused continuing social unrest, especially in the Philippines. The stifling of native industry and the near-total reliance on U.S. imports and exports stunted the economy there and mired millions of Filipinos in an endless chain of poverty.

The patriarchal assumptions that drove American colonial policies resulted in a gendered hierarchy in which the ruling white men sought to control both white women and natives of both genders. Women were relegated to a position of childlike inferiority. White women were a subordinated class who served chiefly to reinforce and justify white male dominance. White American women in both the Philippines and Puerto Rico might be employed as nurses or schoolteachers, but none served in senior administrative posts responsible for policy decisions. The wives of senior American administrators and military commanders, meanwhile, were expected to provide a respectable domestic environment and serve as examples of idealized womanhood, particularly in displaying sexual purity for upper-class native women so that they also might achieve the same idealized model themselves through imitation.

Native men were also subordinate in day-to-day living. As cooks and houseboys, they served white women and provided white Americans with the leisure that defined their privileged class status. At the same time, the presence of native domestic servants in the homes of whites raised fears that young native males might become intimate with white women, particularly the young adult daughters of senior white male administrators. In many ways, this social and cultural hierarchy closely resembled that of the South during the days of slavery. This paradox generated anxieties toward native male workers that pervaded all of the American possessions in Asia, the Pacific, and the Caribbean.

In the post-World War I period, many of the assumptions that drove American colonialism began to erode. Disillusionment with overseas commitments led the United States to scale back military and political obligations, particularly in East Asia. This desire led Congress to pass a law in 1934, the Tydings-McDuffie Act, creating the Philippine Commonwealth and providing for Philippine independence by 1946. Creation of commonwealth status for both the Philippines and Puerto Rico led to the creation of native legislatures there and greater participation by the native elites in administrative and leadership positions. The trappings of colonialism, however, remained strong. White Americans still controlled the highest military and administrative posts, and the United States retained a strong military presence. Whites remained exempt from native-instituted laws, and whites accused of crimes against natives were

tried in white courts. Native elites, moreover, were alienated from the grassroots lives of the majority of their people. In the Philippines, this led to considerable social and economic conflict that generated political instability, problems that were intensified by the Japanese occupation during World War II. This instability has had strategic and political consequences for the United States that have persisted to the present day.

Colwell, John Charles

Birth Date: 1856

Death Date: Unknown

U.S. Navy officer and naval attaché in London during the Spanish-American War. John Charles Colwell, born in 1856, received a midshipman's warrant on September 23, 1870, and graduated from the United States Naval Academy, Annapolis, in June 1874. He was promoted to ensign on July 17, 1875, and to master on June 1, 1881. He made lieutenant, junior grade, on March 3, 1883, and lieutenant on June 30, 1887. Lieutenant Colwell was one of two men (the other being Lieutenant William S. Sims) who played a key role in developing the U.S. Navy's intelligence network in Europe during the conflict.

At the outset of the Spanish-American War in April 1898, the U.S. Navy sought additional ships of all types. One of the earliest actions undertaken by Colwell while serving in London was to secure for the U.S. Navy two protected cruisers being built for Brazil. These became the *Albany* and the *New Orleans*. The navy also sought information on the location of Spanish warships and their strategic employment. For this information the navy relied mainly on its naval attachés in Paris and London, and it was in the area of intelligence gathering that Colwell performed his greatest service.

In concert with Sims, Colwell created an intelligence network that ran across Europe from London to Paris, Madrid, and

Antwerp. Whereas Sims made his base in Paris, Colwell began his network in London on June 7, 1898. It received direct support from the White House. Together, Colwell and Sims not only collected information on Spanish military intentions but also worked to verify the gleanings of each other. Probably their greatest success came in information they provided on the Spanish squadron based in Cádiz under Rear Admiral Manuel de la Cámara y Libermore. Washington was concerned that this squadron might sail to the Philippines or would steam to Cuba and there assist Rear Admiral Pascual Cervera y Topete's squadron at Santiago de Cuba in breaking out of the blockade. Secretary of the Navy John D. Long pressed both Sims and Colwell to acquire information on the intentions of the squadron at Cádiz. Colwell was able to learn that the squadron would be dispatched to the Philippines. This information helped set the stage for the U.S. victory in the Battle of Santiago de Cuba on July 3, 1898.

Colwell and Sims also mounted a successful disinformation campaign, feeding the Spanish authorities bogus information to conceal U.S. intentions. The successes of the intelligence network went beyond collecting military information and disseminating disinformation to also include diplomatic efforts. Colwell's network, for example, detected the readiness of the Spanish government to open negotiations just prior to the Spanish government sending diplomatic feelers through French ambassador to the United States Jules-Martin Cambon.

Colwell spent \$27,000 to establish the intelligence network. The money certainly appears to have been well spent. In recognition of his important service, he was promoted to lieutenant commander on March 3, 1899.

Despite its significance, Colwell's work is often largely ignored. As befits an intelligence operative, little information is available on him, and not even the year of his death is known with certainty.

Committee on the Philippines

U.S. Senate committee established by Senate resolution on December 15, 1899. The Committee on the Philippines focused mainly on legal and economic matters in the Philippines. At the end of the Spanish-American War, Spain had ceded the Philippines to the United States in the Treaty of Paris (1898) in exchange

for \$20 million. Under the same agreement, the United States had also acquired Puerto Rico, Wake Island, and Guam. Cuba was not formally annexed, but the United States exercised considerable control over that island nation's economy and politics for more than a generation. The Senate created the Committee on the Philippines to administer and adjudicate public policies and trade issues regarding the islands.

Soon after the end of the Spanish-American War, insurgent warfare broke out in the Philippines that pitted revolutionaries under the leadership of Emilio Aguinaldo y Famy against American occupation forces. At the same time, a debate raged in the United States between those who opposed imperialist policies—the so-called anti-imperialists—and those who wished to extend U.S. sovereignty over the newly acquired territories. The latter position prevailed, and the United States sent more troops to fight the Filipino insurgents. By early 1902, some of the darker aspects of the war were becoming clear to the United States, with frequent reports of atrocities committed by both sides in the fighting. American brigadier general Jacob Hurd Smith's public comments that he intended to burn native villages and kill male inhabitants over the age of 10 were a great cause for concern in Congress. Senator George Frisbie Hoar (R-Mass.), one of two anti-imperialist Republican members of the Committee on the Philippines, demanded an investigation.

In these circumstances, the creation of the Committee on the Philippines, chaired by Senator Henry Cabot Lodge (R-Mass.), was seen as the most prudent course of action. This committee, usually referred to as the Lodge Committee, was entrusted with the investigation into U.S. policies in the islands. Its hearings were closed to the public. Not surprisingly, the anti-imperialists were incensed that the committee would be under the charge of the vocal proimperialist Lodge. Between January 31 and June 28, 1902, the committee held several hearings regarding alleged cruelties inflicted on Filipino prisoners by American servicemen. However, the hearings often degenerated into disputes between Lodge and Senator Albert J. Beveridge (R-Ind.) on the imperialist side and Hoar and Senator Thomas MacDonald Patterson (D-Colo.) for the anti-imperialists. Other members of the Lodge Committee were anti-imperialist senators Charles A. Culberson (D-Tex.), Joseph L. Rawlins (D-Utah), Edward W. Carmack (D-Tenn.), and Eugene Hale (R-Maine). The imperialists included Redfield Proctor (R-Vt.), William B. Allison (R-Iowa), Charles H. Dietrich (R-Nebr.), Louis E. McComas (R-Md.), and Julius C. Burrows (R-Mich.).

William Howard Taft, governor of the Philippines since June 1900, was the first to testify before the committee. He conceded the use of a "mild form of torture" by the U.S. military in the Philippines. Other U.S. Army witnesses testified that burning houses and torturing civilians were necessary to obtain information and to discourage support for the insurgents. In the meantime, U.S. Marine Corps major Littleton Waller had been charged with murder for his involvement in atrocities committed during the Samar Campaigns, during which he had ordered the killing of civilians and the execu-

tion of prisoners. His court-martial began in March, but he was eventually acquitted of all charges on the reasoning that he had only followed Smith's orders to "kill and burn."

General Smith's court-martial followed in May, during which he insisted that his tactics had been necessary and in fact successful. Although the tribunal found him guilty, he received a hero's welcome upon his return to the United States and was retired by President Theodore Roosevelt without any punishment. Admiral George Dewey was the last witness before the committee in June, at which point the committee adjourned all further hearings. In the end, little of substance emerged from the committee hearings. The testimony heard by the committee tended to confirm the position of the imperialists that U.S. military policies in the Philippines had been correct, considering the circumstances, and that U.S. forces had only done what was necessary to break the back of the insurgency. Senator Beveridge presented his own conclusions to the Senate, essentially utilizing only such testimony as supported his hypotheses. All else was ignored.

On July 1, 1902, the U.S. Congress passed a bill establishing a Philippine government, including an elected assembly, under the auspices of the United States. Taft returned to the islands as governor. The Committee on the Philippines continued in existence for almost 20 more years but never again captured the headlines as it had in 1902. In 1921, the committee was dissolved, and all jurisdiction over legislative issues was transferred to the newly established Committee on Territories and Insular Possessions.

Competitor Incident

Event Date: April 25, 1896

The seizure of two U.S. citizens, one British citizen, and two Cuban rebels by Spanish authorities in Cuba during a failed filibustering expedition on April 25, 1896. The *Competitor*, which had been car-

rying the individuals and was also seized by the Spanish, was a small schooner being used to provide Cuban revolutionaries with arms, ammunition, and other goods in their revolt against the Spanish colonial government, which had begun the year before. The expedition was not, however, sanctioned by the U.S. government, which at that point had vowed to take a position of neutrality in the conflict between Cuban rebels and the Spanish government.

Indeed, the *Competitor* expedition was just one of many filibustering exploits launched in part or in whole by American citizens acting in a nonofficial capacity. The U.S. government had, in fact, taken fairly significant measures to preclude such activity, including employing U.S. warships and revenue cutters to interdict filibustering expeditions before they reached foreign shores. On occasion, the Spanish and U.S. governments had even cooperated in apprehending filibusterers. Nevertheless, numerous expeditions had successfully made their way to Cuba over the years, provoking such earlier crises as the 1873 *Virginus* Affair and the 1895 *Allianca* Incident, in which a Spanish gunboat fired on the U.S. merchant ship *Allianca* that was not part of a filibustering expedition.

On April 25, 1896, as the *Competitor* landed at Punta Berracos, not far from Havana, Spanish troops lay in wait fully expecting the filibustering expedition to go ashore. The ship's crew had begun to unload its cargo when the Spanish struck. The Briton and two Cubans were apprehended ashore; the two Americans were captured while still aboard ship. The Spaniards immediately imprisoned the men in Havana and subjected them to a summary court-martial, which sentenced four of the five (including the Americans and the British citizen) to death by firing squad. When news of the incident made its way to the United States, there was a loud public outcry against the Spanish government. The American press made the story front-page news. Meanwhile, Washington attempted to defuse the situation and gain the release of the men through diplomacy.

The American consul general in Havana, Fitzhugh Lee, argued that unless the men had themselves raised arms against the Spanish, treaties between Spain and the United States dictated that the men had to be given a full trial in a civilian court. Spanish officials rebuffed the American protests, arguing that they had every right to treat the men as enemy combatants. Lee and the U.S. State Department, however, insisted that the men be granted a civilian trial and be charged with lesser acts. Meanwhile, the yellow press in the United States had a field day with the incident, stirring up considerable anti-Spanish sentiments.

Realizing that the Americans would not back down and leery of their deteriorating image in the minds of many Americans, the Spanish relented and agreed to give the filibusterers a new trial in an ordinary tribunal. The men, however, had remained in prison for quite some time. Finally, in October 1896, the two Americans and the British citizen were released from prison and allowed to return home. The Cubans' fate is not known, although it is doubtful that they too were released or even spared the original execution order.

The *Competitor* Incident was part of the escalatory spiral of mutual incrimination and tensions between Madrid and Washington during the Cuban War of Independence (1895–1898), which would ultimately climax in the Spanish-American War. The incident also provided yellow journalists with the first significant fodder in what would become a war of words and images over the situation in Cuba.

Converse, George Albert

Birth Date: May 13, 1844

Death Date: March 29, 1909

U.S. Navy officer. George Albert Converse was born on May 13, 1844, in Norwich, Vermont. After attending Norwich College, he was appointed an acting midshipman in the U.S. Navy on November 29, 1861. Graduating from the United States Naval Academy, Annapolis, in September 1865, he was advanced to ensign on December 1, 1866; master on March 12, 1868; lieutenant on March 26, 1869; and lieutenant commander on July 12, 1878.

Keenly interested in naval engineering and technological innovation, Converse helped pioneer the use of electricity aboard naval ships and the introduction of smokeless powder. He commanded the Torpedo Service during 1893–1897.

During 1897–1899, Converse commanded the cruiser *Montgomery*, helping to suppress U.S. filibustering expeditions. He testified before the naval board of inquiry investigating the cause of the sinking of the battleship *Maine* that he believed the ship was destroyed by two explosions, one internal and one external, but that the internal explosion alone could not have caused the structural

damage sustained by the ship. During the Spanish-American War, he commanded the *Montgomery* in Rear Admiral William T. Sampson's squadron, seeing action off the coasts of Cuba and Puerto Rico. At the beginning of the war, Converse's ship captured several Spanish vessels in the Bahamian Channel, and he suggested employing the *Merrimac* to block the channel at Santiago de Cuba.

Converse was promoted to captain on March 3, 1899. After leaving the *Montgomery* in 1899, he served in the Bureau of Navigation and then headed the Bureau of Equipment, Ordnance, and Navigation. In 1904, he was promoted to rear admiral. He died on March 29, 1909, in Washington, D.C.

Cook, Francis Augustus

Birth Date: May 10, 1843

Death Date: 1916

Career naval officer and commander of the U.S. Navy armored cruiser *Brooklyn* at the Battle of Santiago de Cuba on July 3, 1898. Born in Northampton, Massachusetts, on May 10, 1843, Francis Augustus Cook was the son of a state militia general. An acting midshipman from September 20, 1860, Cook graduated from the United States Naval Academy, Annapolis, and was commissioned an acting ensign on October 1, 1863. That same year, he was assigned to the Western Gulf Blockading Squadron and participated in the latter stages of the American Civil War.

In the years that followed the war, Cook held a variety of assignments afloat and in administrative posts. He was promoted to master on May 10, 1866; lieutenant on February 21, 1867; lieutenant commander on March 12, 1868; and commander on October 12, 1881. During 1893–1896, he was assigned to the Bureau of Navigation. Promoted to captain on February 27, 1896, he assumed command of the new armored cruiser *Brooklyn* when it entered service on December 1, 1896.

During the Spanish-American War, the *Brooklyn* was initially assigned to the navy's Flying Squadron as the flagship of Commodore Winfield Scott Schley. It eventually served in the blockade of Cuba as part of the North Atlantic Squadron off Santiago de Cuba.

The *Brooklyn* was at the center of a controversy surrounding events in the first moments of the Battle of Santiago de Cuba. The battle commenced as the Spanish squadron under the command of Rear Admiral Pascual Cervera y Topete attempted to leave the harbor. When Cervera's four cruisers and two destroyers exited the

U.S. Navy captain Francis Augustus Cook, commander of the armored cruiser *Brooklyn* at the Battle of Santiago de Cuba on July 3, 1898. (*Photographic History of the Spanish-American War*, 1898)

harbor on July 3 at the opening of the battle, the *Brooklyn* executed a starboard turn, away from the Spanish ships, and almost collided with the battleship *Texas*. Controversy continues over whether Schley or Cook gave the order to turn to starboard. Later a court of inquiry, requested by Schley, censured him for this turn, which gave the Spanish ships additional time to escape. Cook was never officially censured or reprimanded for the affair.

After the war, Cook was assigned to the Naval Examining Board and held a variety of posts. He eventually attained the rank of rear admiral before retiring from the navy in 1903. Cook died in 1916.

Coppinger, John Joseph

Birth Date: October 11, 1834

Death Date: November 4, 1909

U.S. Army general and commander of IV Corps during the Spanish-American War. John Joseph Coppinger was born in Middleton, County Cork, Ireland, on October 11, 1834. In 1857, he joined the Warwickshire Militia as an ensign and in 1860 was promoted to lieutenant. That same year, however, he answered a call from Pope Pius IX for Catholics worldwide to rally in defense of the papal states. Coppinger traveled to Italy, where he was appointed a captain, distinguishing himself in fighting at Spoleto in Umbria. His bravery under fire won two papal decorations.

Bored with subsequent duties at the Vatican as part of a small Irish company, Coppinger secured a commission as a captain in the 14th U.S. Infantry Regiment on September 30, 1861, through the intercession of Archbishop John Hughes of New York and U.S. secretary of state William H. Seward. In fighting during the American Civil War, Coppinger was severely wounded in the neck in the August 29–30, 1862, Second Battle of Bull Run (Manassas). He returned to duty following a six-month recovery. Brevetted major for his actions in the Battle of Trevilian Station in Virginia (June 11–12, 1864), he was brevetted lieutenant colonel for his role in the Battle of Cedar Creek (October 19, 1864). In January 1865, he was advanced to colonel in command of the 15th New York Cavalry. He was again wounded in a skirmish near Appomattox Court House, Virginia, at the end of the war.

Remaining in the army thereafter as a captain in the 23rd Infantry Regiment, Coppinger served in the American West in a number of different infantry regiments. He was promoted to major in the 10th U.S. Infantry Regiment in March 1879 and to lieutenant colonel in the 18th Infantry Regiment in October 1883. For his performance in actions against hostile Native Americans during 1886–1888, Coppinger was advanced to colonel. He took command of the 23rd Infantry Regiment in January 1891, and he was appointed brigadier general on April 25, 1895.

At the beginning of the Spanish-American War, Brigadier General Coppinger commanded the 1st Independent Division of troops at Mobile, Alabama. On May 4, 1898, however, he was promoted to major general of volunteers, and his unit was redesignated as IV Corps. Although the corps had been assigned to take part in the Puerto Rico Campaign, the early end of the war precluded its deployment, and it remained in the United States.

Coppinger retired on October 11, 1898. He died in Washington, D.C., on November 4, 1909.

Corbin, Henry Clark

Birth Date: September 15, 1842

Death Date: September 8, 1909

U.S. Army officer and adjutant general of the U.S. Army during the Spanish-American War. Henry Clark Corbin was born on his family's farm in Clermont County, Ohio, on September 15, 1842. He attended public school before enrolling for two years at Parker Academy. He then taught school and studied law before becoming a second lieutenant with the 83rd Ohio Infantry in June 1862 during the American Civil War. He quickly rose through the ranks to become a lieutenant colonel of the 14th Colored Infantry in March 1864 and was brevetted brigadier general of volunteers for meritorious service in March 1865.

Corbin returned briefly to civilian life before reenlisting in 1866 as a second lieutenant in the 17th Infantry Regiment. Promoted to captain of the 38th Infantry, which combined with the 41st Infantry to form the 24th Infantry Regiment in 1869, Corbin spent much time in Kansas and the Southwest fighting in the Indian Wars. In

Brigadier General Henry Clark Corbin was adjutant general of the U.S. Army during the Spanish-American War. (Library of Congress)

1876, he was transferred to Columbia, South Carolina, to keep order during the contested presidential election of that year and became acquainted with Rutherford B. Hayes, James A. Garfield, and William McKinley. After Hayes's disputed victory, Corbin was briefly assigned to the White House before being transferred to fight Indians in the Northwest. In the autumn of 1877, he became the secretary of the Sitting Bull Commission that dealt with the problems of Indians traversing the American-Canadian border.

In 1880, President Hayes appointed Corbin to the adjutant general's office as a major. A close adviser to President Garfield, Corbin was present when the president was shot and later died and advised Garfield's successor, Chester A. Arthur. In 1882, Corbin became assistant adjutant general of the Department of the South. In 1885, he again participated in the Indian Wars, and in 1889, he was promoted to lieutenant colonel before taking the position of adjutant general of the Department of Missouri in 1890. The following year, he was transferred to the Department of Arizona. He received promotion to colonel in 1896, and in February 1898, he rose to the rank of brigadier general when he assumed the post of adjutant general. This was one of the most powerful positions in the army, for it controlled personnel matters.

Corbin was convinced that the United States was unprepared for war with Spain, and he labored unsuccessfully to muster the Hull Bill through Congress to increase military preparedness. As McKinley began to lose confidence in Secretary of War Russell A. Alger and commanding general of the army Major General Nelson A. Miles, he turned increasingly to Corbin for advice and support. Corbin also filled the void left by the increasingly rancorous relationship between Alger and Miles. Although Corbin unsuccessfully argued against using Tampa as a staging area for the war, he nonetheless increased the efficiency of the operation there, which served the army well. Because all army instructions came through the adjutant general's office, Corbin made certain that it never closed, and he often worked long hours without breaks. He also attended numerous meetings with civilian leaders to discuss the war effort.

After the war, Corbin recommended Elihu Root as secretary of war because the War Department would be responsible for administering the newly acquired overseas territories. As secretary of war, Root, a lawyer with no formal military training, relied heavily on Corbin for military advice.

In recognition of his services, Congress promoted Corbin to major general in June 1900, and he continued to work with Root to reorganize the army. Corbin toured China, Japan, and the Philippines in 1901, and the next year he observed German Army maneuvers. After returning to the United States, he commanded the Department of the East and the Department of the Atlantic and organized maneuvers in Manassas, Virginia, in 1904. Later that year, he received command of the Department of the Philippines before retiring as a lieutenant general in September 1906. Corbin died in New York City on September 8, 1909.

Correa y García, Miguel

Birth Date: 1830

Death Date: 1900

Spanish Army general and minister of war. Born in 1830, Miguel Correa y García joined the army as a young man and advanced rapidly in rank. During 1891–1894, he was governor of Cueta and of the captaincy-general of North Africa. On October 4, 1897, Premier Práxedes Mateo Sagasta appointed Lieutenant General Correa as minister of war. On March 26, 1898, Correa declared that war with the United States was inevitable. As this was generally opposed by the army, he threatened to resign, probably pro forma, when in April 1898 Sagasta announced a suspension of hostilities in Cuba. Although Correa understood Spain's weakness at sea, he believed that the army was ready for hostilities with the United States.

Following the beginning of the war, on June 3, 1898, Correa urged that Rear Admiral Pascual Cervera y Topete's Spanish squadron be sent to the Philippines rather than to the Caribbean, but the government rejected this request. Following the Spanish defeat in the Battle of Santiago de Cuba on July 3, Correa urged both Governor-General Ramón Blanco y Erenas in Cuba and Captain-General Manuel Macías y Casado in Puerto Rico to hold out against the Americans and opposed the Protocol of Peace of August 12, 1898. Correa died in Madrid in 1900.

Corregidor Island

Small island located at the entrance to Manila Bay, Luzon, the Philippines. Manila, the largest and most important city of the Philippines, is located on the interior of the bay. Luzon is the largest

and most northerly island in the Philippine archipelago. Tadpole-shaped Corregidor Island is about 3.5 miles in length and 2.74 square miles in total area. Its topography is somewhat rugged, and the tallest hills are on the round bulge about 1 mile wide and formed by rock cliffs sloping sharply upward some 628 feet. Toward the east, the surface levels off, creating a mesa that drops down to the edge of a lower flat area, which in turn falls off to a lengthy and thin extremity. Near the middle of the tail there is the 250-foot elevation of Malinta Hill.

The island's location at the mouth of Manila Bay effectively creates two distinct channels leading into and out of the bay. To the island's north lies the Boca Chica passage, and to the south is the Boca Grande passage, the larger of the two. Given its location, the island long protected the seaward passages to Manila.

When Europeans first landed at the Philippines in 1521, Corregidor was devoid of inhabitants. Once Spain colonized the Philippines, however, it erected fortifications along Manila Bay's shoreline. Recognizing Corregidor's strategic position as ideal for an outstation to warn coastal defenses of incoming ships, the Spaniards eventually placed three 8-inch guns on the islet. These were supported by subterranean arsenals and billets. Two of the guns were placed so as to cover the Boca Grande passage between the island and the Cavite Province coast that rounds the southern coast of Manila Bay. The third was positioned to be able to fire toward the Bataan Peninsula on the northern rim of the bay and command the two-mile-wide Boca Chica passage. Corregidor also housed a quarantine hospital and relay post where semaphore flag signals provided communications between Spanish vessels in the South China Sea and Fort Santiago's commandant in Manila. In 1836, Spanish authorities erected a lighthouse on the island to provide navigation assistance to merchantmen approaching Manila Bay. No additional defensive firepower was added during the approach of war with the United States.

When the Spanish-American War began in April 1898, Rear Admiral Patricio Montojo y Pasarón, commander of the Spanish squadron in the Philippines, considered giving battle to Commodore George Dewey's U.S. squadron at Boca Grande. But Montojo rejected the idea because the channel there was extremely deep, and mines were unavailable.

Dewey's Asiatic Squadron sailed through the passage on the evening of April 30, and after a rocket was shot from Corregidor, a battery on El Fraile, a satellite islet equipped with three 4.7-inch guns, fired on the American ships. The U.S. warships returned fire, the squadron navigated the channel, and the following day Dewey annihilated the Spanish squadron in the Battle of Manila Bay.

Following the Battle of Manila Bay, crewmen from the U.S. cruisers *Baltimore* and *Raleigh* demanded and received the surrender of the bay's island strongholds. Each surrendered, and their garrisons were paroled. Sailors from the U.S. ships landed, spiked the guns, and destroyed the munitions.

When the United States took possession of the Philippines following the Treaty of Paris in December 1898, it fortified Corregi-

dor. At the opening of the Pacific theater during World War II in early 1942, the island served as an American stronghold, withstanding a devastating five-month bombardment from Japanese forces. After a gallant defense, Americans and Filipinos on the island were forced to surrender on May 6, 1942. U.S. forces retook Corregidor in February 1945.

Cortelyou, George Bruce

Birth Date: July 26, 1862

Death Date: October 23, 1940

Politician, attorney, cabinet member, and private secretary for Presidents Grover Cleveland and William McKinley. George Bruce Cortelyou left voluminous diary entries that offer intimate insights into the moods, tensions, concerns, and activities of McKinley and his administration during the Spanish-American War. Cortelyou was born on July 26, 1862, in New York City. In 1882, he received a bachelor's degree from Massachusetts State Normal School, a teacher's college.

Cortelyou taught briefly before taking stenographic courses and mastering shorthand in search of a more lucrative career. His career in government service began with an appointment as secretary to the chief postal inspector of New York in 1891. He went on to graduate from Georgetown University Law School in 1895.

In 1895, President Cleveland hired Cortelyou as chief clerk at the White House. Cleveland in turn recommended him to his successor, McKinley. McKinley appointed Cortelyou as his assistant secretary in 1897. Cortelyou served as the president's principal secretary from 1900 until McKinley's death in September 1901. Indeed, Cortelyou was at the president's side when he was gunned down by a crazed assassin in Buffalo, New York. Cortelyou retained his post during the first years of the Theodore Roosevelt administration, becoming a trusted adviser to the president.

Historians have found Cortelyou's diaries and personal papers written during his service in the McKinley administration particularly valuable in reconstructing the president's views and attitudes prior to and during the Spanish-American War. It is through Cortelyou's correspondence that we know about McKinley's desire to minimize land warfare in Cuba and to emphasize command of the sea to bring about a quick resolution to the conflict with Spain. Cortelyou's papers also illuminate other aspects of the war,

George Bruce Cortelyou was private secretary to presidents Grover Cleveland and William McKinley. Cortelyou's diaries offer great insight on the formation of U.S. policy during the Spanish-American War. (John Clark Ridpath, *Ridpath's History of the World*, 1901)

including the strain on McKinley, his continued efforts to stay abreast of the situation in Cuba, and his manipulation of his own cabinet throughout the discussions about peace terms with Spain to achieve the conditions that he himself wanted at the outset of negotiations.

As part of his duties under Roosevelt, Cortelyou was charged with reforming, professionalizing, and consolidating White House operations in what became known as the West Wing. Cortelyou developed a set of procedures for White House protocol and established a formal line of communications between the White House and the press. He issued frequent press releases and appreciated the power of the media to advance a president's agenda. He also set up the first formal presidential effort to gauge public opinion through analyzing articles in the media. Roosevelt then selected Cortelyou as the first secretary of commerce and labor (1903–1904). In 1904, Cortelyou resigned his position to become the chairman of the Republican National Committee and oversaw Roosevelt's reelection. Roosevelt appointed Cortelyou postmaster general (1905–1907) and then secretary of the treasury (1907–1909). Cortelyou served in the latter post during the economic panic of 1907.

While Cortelyou realized that the Treasury Department had little power to maintain national economic stability, he affirmed the role of the treasury in protecting the nation's banking system and advocated the creation of a centralized banking system and an increase in the nation's money supply. He supported the passage of the Aldrich-Vreeland Act, which provided special currency to be issued in times of panic, and created a commission that eventually led to the creation of the Federal Reserve Board in 1913. In matters of social as well as economic policy, he was squarely in the vanguard of Progressivism, as reflected by the Roosevelt administration's policies.

Upon leaving government service, Cortelyou returned to the private sector as president of the Consolidated Gas Company, which later became New York Gas Company. He died in New York City on October 23, 1940.

Cosío y Cisneros, Evangelina

Birth Date: 1880

Death Date: Unknown

Daughter of Cuban revolutionary and president Salvador Cisneros Betancourt imprisoned by the Spanish at the beginning of the Cuban War of Independence (1895–1898). Evangelina Cisneros became a central focus of yellow journalists' attempts to portray the Spanish in the worst possible light in the years leading up to the Spanish-American War. Very little is known about her early life or her life after the brief notoriety she received in the mid-1890s. She was born in Cuba, probably in 1880. Her father was briefly president of the Cuban Revolutionary Government during the Ten Years' War in Cuba (1868–1878). After the revolt had been quashed, Spanish authorities sent Betancourt into exile on the Isle of Pines (present-day Isle of Youth), located off the southwestern coast of Cuba. His daughter eventually joined him on the Isle of Pines. There they were subjected to repeated abuses at the hands of Spanish authorities.

In July 1896, in the midst of the latest insurrection against Spanish colonial rule in Cuba, Cisneros was implicated in an alleged plot to murder the military governor of the Isle of Pines, Colonel José Bériz. With almost no evidence to even suggest her guilt, Spanish officials removed her from the island and imprisoned her in the Casa de Recojidas, a much-feared prison located in Havana. According to Cisneros, she was persecuted because she had rebuffed

the physical advances of Bériz, who concocted the assassination story to punish her. The Spanish, however, claimed that she had tried to lure Bériz into a trap.

It did not take yellow journalists long to uncover the story of Cisneros, which soon became a cause célèbre in the United States. While newspaper publishers Joseph Pulitzer and William Randolph Hearst engaged in a virtual war for circulation and readership particularly among their flagship papers in New York City, the Cisneros story became almost impossible to resist. Both men sought to exploit the story—and Cisneros's incarceration—for their own ends. Yet the story, as it unfolded, came to be seen as emblematic of Spain's colonial policies in Cuba. Indeed, Cisneros was the personification of the thousands of faceless Cubans languishing in prisons, many of whom had been put there because of their beliefs and not necessarily because of illegal activities. It did not hurt the cause, however, that Cisneros was young (not yet 17) and very attractive.

Hearst, via the *New York Journal*, an archetypal newspaper of the yellow press, reported extensively on Cisneros's plight. Always portraying the Spanish in the worst possible light and sometimes dramatizing the Cisneros story for effect, Hearst began a public relations blitz designed to pressure the Spanish to release Cisneros. Presenting the story as an epochal fight of freedom against oppression, the *New York Journal* urged its readers—particularly women—to begin a campaign to effect the release of the young Cuban. By the summer of 1897, some 15,000 American women had signed a petition that was sent to the Spanish Court in Madrid and demanded the immediate release of Cisneros. Among the women involved in the campaign were President William McKinley's mother, Julia Ward Howe, and Varina Howell Davis, the widow of Confederate president Jefferson Davis.

Despite the continuous and increasingly lurid coverage of the affair, the Spanish refused to release Cisneros, and General Valeriano Weyler y Nicolau, the heavy-handed governor-general of Cuba, indicated that the woman would be put on trial to determine her guilt or innocence. Few in the United States believed, however, that any trial proceedings would treat her fairly. Thus, in late August 1897, Hearst decided to launch a daring mission that would free Cisneros from prison and transport her to the United States. Hearst knew full well, of course, that such a mission would make for sensational headlines and news coverage.

Hearst charged one of his star reporters, Karl Decker, with plotting the prison escape. Enlisting the help of two Cuban revolutionaries, Carlos F. Carbonell and Francisco (Paco) De Besche, Decker planned the escape for October 7, 1897. Under the cover of darkness, the three men stole into the prison facility, sawed through the bars of Cisneros's prison cell and, with Cisneros in tow, scaled a ladder to reach beyond the prison walls and made good their escape to the harbor. Now disguised as a Spanish sailor, Cisneros was kept well hidden for two days, until Decker and Cisneros could board a steamer bound for New York. They arrived in New York Harbor on October 13 to much fanfare and throngs of giddy well-wishers. Hearst had pulled off one of the great feats of yellow jour-

nalism, although a good number of Americans—and his journalistic rivals—dismissed the story as an elaborate hoax.

After her brief flirtation with fame, Cisneros married Carbonell, who also happened to be a dentist. When the Spanish-American War ended, Cisneros settled in Cuba and faded into obscurity. Details of her later years and death are not available. The fact that Cisneros married Carbonell and the murky circumstances of her release have led many to believe that the entire affair was a hoax, perhaps conducted with the help of U.S. officials in Cuba. How Decker and his two accomplices were able to steal into the prison and then leave it entirely undetected has been a subject of considerable conjecture. Some have argued that the prison break was aided by clandestine Cuba revolutionaries who held positions of power within the Spanish colonial government. No matter how the story unfolded, it marked the apogee of yellow journalism. It also seemed to be representative of Hearst's revolutionary idea that news could be created and not simply reported.

Cottas

Moro (Muslim) forts or strongholds indigenous to the southern Philippines. Prominent datus (chiefs) owned many cottas, which included their residences. When menaced by an enemy, the datu and his followers mustered the community to a common defense behind the cotta's protective walls.

The cotta was an earthwork of soil or rock that was surfaced and massed with a thornlike bamboo exterior. Moats between 5 and 30 feet in depth and two or more in number ringed the typical cotta. Their pits were 6 to 8 feet apart with bases dotted with sharp palisades into which attackers would tumble and become impaled. Slender and indirect entry ports shielded gateways from external projectiles. For protection from hostile fire, the cotta contained a split-bamboo shelter with a 10-foot-wide top slanted out at a 20-degree angle. Small brass cannon known as lantakas were placed either outside the cotta to cover the moats or inside to discharge through recessed openings or apertures in the earthworks.

The cotta's ramparts were anywhere from 75 to 100 feet in length per side and 10 to 12 feet in height. Outside walls were vertical, but their interior consisted of stairs 2 feet or more wide. The

summit was usually 2 feet thick but at least 12 feet thick at ground level. The typical cotta's physical structure could for a time withstand limited artillery fire, mining, and assaults by those attempting to scale the ramparts.

Nevertheless, protracted siege campaigns made the cotta untenable. Generally supplied with only limited provisions and munitions, the fortress was meant to hold against a fairly brief enemy assault. The Moros generally avoided siege warfare. Cottas were usually poorly armed, and most of their cannon were obsolescent. Manufactured in China, these guns were secured in barter for other goods.

In operations against the Moros, the U.S. military usually encircled a cotta with as few as 300 soldiers at distances of 200 to 500 yards. Whenever a cotta was surrounded, escape became impossible. U.S. troops used mortars to bombard a cotta's interior and used light artillery against its walls. Generally the Moros hunkered down, refusing to either charge the besiegers or vacate their stronghold. As the Moros were generally ill-prepared for a long siege, U.S. forces usually won by the sheer endurance of their siege or by slowly pulverizing the cotta's walls.

The Moros excelled in hand-to-hand fighting, generally employing the kris (dagger) and barong (thin-edged sword). Many also carried lances. Those Moros in Lanao and Cotabato provinces

on Mindanao and afterward in the Sulu archipelago who opposed U.S. rule used these weapons with great effectiveness against U.S. troops. For that reason and because the Moros insisted on taking their families with them to the cottas, many U.S. commanders preferred siege operations.

Coxey's Army

A group of unemployed men led by Jacob Coxey who marched to Washington, D.C., during March and April 1894 to protest the wide-

Members of Coxey's Army on a barge in the Chesapeake and Ohio Canal on their way to Washington, D.C., to protest the widespread unemployment of the economic depression that began in 1893. (Library of Congress)

spread unemployment caused by the Panic of 1893, an economic depression during 1893–1897. In 1893, a panic and crash on Wall Street combined with other economic problems to create a profound economic crisis in the United States. Indeed, it was the worst depression to hit the nation in its history and was superseded only by the Great Depression of the 1930s. By the spring of 1894, nationwide unemployment had reached 15 percent and would eventually reach 18 percent before receding. The depression affected millions of Americans, many of them city dwellers who labored in factories. But it also profoundly affected American farmers, who had been in dire straits even before the economy turned downward.

To bring to the attention of Washington the plight of the embattled farmer and factory worker, Coxey, a Populist Party politician from western Pennsylvania, organized a march on Washington that began in Massillon, Ohio, on March 24, 1894. Coxey had hoped to pressure Congress and the president to alleviate the high unemployment of the time by appropriating funds to be used to put the unemployed to work on public works projects. Coxey also believed that the federal government should begin printing more unbacked money to jump-start the economy and put Americans back to work. He was an ardent foe of the gold standard and was, as most Populists were, an adherent of free silver monetary policies. While Coxey's proposals do not seem so far-fetched today (indeed the Franklin Roosevelt administration followed some of Coxey's prescriptions in the 1930s), in 1894 they were considered radical and unworkable.

It is believed that the Coxey protest was the first notable popular protest movement marching on Washington, D.C. Beginning with about 100 men in Ohio on March 24, Coxey's Army grew en route, joined by farmers and industrial workers alike. By April 30, 1894, as the throng marched into the nation's capital, the protest numbered more than 500 people. President Grover Cleveland was neither moved nor amused by Coxey's Army and ordered federal troops to disperse the crowd, which had not engaged in any violence or destructive behavior.

The following day, federal troops along with Washington, D.C., police arrested Coxey and other leaders of the march, while the remaining protestors dispersed on their own initiative. Cleveland set a precedent by using federal troops to break up the protest, and he again used them to break the paralyzing Pullman Strike in the summer of 1894. While Coxey was not successful in lobbying Congress to implement the plans he had envisioned, he was quite successful in bringing to the fore the suffering of unemployed Americans. Coxey's Army was covered extensively in the national press, and Coxey received support from groups all across the country. His efforts were particularly well received in farming communities, and in Osceola, Nebraska, as many as 5,000 people organized a picnic to honor Coxey's efforts.

It is widely believed that the popular book *The Wonderful Wizard of Oz* (1900), a highly symbolic story, was based at least in part on Coxey's Army. The creator of the tale, L. Frank Baum, had witnessed Coxey's Army as it made its way to Washington. Dorothy

and the Scarecrow represent farmers, the Tin Man stands for industrial laborers, the Cowardly Lion represents timid do-nothing politicians, and the Yellow Brick Road signifies the route Coxey's Army took to Washington to see the Wizard (allegedly the president). Meanwhile, Dorothy's shoes (silver in the book) represented free silver, which would set them all free. Coxey's Army resonated throughout the nation in spectacular fashion and is a prime example of the problems and opportunities present in America in the 1890s.

Crane, Stephen

Birth Date: November 1, 1871

Death Date: June 5, 1900

Celebrated novelist and journalist during the Spanish-American War. Stephen Crane was born on November 1, 1871, in Newark, New Jersey, the 14th child of a Methodist minister. Crane began writing stories at a young age and attended Lafayette College and Syracuse University but never earned a degree. By 1890, both his parents were deceased, and he moved to New York City, where he worked as a journalist and freelance writer. In 1895, his second novel, *The Red Badge of Courage*, became a popular and critical tour de force. Considered the first truly modern war novel, it traces the life of a soldier during the American Civil War. It remains a classic of its genre.

Because of his journalistic expertise and international reputation as a writer, Crane was employed in 1896 as a war correspondent by the *Bachelor Newspaper Syndicate* to cover the Cuban rebellion. His ship sank en route, leaving him and seven other passengers drifting for 30 hours in an open boat awaiting rescue. This provided him a backdrop for his most famous short story, "The Open Boat" (1898). Thwarted in his attempt to cover the Cuban revolt, he soon began to report on the Greco-Turkish War, which gave the young novelist his first personal look at war.

In 1898, Crane again became a war correspondent when war broke out between Spain and the United States. This time his assignment was to cover several Cuban battles for a number of New York papers. Crane was said to have seen more of this war, including both naval engagements and land battles, than anyone else and was also recognized for his coolness under fire. As with most of the other American reporters, he saw little distinction between participant and reporter. He carried weapons and helped American

forces, even being praised in at least one official report that acknowledged his assistance.

Crane's early war reporting was almost jingoistic in its patriotic mantra. As the conflict continued his reports matured, mixing opinion with actual events, the uncommon with the everyday. He also focused not on celebrities or high-ranking officers but instead on rank-and-file soldiers.

By mid-1899, Crane's health was rapidly deteriorating, a condition brought on by malaria he had contracted in Cuba. He had also contracted tuberculosis. Crane died at the age of 28 in Badenweiler, Germany, on June 5, 1900. His writing was not only typical of its time—sensationalistic, Anglo-centric, and at times jingoistic—but it also set the stage for modern journalistic techniques. Indeed, his reporting during the Spanish-American War represented a new style of journalism that endures to the present day.

Creelman, James

Birth Date: November 12, 1859

Death Date: February 12, 1915

Writer, journalist, editor, and quintessential practitioner of yellow journalism. James Creelman was born in Montreal, Canada, on November 12, 1859, to a working-class family. He attended primary school in Canada but left home in 1872 at age 13 to move to New York City. A precocious and inquisitive youth, he caught the eye of Thomas De Witt Talmadge under whose tutelage he studied for a time at New York's Lay Theological College. Creelman also read for the law under Roscoe Conkling, a major Republican Party operative and politician.

Creelman's first full-time job was in the print department of the Episcopal newsletter *Church and State*. This began his long fascination with writing and publishing. He dabbled in poetry but quickly realized that he was unlikely to make a living from that pursuit alone. He did not, however, give up on his dream to become a well-read writer. After working for several small newspapers, in 1876 he landed his first big job as a reporter, working for the *New York Herald*.

Early on, Creelman exhibited reporting and writing techniques that would serve him well in the era of yellow journalism. While working for the *New York Herald*, he relished traveling great distances and putting himself at considerable risk to ferret out and report on a story. He was reportedly shot at while attempting to report on the famous Hatfield-McCoy feud, and he broke an arm while participating in a hot air balloon ride. By the early 1880s, he had become the newspaper's star reporter and had exposed fraud in the railway and steamship industries. Several of his stories prompted court action or government inquiries, including U.S. congressional hearings in which he was a principal witness.

In 1889, James Gordon Bennett Jr., the owner and publisher of the *New York Herald*, asked Creelman to take over the editor's desk of the London edition of the *Herald*. That newspaper was in serious trouble, however, and Creelman proved unable to make it financially viable. In 1890, he joined the Paris edition of the *Herald*. It was here where the journalist developed his trademark penchant for seeking out and successfully conducting interviews with notorious, obstreperous, or secretive individuals. Among his most famous interviews were those with Russian novelist Leo Tolstoy and Pope Leo XIII. Creelman was the first non-Catholic, English-speaking journalist to talk with the pope. Creelman also interviewed Chief Sitting Bull and Mexican president Porfirio Díaz, among other interesting characters.

In 1891, now back in New York, Creelman edited the *Evening Telegram* before returning to the *New York Herald*, for which he reported for several months from Haiti, covering that country's political and cultural scene. Two years later, in 1893, he left the newspaper business for a brief foray into magazines. For a short time he worked for *Illustrated American* and *Cosmopolitan*. He soon tired of the more staid employment offered by magazines and returned to the newspaper world in 1894. This time, he took a reporting job with Joseph Pulitzer's *New York World*, a publication that became synonymous with yellow journalism. Creelman's first assignment was to cover the conflict between the Japanese and Chinese in China, where he followed the Japanese Army. He went missing for a time and was mistakenly reported to have been beheaded by the Chinese. He then moved on to Korea, where the Japanese were also actively involved, and interviewed the Korean monarch. Creelman's reporting of atrocities committed by the Japanese during the fighting at Port Arthur earned him great attention, although many Americans questioned the validity of some of his reporting.

In 1896, Pulitzer sent Creelman to Cuba to report on the Spanish-Cuba conflict. His reporting of Spanish atrocities and mistreatment of the Cubans helped whip up U.S. condemnation of Spain. The Spanish were not amused by his reporting, however, and expelled him from the island. The following year, William Randolph Hearst, the other great scion of yellow journalism, recruited Creelman to write for his *New York Journal*. Creelman was dispatched first to Europe to gain interviews with leaders and politicians there and then briefly reported on the Greco-Turkish War before going to Cuba as war was about to break out in the spring of 1898. Ever the adventurer, Creelman joined the 12th Infantry in July 1898 and was badly wounded in the arm during an engagement with Spanish troops. Throughout his reporting from Cuba, from 1896 on, he made no bones about his sympathy for the Cubans and his antipathy for the Spanish.

Creelman returned from the war something of a war hero and was also greatly admired for his reporting from the front. By now, his almost unbelievable journalistic exploits and the fame he had garnered because of his writing had far exceeded his expectations when he entered journalism some 20 years earlier. With this sense of accomplishment came a momentous ego, however, and he found himself at constant odds with his publishers, including Pulitzer and Hearst.

Creelman turned to book writing for a time, publishing a record of his exploits titled *On the Great Highway* (1901) and a novel titled *Eagle Blood* (1902). He then turned to writing editorials until 1906, at which time he took a position as a civil servant in New York with an eye toward effecting reform. Soon realizing that fighting city hall was almost impossible, he went back to Hearst's *New York Journal* and covered the beginning of World War I in Europe. In poor health, which was exacerbated by his smoking habit of 30 cigars a day, he fell ill soon after reaching Germany. Creelman died in a medical clinic in Berlin on February 12, 1915.

Crosby, Ernest Howard

Birth Date: November 4, 1856

Death Date: January 3, 1907

Anti-imperialist poet, judge, social reformer, member of the New York Peace Society, and head of the New York Anti-Imperialist League. Born in New York City on November 4, 1856, Ernest Howard Crosby was the son of a wealthy theologian and educator who served as pastor of the Fourth Avenue Presbyterian Church and for 11 years as chancellor of the City University of New York.

American author Ernest Howard Crosby, who headed the New York Anti-Imperialist League during the Spanish-American War. Crosby sharply criticized U.S. actions in Cuba and the Philippines. (Library of Congress)

Educated in an elite private school, Crosby attended New York University and Columbia Law School. For 10 years, he practiced law and in 1887 succeeded Theodore Roosevelt as a Republican assemblyman in the New York state legislature. In 1889, President Benjamin Harrison appointed Crosby to an international judgeship in Egypt.

Crosby's service on the International Court in Alexandria, Egypt, was a life-changing experience. In Egypt he saw firsthand the consequences of European imperialism in Africa. This spiritual crisis in 1894 led him to read Leo Tolstoy's *My Life*. The work converted Crosby to Tolstoy's doctrine of love and nonresistance to evil. Crosby resigned his \$10,000-a-year judgeship and went on a pilgrimage to Tolstoy's home at Yasnaya Polyana in Russia.

Returning afterward to the United States, Crosby immediately took up the banner of nonresistance and became a leading disciple of Tolstoy in America. In numerous speeches and articles, Crosby advocated pacifism, antimilitarism, and anti-imperialism. The Spanish-American War and the Philippine-American War aroused his deepest passions.

After Congress declared war against Spain in April 1898, Crosby and several other reformers issued "A Declaration of Peace." Addressed to the "Workers of America," it called for arbitration to settle a "senseless war" between American workers and Spanish workers. Crosby believed it ironic that jingoists calling for justice in Cuba ignored economic oppression at home. His *Peace Echoes* (1898) and *Swords and Plowshares* (1902) were collections of poems indicting the war and those responsible for it.

Crosby, who had been a member of the New York Peace Society, accepted the position as president of both the New York Anti-Imperialist League and the American Anti-Imperialist League. Inspired by his Tolstoyan belief in nonresistance, he lashed out at the war in Cuba and the Philippines. Despite having previously held the rank of major in the National Guard, he mocked all things military in a 1901 Boston speech titled "The Absurdities of Militarism."

Crosby was a popular speaker for the Anti-Imperialist League, traveling principally throughout the Northeast questioning how great powers such as Britain and the United States wantonly picked on nations of peasants such as the Boers in South Africa and the Filipinos.

In the span of six weeks, Crosby composed the best anti-imperialist novel of the period, *Captain Jinks, Hero* (1902). The work was a fanciful tale depicting the American conquest of the Cubapines and the daring rescue of the missionaries in Porsslania. The book was modeled on *Don Quixote*. Although *Captain Jinks* makes better reading than a serious literary work, it targets the military mind while condemning the press and Christian churches for praising the exploits of the so-called heroes of war.

With military conflict continuing in the Philippines, Crosby continued his denunciations of American imperialism. These were published in the magazine *The Independent* (1902). In these works he criticized President Theodore Roosevelt's plan to construct a large navy and accused the United States of trying to spread its in-

stitutions by physical force, of transporting racism by calling Filipinos "monkeys," and of deceiving itself by claiming that its mission was justified in the name of benevolent Christianity.

The persistent theme in Crosby's anti-imperialism was that the American ideal of the chosen people led to the twin evils of hypocritically violating those ideals overseas while failing to fulfill them at home. Crosby's final effort for world peace was "A Precedent for Disarmament: A Suggestion to the Peace Conference" (1904). It was offered as a model to the delegates to the Second Hague Peace Conference. Crosby died in Baltimore, Maryland, on January 3, 1907.

Crowninshield, Arent Schuyler

Birth Date: March 14, 1843

Death Date: May 27, 1908

U.S. admiral. Born in New York City on March 14, 1843, Arent Schuyler Crowninshield was appointed an acting midshipman on September 25, 1860. He graduated from the United States Naval Academy, Annapolis, on May 28, 1863, during the American Civil War (1861–1865). He served with the North Atlantic Blockading Squadron and was advanced to ensign on July 4, 1863. Serving on the steam sloop *Ticonderoga*, he took part in the assault on Fort Fisher during December 1864–January 1865.

Continuing in the navy after the war, Crowninshield enjoyed routine assignments and promotion. He was advanced to master on November 10, 1865; to lieutenant on November 10, 1866; to lieutenant commander on March 12, 1868; and to commander on March 25, 1880. During 1878–1881 he commanded the sailing sloop *Portsmouth* and during 1887–1891 he had charge of the naval school ship *St. Mary's*. From 1891 to 1892 he commanded the screw sloop

Kearsarge. Promoted to captain on July 21, 1894, Crowninshield took command of the battleship *Maine* on its commissioning in 1895.

In 1897, Crowninshield was appointed chief of the Bureau of Navigation with the rank of rear admiral. During the Spanish-American War, he was an important member of the Naval War Board that directed the naval war with Spain, and Secretary of the Navy John D. Long relied heavily on his advice in developing naval strategy during that conflict and the subsequent Philippine-American War (1899–1902). Crowninshield retired from the navy in 1902 and died on May 27, 1908.

Cuba

Island located between the Gulf of Mexico and the Caribbean Sea, approximately 90 miles south of Key West, Florida. The island of Cuba covers an area of 42,804 square miles and is 708 miles long from west to east and 135 miles wide from north to south. In addition, the coastline of the island is approximately 2,100 miles long. Cuba's climate is categorized as tropical to semitropical, meaning that it has long, hot, humid, and relatively wet summers and drier but warm winters. Except at higher altitudes, Cuba is frost-free. The island is, however, quite susceptible to hurricanes, especially along its southeastern coast. The temperature averages 82 degrees during the summer and 70 degrees in the winter. Average annual rainfall on the island is about 50 inches. Major Cuban cities include Havana (the current capital), Santiago, and Camagüey. At the time of the Spanish-American War, Cuba's population was estimated at 1.57 million, making it the most populous by far of all the Caribbean islands. As with other locales in the Caribbean, Cuba's chief industries at the time were largely agricultural, with sugar cultivation and processing being the predominant moneymaker and employer.

After the landing of Italian-born explorer Christopher Columbus on the island in 1492, Cuba effectively came under the control of Spain in 1511. This was mainly a result of the decimating conquest of Diego Velázquez and Pánfilo de Narváez, a campaign that was designed to scare the local inhabitants into submission. Bartolomé de las Casas described their tactics as being nothing short of a blood-bath. In 1512, gold was discovered in the streams of the highlands of central Cuba, and under the circumstances of a brief gold rush, six towns had been established on the island by 1515. However, as Spanish invaders penetrated farther into present-day Central and South America and found vast mineral wealth there, Cuba lost its great im-

Deployment of the Spanish Navy on the Eve of the Spanish-American War

Location	Sailors	Marines	Vessels
Spain	6,778	5,412	6 battleships, 3 protected cruisers, 3 auxiliary cruisers, 8 destroyers, 14 torpedo boats, 15 gunboats, 12 lesser craft
Cuba	2,533	581	6 cruisers, 6 destroyers, 9 gunboats, 29 patrol boats, 3 tugs, 6 lesser craft
Philippines	2,479	2,515	10 cruisers, 15 gunboats, 9 patrol boats, misc. lesser craft
Puerto Rico	291	23	2 cruisers, 2 gunboats

portance to the Spanish Crown and was relegated to being a strategic position at the crossroads of transoceanic naval transport.

In 1762, during the Seven Years' War (1756–1763), the British captured the Spanish colony. Anglo rule would be short-lived for a variety of reasons. The most important was that Cuba was a rival to English-held Jamaica in terms of sugar production. Many Englishmen who held investments in Jamaican sugar interests did not wish to see a competitor taken over by England. Many of these men served in Parliament, and consequently they substantially influenced the peace negotiations once hostilities between the English and Spanish ended in 1763. As a result, Spain regained control of Cuba in July 1763.

From this point on, the Spanish tried to capitalize on the agricultural wealth of the island. The motives for this were financial: to increase revenue for the Bourbon monarchy and to raise funds to pay for the defense of this highly strategic position.

What Cuba lacked in terms of precious metals it certainly made up for in agricultural potential. The principal crops of Cuba in the 19th century were sugar, tobacco, and coffee. They remain so to this day. The 1800s saw increases in production for all three cash crops, but by century's end sugar had emerged as the dominant export. One reason for Cuba's impressive agricultural growth was the fact that between 1762 and the mid-1860s the island had escaped the massive turmoil that had produced independence movements in numerous Latin American nations. In addition, there were major technological advances over the course of the century, such as steam shipping and railroads, that promoted increased agricultural production. Moreover, the economic growth of the agricultural industries coincided with the increase in the slave trade in the region from roughly 1762 through 1886, at which point slavery was abolished in Cuba.

The question of how to supply workers for such labor-intensive efforts as sugar cultivation had been an issue that bedeviled the island since it came under Spanish rule. By 1515, many of the indigenous peoples of the island had perished because of either diseases introduced by the Spaniards or inhumane working conditions. Consequently, many of the workers required for the backbreaking labor of Cuba's agricultural industries had to be imported from

Postcard depicting the taking of Guáimaro by insurgent forces led by General Calixto García y Iñiquez in October 1896 during the Cuban War of Independence (1895–1898). Luis Rodolfo Miranda is depicted raising the Cuban flag at center. (Library of Congress)

either Africa or nearby Caribbean islands. The majority of these workers came as slaves. The regulation of slave labor was complicated further in 1791 thanks to the Haitian Revolution. While Cuba's major competitor in sugar production at the time was effectively eliminated, the exiles who went to Cuba brought with them horrid tales of the death and destruction wrought by the slaves. This in turn forced tighter controls on the Cuban slave labor source.

Despite the ongoing labor issue, the period between the reacquisition of Cuba by the Spanish in 1763 and the outbreak of the Spanish-American War in 1898 witnessed a substantial increase in international trade to and from the island. While Spain had temporarily granted Cuba freedom to engage in international trade, the Spanish Crown reneged on those rights in 1799. However, Spain was preoccupied with the Napoleonic Wars in Europe and could not efficiently regulate activities in its overseas dominions. This dilemma was further complicated as the Spanish Navy took horrendous losses during the Napoleonic Wars, especially at the 1805 Battle of Trafalgar.

By 1898, the United States had emerged as Cuba's premier trading partner despite high American tariffs on international goods. Indeed, over the course of the 19th century, the United States strove to bring Latin America under its sphere of influence. Cuba became an island of vital importance because of its strategic position in the

Caribbean as well as its agricultural potential. The first attempt to bring Cuba into the United States occurred during Thomas Jefferson's administration (1801–1809) shortly after the 1803 Louisiana Purchase. Repeated efforts during the next century failed, such as the aspirations of Henry Clay in 1825 or those of American investors in the Cuban sugar industry at the end of the century. In 1825, U.S. policy prevented the annexation of Cuba because it best suited the U.S. government in terms of national strategy for Spain to remain the colonial power and because the North was loath to have another possible slave state. And in the latter half of the 19th century, American businessmen played a direct role in thwarting any effort at Cuban annexation in order to protect the domestic sugar beet market and to enhance sugar production in the western United States.

Cubans themselves were contemplating either assimilation into the United States or outright independence. In 1809, with many Latin American states actively fighting for independence, Román de la Luz advocated a similar course in Cuba. However, the Cuban intelligentsia and the planter class did not support it. In fact, many planters preferred annexation by the United States. Indeed, in 1822 a number of representatives of the planter class lobbied in Washington, D.C., for U.S. annexation. However, just like American attempts to bring Cuba into the United States, all such Cuban efforts proved futile.

In the last half of the 19th century, independence movements came to the fore, and Cuba found itself waging a series of devastating wars as it tried to break free from the increasingly weakening Spanish Empire and colonial rule. The first, the Ten Years' War of 1868–1878, left many agricultural regions, such as Cienfuegos and Oriente, in ruin. There was also considerable loss of life. Nevertheless, this painful experience further instilled in Cubans the idea of a united, independent Cuba as propagated by the Cuba Libre movement. During 1878–1879, yet another anticolonial struggle broke out, known as the Little War or Guerra Chiquita. This struggle was short-lived because many Cubans, exhausted from the earlier 10-year conflict, chose not to rally to the cause of independence.

Despite small increases in autonomy that Spain had grudgingly granted to the Cubans, by 1895 Cuba was again in the throes of a war for independence. This time, however, the United States would intervene. This came about in part to prevent another European power from gaining a toehold in the region and because of a sharp increase in American investments in Cuba.

As a result of the Spanish-American War, which lasted in Cuba for little more than two months (June–August 1898), Cuba came further under the hegemonic influence of the United States but was not annexed. Instead, the United States, via investment and trade, brought Cuba into its orbit chiefly by way of economic arrangements. While the U.S. government did eventually grant Cuba its independence in 1902, it did so under the restrictions of the Platt Amendment, which carefully stipulated how Cuba was to conduct its economic and foreign policies. Indeed, this amendment gave the United States the right to intervene in Cuban affairs any time American policy makers saw fit. Over the next 50 years, American investment in the island rose considerably in all relevant industries. American hegemony in Cuba was clearly evident in 1906, as the United States occupied Cuba for the second time in 10 years in response to a revolt against the Estrada government. The threat of American intervention endured through the first half of the 20th century.

Despite American hegemony over the new nation, many Cubans rallied behind José Martí y Pérez's ideal of a nation for all, forged in blood from the Ten Years' War. The common experience of the wars for independence emphasized this notion and galvanized Cubans around the idea of Cuban nationalism that de-emphasized the pressure of racial divisions. In 1901, suffrage was granted to all males regardless of racial background. Nonetheless, there were deep-rooted racial divisions that stretched back to the period of European conquest. Consequently, many of the conflicts experienced on the island after 1902 were either instigated or at least fueled by racial tensions, thus preventing Western notions of stability. Exacerbating these problems were American policy and economic hegemony, which tended to keep corrupt leaders in power and kept the lower classes mired in poverty.

Cuba, Spanish Colonial Policies toward

Spain planted its first permanent settlement in Cuba in 1511 amid strong native opposition. Within a few decades, the Spanish government had successfully instituted the *encomienda* system, a trusteeship labor arrangement in which natives were assigned to work for a wealthy Spaniard who was given control of a specific area of land. The system helped Christianize the natives, structure the economy, and consolidate Spanish political power. Spain initially ruled Cuba directly, and the governor, appointed by the Spanish Crown, had almost complete control of all basic government functions as well as the military. The Spanish abused the natives, however, and concentrated on exploiting the island's natural resources. In part through its influence with the Catholic Church, the Spanish monarchy thoroughly dominated natives, settlers, and blacks. Cuba received relatively little attention from the mother country after it became apparent that its other colonies were more valuable, and Cuba served chiefly as a way station within the empire. This resulted in more casual governance.

As tobacco farming emerged as a profitable enterprise, the Crown used its authority to create a government monopoly over that industry. Growers revolted in the 1720s, but Madrid maintained its tight control over the island for almost another century. King Charles III's Bourbon Reforms in the middle of the 18th century stimulated the Cuban economy and brought liberal ideas to the island. Later in the century, Spain acquiesced to settlers' requests to ease trade restrictions on sugar, end limits on the importation of slaves, and lower tariffs on Cuban imports in an effort to keep them loyal.

The Napoleonic Wars of the early 19th century diverted Spain's attention from Cuba, and the island's economy and political sensibility matured greatly with such salutary neglect. Madrid assented to the private ownership of land for the first time on Cuba by allowing large estates to be subdivided into sugar and coffee plantations and

giving them to established Spanish settlers. Thus, by the mid-19th century, the Cuban economy was flourishing, with sugar and coffee as the two cash crops that fueled economic growth.

Most Cubans were relatively content with Spanish rule through the first few decades of the 19th century. Nevertheless, the growing and prosperous Creole (locally born Cubans of European descent) aristocracy became increasingly concerned that Madrid would be ineffective in dealing with a large-scale slave rebellion such as that in Haiti. They also came to believe that continued rule by Spain might eventually result in the elimination of slavery, which would present grave economic consequences. Small slave revolts in the 1840s intensified these concerns and encouraged many wealthy landowners to covet a political connection with the United States.

Some liberal intellectuals in Cuba had been calling for independence since the 1820s, but Spain flatly rejected the idea of releasing its possessions and from the 1830s on steadfastly sought to continue its rule. By 1860, there were many Creole elites who favored U.S. annexation of Cuba, but a variety of factors, most notably the American Civil War, ended their aspirations. Still, the desire to reform the political relationship with Spain remained and was strengthened by others who wanted equal rights, less centralized power, and gradual emancipation. This reformist movement combined with the successful independence movement in nearby Santo Domingo prompted Madrid to explore possibilities for reform. But the government ignored the policy recommendations of a commission specifically elected to suggest reforms. This coupled with the fact that the government had levied new taxes demonstrated that the Crown was not serious about reform in Cuba.

In 1868, Creole landowners began the Ten Years' War, the first major effort to bring about Cuba's independence. Spain responded forcefully and by 1871 had largely contained the rebellion, which lacked foreign support and was hampered by internal leadership struggles. Exhausted revolutionaries finally signed a peace treaty in 1878. In the wake of the war, the Crown maintained its refusal to undertake political reforms. With the issues unresolved, a new independence movement coalesced under José Martí y Pérez. Working with key figures from the earlier conflict, he spearheaded the Cuban War of Independence that began in 1895. The effort survived Martí's death in the first year of hostilities, and Cubans made territorial gains until Madrid appointed a new governor-general in 1896, Valeriano Weyler y Nicolau, who was known for his undue harshness.

Weyler soon announced his now infamous policy of moving civilians to reconcentration camps, known as the *reconcentrado* system. Although hundreds of thousands of civilians died from disease and starvation in the camps, the program was successful in regaining the initiative for Spain. However, Spanish policies toward Cuba beginning in 1896 garnered much attention in the United States. Before long, Spain and the United States were locked in an escalatory spiral of recriminations and denials that ultimately resulted in the Spanish-American War. It is no exaggeration to assert that Spanish policies toward Cuba were a major cause of the 1898 war.

Cuba, U.S. Naval Blockade of

Start Date: April 22, 1898

End Date: August 14, 1898

On April 25, 1898, the United States officially declared war on Spain. On April 21, in anticipation of certain war, President William McKinley ordered a naval blockade of key Cuban ports on Cuba's northern coast to prevent Spanish reinforcements from reaching the island and to eliminate commercial trade with Cuba.

As early as March 23, 1898, Secretary of the Navy John D. Long produced a plan to close the ports along the western half of Cuba's northern coast. On April 18, Rear Admiral William T. Sampson, commander of the North Atlantic Squadron, issued a memorandum concerning ship dispositions for such a blockade. In early 1898, the U.S. Navy possessed 96 ships of varying qualities and capabilities. However, the navy's ability to enforce a blockade of Cuba was augmented substantially by a \$50 million emergency congressional appropriations bill passed on March 9. That bill authorized the purchasing or leasing of additional ships from private sources and other government agencies, including the U.S. Revenue Cutter Service.

Sampson's squadron began the process of implementing the blockade on April 22 when his ships sailed from Key West, Florida, for Cuba. Although the blockade officially commenced on the morning of April 23, it took time to fully implement because of delays in providing adequate numbers of ships as well as the requisite logistical support for the fleet, such as coal, food, and fresh water. Sampson was hard-pressed to cover 2,000 miles of Cuban shoreline with just 26 ships. The shortage of ships prevented him from maintaining a continuous blockade of the southern coast and prevented McKinley from proclaiming a blockade of it until June 28. By late June, Sampson was able to close off the southern ports as well, preventing the Spanish from obtaining supplies from Mexico and Central America. Eventually, his squadron grew to 124 ships. Still, his naval assets were spread perilously thin given the long shorelines and distances involved, and occasionally ships were absent on other duties. Additional ships were continually added to enforce the blockade, the most famous of these being the battleship *Oregon*,

NAVAL BLOCKADE OF SANTIAGO, 1898

which steamed from its Bremerton, Washington, home port around South America to reach Key West.

The blockade was carried out according to international law, with ships having left Spain prior to the war being declared immune from search. Spanish vessels that were docked in U.S. ports when the war was declared were given until May 21 to leave and were permitted to take on enough coal to reach their home port. However, inconsistencies in blockade enforcement did occur. On August 8, 1898, a Navy Department official reported that three neutral nations were filing complaints with the U.S. State Department about their vessels being seized and expressing concern about potentially costly damage claims that ship owners could file against the United States.

The blockaders intercepted ships in transit to Cuba, seized contraband goods consistent with maritime law provisions, and engaged in several battles with Spanish ships. The first of these clashes occurred on April 27 when U.S. ships were fired upon and responded by shelling Punta Gorda at Matanzas to prevent construction of Spanish artillery batteries there.

Further combat actions occurred on May 11 when U.S. warships cut the cable to Madrid at Cienfuegos. Later that same day, hidden Spanish batteries at Cárdenas attacked several U.S. ships including the torpedo boat *Winslow*, which was seriously damaged.

Another U.S. squadron, commanded by Commodore Winfield Scott Schley, was ordered to leave Charleston, South Carolina, for Key West to prepare to intercept a Spanish squadron under Rear Admiral Pascual Cervera y Topete, believed to be headed to Cuba from the Cape Verde Islands. Schley's squadron arrived off Santiago on May 26. These reinforcements enabled a southern front to be added to the U.S. naval blockade. In the meantime, however, Cervera's ships had managed to make it to Santiago de Cuba unhindered. Sampson then administered a tight blockade of Santiago. On the morning of July 3, 1898, Spanish forces attempted to break out of the harbor there, producing a running battle in which all the Spanish ships were either sunk or scuttled.

Assorted other engagements between U.S. and Spanish forces occurred at various locations in Cuba, including west of the Isle of Pines, Barracoa, and Manzanillo, which resulted in Spanish ships being destroyed or captured along with some modest U.S. losses. The war ended with a cease-fire agreement on August 12, 1898, although American naval assets remained in the area for a considerable time thereafter. The naval blockade was officially lifted on August 14.

Despite some inconsistency in execution and enforcement, the blockade was relatively successful in cutting off Spanish forces from supplies and reinforcements. A number of blockade runners did make it through the blockade, the most famous of these being the *Montserrat*. Many others were either destroyed or captured, however. Significant credit for the blockade's military successes stems from effective planning and from training exercises conducted by the U.S. Naval War College and the Office of Naval Intelligence in the years before the war and to legislation in 1890 and 1892 authorizing new naval construction. The blockade did cause some

hardship for the Cuban civilian population in the way of food shortages and clothing and a scarcity of kerosene, but its relatively short duration prevented these shortages from becoming more severe.

Cuba, U.S. Occupation of

Start Date: January 1, 1899

End Date: May 20, 1902

The U.S. military occupation of Cuba, which occurred in the immediate aftermath of the Spanish-American War, began on January 1, 1899, and ended on May 20, 1902. This was a transition period between Spanish colonialism and formal Cuban independence. The American declaration of war against Spain in April 1898 essentially transformed the Cuban War of Independence (1895–1898) into an American war of conquest. President William McKinley held that because Cuban revolutionaries had failed to dislodge the Spanish from Cuba, the United States was simply completing the task that the Cubans were unable to accomplish. Cubans were therefore excluded from participating in the peace negotiations that ended the Spanish-American War, and the U.S. government appropriated the right to unilaterally negotiate the peace treaty with Spain and supervise the transition from colonial rule to independence.

Although the April 1898 Teller Amendment prohibited U.S. annexation of Cuba, McKinley, who was determined to protect U.S. economic investments in Cuba and uncertain about the ability of Cubans to govern themselves effectively, authorized the U.S. military occupation of Cuba. During the occupation, American military officials facilitated the expansion of U.S. economic investments on the island while simultaneously disenfranchising the majority of

the Cuban population. At the same time, U.S. officials implemented numerous infrastructure improvements. As a result of the occupation, when Cuba became independent in 1902, the island was a virtual political and economic protectorate of the United States.

U.S. Army major general John Rutter Brooke, the first military governor of the island, formally took control of Cuba from Adolfo Jiménez Castellanos, the last Spanish governor, on January 1, 1899. Rather than immediately granting the Cubans independence, McKinley authorized Brooke to establish order and stability in Cuba and prepare its inhabitants for eventual autonomy. Numerous U.S. politicians and military officials contended that the Cubans should not be granted independence until extensive training and safeguards for order and stability could be implemented. Rear Admiral William T. Sampson, commander of the North Atlantic Squadron, insisted that the Cubans had no concept of self-rule and that it would “take a long time to teach them.” Major General William R. Shafter, who had commanded the U.S. invasion of the island, argued that the Cubans were “no more fit for self-government than gunpowder is for hell.”

Brooke immediately disbanded the Cuban Revolutionary Army and implemented a U.S.-supervised electoral system that disenfranchised the majority of Cubans. Only men over the age of 20 who had property valued at more than \$250 or were literate or had served in the Cuban Revolutionary Army were eligible to vote. As such, suffrage restrictions reduced the Cuban electorate to about 100,000 men. McKinley hoped that an electorate limited to the elite and the middle class would form the basis of a stable pro-American Cuban government. Brooke also attempted to reform the customs and postal services on the island.

On December 23, 1899, Major General Leonard Wood replaced Brooke as military governor. Wood, cognizant of the high death rates from disease among the Americans fighting in Cuba during the Spanish-American War, undertook a campaign for the eradication of malaria and yellow fever. Emphasizing public works programs, Wood supervised the building of schools, hospitals, railroads, roads, harbors, and bridges. The infrastructure of Cuba was thereby modernized.

As a result of these improvements, American businessmen and land speculators soon descended on the island and, following the U.S. occupation, purchased vast tracts of Cuban land. By the early 20th century, 60 percent of all rural land in Cuba was owned by U.S. investors and corporations. U.S. economic interests dominated the sugar industry, mining, public utilities, and the railroad network in Cuba. Clearly, the main beneficiaries of U.S. military occupation were U.S. citizens, not Cubans.

Notwithstanding his infrastructure improvements, Wood’s primary task was preparing the Cubans for independence and safeguarding U.S. interests in Cuba. Following the U.S.-supervised municipal elections of 1900, Wood was distressed that the pro-American Cuban elite failed to capture many votes. Instead, candidates whom Wood considered to be “political radicals” and “agitators” won the elections. This was also true of the elections for

American and Spanish soldiers in front of the captain-general’s palace in Havana on January 1, 1899, as control of Cuba is officially handed over to the United States. (Library of Congress)

members of the constitutional assembly held later in 1900. Wood believed that the majority of the members of the constitutional assembly were “adventurers, pure and simple,” and not “safe leaders.” He lamented that the intelligent men with commercial interests were not represented in the constitutional assembly. By January 1901, the U.S. government was eager to end the U.S. military occupation but not without securing guarantees protecting U.S. interests.

In January 1901, U.S. secretary of war Elihu Root, annoyed at the expense of continuing U.S. military occupation of Cuba, outlined a set of provisions that he deemed a prerequisite to Cuban independence. He contended that the United States must retain the right to intervene in Cuba to maintain Cuban independence and stability, that the Cuban government could not negotiate treaties with other nations that might impede Cuban independence, that the United States may indefinitely maintain naval bases in Cuba, and that the Cubans must accept the legitimacy of all legislation enacted by the U.S. military government. Root asked Senator Orville Platt to present his proposal to the U.S. Congress.

Before Platt presented the proposal to Congress, however, he added two more provisions: that the Cubans must continue sanitary improvements and that the Cubans could not contract loans that they could not repay. These provisions, collectively known as the Platt Amendment, were approved by the U.S. Congress on March 2, 1901, as a precondition for Cuban independence. The Platt Amendment represented a significant restriction on Cuban

self-determination. Nevertheless, the Cuban constitutional assembly, realizing that the U.S. military occupation would not end until Cuba accepted the validity of the Platt Amendment, incorporated it, by a margin of one vote, as an addendum to the Cuban Constitution on June 12, 1901. The Platt Amendment made Cuba a virtual protectorate of the United States and ceded the naval station at Guantánamo Bay to the United States. The U.S. military occupation of Cuba subsequently ended on May 20, 1902. The transition from Spanish colony to independent republic, albeit a republic with limited self-determination, was now complete.

Cuba Campaign

Start Date: June 22, 1898

End Date: August 12, 1898

The Cuba Campaign was the most significant and publicized phase of the Spanish-American War. It is also now the best-known campaign of the conflict. The Cuba Campaign began with the initial landings of U.S. troops (V Corps) at Daiquirí and Siboney, Cuba, on June 22, 1898, and ended on August 12, 1898, with the signing of the Protocol of Peace.

The Spanish administration of Cuba was the chief cause of the conflict, and with the U.S. declaration of war of April 25, it was obvious that Cuba would become the principal theater of war. The island is only 90 miles from Florida, which meant that the United States would have both shorter supply lines and access to numerous ports for its small but modern navy. Spain's supply lines, by comparison, stretched all the way back across the Atlantic Ocean, and to compound problems, the Spanish Navy was incapable of challenging the United States for control of the seas around Cuba. This meant, of course, that the sizable Spanish ground forces in Cuba were essentially cut off from resupply during the war.

On April 21, several days before the actual U.S. declaration of war, the U.S. Navy began a blockade of Cuba. While the United States prepared its ground invasion forces, the naval blockade went forward, steadily growing in the number of ships involved and in effectiveness. On May 11, seamen from the U.S. Navy un-

protected cruiser *Marblehead* and gunboat *Nashville* cut Spanish undersea telegraphic cables at Cienfuegos in an effort to sever communication between Cuba and Spain. That same day, the U.S. Navy gunboat *Wilmington*, torpedo boat *Winslow*, and revenue cutter *Hudson* entered Cárdenas Harbor. In an ensuing action, the *Winslow* suffered five men killed and was disabled and had to be towed from the harbor.

Meanwhile, Madrid dispatched a squadron of four cruisers and three destroyers to the West Indies under Rear Admiral Pascual Cervera y Topete. The squadron sailed from the Cape Verde Islands on April 29. Only two of the destroyers made it to Cuba, however. Cervera realized that the mission was a tragic folly that might doom both the ships and their crews. He slipped into Santiago Harbor in Cuba on May 19. Soon U.S. rear admiral William T. Sampson's North Atlantic Squadron had Santiago blockaded. With Cervera's squadron unable to counter the growing strength of the American naval forces off Santiago and with Spain unable to send reinforcements and supplies to the Caribbean, the fate of Cuba was virtually sealed. The defeat of Spanish forces was now largely a matter of time.

To secure a local coaling base and protected anchorage, the U.S. Navy moved to capture Guantánamo Bay. The 1st Marine Battalion received the assignment, supported by warships in the bay. The battalion's 636 marines, accompanied by 4 sailors, went ashore on June 10. The marines secured the beachhead that same day, then routed a numerically superior Spanish force in the Battle of Cuzco Well on June 14.

Major General William R. Shafter, commander of V Corps, the U.S. expeditionary force to Cuba, wanted the navy to enter Santiago Harbor and destroy the Spanish ships there, but Sampson demurred, arguing that the ground forces should first capture the forts at the harbor entrance, the guns of which dominated the harbor entrance and posed a serious threat to his ships. Abandoning its initial plan for an attack on Havana, the army shifted to the capture of Santiago, which would force Cervera's ships to sea.

The U.S. Army, far less prepared than the navy for the war, was unable to begin its landings in Cuba until June 22. These came first at Daiquirí and then at Siboney. Once ashore, Shafter's V Corps lost little time in beginning an advance on Santiago. Still problems abounded, including the lack of effective army-navy cooperation. The army saw an assault on the heights at the entrance to Santiago Harbor, as requested by the navy, as a costly mission with the navy then reaping the glory. Navy leaders, on the other hand, were perturbed by the advance of the army directly to Santiago.

While the navy continued to tighten its blockade of Santiago and, for that matter, all of Cuba, U.S. forces under Major General Joseph Wheeler, rushing to engage the Spanish, clashed on June 24 at Las Guásimas on the road to Santiago. The battle pitted some 1,500 Spanish soldiers against 1,000 Americans, but the Americans prevailed. It was hardly of strategic importance and largely a morale booster for the Americans, who continued their advance toward Santiago.

On July 1, Shafter's V Corps began its main assault on Santiago, with forces advancing on the town of El Caney and San Juan

An illustration by William Glackens depicting the landing of V Corps at Daiquirí, Cuba, in June 1898. The drawing appeared in *McClure's Magazine* in October 1898. (Library of Congress)

Heights, a long series of ridges that included San Juan Hill and Kettle Hill, a smaller flanking promontory adjacent to San Juan Hill. Shafter's plan called for Brigadier General Henry W. Lawton's 6,000-man 2nd Infantry Division to defeat the Spanish garrison at El Caney and then join the remainder of V Corps in its attack on San Juan Heights. El Caney was supposed to be an easy objective, but it was vigorously defended and turned into a day-long fight in which the Americans were held at bay by a much smaller Spanish force under General Joaquín Vara del Rey y Rubio. When Lawton did achieve victory there on July 1, it was too late for his men to join in the fight at Santiago.

That same day at San Juan Heights, the American troops found themselves in a tenuous position at the base of the hills. As pressure from arriving troops continued to mount behind the line and accurate Spanish defensive fire began to exact a toll on the men in the front lines, the order finally came to assault the heights. Although heavily outnumbered, the Spanish defenders were strongly entrenched.

What became known as the Battle of San Juan Hill began around 1:00 p.m., three hours after the planned assault time. As Brigadier General Samuel S. Sumner's Dismounted Cavalry Division (including the 1st Volunteer Cavalry Regiment, also known as the Rough Riders) assaulted Kettle Hill, Brigadier General Jacob F. Kent's 1st Infantry Division advanced on San Juan Hill. A detachment of four Gatling

guns provided critical fire support, and the Spanish began to fall back. After Kettle Hill was taken, Lieutenant Colonel Theodore Roosevelt of the Rough Riders organized a charge on San Juan Hill from the flank to take the pressure off the other U.S. forces attacking the heights by frontal assault. The combined attack was successful, and the Spanish troops were driven from their trenches.

With the Americans on the city's outskirts and in position to bring up artillery to shell Cervera's ships in the harbor, he sortied from Santiago on July 3 knowing that victory was impossible and that the odds of any of his ships escaping were slim. Within a few hours, his squadron had been destroyed in the Battle of Santiago de Cuba. That same day, Colonel Federico Escario García arrived in Santiago with reinforcements from Manzanillo. He had started out on June 22 with 3,752 men. In its 11-day, 160-mile trek to Santiago, the column had clashed with Cubans more than 40 times, suffering losses of 10 percent. The arrival of this force did not alter the strategic balance and instead merely taxed the city's dwindling resources.

Shafter, meanwhile, found his position at Santiago de Cuba tenuous, with increasing numbers of U.S. troops being felled by disease. He was considering a withdrawal when a request for the surrender of Santiago was forwarded to Spanish commander Brigadier General José Toral y Vázquez. The loss of Cervera's squadron, the American occupation of the heights, a shortage of ammunition, and sharply

deteriorating conditions within the besieged city, including a shortage of food, the result of the insurgent- and U.S.-imposed blockade, were too much to overcome. To Shafter's surprise, Toral, after negotiations, offered to surrender not only Santiago de Cuba but also all of the troops in the Division of Santiago, including 9,000 men who were not engaged in the battles at Santiago.

Following proposals and counterproposals and several days of negotiations, the Capitulation of Santiago de Cuba Agreement was signed on July 16, with a formal surrender ceremony the next day complete with the raising of the American flag in Santiago. Although the fighting was over, conditions continued to worsen for the men of Shafter's V Corps. Soon, tropical diseases, chiefly yellow fever and malaria combined with dysentery, were taking a serious toll.

The War Department, not fully aware of the dire situation, was in no hurry to have the men return to the United States, particularly with the concern of the communicable diseases creating epidemics on American shores. Knowing the potential devastation facing V Corps, its senior officers met to discuss the situation. The result was the Round-Robin Letter expressing concern over the scenario penned by Roosevelt but signed by most of the ranking officers on August 3, 1898. The letter was given to Shafter, who leaked it to the press. This letter, and a second one written and signed by Roosevelt alone, received wide newspaper publicity in the United States and forced the War Department to speed the replacement of the ailing elements of V Corps with new troops.

On August 12, the Protocol of Peace was reached with Spain and formally ended the war, although the formal end did not occur until December 10 with the signing of the Treaty of Paris.

Cuba Libre

The phrase "Cuba Libre" (Free Cuba) became the rallying cry of the Cuban independence movement during the 1890s. Interestingly, the slogan became very popular in the United States after the beginning

An American propaganda postcard showing Union and Confederate soldiers shaking hands in front of a female personification of Cuba with broken shackles, circa 1898. The rallying cry of "Cuba Libre" (Free Cuba) originated with the Cuban independence movement and became wildly popular in the United States as well. (Library of Congress)

of the Cuban War of Independence (1895–1898). Indeed, it was used to drum up American support for the Cuban rebels' cause and was a favorite phrase for yellow journalism in the United States.

Vanquished twice in rebellions known as the Ten Years' War (1868–1878) and the Guerra Chiquita (1879–1880) against the tottering Spanish Empire, Cubans in the 1890s found a new catalyst for their nationalism in the exiled scholar José Julián Martí y Pérez. For years he had lobbied in the United States for the arms and funding needed to renew the insurgency. But he also feared U.S. annexationists, who looked to join a great scramble for colonies among European powers. Dwelling in the slums of New York City sobered him as to the reality of U.S. race relations and their implications for foreign policy. He thus warned that U.S. assistance portended as much peril as promise. His warnings were most prescient.

In 1892, Martí formed the Cuban Revolutionary Party in exile to transcend the factionalism that still divided many anti-Spanish Cubans. By 1894, Cuba had gravitated toward the United States, as a global economic depression enabled Americans to buy bankrupt farms and strengthen commercial ties to the island.

When Spanish authorities suspended constitutional guarantees in February 1895, Martí, along with Antonio Maceo Grajales and Máximo Gómez, launched another insurrection. Unique among the

leadership of the rebellion, Martí envisioned full political and racial equality for a postwar Cuba that would serve as a beacon for other Latin American societies. Determined to inspire with deeds as well as with rhetoric, he was one of several leaders to infiltrate the island in 1895 in search of martial glory. He was killed in an encounter with Spanish forces at Dos Rios in Oriente Province on May 19, 1895.

Maceo, dubbed the “Titan in Bronze” for his military exploits, fell in Havana Province later that year. Despite the loss of key figures in the rebellion, the Spanish were reeling from this fresh wave of assaults. Rather than confront the much larger and better-equipped Spanish Army, Cuban rebels relied on guerrilla tactics aimed at eliminating all economic assets. With attacks upon the bountiful sugar crop and its supporting infrastructure, the rebels controlled much of the elevated countryside of eastern Cuba.

Throughout the ordeal, the United States had taken a position of neutrality, although popular support, propped up by the yellow press with the use of slogans such as “Cuba Libre,” meant that American neutrality was one of rhetoric rather than reality. In 1895, the confounded Spanish governor-general Arsenio Martínez de Campos resigned rather than preside over brutal reprisals against the Cuban population. Rapidly losing ground against the insurrection, Spanish authorities turned to most-desperate measures to separate their enemies from civilian support. The newly arrived governor-general, Valeriano Weyler y Nicolau, instituted a policy of forcibly relocating more than 500,000 Cubans into reconcentration camps, where squalid conditions may have claimed as much as 40 percent of the inhabitants.

With this new draconian policy, U.S. newspapers railed against Spanish atrocities, but Washington lacked the consensus to move decisively on behalf of Cuban independence. Meanwhile, some American investors had suffered from rebel attacks on the sugar industry and figured that their best hopes for reimbursement rested with continued Spanish rule. In 1896, the lame-duck administration of Grover Cleveland straddled the fence by opposing the revolution while urging concessions upon Spain. Cleveland’s successor, William McKinley, desired a colonial empire forged without military conquest and studiously avoided the question of Cuban political aims. The Spanish removed Weyler from command in October 1897 and offered the Cubans a measure of self-government, but Cuban insurrectionists, sensing momentum, would settle for nothing less than a complete victory.

Facing growing pressure from an imperialist lobby both within and beyond his Republican Party, McKinley dispatched the battleship *Maine* to Havana to protect Americans from pro-Spanish *voluntario* riots and to signal the gravity of U.S. concerns. On February 15, 1898, a mysterious explosion sank the anchored vessel, resulting in the loss of 266 lives. McKinley considered bidding to purchase Cuba for \$300 million, but chauvinism ruled the day. The final U.S. demands consisted of an armistice, peace negotiations between combatants, the president’s arbitration if necessary, relief aid for Cubans, and an end to reconcentration camps. Implicit in this ultimatum was that the United States would direct Cuba’s independ-

ence. In the meantime, the clamor for war in the United States had reached fever pitch.

Reduced to only two holdings in the Western Hemisphere, Spanish authorities believed that they could not retreat any further. They had thus closed the camps, implemented political reforms, and agreed to an armistice as long as rebels consented first, but they would not willingly relinquish control of the island. The Spanish-American War began in April 1898, with the first engagements occurring in Cuba. McKinley also declared Cuba independent without acknowledging the junta that had managed the revolution. The Teller Amendment forestalled any designs to annex the island, but U.S. interference in the Cubans’ cause was now inevitable.

As the brief conflict progressed, Cuban rebels served primarily as labor units. In four months, the Spanish defeat was complete but with little American respect for how the Cuban insurrection paved the way for the victory. By 1903, the Platt Amendment would ensure U.S. hegemony in Cuba for more than 30 years. The measure allowed U.S. officials to prepare much of the Cuban Constitution, control the island’s foreign policy, and intervene militarily under loosely defined conditions that served U.S. commercial interests. The Cuban revolutionary Fidel Castro, fancying himself a latter-day Martí, would remind his people of the failure of Cuba Libre in exhorting them to victory in 1959 over the U.S.-backed regime of Fulgencio Batista. Indeed, the slogan “Cuba Libre” was just that: a slogan that meant little once the United States had insinuated itself fully into Cuban affairs.

Cuban Junta

A legation of the revolutionary Cuban Republic and the main propaganda arm of the Cuban Revolutionary Party headquartered in New York City. The term “junta” in this context refers to a small council or governing body organized for illicit purposes, in this case

Depiction of a meeting of the leaders of the Cuban Junta in New York City. The junta was established in 1895 to work for Cuban independence from Spain. (Bettmann/Corbis)

the overthrow of the Spanish colonial government. “Junta” in Spanish means joined or joined together.

The Cuban Junta was formed in September 1895 shortly after the beginning of the Cuban War of Independence (1895–1898). Its principal purpose was to seek U.S. support for the Cuban cause and to lobby politicians and others in positions of power to champion their effort and pressure the Spanish to abandon Cuba. The junta also attempted to establish diplomatic ties with foreign governments, an effort that was largely unsuccessful. It was successful, however, in raising American awareness of and support for the struggle in Cuba and often employed propagandistic means by which to accomplish this. The Cuban Junta, for example, worked closely with the yellow journalists of the day and became a favorite cause of newspaper publishers such as Joseph Pulitzer and William Randolph Hearst.

Organized principally by Tomás Estrada Palma, one of the chief revolutionaries in Cuba and a founder of the Cuban Revolutionary Party, the Cuban Junta was staffed primarily by Cuban nationals residing in the United States. It had the blessing of the Cuban revolutionary military commander Máximo Gómez and was aided in its efforts by the Cuban League of the United States, established in 1892 by a wealthy New York businessman. The junta also received much support and sympathy from Charles Anderson Dana, one of the most prominent journalists of the day. Of course, another aim of the Cuban Junta was to solicit monetary support for the Cuban

rebels, who were in constant short supply of food, medical supplies, arms, and ammunition. In this endeavor, it was also somewhat successful insofar as the Cuban rebels maintained a constant low-level insurgency against the Spanish up to the eve of the Spanish-American War in 1898.

The Cuban Junta, using money donated by wealthy Americans sympathetic to its cause, sponsored several filibusters to Cuba in an attempt to supply the Cuban rebels with arms and ammunition. These were only moderately successful, however. The main line of support to the rebels was financial and moral support funneled through the Cuban Junta and its Cuban and American operatives. Despite the junta’s unsuccessful efforts to open diplomatic relations with overseas governments, it did have representatives in Italy, France, Mexico, and several Central and South American republics. While the U.S. government assiduously avoided recognition of or direct links with the junta, individuals in Congress and even within the executive branch demonstrated much support for the rebel cause.

Perhaps the Cuban Junta’s most far-reaching efforts came in the form of propaganda, eagerly reported by the newspapers of the day. While some of the accounts of Cuban troubles were clearly accurate, many were not. Some incidents and reports were purposely exaggerated, while others were fabricated altogether. These stories and reports coming from the junta invariably portrayed the Spanish as barbaric aggressors with no moral compass. The Cubans, on the other hand, were portrayed as heroic liberators insistent on the

establishment of a pure and independent Cuban democracy. The Cuban Junta also served as a way for Cuban émigrés in the United States to rally together for a common cause. Although the junta became moot by 1900 or so, it nonetheless typified the strong ties among Cubans in the United States. After the 1959 communist revolution in Cuba led by Fidel Castro, Cuban émigrés once more banded together and became a formidable lobbying group in the United States.

Cuban League of the United States

Organization founded by American businessman William O. McDowell in New York City in 1892, the mission of which was to aid Cubans in securing liberation from Spanish rule. During the period following the American Civil War, Americans observed with increasing interest Spain's administration of Cuba. For the most part, Spanish rule over the island was inefficient and in some instances was inhumane and even cruel. The Ten Years' War began in 1868, and Cuban revolutionaries, inspired by American democratic ideas and writings, began a sustained revolt against Spanish rule. Although Spain crushed the revolt in 1878, the Cuban revolutionaries had won the admiration of many influential Americans. From that point on, American interest in Cuba, partly fueled by newspaper reports in the sensationalist yellow press, grew stronger. After meeting exiled revolutionary leader of the Cuban independence movement José Martí y Pérez, who also happened to be residing in New York City, McDowell became convinced that only with a well-organized movement with ties to influential Americans and financial resources could the dream of a free and democratic Cuba be realized. To give impetus to this, he formed the Cuban League of the United States.

The membership of the Cuban League included many prominent Americans who provided money and resources in support of the Cuban Revolutionary Party and the Cuban Revolutionary Army as well as the Cuban War of Independence, which would begin in 1895. The league was administered by a board of directors and maintained its headquarters in New York City. Membership was open to all who supported Cuban independence. The league attracted a number of prominent American business and political leaders such as Senator

Henry Cabot Lodge, Theodore Roosevelt, Charles Dana, J. P. Morgan, Samuel Gompers, and John Jacob Astor IV. Using their influence in the halls of Congress and governmental agencies such as the State Department and the War Department, these men actively promoted the cause of Cuban independence and helped influence American political and popular attitudes toward Cuba.

The Cuban League held frequent patriotic rallies in the United States and often invited veterans from the Ten Years' War to give speeches to drum up enthusiasm and support for the organization's mission. Numerous chapters of the league formed around the United States but were chiefly concentrated in Eastern Seaboard cities such as New York City, Philadelphia, and Boston. Membership peaked in 1897 at more than 1,000 members.

One of the chief benefactors of the group was the Cuban Junta, the headquarters of which was also located in New York City. Support that the junta received from the Cuban League allowed the junta to finance several filibustering expeditions to the island, supplying sorely needed weapons, food, medicine, and other resources for the rebel army.

Although U.S. intervention was still six years away when the Cuban League was formed, its strong commitment to sending men, money, and matériel to Cuba allowed the revolutionary cause there to continue and grow, helping to set the stage for war between the United States and Spain.

Cuban Provisional Assembly

Interim government created by Cuban insurgents in order to achieve international recognition and aid during their bid for independence. During its brief existence from November 1898 to January 1899, the Cuban Provisional Assembly served as a link between the Cuban Junta and the Cuban Revolutionary Government. The Cubans also sought to employ the assembly to secure independence while peace negotiations were under way.

Leaders of the Cuban independence movement first attempted to set up an independent government in 1895. The governing body they formed never achieved international recognition. Thus, on October 24, 1898, a meeting was held at Santa Cruz del Sur, Cuba, to form a new government. This effort came to fruition when General Calixto

García y Iñiguez called the Provisional Assembly to order on November 7, and the assembly elected Domingo Mendez Capote as president. On November 10, the assembly accepted the resignations of President Bartolomé Masó and his associates from the provisional government. These men had constituted the leadership of the previous government, and the leaders of the new assembly hoped that their departure would bolster the legitimacy of the new ruling body.

As these events transpired in Santa Cruz del Sur, there was some discussion of sending García out into the Cuban countryside to enlist the disaffected and bring them to accept the U.S. presence. Some legislators believed that this would bolster the claim of the assembly to speak for the Cuban people as an independent government. García's untimely death in Washington, D.C., on December 11, 1898, while on a diplomatic mission there came as a severe blow to the government. The assembly likewise witnessed the transfer of Cuba from Spain to the United States on January 1, 1899.

It soon became clear to the United States that the Cuban Provisional Assembly was an institution in name only. Thus, American policy makers moved to disband the body and establish direct—if temporary—military rule. Among the chief reasons for the failure of the Cuban Provisional Assembly was the lack of broadly recognized leadership. Unfortunately for the Cuban independence movement, its best-known leader, José Martí y Pérez, had been killed in a firefight with Spanish forces in 1895 in the early weeks of the Cuban War of Independence.

Cuban Revolution

See Cuban War of Independence

Cuban Revolutionary Army

Insurgent force organized in Cuba to fight for independence from Spain. The Cuban Revolutionary Army was first organized in 1868 during the Ten Years' War (1868–1878) and was active again during the Cuban War of Independence (1895–1898), which ended with the Spanish-American War. Also known as the Liberation Army, the Cuban Revolutionary Army was disbanded by U.S. officials.

Cuba's first significant attempt at independence began on October 9, 1868, when 38 planters led a revolt against Spanish authorities. The Cuban Revolutionary Army, formed at this time, initially numbered 147 men. This first revolt sparked the Ten Years' War, eventually put down by the Spanish government. Exiled Cuban writer and revolutionary José Martí y Pérez was the spiritual and intellectual leader of the independence movement. Upon founding the Cuban Revolutionary Party (El Partido Revolucionario Cubano) in 1892, Martí was able to attain the support of Máximo Gómez and Antonio Maceo Grajales, heroes of the Ten Years' War.

Martí, who was in the United States, had planned to land in Cuba in February 1895, but his departure was delayed. The revolution began in earnest on February 24, 1895, in a number of Cuban towns, but the Spanish put down the insurrection. Martí did not arrive in Cuba until early April. Shortly after the call for independence, the Cuban Revolutionary Army numbered 4,500 men, but it was limited by a shortage of weapons. As had been the case during the Ten Years' War, black Cubans made up at least 70 percent of the Cuban Revolutionary Army. The army was completely integrated, however, and by December 1895 it numbered some 25,000 men. Martí and Gómez hoped that Cuba could be liberated by the Cubans themselves and greatly feared the possible replacement of Spanish rule by that of the United States. Indeed, while the insurgents made considerable progress in their war against the Spanish, the United States took over the war against Spain in April 1898.

Major General Gómez had overall command of the Cuban Revolutionary Army, the size of which has been variously estimated at 25,000 to 40,000 men. Major General Calixto García y Iñiguez commanded its forces in eastern Cuba. García's forces numbered about 15,000 men, of whom perhaps 6,500 were in the immediate area around Santiago and another 1,000 were stationed around Guantánamo. Elements of the Cuban Revolutionary Army assisted the U.S. Army advance on Santiago by tying down some Spanish units and providing intelligence information on Spanish positions and dispositions. U.S. commanders held them at arm's length, and they did not see action in the U.S. military's operations. U.S. authorities also barred any representation of the Cuban Revolutionary Army in talks regarding the Spanish surrender. Some members of the army were initially retained in security duties.

Following the U.S. victory, military governor of Havana Pinar del Río and Major General Fitzhugh Lee reached an agreement whereby many Cuban Revolutionary Army officers received civil posts, and the U.S. government agreed to pay 33,950 veterans 75 pesos apiece for each of their weapons, which was financed by a loan from private U.S. banks. The Cuban Revolutionary Army ceased to exist in 1899.

Cuban Revolutionary Government

The Cuban Revolutionary Government was created by Cuban revolutionary leaders at Camagüey, Cuba, in September 1895 and provided the political leadership for the Cuban War of Independence (1895–1898). Vestiges of the government would survive until 1902, when a new independent government of Cuba took form. Originally designed to last just two years, the government's chief purposes were to promote independence from Spain and to solicit recognition from nations abroad.

The formation of the government was preceded by a gathering of revolutionaries in the winter of 1895 hosted by José Martí y Pérez,

considered the father of the Cuban independence movement. At this meeting, Martí and Antonio Maceo Grajales, another prominent revolutionary, clashed over visions of a possible revolutionary government. Martí favored a civilian-style government as the best hope of attracting foreign support. Maceo, however, wanted rule by a military junta. As a man with military experience, he believed that a military government would best be able to foment and prosecute a revolution against the Spanish colonial government. Maceo also thought that the civilian revolutionary government in place during the Ten Years' War (1868–1878) had helped bring about the collapse of that effort. In the short term, Martí's vision prevailed, but when he died unexpectedly on May 19, 1895, in a battle with Spanish forces, the revolutionary movement was in disarray, and the precise makeup of a revolutionary government again became an open question.

Throughout the summer of 1895, the absence of a governmental structure hampered the revolutionaries' efforts to solicit support from the international community. Finally, Maceo agreed to convene a convention, the task of which would be to form a government. He also acceded to Martí's vision and reluctantly supported the creation of a civilian-style revolutionary government. At

Camagüey that September, the revolutionary delegates agreed immediately that the current struggle was tied inextricably to the Ten Years' War and that the duration of any new government should be for an initial two-year period. The government would be disbanded when a permanent government had been created. They also readily agreed that although the government would have civilian leadership, the government and its military commanders would be granted sweeping powers to overthrow Spanish rule on Cuba. They decreed that all native Cubans were obligated to take part in the struggle and offer any assistance possible to revolutionary troops. They also asserted that foreign nationals on Cuba were to pay property taxes to the revolutionary government to support independence unless their nations of origin supported the revolution and acknowledged the state of war that existed in Cuba. Although the government was able to enforce to some extent the first decree, it was hard-pressed to implement the second.

After these broad outlines had been agreed to, the delegates went about selecting the government's leaders. On September 16, 1895, Salvador Cisneros Betancourt became president, Bartolomé Masó became vice president, Tomás Estrada Palma became foreign minister, and Máximo Gómez y Báez became general-in-chief of the armed forces. Estrada would become the government's chief liaison in Washington. Maceo was appointed second-in-command, as a lieutenant general, under Gómez. The convention also selected four secretaries who were responsible for various portions of the government's operations. To avoid interference from the civilians, Gómez and the other military commanders received sole authority over all military matters. In reality, Betancourt and the civilian leadership had little power.

The Cuban Revolutionary Government certainly lent an air of legitimacy to the Cubans' cause, but its civilian component was unable to act with much real authority. This was in part because of a lack of steady revenue and resources but also because it was acting in a nation that was still being governed by Spanish colonial authorities. Nevertheless, the government maintained strong ties to the Cuban Revolutionary Party (El Partido Revolucionario Cubano) and the Cuban Junta, the latter based in New York City. Much to the chagrin of the government, the United States never formally recognized its legitimacy, although the United States did work closely with the Cuban Revolutionary Government during the Spanish-American War. The government continued beyond its initial two-year tenure, although it was rendered largely moot after the defeat of Spain by the United States in August 1898. Be that as it may, the Cuban Revolutionary Government existed into 1902, at which time American occupation forces withdrew from Cuba and a new independent government was fully established.

Cuban Revolutionary Party

Political party created by Cuban nationalist José Martí y Pérez in 1892 with the principal aim of overthrowing Spanish rule in Cuba. The establishment of the Cuban Revolutionary Party (Partido Revolucionario Cubano) transformed a revolutionary movement into a revolutionary party and paved the way for the Cuban War of Independence (1895–1898).

On November 28, 1891, Martí announced the formation of a new political party dedicated to the liberation of Cuba from Spanish colonial rule. His resolutions were the preamble to the formation of the Cuban Revolutionary Party. On January 5, 1892, following more than two years of coordination with Cuban nationalists both from inside and outside Cuba, he officially inaugurated the new party. It was no small achievement, as he had to unify many divergent interests into a single entity dedicated to Cuban independence.

On April 8, 1892, Cuban revolutionaries elected Martí the delegate of the Cuban Revolutionary Party. He refused to allow himself to be called the president of the party, preferring the more humble and ubiquitous term *delegado*. Martí made New York City the center of party operations, the main goal of which was to organize revolutionary action to achieve Cuban independence. He sought independence only and opposed continued Spanish colonialism as well as autonomy within the Spanish Empire and annexation to the United States.

The party advocated armed struggle and encouraged all Cubans to participate in the liberation movement; it was also dedicated to providing material and moral support for revolutionary activity. The party would act as the principal entity to unite veterans of the Ten Years' War, the petit bourgeoisie; whites, blacks, and mulattos; men and women; and people of all social classes. Unlike the patrician leadership of the Ten Years' War, the leaders of the Cuban Revolutionary Party came from modest social origins. Even blacks and mulattos had positions of authority.

On January 31, 1893, the Cuban Revolutionary Party officially rejected autonomy as a substitute for independence. The party was therefore diametrically opposed to the wishes of the Cuban planter class, which advocated reform and continued colonialism under Spain. Prior to 1894, the planter class and those who benefited from the sugar plantation economy posed a sizable obstacle to the Cuban Revolutionary Party's initiatives. A reciprocal trade treaty from

1891 between Spain and the United States allowed Cuban sugar to enter U.S. markets at reduced tariff rates. In 1894, the United States rescinded the treaty, and Spain imposed retaliatory tariffs that threatened Cuban sugar exports to the United States altogether, which caused the planters to protest Spanish policy. The undermining of the planters' economic power base lessened their political clout and allowed the revolutionaries to gain influence.

On December 25, 1894, the Cuban Revolutionary Party unveiled the Fernandina Plan. It called for an expeditionary force to depart from Fernandina, Florida, to launch a war of independence in Cuba. Unlike previous liberation attempts, this one was well planned. On January 29, 1895, the official order for the Cuban revolution was signed in New York City. A month later, on February 24, the Cuban Revolutionary Party announced the Grito de Baire, which officially began the Cuban War of Independence. On March 25, 1895, Martí and Máximo Gómez y Báez signed the Manifiesto of Montecristi in Santo Domingo, Dominican Republic, which outlined the Cuban Revolutionary Party's wartime strategy.

Attacks directed against the sugar plantations to weaken the planter class were initially successful, but these convinced the Spanish administration to inaugurate the draconian *reconcentrado* (reconcentration) policy, which gathered rural Cuban peasants and placed them on reservations or in concentration camps in an attempt to isolate the insurgents from the Cuban people. By 1898, after three years of economic dislocation, the Spaniards and Cuban revolutionaries had reached an impasse. Fitzhugh Lee, U.S. consul general in Havana, reached the conclusion that neither side was capable of restoring order.

In April 1898, U.S. intervention transformed the Cuban War of Independence into a U.S. war of conquest. After the U.S. victory in the Spanish-American War, the Cuban Revolutionary Party was dissolved in December 1898, and the Cuban Revolutionary Army was demobilized. U.S. intervention in the conflict and the subsequent U.S. military occupation of Cuba destroyed the Cuban Revolutionary Party's dream of a truly independent Cuba.

consumption. Sugarcane has long been a cash crop in the Caribbean, dating at least to the 17th century. It grows well only in warm, wet subtropical and tropical regions, ranging into Central and South America. In Cuba, this cash crop had become the premier export of the region. Following the Spanish-American War, production climbed significantly. Indeed, between 1898 and 1903, sugar production in Cuba jumped from 350,000 to 1.143 million short tons of product.

As the 19th century came to a close, the United States had replaced Spain as the principal consumer of Cuban sugar. Between 1897 and 1901, Cuban sugar exports accounted for 17 percent of all sugar imported into the United States. Yet these numbers paled in comparison to sugar produced from sugar beets, both domestic and international, that saw a period of market dominance between 1870 and World War I (1914–1918).

By the time hostilities commenced in Cuba in the late spring of 1898, the sugar industry itself had already undergone a series of changes. The older system of sugar production in Cuba had consisted of individual plantations that were powered by the labor of slaves, which in comparison to modern standards produced a limited yield. However, with the advancement of new technology and the abolition of slavery in 1886, the costs of production radically decreased. This led to a dramatic reduction in the cost of refined sugar on the market and ultimately in the increase of consumption, especially among the lower and working classes. In addition, the industry itself underwent the process of horizontal integration in that specific areas of sugar production were consolidated. For instance, plantations were purchased and brought under the control of one large interest, thus consolidating the harvesting aspect of sugar production. Yet the paramount change that the sugar industry experienced in Cuba was vertical integration. This is a situation in which one interest owns all aspects of production from the supply of raw materials to transport and finally the refining and distribution process.

Another contributing factor to the sea of change in the Cuban sugar industry was U.S. tariff policies. High tariffs on imported sugar, especially from Cuba, wrought havoc on the Cuban economy. In 1897, the Republican-controlled Congress, acting on the campaign pledges of President William McKinley, reversed the 1894 Wilson-Gorman Tariff Act that had lowered tariffs on most

Cuban Sugar

Sugar is a sweetener produced through the labor-intensive process of extracting juice from the sugarcane plant. The cane is ground, then boiled, and ultimately crystallized before being shipped for

Privately hired guards protecting sugarcane harvest and cattle against insurgent attack, Soledad, Cuba, circa 1896. (Library of Congress)

imported goods, a policy pursued chiefly by the Democratic Party. The Dingley Tariff raised tariffs to all-time highs, equal to a 46.5 percent value-added tax on all incoming goods to the United States. On some imports, tariffs rose as high as 57 percent. This naturally hobbled Cuban sugar producers, imperiled the economy, and fomented considerable unrest among Cuba's sugar laborers. That combined with anti-Spanish agitation played a major role in the events that ultimately led to the Spanish-American War.

The labor force for the sugar industry was composed of mostly wage earners by the time Cuba came under the hegemonic economic control of the United States. However, because of 40 years of perpetual conflict ranging from wars for independence to the war between the United States and Spain, the indigenous population suffered horrendous numbers of casualties, which had a direct impact on the potential workforce. The sugarcane fields were also casualties, as insurgents fighting against the Spanish set countless fields ablaze. The sugar crop suffered greatly as it plummeted from more than 1 million tons in 1894 to 212,000 tons by 1897.

Following the Spanish-American War, the Cuban sugar industry became a primary focus of U.S. capital investment. In actuality, the debate over Cuba becoming part of the United States had been discussed as far back as the early 19th century by numerous Americans. The April 1898 Teller Amendment had excluded outright annexation, but Cuba became so intertwined with American interests that it became a sort of economic colony until the 1959 revolution that brought Fidel Castro to power.

Congress refused to reinstate the sugar tariff relief after 1903 in spite of Wood's strong recommendation and Roosevelt's call for a special session to consider it. This was largely due not only to competing sugar interests in Hawaii and Louisiana but also because of the domestic sugar beet industry based primarily in Colorado. The debate over possible annexation was significant for the Cuban sugar industry primarily because of the levying of tariffs. One such example was the Wilson Tariff of 1894. While it eliminated bounties, the legislation also imposed a tariff on all foreign finished products. These duties were further increased in 1897 under the Dingley

Tariff. These policies affected the Cuban sugar industry in that refined sugar was subject to tariffs, whereas raw sugar was not. This led to more raw sugar being exported to the United States to be refined at U.S.-run refineries and sold, thus reinforcing vertical integration under American companies.

Ultimately, Cuba's position as an independent state under the economic hegemony of the United States, not to mention its role as a dominant supplier of sugar to the United States and the rest of the world as well, allowed for American military intervention on numerous occasions after the Spanish-American War. One such instance came in March 1917 following a revolt in Cuba in 1916. President Woodrow Wilson sent nearly 1,000 troops to Cuba, allegedly to protect the sugar harvest but in reality as a show of force that would aid the Cuban government in crushing the rebellion and thus protect American interests on the island.

Cuban War of Independence

Start Date: February 24, 1895

End Date: August 1898

Insurrection against Spanish colonial rule in Cuba that began on February 24, 1895, and lasted until the defeat of Spain by U.S. forces in August 1898 during the Spanish-American War. The Cuban War of Independence of 1895–1898 was the last of three separate revolts on the island in the last half of the 19th century. The other two were the Ten Years' War during 1868–1878 and the Little War, or *La Guerra Chiquita*, during 1879–1880.

Although Christopher Columbus landed on Cuba in 1492, the Spanish did not attempt to conquer the island until an expedition in 1510 led by conquistador Diego Velázquez. The conquest was completed by 1515. Cuba's fertile soil made the cultivation of tobacco and sugar possible, while the discovery of gold in the interior of the island led to the opening of a number of mines. In order to provide labor for the island's plantations and mines, the Spanish enslaved most of the island's population.

The exploitation of the natives and their susceptibility to European diseases resulted in their near extinction within a generation. To replace cheap native labor, the Spanish began to import African slaves. Until the Haitian Revolution (1791–1804), the Cuban economy remained diversified, with tobacco, livestock, and shipbuilding as the principal industries. Because sugar production in Haiti dropped precipitously, wealthy Cuban landowners saw an opportunity for the island to become the world's leading sugar producer, and they petitioned the Crown for concessions to accelerate the sugar industry on the island.

Cuba's economy soon became predominantly agricultural with the introduction of sugarcane as the primary cash crop, leading to the founding of vast sugar plantations throughout the island. The harsh conditions of sugar cultivation and the labor-intensive methods of sugar farming led to a large slave population on Cuba. Ultimately, sugar cultivation enriched a small planter class along with the few who catered to the sugar plantation owners. The plantation system quickly came to dominate the island economically and politically. Before long, the bulk of the Cuban population had become restive, and open rebellion erupted in 1868. The ensuing Ten Years' War ended in stalemate in 1878. Almost immediately thereafter, the Little War erupted in 1879, lasting until 1880.

In the 1890s, the Cuban Revolutionary Party, led by José Martí y Pérez, was the leading proponent of Cuban independence. Founded in 1892 by Martí, the main tenets of the party were independence from Spain, the removal of all legal distinctions based upon race, amity with those Spaniards who supported the party and the revolution, and economic and land reforms. Certain elements within Cuban society, primarily the planters and a large segment of the middle class, wished to remain a part of the Spanish Empire but with increased autonomy from Spanish rule.

The Cuban revolution began on February 24, 1895, near Santiago de Cuba, located in the poorer eastern part of the island. However, attempts to coordinate the uprising across the island faltered when Spanish officials arrested rebel leaders en masse in Havana and Matanzas. The armed struggle floundered for most of the year, with the rebellion confined to the eastern part of the island and military setbacks across the rest of the colony. The death of Martí on May 19, 1895, further hampered the rebellion. Spain's appointment of Arsenio Martínez de Campos, the victor in the Ten Years' War, as captain-general offered hope for a quick end to the conflict. Martínez was a conciliatory figure who had appeal to those in Cuba seeking autonomy and reform.

Any hope for a quick reconciliation ended, however, when rebel armies moved into the central and western parts of the island. Martínez's failure to contain the rebels in the east and to reach any agreement with the autonomists had a deleterious effect on Spain's efforts to end the uprising. Spanish conservatives now gave up any pretense of a negotiated end to the conflict and became determined to wipe out the rebellion on the field of battle. It now became clear that the rebels were actually making war upon two enemies at once: the planters and the colonial metropole. The planters were thrown

Members of the rebel forces fighting the Spanish Army in Cuba. (*Photographic History of the Spanish-American War*, 1898)

into the arms of the colonial regime by virtue of their need to protect their holdings and status in Cuban society.

While Martí had been the intellectual and political leader of the rebellion, the rebel army was led by Máximo Gómez y Báez and Antonio Maceo Grajales. Gómez, a former Spanish general, formulated the Cuban strategy of hit-and-run tactics, avoiding pitched battles with the better-equipped and more numerous Spanish colonial troops. He also made war on the lifeblood of the Cuban elite and colonial regime by attacking and destroying Cuban sugar plantations. The rebels received significant support from the peasants and black plantation workers in the countryside. As the war dragged on into 1896, a Cuban exile group in the United States called the Cuban Junta was able to swing American popular opinion to the side of the rebels. It was also instrumental in funneling arms and money to the rebels. In 1896, the Cuban rebels were able to bring the conflict to the more prosperous western portion of the colony, which was also the heart of the sugar industry. In so doing, the rebels inflicted significant damage on both the Cuban and Spanish economies.

As the rebellion endured, the conflict turned increasingly vicious on both sides. The rebels' invasion of western Cuba led to the appointment of General Valeriano Weyler y Nicolau as leader of the Spanish forces and Cuban governor in 1896, replacing Martínez. Weyler deduced that the best way to beat the rebels was to deprive them of support from the peasants in the countryside. He thus in-

troduced the policy of reconcentration, which involved the forced relocation of peasants from their homes and farms into fortified government-run cities and camps. More than 500,000 Cubans were relocated as a result of this *reconcentrado* (reconcentration) policy.

Weyler's policy led to economic, political, and military catastrophe. Not only were the peasants removed from their land, but their crops were burned and animals slaughtered. At the same time, thousands of relocated peasants died, as the relocation centers were ill-equipped to feed or shelter their inhabitants. Many others died from disease caused by the close quarters and abysmal sanitation. To be fair to Weyler, the destruction of property was not new to the conflict, but his forced and draconian removal of the peasants from their land added a new twist to it. Weyler's heavy-handed measures led to a swelling in the ranks of the rebel army. Also, world public opinion strongly opposed Weyler's policies. This was especially true in the United States, where opinion was strongly shaped by the yellow press. With international pressure mounting, Weyler was recalled to Spain in October 1897.

The war's destruction increased as the Spanish retreated into the cities and fortified villages and the rebel Cubans increasingly controlled the countryside. This led to a vicious war of attrition as the rebels inflicted more damage on the large planters and the Spanish made war upon the peasants. The war dragged on, with neither side able to defeat the other. At the beginning of 1897, the tide slowly turned against the Spanish as the rebels grew stronger and

bolder, while Spanish morale plummeted. It was now apparent to most that the Spanish cause was lost; the Spanish government was desperately looking for a way out of the Cuban morass.

A great shadow loomed large over the Cuban War of Independence, that of the United States. Indeed, segments of the American population had a long-standing interest in Cuba. Before the American Civil War (1861–1865), many Southerners expressed a desire to seize Cuba and make it a state or states to offset Northern power in Congress. While this did not occur, Cuba did attract significant American capital in plantations and sugar-processing plants. Following the Civil War, American investment in Cuba steadily grew, as did American involvement in Cuban internal affairs. There was also renewed interest in seizing Cuba from Spain and making it part of the United States. This time, the lead was taken by business leaders and proponents of an American empire. American investments by the time of Cuban insurrection had grown enormously, and tensions between the United States and Spain increased as the United States became frustrated with Spanish colonial rule and economic restrictions.

Cubans seeking independence from Spain had long had a presence in the United States, and they lobbied hard for American political and popular support for independence. The Cuban Junta succeeded in casting the Cuban revolt in terms of an oppressed American people attempting to gain their freedom from a European power. In order to gain support from the American public, Cuban publicists often compared their struggle to the American Revolutionary War. They portrayed the Spanish government as corrupt, brutal, and repressive.

All this propagandist agitation succeeded, for the U.S. government and the American people strongly supported the rebels. Particularly important in this regard was the sensationalist yellow press. Once the revolt began, American newspapers sent reporters to the island who reported in lurid detail the deprivations of the cruel Spanish colonial overlords. Many of the stories, filed from the safety of Havana, were full of fabrications and lacked any notion of balanced reporting. Once Weyler had taken command of the situation and instituted his *reconcentrado* system, the American press wrote story upon story detailing the horrid consequences of the policy. Tensions between the United States and Spain, spurred by the rantings of the yellow press, the U.S. desire to protect American commercial interests on the island, and the drumbeat of American imperialists, grew to dangerous proportions by 1898. The explosion and destruction of USS *Maine* in Havana Harbor on February 15, 1898, was an ideological breaking point that ultimately led to the Spanish-American War.

The U.S. conquest of the island and defeat of Spain in August 1898 enabled Cuba to gain its independence from Spain. Cuban independence was delayed, however, as the United States established an occupation government in an effort to secure a stable regime that would protect American economic interests. The issue was decided in 1901 via the Platt Amendment, as Cuba was granted its hard-won independence. In 1902, Cuba formally became an independent nation, albeit one under the thumb of its powerful neigh-

bor to the north. Most Cubans soon found out that the formalized Spanish policies that had resulted in inequity and repression were merely replaced by informal political-economic policies that were in large part controlled by Americans.

Curaçao

Dutch Caribbean island. Occupied by the Dutch in 1634 and only some 141 square miles in size, Curaçao is considered a transcontinental island, geographically part of South America but also part of the West Indies and one of the Leeward Antilles.

During the Spanish-American War, Rear Admiral Pascual Cervera y Topete's squadron arrived at Curaçao from Martinique on May 14, 1898. The Spanish government had informed Cervera that it would send a collier with 5,000 tons of coal there. In this Cervera was to be disappointed. Because of the Dutch government's declaration of neutrality, the governor allowed him to bring only two of his ships into the harbor and authorized them to take on only 600 tons of coal. The other ships spent the night outside the harbor. Cervera was also told that he could remain there for only 48 hours. The next day, the U.S. consul cabled Washington of Cervera's presence at Curaçao. After considering his options, Cervera departed with his squadron that same day, steaming north slowly to preserve coal, bound for Santiago, Cuba.

The discovery of oil on Curaçao in 1914 led Royal Dutch Shell to establish a large oil refinery on the island, completely transforming the economy. Curaçao became a strategically important location especially during World War II.

Cuzco Well, Battle of

Event Date: June 14, 1898

Action during the Battle of Guantánamo fought on June 14, 1898. During the Battle of Guantánamo (June 9–17, 1898), U.S. forces mounted an operation against the Spanish position in the Cuzco Valley east of Guantánamo Bay in order to secure the 1st Marine Battalion's beachhead. The Spaniards' position included a well, the only source of fresh water for 12 miles.

The operation, commanded by U.S. Marine Corps captain George Frank Elliott, was formed to attack the position, destroy the well, and force the Spanish to withdraw. The assembled force consisted of 160 men of C and D companies of the 1st Marine Battalion, 50 Cuban rebel soldiers, and, to provide cover fire, the U.S. Navy gunboat *Dolphin*. Some 480 men defended the Spanish position, including six companies of Spanish infantry from the Principe and Siminca regiments and two companies of Cuban loyalists. Captain Elliott planned a two-pronged attack, sending a platoon of Company C and a small Cuban force to follow the ridge lines and cut off the Spanish pickets. The remainder of the force followed a seaside trail.

The Spanish were alerted to the expedition, but American forces successfully skirmished for control of the high ground forming the western edge of Cuzco Valley overlooking the Spanish position. The Spanish defenders retreated into an area obscured by heavy vegetation at the base of the ridge. At this point, the Americans were reinforced by the arrival of 50 men of 1st Marine Battalion's Company A. This company formed the left flank of the expedition's line. Com-

panies C and D formed the center flank, and the main Cuban force formed the right flank.

Flanking fire from Company A and shelling from the *Dolphin* caused the Spanish force to dissolve in short order. Trying to escape, the exposed Spanish soldiers became targets for marine sharpshooters. By midafternoon, the battle had ended. The Spanish forces withdrew to Guantánamo and Caimanera, and the Americans then destroyed the well. American casualties included 4 marines wounded and approximately a dozen men suffering from heat exhaustion. The Cubans suffered 2 men killed and 2 men wounded. The Spanish suffered 68 men killed and an unknown number wounded. Eighteen others were captured. The short battle had forced the Spanish forces to withdraw, protecting the marine beachhead from further attack and securing the lower bay for the Americans.

D

Daiquirí Beachhead, Cuba

Landing point for the first U.S. ground troops in Cuba. The village of Daiquirí was located on the southeast coast of Cuba, about 16 miles east of Santiago. The American landings at Daiquirí commenced on June 22, 1898. When the United States declared war on Spain, it was a foregone conclusion that Cuba, so close to Florida and the cause of American anger that brought on the war, would be the focus of U.S. military operations.

Initially, the capital at Havana was the primary target, but on May 19, 1898, Spanish rear admiral Pascual Cervera y Topete eluded American warships and moved his squadron into Santiago Harbor. American commanders then decided to shift the focus of the Cuban invasion to the capture of Santiago and the destruction of the Spanish warships there. By June, Rear Admiral William T. Sampson had established a naval blockade of the port. He did not, however, wish to enter the harbor for fear of Spanish mines and coastal batteries. Instead, he chose to await the arrival of U.S. land forces, which he hoped could capture Santiago and bring the Spanish ships under fire from the land, either destroying Cervera's squadron or forcing it to sea.

American units that would form V Corps for the invasion of Cuba assembled at the embarkation point of Tampa, Florida. Poor interservice communication meant a shortage of ships to transport the men to Cuba. Tampa also lacked sufficient facilities to house, train, and supply the invasion force. As the expeditionary force grew in size, U.S. commanders debated the landing point for the invasion, eventually settling upon Daiquirí.

Major General William R. Shafter, the commander of V Corps, hoped to come ashore at Daiquirí, move up the coastal road some seven miles to Siboney, and then turn northwest toward El Caney and Santiago itself. While Daiquirí was close to Santiago, a landing

there posed several problems. There was only one pier, and most of the troops would have to come ashore over the beaches, riding to shore in launches. A high bluff behind the beach offered excellent observation and firing positions for Spanish defenders, while blockhouses dotting the bluffs provided protection to infantry defending against the landings.

Some 12,000 troops were available to the Santiago region commander, Lieutenant General Arsenio Linares y Pombo. Curiously, he chose to allow Shafter's landings to go largely unopposed despite the destruction that even a small Spanish force might have inflicted. Although the original estimates were that the Spanish had 7,000 troops in the area, Shafter knew that Daiquirí was undefended. Linares had ordered the 300 defenders withdrawn in order to shorten the Spanish defensive line.

Beginning at 9:40 a.m. on June 22, five American naval warships under the overall command of Captain Caspar F. Goodrich opened a bombardment of the Spanish shore positions but provoked no response from the deserted blockhouses. Thirty minutes later, troops of Brigadier General Henry W. Lawton's division began to move ashore. By nightfall, 6,000 men had landed. Much vital equipment had been lost, however. Despite assurances that the beaches were undefended, many civilian transport captains refused to approach closer than a mile and a half off the beach until the lack of a Spanish presence could be verified. Even Shafter could not browbeat the skittish captains into a closer approach until launches laden with American troops reached the beach and reported it empty. Cavalry horses and draft animals were lowered into the water in belly slings and expected to swim ashore, but more than 50 proceeded in the wrong direction and drowned. Supplies were tossed haphazardly on the beach with little sense of order. Casualties in the landing were at least extraordinarily light.

Members of the U.S. Army V Corps come ashore at Daiquirí, Cuba, 1898. (Bettmann/Corbis)

Two U.S. soldiers drowned, while one Spanish soldier was killed and five others were wounded.

Upon unloading at Daiquirí, the invaders discovered that the Spanish had destroyed the railroad to Santiago and had sabotaged all of the rolling stock. This left only the small coastal road for the transportation of troops, equipment, and supplies. Nevertheless, Shafter ordered Lawton to move on the road and capture Siboney. By the time Lawton's division departed the beachhead, however, it was too late in the day to reach Siboney. That night the troops camped directly on the road, expecting a Spanish counterattack that never came.

The troops left behind at Daiquirí camped directly on the beach. The following morning, Lawton's division moved into Siboney, which proved to be as deserted as Daiquirí. Shafter immediately designated Siboney, which was seven miles closer to Santiago, as the primary headquarters for the assault on the city. Having served its purpose for the initial landings, Daiquirí was quickly relegated to a secondary role. Beginning on the night of June 23, V Corps began to come ashore at Siboney. V Corps was extraordinarily lucky. As Theodore Roosevelt remarked later, a force of only 500 Spanish troops could have prevented the landing.

Davis, Cushman Kellogg

Birth Date: June 16, 1838

Death Date: November 27, 1900

U.S. attorney, politician, governor of Minnesota (1874–1875), and U.S. senator (1886–1900). Cushman Kellogg Davis was born in Henderson, New York, on June 16, 1838. When he was less than a year old, his family moved to the Wisconsin Territory, where he attended public primary and secondary schools. He attended Carroll College in Waukesha, Wisconsin, for a time before transferring to

the University of Michigan in Ann Arbor, from which he graduated in 1857. For two years he studied law with the law office of Alexander W. Randall and was admitted to the bar in 1860. At the beginning of the American Civil War, he enlisted with the 28th Regiment, Wisconsin Volunteer Infantry, at the rank of first lieutenant. In 1861–1862, he saw action in a number of campaigns in the West. From 1862 to 1864, he served as assistant adjutant general. Later in 1864, he served as an aide to Brigadier General Willis Arnold Gorman with whom he would later practice law. That same year, Davis was compelled to resign his commission because of ill health.

Upon leaving the army, Davis moved to St. Paul, Minnesota, where he set up a law partnership with Gorman, his old friend and mentor. In short order, Davis had made a name for himself in Minnesota law circles and had become active in the Republican Party. In 1867, he took a seat in the Minnesota House of Representatives but a year later was named a U.S. district attorney, a post he would hold until 1873. In 1874, he became governor of Minnesota, leaving office in 1875. In 1886, he was elected to the U.S. Senate on the Republican ticket. He would remain in the Senate until his death in 1900.

Davis had a quite successful career in the Senate and sat on several important committees, including the Committee on Territories and the powerful Committee on Foreign Relations. Among his colleagues—both Republican and Democratic—he enjoyed a reputation as a hard-working and honest broker with a considerable gift for oratory. In March 1897, he became chairman of the Committee on Foreign Relations just as events in Cuba were coming to a head and U.S.-Spanish tensions were on the rise. Well versed in international law and a thoroughly diplomatic gentleman, he provided much useful information and guidance to President William McKinley's administration both during the Spanish-American War and in its aftermath. Because of Davis's expertise and solid reputation, he was one of the U.S. peace commissioners to the peace negotiations with Spain that commenced in September 1898 in Paris. Two months later, the Treaty of Paris had been negotiated and signed by both sides. Returning to the Senate, Davis's health declined, and he died in St. Paul, Minnesota, on November 27, 1900.

paper business at age 22 in 1888. As a correspondent for both the *New York Sun* and *Harper's Weekly*, at the beginning of the Spanish-American War Davis covered the Flying Squadron, commanded by Commodore Winfield Scott Schley. The *Sun* then sent Davis to the Philippines to cover VIII Corps. He managed to secure passage with the first contingent of troops and thus was an eyewitness to the U.S. capture of Guam. *McClure's Magazine* later published a rather accurate account that he wrote about the August 13, 1898, First Battle of Manila.

Davis traveled widely in the Orient. In 1900, he covered the international expedition sent to suppress the Boxer Rebellion, and in 1904, he worked as a correspondent attached to the Japanese Army in Manchuria during the Russo-Japanese War. He also covered the 1907 trial of Bill Haywood in Boise, Idaho, for the *New York Times* and found himself attacked by the labor and socialist newspapers for allegedly having been bought out by capitalist interests. In 1912, Davis directed publicity for Theodore Roosevelt's campaign for president on the Progressive ("Bull Moose") Party ticket. Davis wrote a number of books, including an autobiography and biographies of Presidents William McKinley and Roosevelt. Davis served as secretary of the National Foreign Trade Council from 1917 until this death in New York City on June 3, 1932.

Davis, Richard Harding

Birth Date: April 18, 1864

Death Date: April 11, 1916

American novelist and journalist famous for his coverage of the Spanish-American War. Richard Harding Davis was born on April 18, 1864, in Philadelphia, Pennsylvania, the son of journalist Lemuel Clarke Davis and novelist Rebecca Harding Davis. The younger Davis studied during 1882–1886 at Lehigh and Johns Hopkins universities, where he published his first short stories. His lackadaisical attitude toward formal studies prevented him from earning a degree from either school, however.

In 1886, Davis became a reporter for the *Philadelphia Record*. That December he joined the *Philadelphia Press*. In 1889, he moved to New York, where he wrote for the *New York Sun*. His coverage of

Davis, Oscar King

Birth Date: 1866

Death Date: June 3, 1932

U.S. journalist, war correspondent, and author. Oscar King Davis was born in Baldwinsville, New York, in 1866. He entered the news-

Richard Harding Davis became the managing editor of *Harper's Weekly* in 1890. He was a successful fiction writer and a war correspondent during the Spanish-American War and then World War I. (Chaiba Media)

the 1889 Johnstown, Pennsylvania, flood earned him many accolades. His literary success as a fiction writer earned him the managing editorship of the well-read and prestigious *Harper's Weekly* in 1890. He used his post to travel widely, and in doing so he published in a series of books his impressions of the American West, South America, and Europe.

In 1895, Davis joined the *New York Journal*, then an upstart newspaper owned by William Randolph Hearst, and reported from the battlefields of the Greco-Turkish War two years later. Soon afterward he was commissioned by Hearst to cover the Cuban rebellion against Spain, which had begun in 1895. Davis's widely read stories focused on the struggle of ordinary Cubans and aroused sympathy for their cause in the United States. However, when Hearst changed one of Davis's stories to make it more dramatic, Davis was outraged and promptly resigned his position. He continued to cover the war for Joseph Pulitzer's *New York Herald*, *Scribner's Magazine*, and the *London Times*.

As soon as hostilities between Spain and the United States commenced, Davis was ready to travel to the war zone and report from the front. While aboard the battleship *New York*, he witnessed the shelling of Mantanzas, giving him an exclusive coverage of that event in the war. As a result of his reports, the U.S. Navy excluded journalists from all ships for the duration of the Cuban conflict.

Davis solidified his already-sterling journalistic stature when he befriended Lieutenant Colonel Theodore Roosevelt and the soldiers of the 1st U.S. Volunteer Cavalry (the Rough Riders) in Cuba. Davis joined them in action in the Battle of San Juan Hill (July 1, 1898), and his reports helped to create the legend surrounding Roosevelt and the Rough Riders. Roosevelt even offered him an officer's commission in the unit for his abilities in combat, but Davis declined and accepted honorary membership instead. His reports on other engagements, both in Cuba and Puerto Rico, represented some of his best journalistic writing.

At the Battle of Las Guásimas on June 24, 1898, Davis showcased his courage when he directed the fire of a dozen U.S. soldiers on a Spanish position. In the skirmish, he personally fired some 20 rounds from a rifle. Following the Battle of Coamo, the Puerto Rican village of that name actually surrendered to Davis and three of his fellow war correspondents.

Davis's vivid and meticulously documented reporting provided a lasting record of the Spanish-American War in the Caribbean. Indeed, his work continues to serve as primary documentation for historians to this very day. While some categorized Davis as a proponent of yellow journalism, his work clearly transcended such a pejorative assessment.

By the time of the Boer (South African) War (1899–1902), Davis enjoyed a reputation as one of the world's leading journalists and war correspondents. He covered that conflict from both the English and Boer perspectives and later published his first-hand accounts in a book titled *With Both Armies* (1902). Upon the outbreak of World War I in August 1914, Davis traveled to Europe to report from the front. Soon after his arrival in Belgium, however, he was captured by the German Army. As his passport had been issued in London, the Germans considered him a British spy and threatened him with execution. He was ultimately able to convince them that he was an American journalist and returned to the United States in 1915. His reports about the European battlefields no longer stressed the glory of war, however, as had many of his Spanish-American dispatches. Rather, they portrayed embittered and disillusioned soldiers trapped in endless warfare and dismal trenches.

Davis's early fiction achieved instantaneous success, especially his *Gallegher and Other Stories* (1899). He also wrote novels and plays, some of which were illustrated by Charles Dana Gibson. Davis is believed to be the model for the dashing young gentleman escorting the Gibson Girls. His most popular novel, *Soldiers of Fortune* (1897), was made into a play and later a movie. His other works include *Cuba in Wartime* (1897), *The Lion and the Unicorn* (1899), *Ranson's Folly* (1902), and *Notes of a War Correspondent* (1910). His first marriage, to Cecil Clark in 1899, ended in divorce in 1910. Two years later, he married the musical comedy star Elizabeth G. McEvoy (Bessie McCoy), with whom he fathered a daughter in 1915. Davis died of heart failure in New York City on April 11, 1916.

Dawes, Charles Gates

Birth Date: August 27, 1865

Death Date: April 23, 1951

Banker, financier, and politician. Born in Marietta, Ohio, on August 27, 1865, Charles Gates Dawes graduated from Marietta College in 1884 and two years later completed law school at the University of Cincinnati. He practiced law in Nebraska for eight years until the Panic of 1893, when he turned his attention to business matters. Within a year, he had amassed a large fortune by investing in gas, electric, lumber, and meatpacking companies. In 1895, Dawes moved to Evanston, Illinois, and bought control of two large plants producing gas near Chicago and Lacrosse, Wisconsin. In 1894, he published his first book, *The Banking System of the United States and Its Relation to the Money and Business of the Country*, which set forth a fiscal philosophy to which he adhered for the remainder of his life.

Dawes, an ardent Republican, was also interested in politics and became involved in the Illinois Republican Party. Fiercely proud of his Ohio roots, he attached himself to Ohioan William McKinley, whom he met for the first time in 1894. After moving to Evanston, Dawes immersed himself in Chicago politics. There he earned an excellent reputation for his organizational and fund-raising skills. In 1896, he had charge of McKinley's successful Illinois campaign for president and was rewarded with the position of comptroller of the currency at the Treasury Department in 1897.

Dawes was by nature a fiscal conservative. His prior work in banking in Nebraska in the early 1890s suited him well for the position of comptroller. He believed firmly in following the Republican platform that extolled the gold standard, a position in sharp contrast to that of McKinley's opponent in the election of 1896, William Jennings Bryan, a proponent of free silver and also a close friend of Dawes.

Dawes managed the office of comptroller competently. During his tenure, he instituted strong banking regulations to prevent panics such as the one that precipitated the 1893–1897 economic depression. In addition, he was able to recover \$25 million from banks that had failed in the Panic of 1893.

Charles Gates Dawes, an influential financier, was comptroller of the currency in the Treasury Department during the Spanish-American War and helped stabilize the currencies of Cuba and the Philippines after the conflict. He went on to become vice president of the United States and a Nobel Peace Prize recipient. (Library of Congress)

At the beginning of the Philippine-American War, Dawes was confronted with the instability of Philippine banks and a currency based on the Mexican peso and exchange rate for silver as well as businesses and merchants who would not accept U.S. currency. Since the Spanish-American War and subsequent American occupation, a large amount of U.S. gold had been introduced into the Philippines, mainly by the War Department to pay soldiers and conduct army business and operations. Instead of converting everything to the gold standard, however, Dawes compromised and instituted a flexible policy whereby both Mexican pesos and U.S. dollars would be accepted at reasonable exchange rates (approximately two pesos to the dollar). This proved crucial for stabilizing the economy of the islands.

Dawes resigned his post as comptroller in October 1901 in the hopes of winning a U.S. Senate seat from Illinois. Lack of support from President Theodore Roosevelt forced Dawes to withdraw his candidacy. During World War I, he served on American Expeditionary Forces general John J. Pershing's staff, assisting in supply and logistical matters. After the war, Dawes supported the League of Nations, a very unpopular stance for most Republicans. From 1921 to 1924, he served as the first director of the Bureau of the Budget. In 1924, he was awarded the Nobel Peace Prize for his

Dawes Plan, a sensible and magnanimous program for stabilizing Germany's eviscerated postwar economy.

In 1924, Dawes was elected vice president of the United States on the ticket with President Calvin Coolidge. Dawes's tenure in office was not a happy one, as he and Coolidge did not get along. Dawes left the office when his term expired in 1929. That same year, he was named ambassador to Great Britain and held that post until 1932. For the remainder of his life, he dabbled in politics and oversaw his vast financial and commercial holdings. Dawes died in Evanston, Illinois, on April 23, 1951.

Day, William Rufus

Birth Date: April 17, 1849

Death Date: July 9, 1923

U.S. attorney, jurist, and diplomat. William Rufus Day was born on April 17, 1849, in Ravenna, Ohio. His father was a justice of the Ohio Supreme Court. After graduating from the University of Michigan in 1870, the younger Day attended classes at its law school from 1871 to 1872. Upon passing the bar exam on July 5, 1872, he began a law practice in Canton, Ohio, in partnership with William A. Lynch.

Day continued to practice criminal and corporate law in Canton until 1897. He also became active in Republican Party politics. As a close friend of William McKinley, Day served as the president's legal and political adviser during McKinley's political career. From 1886 to 1890, Day was a judge on the Court of Common Pleas. In 1889, he was appointed judge for the Northern District of Ohio, but because of poor health he had to decline the office.

When McKinley became president in March 1897, Day became his assistant secretary of state, working under Secretary of State John Sherman, another Ohioan. Day acted as the de facto secretary of state, however, overseeing most of the State Department's day-to-day operations. Sherman's appointment had been based purely on politics, and the aging former U.S. senator was clearly not up to the task at hand.

A year later, in April 1898, Day became secretary of state when Sherman resigned in opposition to the Spanish-American War. Day immediately secured European neutrality during the war. In September 1898, he resigned his post in order to head the U.S. Peace Commission to negotiate in Paris the formal treaty ending the war with Spain. John Hay succeeded him.

William Rufus Day was secretary of state during the Spanish-American War, when he worked to secure European neutrality. He then resigned to head the U.S. commission to the Paris Peace Conference that ended the war. (Library of Congress)

Day argued against the annexation of Spanish colonies and did not believe that the United States should acquire all of the Philippine archipelago. In this McKinley overruled him. Day then insisted on purchasing the Philippines rather than claiming the islands by right of conquest. As such, he made sure that the Treaty of Paris included a payment of \$20 million to Spain in compensation for the loss of the Philippines.

In February 1899, McKinley rewarded Day for his service by securing his appointment to the U.S. Court of Appeals for the Sixth Circuit, where he succeeded William Howard Taft. In January 1903, President Theodore Roosevelt nominated Day to the U.S. Supreme Court, where he served until November 1922. Day held a centrist position on the court and supported federal antitrust prosecutions and the preservation of states' rights. After his resignation from the Supreme Court, he served for a few months as an arbitrator in the Mixed Claim Commission of the United States and Germany during 1922–1923. Day died at his summer home on Mackinac Island, Michigan, on July 9, 1923.

Debs, Eugene Victor

Birth Date: November 5, 1855

Death Date: October 20, 1926

Prominent U.S. socialist and activist. Eugene Victor Debs was born on November 5, 1855, in Terre Haute, Indiana, where his parents were grocers. Dropping out of school at age 15, he worked as a locomotive fireman. In 1875, he joined the Brotherhood of Locomotive Firemen (BLF), a fraternal organization, and was elected recording secretary of the Terre Haute chapter. Refusing to take a position on the Great Railroad Strike of 1877 and its violent suppression, he believed that the differences between labor and capital could be resolved in a harmonious fashion. He continued to rise within the ranks of the BLF, attaining the position of grand secretary treasurer by 1880 and editing the brotherhood's *Locomotive Fireman's Magazine*. He also moved into electoral politics, running as a Democrat for city clerk in 1879 and forming a victorious coalition of both workers and small businessmen. He was reelected to the post in 1881 and gained a seat in the Indiana Assembly in 1884.

Although successful in his fraternal and political activities, Debs grew increasingly pessimistic about the possibility of cooperation between labor and capital as economic and political power became concentrated in the hands of big business. Believing that narrow craft unions only exacerbated divisions within the working class, he looked to industrial unionism as the means through which to forge working-class solidarity. Accordingly, in 1893 he played an essential role in the formation of the American Railway Union (ARU), which called for the enlistment of all railroad workers under its banner.

The class cohesion of the ARU was tested in 1894 when the union refused to work on trains carrying Pullman cars in support of the strikers at George Pullman's railroad car shop outside of Chicago. Railroad operators demanded that President Grover Cleveland intervene to halt the strike. Citing interference with the delivery of the mail, Cleveland dispatched troops to end the strike. Debs and other union leaders were jailed for failing to obey an injunction to halt the ARU boycott of Pullman.

While serving a six-month prison term, Debs expanded his intellectual investigation of socialism by reading the works of Karl Marx and Eduard Bernstein. Although Debs's conversion to socialism was

Eugene Debs was a labor activist, an anti-imperialist, and a Socialist Party candidate for president in five elections. He later strongly opposed U.S. entry into World War I. (Library of Congress)

well under way before he was incarcerated, he emerged from prison a firm believer in Bernstein's revisionist view that socialism could be achieved through an evolutionary process of political reform. In 1897, Debs publicly declared himself a socialist, and in 1900, he accepted the Socialist Party of America (SPA) nomination for president, garnering approximately 100,000 votes in the election of that year. Four years later, his candidacy compiled almost a half million votes, and socialist candidates won election to local offices around the country. The 1908 presidential race provided little momentum for Debs and the SPA, but in the spirited election of 1912, which featured a four-way contest for president among Debs, Republican incumbent William Howard Taft, former president Theodore Roosevelt, and Democrat Woodrow Wilson, Debs attained almost 1 million votes. Suffering from exhaustion and ill health, he was unable to accept the 1916 SPA presidential nomination.

Debs opposed U.S. entrance into World War I. His perception that this had been undertaken to serve the interests of bankers and munitions makers convinced him in June 1918 to reenter the fray and denounce U.S. participation in the conflict. After delivering an

antiwar speech in Canton, Ohio, Debs was arrested for violating the Espionage Act of 1917 and sentenced to 10 years in prison. While serving his term in the Atlanta Federal Penitentiary, he once again ran as the presidential candidate of the SPA. Although campaigning from his jail cell, he still secured nearly 1 million votes. The budding socialist movement in the United States, however, was crushed during the war and the Red Scare that followed it.

On December 25, 1921, President Warren G. Harding ordered Debs released from prison. Suffering from poor health, Debs returned to his native Terre Haute. Despairing of the class unity and progressive social reform that he once envisioned, he died at the Lindlahr Sanitarium near Chicago on October 20, 1926.

Delcassé, Théophile

Birth Date: March 1, 1852

Death Date: February 22, 1923

French politician, ambassador, minister of the navy, and foreign minister. Born on March 1, 1852, at Pamiers (Ariège), Théophile Delcassé went to Paris to become a schoolteacher but turned to journalism and politics, specializing in colonial matters and foreign affairs and writing for the journal *La République Française* and the newspapers *Le Matin* and the *Le Jour*.

Identified with the radical Left, Delcassé was first elected to the Chamber of Deputies from the Ariège in 1889. He remained a deputy for 30 years. From 1893, he was almost constantly a minister: first parliamentary undersecretary of state and then minister of colonies (1893–1895) and minister of foreign affairs (1898–1905).

Delcassé played a major role in French foreign affairs in the period. As minister of colonies, he set in motion the events that led to the 1898 Fashoda Crisis in the Sudan with Britain, which as foreign minister he was then obliged to undo. Working through capable French ambassador to London Paul Cambon, Delcassé bowed to British demands and resolved the crisis by withdrawing the French expeditionary force from Fashoda without compensation. France and Britain did agree on a boundary between their territories in

As French foreign minister during the Spanish-American War, Théophile Delcassé adopted a neutral position on the war, although he did allow the French ambassador in Washington to transmit communications between the Spanish government and the William McKinley administration. (Library of Congress)

East Africa. Resolution of this crisis made possible the Entente Cordiale of April 1904 between France and Britain by which France recognized paramount British interests in Egypt and Britain recognized France's predominant role in Morocco. All major points of disagreement between Britain and France were resolved, including the Newfoundland fisheries and Siam.

Delcassé adopted a hands-off policy regarding the Spanish-American War, although he allowed French ambassador to Washington Jules-Martin Cambon to act on behalf of Spanish interests in securing an end to the war. Delcassé advised the Madrid government to accept the U.S. demands in the Protocol of Peace (signed on August 12, 1898) in the hopes that this would allow Spain to retain the Philippines. Later Delcassé hosted the peace negotiations that ended the war with the December 1898 Treaty of Paris. During the negotiations, he urged the Spanish to accept the U.S. acquisition of the Philippines rather than prolong the war.

Delcassé strengthened the existing alliance between France and Russia, traveling to St. Petersburg in 1899 to engage in talks with the Russian government. An additional accord committed the two states to collaborate in maintaining not only peace but also the balance of power in Europe. The new terms implied that France would

back Russia if the Balkan status quo were upset and that Russia would help France recover Alsace-Lorraine if the Central Powers sought to upset the European balance.

Delcassé also arranged understandings with both Italy and Spain regarding the expansion of French interests in Morocco, and in July 1902, he secured a secret understanding with Italy whereby Rome agreed, despite its membership in the Triple Alliance, to remain neutral in the event that Germany attacked France but also in case France was forced in “defense of its honor or security” to declare war on Germany. This agreement marked the nadir of the Triple Alliance.

Believing that he had cleared the way for such a move, Delcassé then proceeded to advance the French takeover of Morocco. The German government strenuously objected, however, provoking the First Moroccan Crisis (1905). Berlin threatened war and informed French premier Maurice Rouvier in no uncertain terms that his foreign minister must go. Delcassé refused to budge, but France was not ready for war, and he was forced from office in a cabinet reshuffling. France ultimately agreed to an international conference at Algeiras in 1906, which ironically strengthened its position.

Delcassé returned to the cabinet in 1911 as navy minister, a post he held until 1913. In this capacity he worked to reorganize and strengthen the navy and negotiated a key naval agreement with the British Admiralty whereby France would concentrate its strength in the Mediterranean and Britain would keep its forces in the North Sea, with Britain promising to defend the northern French coast from German naval attack. In 1913, Delcassé went to St. Petersburg as French ambassador to strengthen the Franco-Russian alliance and held that post until August 1914, when he returned as minister of foreign affairs. He negotiated the September 4, 1914, Declaration of London whereby France, Russia, and Britain pledged not to conclude a separate peace, and he prepared the way for the entry of Italy into the war on the Entente side. Hostile to the creation of a Balkan front, he resigned in October 1915 with the sending of Entente forces to Salonika and retired from public life altogether in 1919. Delcassé died at Nice on February 22, 1923.

Democratic Party

One of the two principal political parties in the United States during the Spanish-American War. The oldest political party in the

A caricature of William Jennings Bryan in the September 14, 1896, edition of *Judge* magazine attacks Bryan’s “Cross of Gold” speech delivered at the Democratic National Convention on July 8, 1896. In the speech, Bryan advocated the unlimited coinage of silver by the U.S. government, a policy that he believed would bring relief to debtors in the economic depression then gripping the nation. (Library of Congress)

United States, the Democratic Party traces its origins to the anti-Federalists of the 1790s. In the early 1790s, the Democratic-Republican Party (the forerunner of the Democratic Party) came into being as a reaction to the Federalists, led by Alexander Hamilton. Hamilton and the Federalists believed in a strong central government, a national bank, and federal government support of business and industry. The anti-Federalists, best exemplified by Thomas Jefferson and James Madison, helped form what would ultimately become the Democratic Party in opposition to the Federalist agenda.

The Democratic-Republicans wanted to keep the federal government small and unobtrusive. They believed that democracy was best served by a system in which the states and individual citizens held the majority of the economic and political power of the nation. They eschewed the buildup of industry in the United States and deplored governmental attempts to support it. For them, the model American citizens were the small yeoman farmers and the local tradesmen and shopkeepers. This idealized concept, which never actually existed in any large sense, came to be known as

Jeffersonian Democracy and would be the hallmark of Democratic Party ideology into the 20th century.

The Democrats ultimately became known as the party of states' rights by the early 1800s, which explains its great influence among Southern planters who wanted as little interference as possible with their "peculiar institution" of slavery. The Democratic Party was powerful not just in the South but also in parts of the western Great Plains and the far West. It was weakest in the populous and industrialized Northeast. The Democrats first captured national office in 1800, with Jefferson winning the presidency and Democratic-Republicans winning control of the House, the Senate, and the majority of state legislatures. After the War of 1812, the Federalists lost ground to the momentary gain of the Democratic-Republicans. Before long, however, infighting and factionalism tore through the party, and it broke apart by the end of the 1820s.

War hero Andrew Jackson, elected to the presidency in 1828, picked up the mantle of the old Democratic-Republican Party and helped forge the modern Democratic Party. This inaugurated the era of Jacksonian Democracy, with Jackson's belief in the sovereignty of the people above all else, a strong aversion to centralized banks and industrialists, and a healthy fear of the moneyed elite in the Northeast. Until the late 1840s, most Democrats were slave owners, farmers, tradesmen, some small businessmen, and, increasingly, immigrants and laborers whom the Democrats claimed to champion. Democratic Party priorities reflected its constituency, as witnessed by the opening of new lands in the West for farming and the expulsion of Native Americans from their ancestral lands. Democratic president James K. Polk's foreign and domestic policies, which included the Mexican-American War (1846–1848), huge territorial acquisitions in the West, reduced tariffs, and a subtreasury system, alienated many Democrats and led to a schism in the party in 1848.

Alarmed by Polk's policies and disenchanted over the possible expansion of slavery, a group of Democrats bolted the party in 1848 to form the Free-Soil Party. Meanwhile, the Whig Party began to unravel, which resulted in split votes in national elections in 1852 and 1856. The result was two Democratic presidents in the years leading up to the American Civil War. The Free-Soilers joined ranks with the Republican Party by the mid-1850s.

By 1860, the Democratic Party had become so splintered that it nominated two presidential nominees, Illinois senator Stephen Douglas representing the North and John C. Breckenridge representing the South. This ultimately paved the way for Abraham Lincoln's election and the Civil War. Four years of war and Radical Republican Reconstruction efforts thereafter kept the Democratic Party relatively weak. By 1870, the idea took hold of the Solid South, or a monolithic Democratic Party that predominated in the southern tier of states. This alignment would last for nearly a century. Not until 1874 did the Democratic Party regain its momentum at the national level when it took control of the House of Representatives.

During the 1880s, power in Washington was quite evenly split between the Republicans and Democrats. The election of Democratic

president Grover Cleveland in 1884 signaled a change of strength for the party. By then, the Democratic Party had not only locked up the southern states but also ran strong among farmers in parts of the lower Midwest and had made great inroads with newly arrived immigrants in cities, mill towns, and mining communities. Cleveland represented the so-called Bourbon Democrats, who held fairly conservative views. They tended to champion industrial interests, abhorred bimetallism, and were adamantly opposed to expansionism or imperialist foreign policy. A sharp economic downturn that began in 1893 and turned into an economic depression led to the repudiation of the Democrats in the 1894 congressional elections, handing the Republicans a significant majority in both the House and Senate. Cleveland, who was serving a second (nonconsecutive) term as president, became a virtual lame duck after 1895.

In the pivotal 1896 elections, the rural Democrats overcame the dominance of the Bourbon Democrats. Represented by Democratic presidential nominee William Jennings Bryan, the agrarian Democrats championed free silver (or bimetallism) and railed against the East Coast establishment, including banks, railroads, and big business. Conservative Democrats who opposed free silver formed the short-lived National Democratic Party, which championed the continuation of the gold standard. Due in large part to this split, Bryan lost the 1896 election to Republican candidate William McKinley. This opened the door to almost three decades of Republican dominance in Washington.

Not all Democrats were anti-imperialists, but a sizable majority of them disdained overseas expansion because it expanded the size and scope of the federal government. Still cleaving to states' rights, many Democrats believed that individual freedoms and interests would be sublimated to national objectives, particularly if the United States became an overseas empire. Fortunately for the Republicans, the split in the Democratic vote in 1896 and the disastrous decision to fuse the Populist Party platform with the Bryan platform virtually ensured a Republican victory. It also opened the door to overseas expansion, which Grover Cleveland had staunchly resisted until leaving office in March 1897.

Dewey, George

Birth Date: December 26, 1837

Death Date: January 16, 1917

U.S. admiral. Born in Montpelier, Vermont, on December 26, 1837, George Dewey was the son of a prominent physician. Dewey wanted to go to the United States Military Academy, West Point, but ended up attending the United States Naval Academy, Annapolis, instead. He graduated from the academy in 1858. Promoted to lieutenant in January 1861, during the American Civil War Dewey served aboard the steam frigate *Mississippi* and soon became its executive officer. He took part in the passage of Flag Officer David Farragut's squadron up the Mississippi River to New Orleans on April 24–25, 1862, and in operations against Port Hudson (March 14, 1863). Dewey then served in the North Atlantic Blockading Squadron and, as the executive officer aboard the steam frigate *Colorado*, took part in operations against Fort Fisher (December 1864–January 1865). He ended the war as a lieutenant commander aboard the steam sloop *Kearsarge* in European waters.

During the next two decades, Dewey held a number of assignments. He was promoted to commander in 1872 and moved in 1875 to Washington, D.C., where he served for seven years on the Light-house Board. In 1882, he returned to sea as captain of the steam sloop *Juniata*. While in the Mediterranean, he became ill and spent a year in a British hospital on Malta. He did not fully recover and return to duty with the navy until 1884. Promoted to captain in September 1884, he received command of the gunboat *Dolphin*, one of the navy's first steel ships, that was still under construction. Frustrated over the delays in its commissioning, he secured command of the steam sloop *Pensacola*, flagship of the European squadron (1885–1889).

Dewey returned to Washington as chief of the Bureau of Equipment (1889–1893) and then as president of the Bureau of Inspection and Survey (1895–1897). On his promotion to commodore in February 1896, he was entitled to command a squadron. Both Dewey and Commodore John A. Howell sought the post of commander of the U.S. Asiatic Squadron. Relations with Spain were deteriorating over Cuba, and if war came, the Philippines would figure prominently in it. With the support of his friend Assistant Secretary of the Navy Theodore Roosevelt, Dewey received the coveted position. He officially took up his command at Nagasaki, Japan, in January 1898 aboard the cruiser *Olympia*.

When the battleship *Maine* exploded and sank in Havana Harbor on February 15, 1898, Dewey's squadron was on its way to Hong Kong. He had already begun preparations for a possible attack on the Spanish squadron in the Philippines. On April 25, the United States declared war on Spain, and three days later under telegraph orders from the Navy Department, Dewey's squadron steamed for the Philippines.

As the squadron neared the Philippines, Dewey detached both the *Boston* and the *Concord* to scout Subic Bay. Informed by signal that the Spanish squadron was not there, Dewey exclaimed, "Now

Commodore George Dewey commanded the U.S. Asiatic Squadron that routed the Spanish in the Battle of Manila Bay during the Spanish-American War and established the United States as a Pacific power. (Library of Congress)

we have them!" He decided to enter Manila Bay with his squadron on the night of April 30, a risky decision because of the threat posed by mines but one intended to avoid fire from Spanish guns protecting the entrance to the bay and to catch the Spanish off guard. Dewey rejected the suggestion that a supply ship go first and insisted on taking the lead himself in the *Olympia*.

Early the next morning, May 1, Dewey and his men could see Rear Admiral Patricio Montojo y Pasarón's squadron anchored off Cavite and commenced operations against it and the shore batteries. In one of the memorable quotes in U.S. Navy history, Dewey told his flag captain Charles V. Gridley of the *Olympia*, "You may fire when ready, Gridley." In a matter of six hours, Dewey's squadron of four cruisers, two gunboats, and a revenue cutter had reduced the seven smaller Spanish warships to scrap at a cost of only seven men wounded for the Americans. News of the victory in the Battle of Manila Bay made Dewey a hero in the United States and led to his promotion to rear admiral that same month.

Dewey's role in the war largely ended with the naval battle at Manila. Although he could take Manila at any time, he warned Washington that he would be unable to hold it because of the lack of U.S. ground troops, and he thus awaited their arrival. In June,

Washington informed Dewey that Spanish rear admiral Manuel de Cámara and a Spanish squadron—superior, on paper at least, to that of Dewey's own—had departed Spain for the Philippines. It was ordered to return to Spain following the Battle of Santiago de Cuba, however. More troublesome to Dewey was the presence off Manila of the German East Asian Squadron under Vice Admiral Otto von Diederichs, which flouted international regulations pertaining to blockades. The German squadron was definitely superior to his own.

In June and July, some 6,000 U.S. troops arrived, and Dewey's squadron supported the army's capture of Manila on August 13 and subsequent operations in the Philippines. In March 1899, Congress advanced Dewey to admiral of the navy.

An exhausted Dewey sailed from the Philippines on May 20, 1899. He returned to the United States on September 26, 1899, and four days later led a victory parade through New York City. In the spring of 1900 he made a brief bid for the presidency but dropped out to become president of the newly formed Navy General Board. Exempted from retirement due to age, he served in this post for 16 years and played an important role in U.S. Navy expansion. He also supported President Roosevelt's plan for a circumnavigation of the globe by the Great White Fleet during 1907–1909. Dewey published his autobiography in 1913.

In 1903, Secretary of War Elihu Root and Secretary of the Navy William Moody established the Joint Army-Navy Board. Dewey became its chair, serving on this board and the Navy General Board until his death in Washington, D.C., on January 16, 1917. Intelligent, thorough in his preparations, and a bold commander, Dewey was a natural leader who was greatly respected by those he commanded.

Diederichs, Ernst Otto von

Birth Date: September 7, 1843

Death Date: March 8, 1918

German admiral. Born on September 7, 1843, in Minden, Westphalia, Ernst Otto von Diederichs was expected to follow his family's tradition of service to the Prussian state. However, ill health prevented him from attaining the necessary academic credentials for university admission. He therefore joined the Prussian Fusiliers in 1862 in pursuit of a military career, but again poor health forced him to give up his commission. When a military surgeon proposed that he take a sea cruise to recover, Diederichs signed up with the merchant marine to fulfill his military obligations. In 1865, following three years of service in Southeast Asia, he applied for admission to the naval officer corps of the Prussian Navy. Two years later, he was promoted to lieutenant junior grade (*Unterleutnant zur See*). During the Franco-Prussian War (1870–1871), he participated in the coastal defense of the German North Sea harbors and commanded the gunboat *Natter*.

Diederichs was one of only 12 officers admitted to the new Naval Academy in Kiel in 1872, established to prepare its graduates for staff positions. Promoted to lieutenant commander in 1873, he graduated a year later. Based on his expertise in gunnery, in October 1874 he was assigned to the Torpedo Research and Development Commission in Berlin, where he remained until 1878. Following a two-year tour as first officer aboard the cruiser corvette *Luise* in East Asia, he returned to Germany in 1880. In 1883, Lieutenant-General Leo von Caprivi appointed Diederichs chief of operations at the Admiralty, where he was responsible for operational planning. In 1890, he was appointed director of the Imperial Shipyard at Kiel. Part of his responsibility was to develop Kiel as a commercial and military port, an experience that served him well at Jiaozhou (then known as Kiao-Chau, Kiaochow, Kiauchau, or Ki-autschou), China, in 1897.

When Kaiser Wilhelm II promoted Diederichs to rear admiral in 1892, he visited navy shipyards in the United States to discuss recent technological developments. In 1895, he was assigned as chief of staff to the commanding admiral of the navy, Admiral Eduard von Knorr, at the Naval High Command in Berlin. Ever since his 1882 strategic memorandum had pioneered plans for a two-front war against France and Russia, Diederichs had voiced opposition to naval and imperial policies that alienated Great Britain. At his new post, however, he was asked to begin the development of war plans against Britain. He concluded that Germany should never enter such a war alone and that an alliance with another naval power, rather than a large fleet, would deter potential British aggression. He became a leading critic of Rear Admiral Alfred von Tirpitz's plans for a stronger German Navy.

When Tirpitz was recalled from East Asia to become state secretary in 1897, Diederichs became his successor as chief of the Cruiser Division. Because German commanders complained regularly that the lack of a permanent base impaired naval operations in

Dick Act of 1903

See Militia Act of 1903

East Asia, Diederichs was ordered to identify potential sites for such a base. He subsequently toured all viable sites and concluded that Jiaozhou on the Shandong (Shantung) Peninsula was the only suitable site. He realized, however, that Germany could not move against it without a legitimate reason.

When several German officers were assaulted in Wuchang in October 1897, Diederichs sought to use the incident as the justification for the seizure of Jiaozhou. He cabled Berlin for permission, but his request was denied. However, when two German Catholic priests were murdered in Shandong Province in November 1897, Kaiser Wilhelm cabled Diederichs to proceed immediately to Jiaozhou and seize the area as compensation. On November 14, 1897, he mounted an operation that took the Chinese forces in Jiaozhou by surprise. The Chinese evacuated their fortified positions and withdrew to the north. Diederichs's rapid action resulted in a bloodless German seizure of Jiaozhou. Kaiser Wilhelm acknowledged Diederichs's accomplishment by promoting him to vice admiral and also immediately dispatched reinforcements to China. Diederichs then began to develop Jiaozhou as a naval base. Germany and China later signed an agreement that granted Germany a 90-year lease around Jiaozhou Bay.

On the outbreak of war between the United States and Spain in April 1898, Diederichs believed that the conflict could provide Germany with another opportunity to secure a base in East Asia. He expected that the war would result in a partition of the Philippines, and he wanted Germany to participate in any potential territorial gains. Among the most favorable sites for a German base in the Philippines were Manila Bay and Mariveles Bay. When two German engineers were reported missing in Luzon, the German consul Friedrich von Krüger called on Diederichs to protect German nationals. Kaiser Wilhelm then ordered Diederichs to proceed to the Philippines and survey the situation. As some of his ships were under repair, Diederichs decided to dispatch the cruiser corvette *Irene* to Manila immediately and to follow in the cruiser corvette *Kaiserin Augusta*. His other ships were to proceed as soon as possible.

The arrival of so many German warships in the Philippines altered the local balance of power. American commodore George Dewey was concerned that Germany might interfere with his operations before Spain surrendered, thereby ensuring itself a role in the peace negotiations. In the weeks following the Battle of Manila Bay, relations between Dewey and Diederichs grew quite strained. Dewey claimed that German ships were interfering with the U.S. naval blockade of Manila, a charge that Diederichs denied. Tensions reached a climax in a face-to-face confrontation with Diederichs's envoy Captain-Lieutenant Paul Hintze on July 10, 1898, when Dewey declared that if Germany wanted war, it could have it.

Diederichs reported on July 14 that he believed that Dewey's outburst was prompted by an explosive mixture of rumors, American newspaper reports depicting Germany as an aggressor, and a certain unease resulting from the size of the German squadron. Although Diederichs had lost hope by late June that Germany might

still gain a foothold in the Philippines, he nonetheless dispatched ships throughout the archipelago to examine potential sites for a German base, which again raised tensions between the United States and Germany. Realizing, however, that there was no particular sympathy for the Germans among Philippine revolutionaries, Diederichs yielded. He pointed out in a report that his presence had accomplished nothing and had probably done more harm than good, damaging the German image abroad and alienating other powers. He then commenced a long-postponed visit to Batavia in the Dutch East Indies.

Upon Diederichs's return to Germany in 1899, Kaiser Wilhelm assigned him as chief of staff of the Admiralty. There Diederichs reviewed existing plans for a possible war with Britain and began to develop war plans against the United States. In January 1902, he was promoted to admiral, but he retired from the navy in August 1902 because of his strong opposition to Tirpitz's naval policy, which had the emperor's support. Diederichs died in Baden-Baden on March 8, 1918.

Dingley Tariff

Tariff levied by the U.S. Congress in 1897 on foreign goods imported to the United States. Also called the Dingley Act, the new tariff schedule was named after its principal sponsor, U.S. representative Nelson R. Dingley Jr., a Republican and chairman of the House Ways and Means Committee. The Dingley Act became law on July 24, 1897, when Republican president William McKinley held a signing ceremony to inaugurate the new tariff duties.

High protective tariffs were nothing new for the Republican Party. Indeed, since its founding in the 1850s, the party generally favored high taxes on imported, finished products to protect U.S. industry and to spur its growth. In 1896, McKinley had campaigned on a platform that included a pledge to initiate higher tariffs. In 1897, the Republicans found it necessary to increase tariffs as a way to undue the 1894 Wilson-Gorman Tariff Act, which had been initiated by the Democrats in Congress and had marginally reduced import duties from the highs reached under the McKinley Tariff Act of 1890.

Sample Duties Enacted by the Dingley Tariff

Item	Duty
Beef	2¢ per pound
Cotton (thread)	6¢ per dozen spools
Horses	\$30 per animal
Iron ore	40¢ per ton
Molasses	6¢ per gallon
Rum	\$1.50 per gallon
Steel (highest grade)	4 ⁷ / ₁₀ ¢ per pound
Sugar (refined)	1 ⁹⁵ / ₁₀₀ ¢ per pound
Tobacco (with stems)	\$2.50 per pound
Wheat	25¢ per bushel

Under the schedule of new tariffs, the value-added tax on most imported products averaged about 45.6 percent, meaning that a tax equal to 45.6 percent of a product's value had to be paid before it was allowed into the country. On certain items, particularly those that competed with U.S. industrial products in need of even more protection, the tariff jumped to as high as 57 percent. Notably, the Dingley Act allowed the president to exercise trade reciprocity, a novel feature for the time. This provided McKinley the opportunity to lower tariffs on certain goods if the exporting country did the same for incoming U.S. products. The Dingley Tariff represented the highest tariffs up to that time in U.S. history. It would be superseded by the Payne-Aldrich Tariff Act, passed in 1909.

Besides the Republicans' penchant for high tariffs, there were other imperatives behind the Dingley Tariff. Chief among them was the devastating economic depression that had gripped the nation since 1893. The downturn began with a frantic run on the country's gold supply that spilled over to Wall Street, where it precipitated a full-blown panic and a stock crash, and finally trickled down to almost every business in America. After four years of economic deprivation, labor unrest, and businesses failing by the thousands, the unemployment rate peaked at 12.4 percent in 1897. With a clear Republican mandate in both the Congress and the Oval Office, McKinley and congressional leadership believed that higher tariffs would help the nation out of the economic doldrums. Republicans also hoped to reduce the domestic tax burden by shifting the revenue stream from internal to external sources.

The Dingley Tariff played a peripheral, but certainly notable, role in the onset of the Spanish-American War. Indeed, the new tariff schedule hit the Cuban economy, particularly the sugar industry, very hard. Increased unemployment among Cubans led to a general increase in their frustration with Spanish colonial policies. This exacerbated the unrest that had begun in 1895, which in turn provoked more American indignation at Spanish rule in Cuba. While pressuring the Spanish was not a motivating factor for the passage of the Dingley Tariff, the Republicans had to have known the likely effect it would have on Cuba's economy.

Dodge, Grenville Mellen

Birth Date: April 12, 1831

Death Date: January 3, 1916

U.S. general, congressman, railroad builder, and land developer. Born in Danvers, Massachusetts, on April 12, 1831, Grenville Mellen Dodge was educated at Dunham Academy in New Hampshire and then Norwich University in Vermont, from which he graduated with a degree in civil engineering in 1851. He moved to Iowa that same year and was an engineer and surveyor for railroads, including the Union Pacific. He also became a partner in the Baldwin & Dodge Banking Firm.

Dodge organized the Council Bluffs Guards and was commissioned a colonel in the 4th Iowa Infantry Regiment in July 1861 after the start of the American Civil War. Shortly thereafter he received command of the 1st Brigade, 4th Division, in the Army of Southwest Missouri. He fought in the Battle of Pea Ridge (Elkhorn Tavern), Arkansas, on March 7–8, 1862, when he had three horses shot from under him and was wounded in the side. Promoted to brigadier general of volunteers for his role in that battle, he took command of the District of the Mississippi, earning the attention of Major General Ulysses S. Grant for his espionage networks and rebuilding the Mobile & Ohio and other western railroads.

Promoted to major general of volunteers in June 1864, Dodge commanded XVI Corps during Major General William T. Sherman's Atlanta Campaign. Dodge led his corps in the Battle of Ezra Church (July 28, 1864). Wounded in the head by a Confederate sharpshooter on August 19, 1864, during the Siege of Atlanta, Dodge returned to active duty that December as commander of the Department of the Missouri, a post he held until the end of the war. The department was subsequently expanded to include the departments of Kansas, Nebraska, and Utah. His camp in Kansas was known as Fort Dodge. Later it became Dodge City.

Dodge's soldiers were kept busy against the Native Americans, for in the summer of 1865 the Cheyenne, Arapahos, and Sioux raided the Bozeman Trail and other overland mail routes. Dodge then ordered a punitive operation against the hostiles that became known as the Powder River Expedition or the Connor Expedition for its commander Brigadier General Patrick E. Connor. The only major engagement of the campaign, the Battle of the Tongue River, resulted in an army victory against the Arapahos. Fighting in the Powder River area, however, eventually led to Red Cloud's War.

Resigning his army commission in May 1866, Dodge returned to the railroad business as chief engineer of the Union Pacific Railroad. In this position, he became a key figure in the construction of the Transcontinental Railroad. He also won election to the U.S.

A Union general during the American Civil War, Grenville Mellen Dodge became a highly successful businessman. He opposed the war with Spain but then reluctantly agreed to chair a commission created by President William McKinley to investigate the notorious Embalmed Beef Scandal and the practices of the U.S. War Department during the war. (Library of Congress)

House of Representatives as a Republican from Iowa and served in the House during 1867–1869. He spent much of his time away from the capital, however, engaged in railroad construction, but while in Washington he lobbied forcefully for the railroads and internal improvements in the West. Employed by financier Jay Gould in 1873, Dodge supervised the laying of some 9,000 miles of railroad track. Later he also supervised the laying of railroad track in Cuba. Involved in a number of different businesses, he became immensely wealthy, with a fortune estimated at some \$25 million.

A staunch Republican and personal friend and confidante of President William McKinley and Secretary of War Russell A. Alger, Dodge believed that war with Spain would bring economic instability. He therefore encouraged McKinley to secure a peaceful solution to the growing tension with Spain over Cuba. On the declaration of war, Dodge was offered command of I Corps, but he declined in order to continue his business pursuits. Throughout the war, however, he remained in close touch with McKinley and Alger.

Following the war, Dodge reluctantly agreed to chair a commission created by McKinley to investigate the notorious Embalmed Beef Scandal and the practices of the War Department during the war. The commission, officially called the Commission to Investigate the War Department, came to be known simply as the Dodge Commission.

Dodge retired to Council Bluffs, Iowa. He wrote several books of recollections of the Civil War and construction of the Transcontinental Railroad. He died at Council Bluffs, Iowa, on January 3, 1916.

Dodge Commission

Presidential investigative committee, also known as the War Department Investigating Commission, appointed by President William McKinley to study the workings of the War Department and the U.S. Army during the Spanish-American War. The commission was named for its chairman, former U.S. Army major general and former Republican congressman from Iowa Grenville Mellen Dodge. First convened on September 26, 1898, the Dodge Commission ended its assignment on February 9, 1899. Its findings were published in an eight-volume report.

At the conclusion of hostilities with Spain, McKinley called upon Dodge to head a commission to investigate charges of mismanagement and incompetence leveled against the U.S. Army and Secretary of War Russell A. Alger. Dodge, a loyal and influential Republican and successful railroad entrepreneur, then organized a committee composed of 12 members. All 12 were Civil War veterans, including one ex-Confederate, Captain Evan P. Howell of Georgia.

Among the more influential members of this investigative body were former Vermont governor Urban A. Woodbury, who had lost his right arm and became a prisoner of war at the First Battle of Bull Run; James A. Beaver, attorney, judge, and governor of Pennsylvania who had commanded the 48th Regiment of Pennsylvania Volunteers and lost a leg in the Second Battle of Bull Run; Brigadier General John M. Wilson, Medal of Honor recipient for

Members of the Dodge Commission. Appointed by President William McKinley and named for its chairman, Grenville Mellen Dodge (*right*), it was charged with investigating the performance of the War Department and the U.S. Army during the Spanish-American War. (Corbis)

his heroism in the Battle of Malvern Hill, Virginia, in 1862 and superintendent of the United States Military Academy at West Point from 1889 to 1893; and Colonel James A. Sexton, postmaster of Chicago, who served as the provost marshal for the Union Army's XVI Corps.

During its inquiry, the Dodge Commission requested comprehensive reports from the U.S. Army's adjutant general, quartermaster general, commissary general, surgeon general, chief of engineers, and chief of ordnance. It investigated 10 specific areas. Among these were the amount and kind of camp and garrison equipment on hand at the start of the war; the arming and equipping of the volunteer regiments in the various camps; the quantity, quality, and kind of food furnished; the number of tents, beds, linens, medicines, and other necessities for hospitals; the efficiency of the medical staff; and the conditions and operations of both the Engineer Department and the Ordnance Department.

The Dodge Commission's most important investigative focus was directed at hygiene and public health in the army camps. Of the 274,000 officers and men who served in the war, 5,462 had died in theaters of operation and camps in the United States. Yet, only

379 of those deaths were battle-related. The commission heard testimony from 495 witnesses and visited most of the encampments. It also conducted interviews with soldiers and officers in several locales around the country. Based on a report submitted by Majors Walter Reed, Edward Shakespeare, and Victor C. Vaughan, who examined the incidence of typhoid fever in army encampments, the commission found that the Army Medical Department was understaffed and not properly organized to meet the demands of a modern war. It also pointed out that the Medical Department had failed to investigate the sanitation conditions in the camps, had too few nurses available and discounted their valuable service, and had to rely on an ineffective Quartermaster Corps for the distribution of medical supplies and equipment.

The Dodge Commission's findings produced numerous recommendations that included an increase in the number of medical officers, the establishment of a nursing reserve component, and the securing of a sufficient amount of medical supplies equivalent to an army four times its present strength. The commission also recommended that the Medical Department take charge of the delivery of supplies.

Despite some criticism that the commission was a rubber stamp and partisan coverup for the shortcomings of the McKinley administration, it examined every aspect of the U.S. Army's and War Department's actions. No formal charges were brought against either, although McKinley did request Alger's resignation in 1899. Many of the Dodge Commission's recommendations regarding military hygiene and medical treatment were implemented within a few years. Military officer training manuals were also rewritten to ensure that line officers developed a sense of responsibility for the overall health of their command. Also, curriculum in hygiene and public health was implemented at the United States Military Academy at West Point and other military training schools. Thus, the Dodge Commission is credited with establishing new policies governing hygiene and medicine within the U.S. military.

By far the most controversial topic with which the committee dealt was the Embalmed Beef Scandal. During his testimony to the Dodge Commission, Major General Nelson A. Miles, commanding general of the army, pointedly accused Brigadier General Charles Patrick Egan, who was the commissary general during the war, of providing U.S. troops with substandard canned beef that most soldiers despised because of its poor taste. Miles also accused the commissary general and U.S. meatpacking companies of experimenting with unknown chemical preservatives that had resulted in sickness among many who had consumed the beef. Egan denied the allegations and lashed out at Miles publicly, an action that brought a court-martial, conviction, and reduction in rank. In the end, the Dodge Commission concluded that while much of the meat fed to U.S. soldiers may indeed have tasted terrible, it was not defective and had not caused the widespread sickness claimed by Miles and others.

Dole, Sanford Ballard

Birth Date: April 23, 1844

Death Date: June 9, 1926

Hawaiian politician, president of Hawaii's provisional government and the Republic of Hawaii (1894–1900) following the 1893 revolt

Sanford B. Dole, pineapple baron and president of the Republic of Hawaii (1894–1900). (Bettmann/Corbis)

that unseated Queen Liliuokalani, and governor of Hawaii (1900–1903). Sanford Ballard Dole, the son of white U.S.-born Protestant missionaries, was born in Honolulu, Hawaii, on April 23, 1844. Educated in the United States, he became a lawyer and joined the small group of white elites in Hawaii who wielded great influence in Hawaiian affairs and who pushed the Hawaiian monarchy to embrace Western-style democracy and values. From 1884 to 1887, Dole served in Hawaii's legislative body and became fast friends with King David Kalakaua and Queen Liliuokalani. Dole served as an informal adviser to both during their reigns.

In 1887, after white businessmen, planters, and other influential Hawaiians forced King Kalakaua to accept a new constitution that essentially gave more power to Americans and Europeans and less to native Hawaiians, the king appointed Dole as a justice on Hawaii's supreme court. He served in the position until 1893. Meanwhile, he continued to counsel the monarchy, which had been significantly diluted in its powers by the 1887 constitution.

In 1893, Queen Liliuokalani was overthrown in a bloodless revolt engineered by American-born planters and other white businessmen. Dole was reluctant to support the overthrow and believed that the monarchy could—and should—be retained. His position among the white elite, however, was decidedly in the minority. Nevertheless, when he was approached by the revolutionaries to lead the new government, he accepted the position of president of the provisional government, which became the Republic of Hawaii

in 1894. Dole thus became the first (and only) president of the Republic of Hawaii. One of the republic's first orders of business was to secure annexation to the United States as an American territory, an effort that Dole supported and for which he lobbied diligently with Washington.

The queen refused to abdicate until 1896, and Dole's government had to fend off several attempts—at least one under arms—to topple the new regime. Dole also had to contend with a major influx of immigrants to the islands—chiefly from Japan—that threatened to swamp the local economy and alter the racial and ethnic makeup of Hawaii.

Initially, Dole's efforts to secure U.S. annexation for the Hawaiian Islands were unsuccessful. Indeed, President Grover Cleveland, no fan of expansionism, was suspicious enough about the 1893 revolt that he sent an investigatory committee to Hawaii headed by James H. Blount to look into the matter. The subsequent Blount Report, issued in the summer of 1893, concluded that the revolution had been inappropriately instigated by Americans and lacked the support of the general populace. Armed with this, Cleveland refused to allow annexation to go forward and demanded that Liliuokalani be restored to her throne. Dole sent a personal reply to Washington after Cleveland's demand had been made known. In it, Dole eloquently and passionately defended the revolution (for which he had little enthusiasm just a year prior) and informed Cleveland that he had no right or authority to insert himself into Hawaiian affairs.

In 1898, under the expansionist-minded William McKinley administration, the Hawaiian Islands were formally annexed by the United States. Not until 1900, however, with the passage of the Organic Act, was there legislation in place to formally govern Hawaii as a territory. Upon the act's passage, McKinley appointed Dole as the first American governor of Hawaii. (Hawaii would not become a state until 1959.) Dole stayed in the post until 1903, at which time he accepted an appointment as a U.S. district court judge based in Hawaii. He remained a judge until 1915, at which time he retired. In failing health in his later years, Dole died on June 9, 1926, in Honolulu.

Haddox Dorst was born in 1852 and graduated from the United States Military Academy, West Point, in 1873. From 1873 to 1883, he served in a variety of frontier posts. He was also involved in numerous skirmishes with Native Americans. During 1883–1884, he served as aide-de-camp to Brigadier General Ranald Mackenzie. From 1887 to 1890, Dorst was assigned to the United States Military Academy, where he taught in the Tactical Department. His next major assignment came in 1894 as U.S. military attaché to Austria, a post in which he served until 1897.

Early in 1898, Dorst was dispatched to Greece, where he was an official observer with the Greek Army, which was at the time engaged in the Greco-Turkish War. When the Spanish-American War began, he was called home. Now a captain, he received a temporary appointment as lieutenant colonel of U.S. Volunteers. He served during the Santiago de Cuba Land Campaign and in the early stages of the Philippine-American War. He remained attached to the 4th U.S. Cavalry Regiment.

It was Dorst's activities prior to the landing of V Corps in Cuba that gave him notoriety. In early May 1898, he was charged with undertaking a clandestine mission that involved landing supplies, armaments, and a small contingent of troops on Cuba to bolster the efforts of the revolutionary forces there. Departing from Tampa, Florida, Dorst and his men steamed toward Cuba on the *Gussie*, an old side-wheel steamer. On May 12, Dorst and his men landed at Arbolitos Point with the U.S. Navy ships *Wasp* and *Manning* as armed escorts. When the expedition came ashore, it was obvious that its cover had been blown by U.S. journalists and that there were no Cuban revolutionaries to greet them. Confronted by a Spanish cavalry unit, Dorst and his men returned to the *Gussie* and steamed back to Tampa. Despite this, the operation has ever since been noted as the first landing of American troops in Cuba during the Spanish-American War.

Not to be deterred, Dorst was given another clandestine mission, to supply the Cuban rebels. This time, he and his men sailed from Key West aboard the steamer *Florida* and landed in eastern Cuba not far from the site of the first expedition. At the time, the landing site was under the control of the Cuban rebels. On May 26, Dorst and his crew successfully landed some 400 armed Cuba rebels along the coast as well as 7,500 Springfield rifles, more than 1 million rounds of ammunition, 20,000 food rations, some 100 mules and horses, and clothing and military equipment. Following this mission, Dorst and his men returned to Key West.

Following his service in Cuba and then in the Philippines, Dorst served in a variety of posts. He retired from the army in 1911 as a colonel. Dorst died in Virginia on January 11, 1916.

Duffield, Henry Martyn

Birth Date: May 15, 1842

Death Date: July 13, 1912

U.S. brigadier general of volunteers who commanded a brigade composed of several of the Michigan volunteer units in V Corps during the Spanish-American War. Henry Martyn Duffield was born on May 15, 1842, in Detroit, Michigan. He attended the University of Michigan for one year and went on to study at Williams College, from which he graduated in 1861. He enlisted as a volunteer in the Union Army in 1861 and was commissioned that same year, participating in a number of battles during the American Civil War. He mustered out of the service in 1864.

Duffield practiced law for many years in Michigan and ran for Congress from Michigan as a Republican in 1876. He again volunteered for service in the Spanish-American War and was appointed a brigadier general of volunteers on May 27, 1898. His brigade left Camp Alger in mid-June and deployed from Tampa, Florida, to Cuba on the *Yale*, disembarking at Siboney, Cuba, on June 27 after the arrival of V Corps. Major General William R. Shafter was in overall command. V Corps landed unopposed at both Siboney and Daiquirí, Cuba. Duffield's 2,200-man brigade included the 33rd and the 34th Michigan Infantry Regiments. A lack of adequate sealift precluded the 9th Massachusetts Infantry, also assigned to the brigade, from joining the brigade until the beginning of July.

Upon landing, Duffield's brigade remained in the Siboney area until it was assigned to stage a diversionary attack on July 1 at Aguadores, Cuba, while the remainder of V Corps struck the Spanish positions at El Caney and San Juan Heights. The goal of this demonstration was to prevent Spanish general Arsenio Linares y Pombo from reinforcing at El Caney and San Juan Heights by leading the Spanish to believe that the U.S. attack would be concentrated on the heights at the harbor entrance. Several U.S. Navy ships participated in the action, notably the battleship *New York*, gunboat *Gloucester*, and armed yacht *Suwanee*, although the attack was delayed by three hours because of the cautious approach of Duffield's forces to their objective.

Duffield's men were never able to obtain a satisfactory position from which they could direct a significant volume of fire against opposing Spanish forces situated across a deep gorge. The Spanish, numbering fewer than 300 men, returned fire, and Duffield withdrew his forces after about four hours of desultory fire. It is unlikely that the diversion had a significant impact on Spanish actions or their ability to reinforce at El Caney or San Juan Heights.

The next day, July 2, Duffield's volunteer brigade was reinforced by the 9th Massachusetts Volunteer Infantry Regiment and joined with Brigadier General John C. Bates's independent brigade. Duffield was soon stricken with yellow fever and was ill for several months. He returned to the United States in August. His brigade was officially disbanded with the remainder of V Corps on October 3, 1898, and Duffield resigned his commission on November 30.

Duffield then resumed his law practice. In 1903, he served as an arbitrator in the German-Venezuelan dispute and as a presidential elector for Michigan in 1904. Duffield died on July 13, 1912, in Detroit, Michigan.

Dunne, Finley Peter

Birth Date: July 20, 1867

Death Date: April 24, 1936

Influential satirist, humorist, and journalist. Finley Peter Dunne was born on July 20, 1867, in Chicago, Illinois, to Irish immigrant parents. He graduated from Chicago's West Division High School in 1884 and thereafter began a career in journalism. He worked for six different Chicago daily newspapers before accepting a position as an editor at the influential Chicago *Evening Post*.

At the *Evening Post*, Dunne created the fictional Irish immigrant character Mr. Martin Dooley in 1893, modeling the character after people he had known in Chicago's South Side Irish working-class neighborhood of Bridgeport and using it as a device on which to expound on sensitive political, social, and military viewpoints. The 750-word Dooley monologues were delivered in dialect to either the fictional politician John McKenna or the fictional mill worker Malachi Hennessy and appeared weekly in the Sunday papers. Approximately 300 of the Dooley pieces were published in the *Evening Post* between 1893 and 1900. Finley's Mr. Dooley provided a window into 19th-century Irish immigrant identity by focusing on such issues as economic deprivation in Ireland, working conditions in factories, labor unions, assimilation, ward politics, and family life. Some critics maintain that Dunne's Bridgeport community represents one of the finest

renditions of ethnic life in America to be found in 19th-century journalism or literature.

In 1898, the Dooley columns drew national attention by criticizing what Dunne perceived as the hypocrisy of U.S. policy in the Spanish-American War. Dunne's satire certainly cast doubts on Secretary of State John Hay's notion of a so-called splendid little war. War heroes Admiral George Dewey and Colonel Theodore Roosevelt were also lampooned in the Dooley monologues. Using Roosevelt as an example, Dooley commented that the overly large U.S. military force was composed of "clubmen" who were in Cuba to have their "pitchers" taken. A Spanish donkey shot by the American forces was described by Mr. Dooley as an "intrepid ass." The biting satirical Dooley monologues were quite critical of American jingoism and imperialism and earned Dunne a national reputation.

Dunne, a close friend of Mark Twain (Samuel Clemens), also joined other anti-imperialists in critiquing the rationale for the American military presence in the Philippines and Cuba. According to the journalist, the United States had betrayed its founding principles by becoming a colonial power. Dunne also decried Washington's obsession of following the dictates of big business. Mr. Dooley described American imperialist motives as "Hands acrost th' sea an' into somewan else's pocket." Dunne's Irish wit also poked fun at the paternalistic attitude of imperialists, who claimed to be undertaking a civilizing mission, remarking, "An' we'll give ye clothes, if ye pay f'r them; an' if ye don't, ye can go without." Dunne equated the American suppression of the Filipino uprising with British actions taken against the Boers in South Africa.

While Dunne's critiques did not halt the advance of imperialism, his pieces questioning the war resonated with many readers on the national stage, and the Mr. Dooley column was soon syndicated throughout the country. In 1900, Dunne moved to New York City. Writing for such publications as the *New York Times* and *Harper's Weekly*, he commented on a variety of topics ranging from health fads to race relations. National figures such as Andrew Carnegie and William Jennings Bryan were often the recipients of Dooley barbs, as was President Theodore Roosevelt with whom Dunne eventually formed a friendship.

In 1906, Dunne joined the muckraking Progressive-era journalists Ida Tarbell and Lincoln Steffens in editing the *American Mercury*. More of a fatalist than his coeditors, Dunne lacked a profound faith in progressive reform. The devastation of World War I also disillusioned him and seemed to silence his satire. He published the last of eight Dooley collections in 1919. He also edited *Collier's Weekly* from 1917 to 1919.

Among many humorous and pithy sayings that Dunne conjured up over the years (many in an Irish Brogue) are "Comfort the Afflicted, Afflict the Comfortable"; "Minds are Like Parachutes; They Only Function When Open"; and "The Best Husbands Stay Bachelors; They're Too Considerate to Get Married." Some present-day observers liken Dunne's wit and satire to Garry Trudeau's *Doonesbury* comic strip. During the 1920s, Dunne retired to private life

Influential American newspaper editor Finley Peter Dunne was a staunch critic of the Spanish-American War and American imperialist policies. (Library of Congress)

with his family. He died in New York City on April 24, 1936, from throat cancer.

Dupuy de Lôme, Enrique

Birth Date: August 23, 1851

Death Date: June 30, 1904

Spanish ambassador to the United States on the eve of the Spanish-American War. Born on August 23, 1851, in Valencia, Spain, into an

upper middle-class family, Enrique Dupuy de Lôme was formally educated in Paris. In admiration of his French uncle, Stanislas Charles Dupuy de Lôme, the noted French warship designer, Dupuy de Lôme, whose family had only used the “Dupuy” surname since the 16th century, reestablished the full French surname. In 1868, Dupuy de Lôme returned to Spain to study law in Madrid. Simultaneously, he served as an orderly in the Foreign Ministry, the first step in what would be a long diplomatic career. After completing his legal studies at the University of Madrid in 1872, Dupuy de Lôme received his first overseas diplomatic assignment in April 1873 when he was posted as third secretary in the Spanish embassy in Japan. He served in Japan for two years. On his return to Spain, he spent several months traveling in the United States. In 1875, he and his new bride embarked on a two-year tour of Europe. In 1877, he returned to Madrid, where he was promoted to second secretary at the Foreign Ministry.

In 1878, Dupuy de Lôme was posted to the Spanish embassy in Uruguay followed by two years in the Spanish embassy in Argentina. In 1881, he was posted to the Spanish embassy in France. In March 1883, he was promoted to first secretary and appointed to the Spanish embassy in the United States. There he worked under Spanish ambassador Juan Valera, one of Spain’s leading diplomats of the 19th century as well as a prominent novelist.

In 1884, Dupuy de Lôme was posted to Spain’s embassy in Germany. In 1885, during the Caroline Islands Crisis in which the Germans attempted to claim those islands, Dupuy de Lôme restored amicable German-Spanish relations after papal arbitration decided in favor of Spain. In 1888, he was promoted to ministerial rank and posted as Spain’s ambassador to Uruguay.

In 1892, Dupuy de Lôme was appointed Spanish ambassador to the United States. His posting lasted only a few months, however, as he submitted his resignation after the Liberals took control of the Spanish government later in 1892. In 1895, following the outbreak of the Cuban War of Independence, Dupuy de Lôme, now considered the best choice to ease tensions between the United States and Spain over Cuba, was reappointed ambassador to the United States. He immediately attempted to ameliorate the unfavorable public opinion of Spain in the U.S. press, especially after the yellow journalists had unveiled the horrors of the *reconcentrados* (Cuban detention centers) implemented by General Valeriano Weyler y Nicolau.

President Grover Cleveland attempted to maintain neutrality in the Cuban War of Independence. However, once President William McKinley, who supported an expansionary foreign policy, took office in March 1897, Dupuy de Lôme’s task of maintaining cordial U.S.-Spanish relations became considerably more difficult. Besides his ambassadorial duties, he was also responsible for maintaining Spain’s espionage network in the Americas.

As late as December 1897, Dupuy de Lôme believed that a conciliatory policy toward the Cuban insurgents could eliminate the possibility of war between the United States and Spain. But things began to unravel quickly in 1898 and would soon overwhelm his diplomatic offensive. He Lôme wrote a personal letter to an acquaintance, José

Canalejas, who was in Cuba covering events for a Spanish newspaper. The letter, which became infamous, sharply criticized President McKinley, characterizing him as “weak” and a “low” politician who was pandering to the “rabble.” Cuban revolutionaries intercepted the dispatch and turned it over to representatives of the Hearst publishing empire. Published in the *New York Journal* on February 9, 1898, the letter played a large role in expanding public support in the United States for war against Spain. The inability of the Spanish government to quell disorder in Cuba, Dupuy de Lôme’s incendiary letter to Canalejas, and the sinking of the U.S. battleship *Maine* on February 15, 1898, all brought a rapid deterioration of U.S.-Spanish relations. While the Dupuy de Lôme–Canalejas letter did not in and of itself bring about the war with Spain, it certainly provided much grist for those clamoring for war in early 1898. Following the revelation of this letter, Dupuy de Lôme promptly resigned his post. He continued to work for the foreign minister but never again held such a high-profile position. He died in Paris on June 30, 1904.

Dupuy de Lôme–Canalejas Letter

Personal correspondence between Enrique Dupuy de Lôme and José Canalejas y Méndez disparaging U.S. president William McKinley that was made public. The Dupuy de Lôme–Canalejas Letter, more commonly referred to as simply the de Lôme Letter, was intercepted by Cuban revolutionaries in the Havana post office in early 1898 and turned over to representatives of the William Randolph Hearst publishing empire, which published it in the *New York Journal* on February 9, 1898. At the time, the newspaper was one of the leading publications of the yellow press.

In 1895, following the outbreak of the Cuban War of Independence, the Spanish government, attempting to ameliorate the unfavorable public opinion of Spain in the U.S. press, which was reporting the horrors of the *reconcentrados* (Cuban detention centers), appointed Dupuy de Lôme ambassador to the United States. Although President Grover Cleveland attempted to maintain neutrality in the Cuban War of Independence, once President William McKinley, who supported an expansionary foreign policy, took office in March 1897, Dupuy de Lôme’s task of maintaining cordial

U.S.-Spanish relations became considerably more difficult. Nevertheless, as late as December 1897, he believed that it might be possible to end the threat of war between the United States and Spain.

Unfortunately for Dupuy de Lôme, his efforts were undone by the publication of a private letter expressing his personal views on Spanish-American relations to his friend, José Canalejas y Méndez, who was in Cuba covering events for a Spanish newspaper. Although undated, the handwritten letter was most likely written in mid-December 1897. Sending the letter through the postal system and committing his personal views to paper, Dupuy de Lôme committed a diplomatic faux pas.

The letter contained derogatory comments about President McKinley and his policies concerning Cuba. Dupuy de Lôme wrote: "McKinley is weak and catering to the rabble and, besides, a low politician who desires to leave a door open to me and to stand well with the jingoes of his party." Regarding the possibility of lessening tension with the United States, Dupuy de Lôme contended that "without a military success nothing will be accomplished there [Cuba], and without military and political success, there is here always danger that the insurgents will be encouraged, if not by the government, at least in part by public opinion." In addition, Dupuy de Lôme urged Canalejas to agitate commercial relations even if "only for effect" and to send a man to Washington "to make propaganda among the Senators."

The letter was not official Spanish policy and was merely personal correspondence between two friends, but this subtlety was lost on American readers. Publication of the letter in the press greatly inflamed American public passions and helped to fuel an aggressive warlike policy in the United States that culminated in the Spanish-American War.

Once Dupuy de Lôme saw that the letter had been published, he immediately cabled his resignation to Madrid and, when questioned by the U.S. State Department, acknowledged the authenticity of the letter and left the country. The inability of the Spanish government to quell disorder in Cuba, Dupuy de Lôme's incendiary letter to Canalejas, and the sinking of the U.S. battleship *Maine* on February 15, 1898, in Havana Harbor brought about a rapid deterioration of U.S.-Spanish relations. While the Dupuy de Lôme-Canalejas Letter did not in and of itself bring about the war with Spain, it certainly provided grist for the mill of those clamoring for war in early 1898.

Dynamite Gun

A U.S. naval ordnance experiment, the so-called dynamite gun utilized compressed air. In 1882, D. M. Mefford in the United States patented a compressed-air gun with which to discharge projectiles filled with dynamite or other detonating powders. He hoped to provide a less jarring initial shock for the shell to enable it to have a high-explosive dynamite filler. In 1884, Mefford demonstrated a 2-inch-caliber gun made from brass tubing. It fired a 5-pound solid shot for half a mile, where it penetrated 26 inches into a concrete target. He believed that some redesign of the gun was necessary, but before he could carry this out, G. H. Reynolds patented a design taken from Mefford's work but sufficiently different to avoid patent infringement. U.S. Army lieutenant E. L. Zalinski, present at the Mefford test trial, now resigned from the service and teamed up with Reynolds to form the Pneumatic Dynamite Gun Company.

Eventually the company produced a 15-inch-caliber smooth-bore gun that fired a variety of dynamite-filled projectiles, from 12-inch, 966 pounds to 8-inch, 298 pounds. The projectiles had fins to aid in stability in flight, and the smaller ones had wooden sleeves to bring them up to the desired gun caliber.

In 1890, the U.S. government purchased a number of these guns for coast defense purposes, and the navy fitted three aboard the dynamite cruiser *Vesuvius*. Positioned at fixed angle on the fore deck, the guns were aimed by turning the ship. Adjustments in range were effected by regulating the amount of air pressure on the shell. Unfortunately, all the necessary compressing equipment left little room aboard ship for anything else.

The dynamite gun's chief failing was its relatively short range of 1,750 yards for the largest shell. Advances in slower-burning gunpowder that produced longer pressure on the projectile quickly brought its eclipse. The only use of this weapon in battle came during the Spanish-American War when on June 14, 1898, the *Vesuvius* shelled Morro Castle, Cuba, on the eastern side of the entrance to the harbor of Santiago de Cuba without significant effect.

Dysentery

Waterborne infectious disease caused by a variety of organisms, including *Entamoeba histolytica*, *Shigella* species, and various coliform bacteria. The disease is characterized by frequent bloody diarrhea, abdominal cramps, fever, and dehydration. It is generally transmitted from human to human and usually by contamination of food or water by infected feces. Humans are the most common

A dynamite gun. It used compressed air to project shells charged with dynamite. The gun is in the 1st Volunteer Cavalry Regiment (Rough Riders) camp in the San Juan Valley, Cuba. (Ralph D. Paine, *Roads of Adventure*, 1922)

vector, and the disease is most common when people are crowded into small spaces such as army camps and ships.

Entamoeba usually causes a mild disease that causes self-limited diarrhea and abdominal pain, although it can present as the more severe amoebic dysentery and, rarely, can infect the liver. Shigellosis (named for Japanese bacteriologist Kiyoshi Shigu, who first isolated the organism in 1898) is a more severe disease that causes severe cramping and bloody stools and has an approximate 5 percent mortality rate. In the late 19th century, both were easily confused with typhoid or even cholera.

The earliest descriptions of dysentery are in the Egyptian Ebers Papyrus from approximately 1550 BCE, and the disease was well described in the Hippocratic writings from the fourth and fifth centuries BCE. Dysentery was a major cause of death among Christian forces during the Crusades, and both Edward I and Henry V of England died of the disease. It was so common in wartime that it acquired the nickname “campaign fever” during that century. More than 80,000 Union troops died of dysentery during the American Civil War.

By 1898, it had only recently become evident that febrile diseases including dysentery were caused by microorganisms and not, as had been commonly believed, by exposure to contaminated air. The causative organisms of typhoid, cholera, and amoebic dysentery had all been identified, but most laymen and many doctors still did not understand the importance of protecting food and water from fecal contamination. The soldiers tended to blame their intestinal difficulties on chemicals from the canned (“embalmed”) beef they were being fed.

In Cuba, the U.S. Army lost 345 men in combat and 2,565 from disease, mostly diarrheal. This greater than seven to one proportion compared poorly to even the Civil War in which there were only 50 percent more deaths from disease than from combat. Immediately after hostilities ended in eastern Cuba, Colonel Theodore Roosevelt informed his superiors (and newsmen and Washington politicians) that fewer than half of his Rough Riders were fit for duty, mostly because of fevers and dysentery. By the end of July 1898, 75 percent of the civilian packers and teamsters attached to

American forces were sick, and Major General William R. Shafter pronounced V Corps unable to fight.

Brigadier General Leonard Wood (the original commander of the Rough Riders and later commander of the 2nd Cavalry Brigade) was a signal exception. Taking advantage of his Harvard medical training, he forbade his men to drink from local standing water after landing at Daiquirí, and his men, alone among the invaders, were free of diarrhea. When he assumed command of the city of Santiago and later the surrounding province, he spent more money on sanitation than on any other governmental function and ultimately turned Cuba into a healthier environment for American soldiers than any other in which they were stationed.

E

Eagan, Charles Patrick

Birth Date: January 16, 1841

Death Date: February 2, 1919

U.S. Army officer and commissary general for the U.S. Army during the Spanish-American War. Born in Ireland on January 16, 1841, Charles Patrick Eagan immigrated to the United States at a young age. He attended school in San Francisco, California. He married in November 1863 and subsequently joined the Washington Territorial Infantry. Deciding on a career in the military, he rose steadily through the ranks. He became a first lieutenant with the 9th Infantry Regiment in 1866 and was promoted to captain with the Commissary and Subsistence Department in 1874. From then on, most of his army career was in commissary and supply. He also saw action in several engagements with Native Americans in the West during which he was wounded, and he was cited for gallantry for this service.

In January 1897, Eagan was appointed assistant commissary general at the rank of lieutenant colonel. Promoted to full colonel on March 11, 1898, he became commissary general at the rank of brigadier general on May 3, 1898. His long years of service as a commissary officer seemed to make him a natural for the position during wartime. Indeed, he had a reputation as a solid administrator, although he was hardly innovative in his approach to problem solving.

Eagan immediately sought to increase both the quantity and quality of food shipments to U.S. troops, but in the final analysis, most rations remained unchanged. His most controversial move as commissary general was his decision to substitute for fresh meat preboiled beef that had been canned. Although the product had been in limited use for almost two decades, its widespread use in the field provoked much consternation on the part of the troops. It

also precipitated the Embalmed Beef Scandal. Believing that the canned beef would be viewed as wholesome and economical (providing freshly slaughtered beef to troops in distant locations was quite difficult), Eagan procured hundreds of thousands of tins of beef. Almost immediately, reports came in claiming that the beef was tainted, inedible, or impossible to serve without cooking. Some soldiers claimed illness from the beef, although it was quite difficult to determine if the beef alone had made them ill. Nevertheless, many saw the canned meat as unappetizing at best and inedible at worst. Soon soldiers began referring to it as embalmed beef because of its pallid color, rancid smell, and poor taste.

The canned beef was not, however, the only issue of contention. Commanding general of the army Major General Nelson A. Miles later claimed that some 337 tons of refrigerated beef was also tainted. Indeed, Miles made the Embalmed Beef Scandal a national sensation during his testimony before the Dodge Commission hearings in December 1898. Miles blasted the Commissary Department with allegations that it had supplied American troops with chemically tainted meat that had sickened and even killed men. He also asserted that the Commissary Department along with civilian contractors had tried to cut costs by procuring inferior meat and then had sought to disguise this with chemicals and other cosmetic means.

Miles, who did not get on well with President William McKinley, was later censured by the Dodge Commission for his allegations, which were never substantiated. Indeed, retired army general Grenville Dodge, who chaired the Dodge Commission, concluded that Miles's accusations were politically driven. Dodge also concluded that there existed no tangible evidence of tainted meat.

Meanwhile, Eagan, renowned for his hot temper, lashed out publicly at Miles, denying that any meat sent to U.S. troops was

tainted and accusing Miles of lying and grandstanding. Worse yet, he asserted that Miles was aiding the cause of the nation's enemies by his lurid and seemingly baseless allegations. By taking on a public figure in such a public way, Eagan essentially ended his military career. When the Dodge Commission disbanded in early 1900, the army pursued court-martial proceedings against Eagan. The former commissary general was ultimately found guilty of insubordination and conduct prejudicial to military discipline. President McKinley suspended Eagan from active duty but kept him at full pay until 1906, at which time he retired from the army. Eagan moved to New York City upon retirement and died there on February 2, 1919.

East Asian Squadron

Germany was a latecomer to the colonial sphere, for Chancellor Otto von Bismarck (1871–1890) had for the most part opposed acquisition of overseas territories. That was not true with German kaiser Wilhelm II (1888–1918) who had forced Bismarck's resignation in 1890, however. Wilhelm relentlessly pursued *Weltpolitik* (world policy) to secure Germany's "place in the sun" and a strong navy to protect German overseas trade and one day challenge Britain (possibly even Britain allied with the United States) for world mastery. From the mid-1890s, Germany embarked on a major naval building program that by 1914 resulted in its navy becoming the second most powerful in the world. Wilhelm hoped that among other benefits the navy would enable Germany to acquire colonies and overseas bases. Most of the world had already been divided up by other imperial powers, chiefly the British and the French, but Germany hoped at least to secure suitable bases (*Stützpunkte*) in Africa, in the Caribbean, and in Asia.

In Asia, Rear Admiral Alfred von Tirpitz, then commander of the German East Asian Squadron, scouted for possible locations for a German settlement in China. The murder of two German missionaries in November 1897 proved fortuitous. On learning of the event and without consulting with either the German Foreign Office or even the navy, Wilhelm immediately ordered Tirpitz's successor as commander of the East Asian Squadron, Vice Admiral Otto

von Diederichs, to seize the Kiaochow (now Jiaoxian) region. That same month, a landing party went ashore from the ships of the East Asian Squadron. Reinforcements were sent out, and in March 1898 Germany secured a 99-year lease from China on the Shantung (Shandong) Peninsula and began constructing a major naval base at Tsingtao (Qingdao).

The next year, 1898, seemed to promise even brighter prospects for German colonial acquisitions in the Far East. Aware that Spanish imperial power was crumbling, Wilhelm had already announced his intention to purchase or simply take the Philippine Islands from Spain. Tirpitz, now state secretary of the Reichsmarineamt (RMA, Imperial Naval Office), in effect naval minister, lamented that the Spanish-American War came too early in his naval-building program for Germany to play a decisive role. Nonetheless, he suggested that German warships be stationed off Manila to await developments.

Wilhelm concurred and on May 18, 1898, ordered Diederichs to steam from Kiaochow to Manila. At Manila between June 12 and 18, Diederichs actually concentrated a force superior to that of Rear Admiral George Dewey's U.S. blockading squadron. Diederichs's ships consisted of the cruisers *Cormoran*, *Irene*, *Kaiser*, *Kaisrin*, *Augusta*, and *Prinzess Wilhelm*. Wilhelm and the navy hoped to secure the acquisition of Mindanao in the Philippines as well as the Sulu Archipelago and Palawan. The Foreign Office concurred with the policy of using the East Asian Squadron to secure naval bases in East Asia.

Diederichs's cables to Berlin were full of complaints of Anglo-American collusion. He hoped that he might be able to secure Mindanao but also the Carolines and Marianas and Palau Island. The powerful German naval presence, however, backfired, leading to several incidents and hard feelings with Dewey. Indeed, this was the single most destructive event in German-U.S. relations before World War I, as the two squadrons almost came to blows in Manila Bay.

Minor incidents ballooned out of proportion, especially over the right under international law of blockading ships to inspect other vessels (the so-called *droit de visite*), which Diederichs flatly rejected. There were numerous incidents. One German warship failed to display its colors until an American warship fired a shot across its bow, while another German warship approaching Dewey's flagship, *Olympia*, at night did not stop until it was similarly threatened. Dewey was especially angry over German ship movements at night that forced him to turn on searchlights, revealing the position of his own warships to the Spaniards ashore. The Germans also established communication with Filipino nationalists on shore.

On July 10, Diederichs sent his flag lieutenant, Paul von Hintze, to the *Olympia* to protest the boarding of the German cruiser *Irene* by an officer of the U.S. revenue cutter *McCulloch*. During the meeting, Dewey lost his temper and threatened to open fire on any ship that refused to stop and states that this would bring war. Dewey said that he had no problem with the British squadron, which always communicated with him. He told Hintze, "If Germany wants war, all right, we are ready."

Although Diederichs vented his spleen in communications to Berlin, he later conceded that the bullying had been a major diplomatic gaffe. Wilhelm, however, chose to attribute Germany's failure to secure any colonial advantage from the war to its insufficient naval resources, and this became one more excuse for further naval expansion.

Germany did purchase both the Mariana and Caroline Islands from Spain in 1899, and the East Asian Squadron remained a notable concentration of German naval strength that kept open communications between Tsingtao, New Guinea, and the Carolines and Marianas. At the beginning of World War I the squadron, now commanded by Vice Admiral Maximilian von Spee, steamed from the Carolines, hoping to reach European waters. In the Battle of Coronel off the coast of Chile on November 1, 1914, Spee administered a decisive defeat on a weaker British cruiser squadron under Rear Admiral Sir Christopher Craddock. The British then concentrated a more powerful force under Vice Admiral Sir Doveton Sturdee that defeated the Germans and sank most of Spee's ships at the subsequent Battle of the Falklands on December 8, 1914.

Eastern Squadron

U.S. Navy force created on June 18, 1898, by order of Secretary of the Navy John D. Long. On July 7, Commodore John C. Watson was appointed to command the Eastern Squadron, the ships for which were to be detached from Rear Admiral William T. Sampson's North Atlantic Squadron. Initially, Long ordered the battleships *Iowa* and *Oregon* and several auxiliary ships designated for the squadron. Several weeks later, he augmented the Eastern Squadron with the armored cruiser *Brooklyn* and three additional cruisers, the *Dixie*, *Yankee*, and *Yosemite*. These ships were made ready for possible service in European waters and a mission that might include an attack against the Spanish coast. Sampson, whose blockade of the Cuban coast was already tenuous at best, protested Long's orders, arguing that he could ill afford to lose even a single ship.

Meanwhile, Spanish admiral Manuel de la Cámara y Libermore led his 13-vessel squadron, carrying supplies and reinforcements, from Cádiz, Spain, through the Strait of Gibraltar to fortify Spain's Philippine forces against attacks by local insurgents and an impending landing of American forces. Cámara's squadron included

Spain's only battleship, the *Pelayo*; the armored cruiser *Carols V*; the armed merchant ships *Patriota* and *Rapido*; two transport ships carrying 4,000 soldiers (*Buenos Aires* and *Panay*); and four colliers with the destroyers *Audaz*, *Prosperina*, and *Osado* serving as escorts.

The U.S. Naval War Board regarded Cámara's squadron as a potentially difficult challenge to Rear Admiral George Dewey's squadron at Manila and recommended that Long dispatch a squadron to Spanish waters to cause the Spanish government to recall Cámara's ships. U.S. naval attaché William S. Sims, based in Paris, was also ordered to leak news of the Eastern Squadron's mission to ensure Cámara's recall and alert European powers that the United States would not hesitate to send naval forces to European waters if necessary. This message was at least partly intended for German leaders, who had sharply increased their own naval presence in Philippine waters.

Sampson sought to delay execution of the order creating the Eastern Squadron for as long as possible. By mid-June, Sampson was strengthening the blockade of Cuba and expanding it to Puerto Rico, sustaining naval watches of ports not under blockade and supporting activities of V Corps and preparing for its imminent landing at Daiquirí on June 22. At the same time, Sampson's squadron was patrolling the waters of southeastern Cuba and keeping Admiral Pascual Cervera y Topete and his squadron bottled up at Santiago de Cuba. On June 21, the reorganization of U.S. naval forces in the Caribbean strengthened Sampson's command and provided more ships for his squadron, which then was designated the North Atlantic Fleet.

As Cámara headed east in the Mediterranean, Spain augmented its naval forces by purchasing a Chilean armored cruiser. Tension within the U.S. Navy leadership was growing over the difficult choice of leaving the North Atlantic Fleet in the Caribbean to ensure destruction of Cervera's squadron and control of Caribbean operations or dividing the fleet and sending the new Eastern Squadron to attack the Spanish coast in the hopes of forcing Cámara's recall.

As Secretary Long continued to pressure Sampson over the Eastern Squadron and Sampson argued for delay, the battlefield situation in Cuba forced Cervera to sortie from Santiago de Cuba's harbor on July 3. Within a few hours, the Spanish squadron had been destroyed. Three days later, on July 6, Spain recalled Cámara, who had just passed through the Suez Canal.

As the Navy Department confirmed news of Cámara's recall in the ensuing days, interest in sending the Eastern Squadron to Spain grew. On July 10, Sampson reported to Long that the Eastern squadron, now comprising the battleships *Oregon* and *Massachusetts* and the cruisers *Newark*, *Dixie*, *Yosemite*, and *Yankee* as well as supply ships and several colliers, could leave in two days. Unsatisfied with the strength of the squadron, however, Long notified Sampson that all armored vessels except monitors would join Watson's Eastern Squadron bound for Spain. Soon thereafter, plans were developed to deploy two squadrons under Sampson's command, one to steam to the Philippines via the Suez Canal to reinforce Dewey

The U.S. battleship *Iowa*. (Library of Congress)

and another to attack Cámara's squadron. Sampson again objected, citing the need to prepare ships for such a mission.

In the days that followed, the navy changed its plans again. By July 26, Washington received word from Spain via France of an initiative for peace. As the two sides moved toward peace, the Navy Department continued to prepare to deploy the Eastern Squadron on an eastward expedition that would keep the pressure on Spain for peace. On August 12, Spain and the United States signed the Protocol of Peace, and the Eastern Squadron was never deployed.

Eberle, Edward Walter

Birth Date: August 17, 1864

Death Date: July 6, 1929

U.S. naval officer. Edward Walter Eberle was born on August 17, 1864, in Denton, Texas, but was reared near Fort Smith, Arkansas, after his family relocated there in 1865. Entering the United States Naval Academy at Annapolis in 1881 as a cadet midshipman, he graduated in 1885 and spent two years at sea aboard the screw sloops *Mohican* and *Shenandoah* and the steamer *Ranger*. He was commissioned an ensign on August 8, 1887, and was assigned to the *Albatross* on which he would serve for three years.

In January 1891, Eberle reported to the Washington Naval Yard, where he studied naval ordnance. It was here that he developed an abiding interest in naval gunnery, which became the centerpiece of his distinguished naval career. In March 1891, he departed on a

long tour of duty in Asia, not returning to the United States until 1894. From 1894 to 1896, he was assigned to the United States Naval Academy.

Promoted to lieutenant, junior grade, on June 12, 1896, Eberle was ordered to report to San Francisco, where the battleship *Oregon* was about to enter service. He served aboard that battleship for almost three years. The *Oregon* was commissioned on July 15, 1896, and Eberle received command of its forward turret.

Following the sinking of the battleship *Maine* in Havana Harbor on February 15, 1898, the Navy Department ordered the *Oregon* from Bremerton, Washington, to Callao, Peru, and on the outbreak of war it was ordered to Key West, Florida. Taking on coal, provisions, and ammunition at San Francisco, the *Oregon* covered the 14,500 miles in 66 days. The *Oregon* joined Rear Admiral William T. Sampson's North Atlantic Squadron off Santiago de Cuba on June 1.

The *Oregon* took part in the July 3, 1898, Battle of Santiago de Cuba when Sampson's squadron destroyed the Spanish squadron of Rear Admiral Pascual Cervera y Topote as it exited the harbor. After the battle, Eberle received high praise for the accurate gunfire from his turret. He was also singled out for praise after the bombardment of Spanish shore positions at Caimanera.

On March 3, 1899, Eberle was promoted to lieutenant and was assigned in June to the navy cruiser *Baltimore*. He served as a flag lieutenant in the Asiatic Squadron for a few months before returning to the United States to become an aide to the superintendent of the Naval Academy. While at Annapolis, he also continued to study the latest developments in naval gunnery and ordnance. During 1901–1902, he served on the battleship *Indiana* and then was assigned to the New York Navy Yard. He also wrote a series of manuals on wireless communications and the art of employing guns and torpedoes.

In 1905, Eberle was advanced to lieutenant commander and during 1905–1906 served as an instructor at the Naval War College at Newport, Rhode Island. He then held a series of senior command posts on land and sea. On July 1, 1912, he was promoted to captain. Between 1912 and 1915, he pioneered the use of smoke-screens to protect ships from attack and presciently proposed the use of aircraft to spot and destroy enemy submarines. In addition, he attended an accelerated course of study at the Naval War College in 1913 and held several commands until 1915, at which time he was appointed superintendent of the Naval Academy. He held that post through World War I until 1919, when he was advanced to rear admiral.

Eberle then commanded divisions of both the Atlantic and Pacific Fleets and in 1923 became the chief of Naval Operations. In this post his administrative prowess, diplomatic skills, tact, and communications skills served him well. In 1927, he was appointed chairman of the Executive Committee of the Navy General Board. He retired in 1928, having served in the navy for 47 years. Retiring to northern Virginia, Eberle died in Washington, D.C., on July 6, 1929.

Economic Depression

Start Date: 1893

End Date: 1897

Most serious economic depression in American history prior to the Great Depression of the 1930s. The economic depression of 1893–1897, also referred to as the Panic of 1893, not only affected the political discourse but also bolstered the fortunes of American expansionists who used the crisis to assert that the United States had to seek new markets abroad to absorb excess inventory at home.

While the arguments of imperialists and expansionists had some merit, most of the markets that they eyed so covetously would not in fact have aided the U.S. economy, nor would they have miraculously pulled the economy out of the doldrums. The long-fabled China Market is a prime case in point. Even though on the surface it appeared ripe for American taking, in reality the vast majority of Chinese had neither the interest in nor the money to become major purchasers of U.S. products. Nevertheless, to study the economic crisis of the 1890s is to understand how the expansionist-minded Republicans came to power beginning in 1894 and how the United States became involved in the Spanish-American War.

The economic depression that began in 1893 was triggered by several trends and events. Unchecked economic growth and corporate mergers, wild speculation and profit taking, financial irregularities, a chaotic banking system, an unbalanced monetary policy,

Unemployment in the United States, 1890–1900

Year	Individuals Unemployed	Percentage of Workforce Unemployed
1890	904,000	4.0%
1891	1,285,000	5.4%
1892	728,000	3.0%
1893	2,860,000	11.7%
1894	4,612,000	18.4%
1895	3,510,000	13.7%
1896	3,782,000	14.4%
1897	3,890,000	14.5%
1898	3,351,000	14.4%
1899	1,819,000	6.5%
1900	1,420,000	5.0%

and a string of high-profile bankruptcies all played a part. In the spring of 1893, two major corporations—the Philadelphia and Reading Railroad and the National Cordage Company—declared bankruptcy almost simultaneously and with no warning. This precipitated a panic and crash on Wall Street. Before long, the stock market crash had eroded confidence in the U.S. economy, and the economic crisis spread like a pandemic from one coast to the other. To make matters worse, the government's gold reserve was being rapidly depleted as a result of the Sherman Silver Purchase Act of 1890, which had required that notes be payable in gold or silver. Government revenues were also falling fast, which added to the economic misery.

By 1894, with the economy teetering on collapse, the U.S. Treasury Department reported that the gold reserve had fallen below \$100 million, which was the absolute minimum required by law. It was temporarily replenished when the Democratic Grover Cleveland administration raised \$50 million by way of a bond. However, by January 1895, the gold reserve had plunged to \$68 million, and just a week later it fell again to just \$45 million. The government was now virtually paralyzed, with many calling for Cleveland's impeachment. A number of financial tycoons, including John Pierpont Morgan, came to the rescue, however, and offered to provide the government with gold in return for government bonds. Suspicious of the financiers' motives (they all profited handsomely from the deal), Cleveland nevertheless agreed to the arrangement, which arrested the economic hemorrhaging. By June 1895, the gold reserve had increased to \$107.5 million, and there were incipient signs of an economic recovery.

Nevertheless, the economic downturn was like no other before it. In 1860, there were four farmers for every one industrial worker in the United States. By 1890, that ratio had shifted radically, however. There were now just two farmers for every one factory worker. This meant that many more Americans (one in three) were entirely dependent on a daily or weekly wage earned in a factory or similar place. Unlike farmers, industrial workers could not live off the land because they lived in the vast cities of the Northeast and Midwest. And almost none owned any land or even the place in which they lived. Because of the large concentration of industrial workers, sharp economic depressions spread far wider and faster than they had in the past. In 1892, the unemployment rate was about 3 percent; by early 1895, it had skyrocketed to 18.4 percent. The hardship caused by such massive unemployment was unprecedented, and at the time there were no government relief agencies to provide assistance to the unemployed. By 1895, private charitable organizations had been simply overwhelmed. Some cities set up soup kitchens to prevent unrest, but they too were insufficient to fulfill the needs of all.

Organized labor came under great pressure to alleviate the economic suffering, and strikes such as the 1894 Pullman Strike, which sparked a nationwide railway stoppage, became common. Scores were killed and wounded during that strike in the summer of 1894, while thousands more were arrested. The situation became so per-

A drawing from *Frank Leslie's Illustrated Newspaper* depicts panic on the floor of the New York Stock Exchange on May 5, 1893. A drop in U.S. gold reserves caused a financial panic on the stock market and in the business community, with more than 14,000 businesses declaring bankruptcy by the end of 1893. (Library of Congress)

ilous that President Cleveland was ultimately forced to dispatch troops to break up the work stoppage by violent means.

The economic depression of 1893–1897 also catapulted Eugene Debs into the forefront of labor agitation. Debs, who would ultimately cleave to socialism as a prescription for America's ills, helped create the American Railway Union in the midst of the chaotic summer of 1893. A year later, he led the effort to turn the Pullman Strike in Chicago into a nationwide railway strike.

Mass protests in cities across the country became commonplace by 1894. By January 1894, approximately 15,000 companies had gone bankrupt, and almost 500 banks closed their doors, taking millions of depositors' life savings with them. By mid-1894, the gross national product (GNP), the measure of a nation's economic activity, had contracted by 12 percent from the prior year. Ultimately, before a modest recovery began in the autumn of 1895, more than 16,000 businesses had failed along with 642 banks. The economy would not enjoy a sustained recovery until early 1897.

Not surprisingly, the economic catastrophe had a major impact on American politics. Although President Cleveland was powerless to stop or reverse the downturn, he was nevertheless pilloried for his handling of the crisis, and that criticism came from those in his own Democratic Party as well as from the Republicans. The Populist Party also repudiated the president's performance. In the off-year 1894 congressional elections, the Republicans swept both houses of Congress in what was then the biggest political shift in U.S. history. Two years later, Republican candidate William McKinley handily defeated Democratic Populist candidate William Jennings Bryan for the presidency. McKinley had run on the promise of prosperity, the gold standard, and vague notions of American overseas expansion, while Bryan championed free silver. Indeed, the elections of 1894 and 1896 established a Republican political ascendancy that was to last until the next economic depression in 1930.

With the ascendancy of the expansionist-minded Republicans in Washington and the notion that the economic turmoil of the 1890s necessitated the search for more and better markets overseas, the stage was set for an era of American economic and territorial imperialism. The crisis in Cuba that began in 1895 handed the expansionists the perfect pretext by which to fulfill their agenda. While it is impossible to say that the United States would not have gone to war with Spain in 1898 had the Democrats been in the majority, it is certainly conceivable that they may not have pushed for the annexation of the Philippines or Guam at war's end. There can be little doubt, however, that the economic depression of the 1890s—and the social and political turmoil it engendered—worked greatly to the expansionists' advantage.

Edison, Thomas Alva

Birth Date: February 11, 1847

Death Date: October 18, 1931

One of the nation's most prolific pioneers in the development of electronic inventions, including the incandescent light bulb and the

Despite deafness from an early age and limited formal education, Thomas Edison became one of the most prolific pioneers in the development of electronic inventions, including the incandescent light bulb, the phonograph, and electrical generation and distribution. (Library of Congress)

phonograph, and the unsuccessful proponent of direct current for electrical generation and distribution. Thomas Edison was born on February 11, 1847, in Milan, Ohio, the youngest of seven children. Because he did poorly in school, his mother taught him at home. Mathematics was his weakest subject, but he found chemistry to his liking. When in his teens, he set up a chemical laboratory in a train's baggage car. Selling newspapers and candy on trains and getting to know telegraph operators in the stations on his route, he became a telegrapher himself at age 16. In his late teens, he began to suffer from deafness, possibly because of an accident.

In 1868, Edison went to work as an operator for the Western Union Telegraph Company in Boston, meanwhile continuing to tinker with experiments. In New York City, after showing off his technical skills, he was hired as general manager by Laws' Gold Indicator Company. Soon afterward, with two other electrical engineers, he formed a company specializing in electrical work of all kinds. In 1870, when the firm was sold, Edison received \$40,000 for his share and started his own electrical business, for which he hired trained technicians, able to work on inventions under his supervision, as well as scientific theorists.

Edison concentrated during the early 1870s on making advances in the telegraph, often improving on the work of earlier inventors. For example, he took the duplex system of telegraphing, by which

two messages could be sent simultaneously, and made it quadruplex, allowing for four messages. The advances that he pursued in telegraphs would make the medium indispensable in times of war, as the Spanish-American War clearly witnessed.

In 1876, Edison set up an invention plant at Menlo Park, New Jersey, where he and his staff pursued research on and development of projects that were seen to be profitable. In 1877, Edison invented the phonograph, at first a crude device that he slowly improved. Two years later, he made the incandescent electric bulb a commercial possibility. His chief (and essential) contribution was to perfect the means for cheap production of the bulbs and for bringing power to them from a central source. In lower New York City, he established the first electrical plant to generate power.

By 1887, the Menlo Park plant had outgrown itself, and Edison moved his headquarters to West Orange, New Jersey, where work continued on a larger scale. He organized companies to make and sell his various inventions. These companies were eventually merged into what is now the General Electric Company. In experimenting with the motion picture during the 1890s, Edison and his colleagues took an existing device, improved it, patented it as the Edison Vitascope, and encouraged the formation of what became the movie industry.

Edison's other successes, often worked out from existing inventions, include the storage battery, the mimeograph, the microphone, the electric locomotive, railway signaling devices, and lighting systems for railway cars and mines. During World War I (1914–1918), he chaired the Naval Consulting Board, where he applied his research on torpedoes, periscopes, and flame throwers.

Edison made only one discovery in pure science, the Edison Effect, that he noted and patented in 1883 and that led other workers to discover the vacuum tube, in turn important for radio. Edison registered some 1,000 patents, although many of these were the result of cooperative work in his laboratories. Even during his lifetime, the phenomenal character of his inventions gave him an almost heroic stature in the public view, and a virtual mythology grew up about the events of his life and career. Edison died in West Orange, New Jersey, on October 18, 1931.

Soldiers of the U.S. Army VIII Corps ford a river during the Philippine-American War, 1899. (Library of Congress)

Philippine-American War (1899–1902). The forces of VIII Corps were originally to seize Manila following Commodore George Dewey's victory in the Battle of Manila Bay (May 1, 1898). The corps mission grew, however, to include occupying and pacifying the Philippine Islands following their acquisition by the United States in the December 1898 Treaty of Paris.

VIII Corps was officially constituted at San Francisco on June 21, 1898, with Major General Wesley Merritt as its commander. The corps originated in President William McKinley's order of May 2, 1898, to send an expeditionary force to the Philippines. Regular army and volunteer units began their assembly at San Francisco on May 6, and units began to deploy to Manila from San Francisco on May 25. While the force numbered some 20,000 men, only 25 percent of these were regulars; the remainder were U.S. Volunteers. Because of a lack of shipping, the men traveled to the Philippines in seven different contingents. The first group to depart arrived in the Philippines on June 30, capturing the island of Guam en route.

Because not all units had arrived in the Philippines by the end of July, Merritt designated those on hand as the 1st Division of 641 officers and 15,058 men and placed it under the command of Brigadier General Thomas M. Anderson. It consisted of two brigades under the command of Brigadier Generals Arthur MacArthur and Frank V. Greene. Its artillery component included 16 light field guns and 6 mountain guns as well as Gatling guns and machine guns.

The men of VIII Corps established Camp Dewey, south of Manila. On August 13, VIII Corps troops captured Manila following prearranged token Spanish resistance in what became known as the First Battle of Manila. However, a standoff ensued between VIII

VIII Corps

U.S. expeditionary force assembled for service in the Philippines during the Spanish-American War (1898) and the subsequent

Corps and Filipino rebels led by Emilio Aguinaldo y Famy who surrounded the capital city while the United States decided whether to annex the Philippines. Major General Elwell S. Otis arrived in Manila on August 20 with reinforcements from San Francisco and assumed command of VIII Corps on August 30, when Merritt departed for Paris to assist in peace negotiations with Spain.

On assuming command, Otis reorganized VIII Corps into two divisions commanded by Anderson and MacArthur, now both major generals. Upon learning that the United States had claimed sovereignty over the Philippine Islands with the signing of the Treaty of Paris, tensions between VIII Corps and the rebels escalated. Fighting began on February 4, 1899, in what became the Second Battle of Manila and the Philippine-American War.

U.S. troops drove the insurgents from the capital area. Believing that resistance was centered on the Tagalog ethnic group, Otis planned to drive his forces northward from Manila along the Manila-Dagupan Railroad, the only logistical supply route that could support his troops far from the port facilities in Manila. The plan was to encircle the rebels to prevent them from disbanding into small guerrilla groups while at the same time demonstrating the advantages of American rule in the occupied areas. Otis believed that resistance would then collapse throughout the islands.

VIII Corps' combat effectiveness was consistently hampered by the need for more troops. It was also under constant pressure to discharge its state volunteers, who had volunteered to fight only the Spanish and not the Filipinos. Regular army units were sent to replace them, but the need to garrison an ever-increasing occupation zone meant that VIII Corps was only able to muster 11,000 operational troops at any one time. To meet VIII Corps' manpower needs, on March 2, 1899, Congress authorized raising regular army strength to 65,000 men and the recruitment of 35,000 volunteers from the nation at large. As reinforcements were shipped overseas, VIII Corps grew from 28,000 men at the end of August 1899 to more than 50,000 men by the end of December 1899.

On March 17, 1899, VIII Corps was reorganized into a defensive element to protect Manila and an offensive element to fight in the interior of Luzon. VIII Corps conducted most of its campaigning during the spring of 1899 with two sustained drives northward in the form of infantry columns that would try to seize the ever-shifting rebel headquarters and trap the bulk of the insurgent army. These drives were accompanied by offensives to the south and east of Manila. The northern operations were successful in seizing ground but were too slow to encircle the rebels because of the difficult conditions encountered.

Following a summer respite, VIII Corps launched a three-pronged offensive to finish off resistance in the north. Once again, rugged terrain and heat took their toll, allowing the rebels to escape into the mountains. By the end of November 1899, VIII Corps had succeeded in dispersing large concentrations of rebels. This forced the survivors to flee into the mountains. Defeated in the open, rebels began to wage a guerrilla campaign. VIII Corps then turned its attention to the south and east. With garrisons already in the major

ports of the western Visaya and Moro Islands, combined army-navy teams captured the major port cities of southeastern Luzon, the eastern Visaya Islands, and Mindanao.

With the conclusion of large-scale operations, the need for a corps-level field command came to an end as VIII Corps transitioned into a counterinsurgency force. VIII Corps continued to battle the insurgents, although the corps was officially dissolved on March 20, 1900, and reorganized as a territorial command, known as the Division of the Philippines, with four geographical departments: Northern Luzon, Southern Luzon, Visayas, and Mindanao-Jolo. Each of the four was also subdivided into districts and subdistricts.

El Caney, Battle of

Event Date: July 1, 1898

Battle fought at El Caney, Cuba, between U.S. and Spanish forces on July 1, 1898. The Battle of El Caney and the simultaneous Battle of San Juan Hill were the first major engagements of the Spanish-American War in Cuba. These two American victories were instrumental in the encirclement and siege of Santiago, the major Spanish port city on the southern coast of Cuba.

On June 22, 1898, Major General William R. Shafter's V Corps made an unopposed landing on Cuba at Daiquirí, 15 miles east of Santiago. Shafter planned a two-pronged attack on the approaches to Santiago, the left at San Juan Heights and the right at El Caney. At El Caney, the Spanish had erected six earth and wood blockhouses to the north and west of the village. Southeast of the town and situated on a hill, the old stone Spanish fort of El Viso commanded the entire area. Brigadier General Joaquín Vara del Rey y Rubio commanded 520 troops manning the El Caney defenses.

Brigadier General Henry W. Lawton's 6,653-man 2nd Division received the assignment of taking El Viso and the El Caney defenses. The American timetable called for the Spanish positions to fall within two hours of the commencement of the assault, whereupon Lawton was to join the main American attack on San Juan Heights

A U.S. Army artillery battery in action during the Battle of El Caney, July 1, 1898. (Army Historical Foundation)

six miles to the southwest. Lawton's division moved into position before dawn on July 1.

The battle opened at 6:35 a.m. with artillery fire from Captain Allyn Capron's battery of four 3.2-inch rifled guns situated about a mile and a half from the Spanish positions. The bombardment had almost no impact on the defenders, however. Rather than concentrate artillery fire on any single point, Lawton continually shifted targets, which had minimal effect. Meanwhile, Lawton's three brigades deployed for the attack with Brigadier General William Ludlow's brigade on the left of the American line, Brigadier General Adna R. Chaffee's brigade in the center, and Colonel Evan Miles's brigade on the right. Confusion reigned, and none of the brigades were prepared to advance at the planned time of the assault.

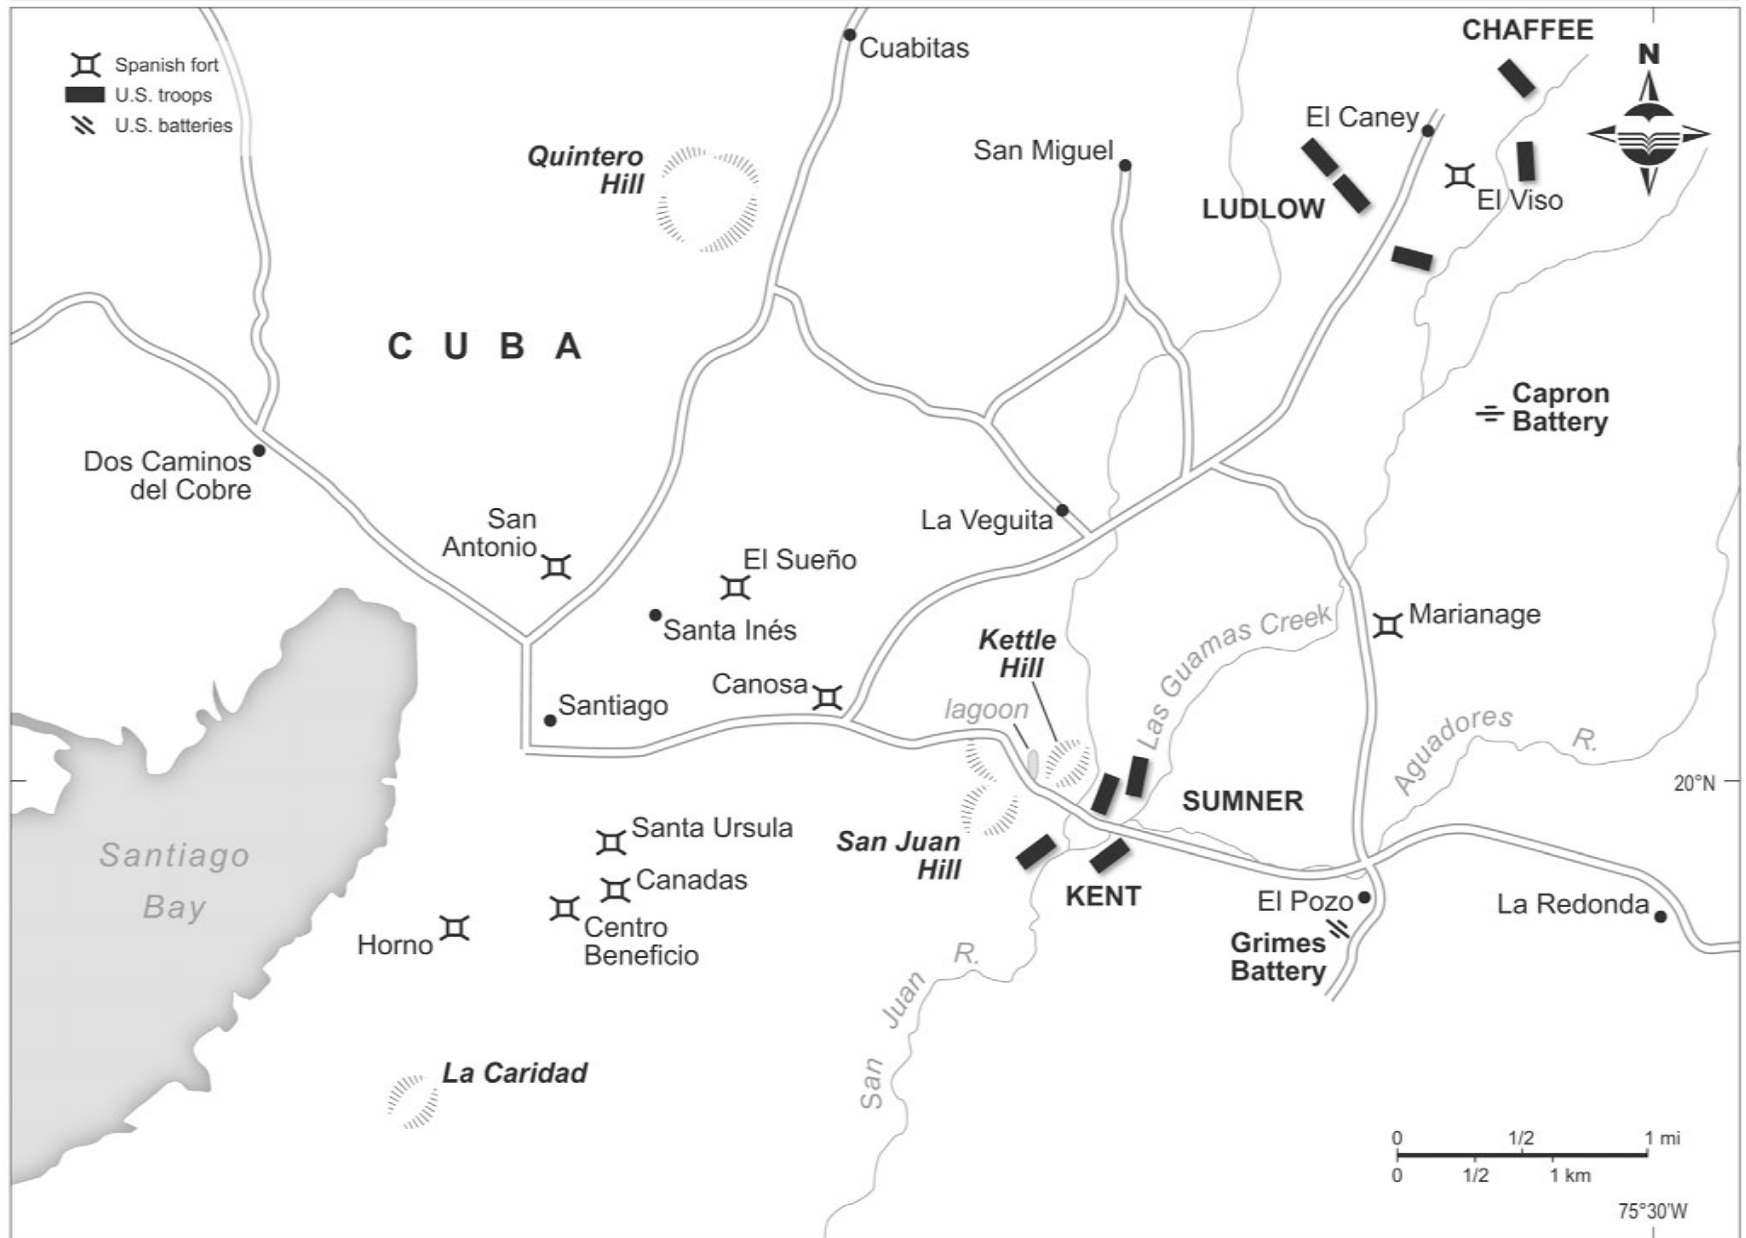

When artillery fire failed to subdue any of the Spanish strong points, the American infantry brigades moved forward. The attacks were poorly coordinated and, taking the form of a gradually closing semicircle, stalled half a mile away from the Spanish lines. American numerical superiority was offset by the Spanish defensive works, and the ensuing small-arms fire saw mounting U.S. casualties with little visible effect on the Spanish defenders. Both sides used volley fire, but the Spanish Mauser repeating rifle was a better weapon than the Krag-Jorgensen employed by the U.S. regulars. The U.S. volunteers, such as the 2nd Massachusetts Regiment, were at particular disadvantage; they were armed with the single-shot .45-caliber Springfield rifle firing black powder cartridges that gave away their firing positions to the Spanish. The Spanish were also able to fire from protected positions inside their blockhouses and trenches.

By noon the fighting had almost stopped. Commanders on each side paused to rest their troops and replenish supplies, particularly ammunition. Vara del Rey reported that he had repulsed a major American attack at a cost of 20 Spanish casualties. Shafter ordered Lawton to break off the attack and move at once to join the other battle, but Lawton insisted on capturing El Caney, and Shafter permitted him to continue. Lawton ordered up reinforcement in the form of Brigadier General John C. Bates's Independent Brigade and resumed the assault.

Although Vara del Rey had been killed shortly after noon, the Spanish continued to offer stiff resistance even though they were down to approximately 520 men. Rather than another poorly coordinated infantry assault on multiple positions, Lawton ordered Capron to concentrate fire on El Viso, the key point in the El Caney defenses. At 2:00 p.m. Capron's guns, which had been moved to within 1,000 yards of El Viso, began to breach its walls. The 24th U.S. Infantry Regiment (an African American unit) and the 12th Infantry Regiment then engaged in a bloody firefight with the Spanish defenders and captured El Viso by 3:00 p.m. Lawton ignored Shafter's order to bypass the small blockhouses for an advance on Santiago and continued his assault on the blockhouses. Once El Viso surrendered, American artillery was able to methodically destroy each blockhouse in turn. Fighting ceased about 5:00 p.m. The surviving Spanish defenders, now out of ammunition, attempted to withdraw into Santiago, but only about 80 reached the city.

The attack at El Caney, though eventually successful, proved strategically worthless to the American cause. The capture of El Caney cost V Corps 81 dead and 360 wounded. Spanish casualties

BATTLES OF EL CANEY AND SAN JUAN HEIGHTS, JULY 1, 1898

numbered 235 killed or wounded and 125 taken prisoner. General Vara del Rey and his two sons were among the Spanish dead. At about 8:00 p.m., Lawton's division began the movement to Santiago. The Americans now controlled both the water supply and the roads into Santiago. Starving out the city would be only a matter of time.

El Pozo, Cuba

A high hill located about 2,500 yards in front of San Juan Heights and about 1.5 miles from Santiago, Cuba. Prior to the Battle of San Juan Hill on July 1, 1898, U.S. forces of Major General Joseph Wheeler's Dismounted Cavalry Division and Brigadier General Joseph F. Kent's 1st Division were both camped near El Pozo (El Poso), and it was from this point that they assaulted San Juan Heights. Battery A of the 2nd Field Artillery with four light 3.2-inch guns was also positioned near the hill during the same battle. One of only a few artillery outfits to witness action during the fighting in Cuba owing to the war's short duration, Battery A was also known as Grimes's Battery for its commander Captain G. S. Grimes.

At about 8:00 a.m. on July 1 with the Battle of San Juan Hill about to commence, the guns of Grimes's Battery opened fire on the heights at a range of some 2,600 yards from the Spanish blockhouse on San Juan Hill. Unfortunately for the Americans, thick smoke from the black powder charges used by the American guns soon revealed their position, and the Spanish commenced counterbattery fire from behind the heights. The guns were ordered to stop firing to protect the men around them. This forced the American infantry attack to go forward without artillery support. Several men in the battery were killed or wounded. Renowned artist Frederic Remington made Battery A famous by depicting some of its men in the heat of battle.

A conference was held near El Pozo the next day, July 2, when V Corps commander Major General William R. Shafter was persuaded against withdrawing from the Santiago area.

Election of 1900

General election in the United States pitting incumbent Republican president William McKinley and his running mate Theodore Roosevelt against Democratic nominee William Jennings Bryan and running mate Adlai E. Stevenson. The election, which occurred on November 6, 1900, was most noteworthy because the issue of imperialism still guided the political debate, as did the ongoing Philippine-American War. General Emilio Aguinaldo y Famy, leader of the Filipino insurgency, mapped out a specific plan that he hoped would influence the U.S. elections.

The election of 1900 was largely a rematch of the 1896 election inasmuch as both presidential contenders were the same and many of the same campaign issues were in play. There were, however, important differences that gave McKinley a decided advantage. First, the American economy was booming, unlike four years earlier when it was struggling to recover from a devastating depression. Second, McKinley could rightly point out that the stunning success of the Spanish-American War had made the Western Hemisphere more stable and that it had brought with it a much-enlarged United States. Finally, in most circumstances, incumbents usually enjoy an automatic advantage in a general election.

Bryan's campaign continued to play on a number of Populist Party themes including free silver, which no longer resonated because the economy was prospering and world gold reserves were on the increase after gold mines in South Africa and Alaska had begun producing. Bryan also pledged that he would more actively pursue antitrust prosecutions and sever the ties between Washington and big business. This pledge was also not particularly well received, as the Republicans had just as many plans, if not more, to curb the abuses of trusts and business monopolies.

Perhaps Bryan's singular weapon in the 1900 election was his use of the Philippine-American War and its ties to American imperial expansion. Arguing that the war was fatally executed and that the United States should accommodate the Filipino insurgency by pledging to support Philippine independence with all due haste, Bryan made it clear—without saying so specifically—that he would bring an immediate end to the war in the Philippines. He also sought to end what he termed American “imperial expansion” but without saying how he intended to accomplish this.

McKinley, who presided over a well-oiled campaign machine, ran largely on his track record since taking office in 1897. Since then, the economy had not only improved but was actually booming. The United States had fought a quick, relatively painless war

A Republican Party campaign poster for William McKinley and his running mate Theodore Roosevelt. The gold standard, referred to on the poster, was an issue of the time. (Library of Congress)

with Spain and won it in less than three months. It also had added Hawaii, Guam, Puerto Rico, and the Philippine Islands to its territory and had stabilized Cuba. Realizing, however, that the Philippine-American War was a potential liability, the McKinley administration boasted of troop withdrawals ahead of the elections, and other Republicans promised that the war would be over within 60 days of McKinley's reelection. The fact was that the war was not close to an end, as reports from field commanders—including Brigadier General Arthur MacArthur—made abundantly clear.

Aguinaldo, who was a shrewd politician as well as an effective military leader, saw the 1900 election as a way to end the Philippine-American War more or less on his terms. As early as the summer of 1899, he made plans for a series of broad and punishing assaults against American forces all across the Philippine Islands. His strategy was simple: cause as much damage to American forces as possible, undermine Americans' faith in the war effort, and tip the election in the Democrats' favor.

In the end, neither Bryan nor Aguinaldo could tilt the scale enough to upset the incumbent McKinley. McKinley won the election with broad-based support, including from the majority of soldiers serving in the Philippines. In addition, McKinley's running mate, New York governor Theodore Roosevelt, hero of the Battle of San Juan Hill, proved to be an effective campaigner. When the votes were counted, McKinley had carried 28 states to Bryan's 17 and had garnered 292 electoral votes to Bryan's 155. In the straight popular vote count, McKinley carried 51.7 percent of the vote as compared to Bryan's 45.5 percent. McKinley swept practically all the northern tier of states from Maine to Washington as well as California. Bryan ran strong only in the South and carried no industrially significant states. Socialist Eugene Debs, who ran for the presidency for the first time in 1900, captured 87,945 votes. The once-promising Populist Party, which ran as its candidate Wharton Barkley, took just 50,989 votes.

Elliott, George Frank

Birth Date: November 30, 1846

Death Date: November 4, 1931

U.S. Marine Corps officer. Born on November 30, 1846, in Utah, Alabama, George Frank Elliot spent several years in Alabama before his family moved to New Hampshire. Firmly committed to a career in the military, he enrolled at the United States Military Academy, West Point, in 1868 but left after two years to accept a commission as a second lieutenant in the Marine Corps.

During the course of the next seven years, Elliott served in a variety of postings ashore, most notably at the Washington Naval Shipyard in the District of Columbia and the Portsmouth Naval Shipyard at Kittery, Maine. After serving briefly with the Marine Guards on the *Vermont*, *Frolic*, and *Monongahela*, he was transferred to the Norfolk Navy Shipyard in Portsmouth, Virginia. His return to Virginia in 1877 coincided with the Great Railroad Strike of 1877, when Baltimore and Ohio Railroad employees staged a general strike that spread along the railroad line from Maryland to West Virginia. Elliott and a detachment of marines were dispatched by President Rutherford B. Hayes to Baltimore to help prevent destruction and protect the city and the railroad from further damage.

In 1878, Elliott was promoted to first lieutenant. During the next few years, he continued with a series of assignments, serving on the *Alliance* before being stationed at the Marine Barracks, Charlestown Naval Yard, in Boston, Massachusetts. In 1885, he participated in a naval expedition to Panama. He was promoted to captain in 1892 and led a marine unit at the U.S. legation in Seoul, Korea, in 1894.

With the outbreak of the Spanish-American War in 1898, Elliott was called to action with the 1st Marine Battalion, which was to be dispatched to Cuba. On June 10, 1898, commanding a company of marines, Captain Elliott landed at Guantánamo Bay. He was then ordered to take Cuzco Well, the main water supply for the Spanish who were defending the bay. On June 14, Elliott led an attack on the Spanish. He commanded some 160 men, consisting of C and D companies of the battalion and a number of Cuban insurgents. Enjoying gunfire support from the gunboat *Dolphin* offshore, Elliott's men defeated nearly 500 Spanish defenders while sustaining only minimal casualties.

Comparatively speaking, the events at Guantánamo and Cuzco Well were minor skirmishes. However, the marines' occupation of the strategic area and the establishment of the coaling station at Guantánamo enabled the U.S. Navy to maintain constant pressure on the Spanish squadron at Santiago.

Promoted to major in March 1899, Elliott saw action in the Philippines during the Philippine-American War beginning in September 1899, when he landed with a battalion at Cavite to support marines already operating in the field. Soon thereafter, he was promoted to lieutenant colonel. Elliott and his men worked closely with army units to storm and capture the insurgent-held town of Novalleta on October 8, 1899.

In 1900, Elliott returned to Portsmouth, Virginia, where he remained until 1903. In March 1903, he was transferred to Washington, D.C., and promoted to colonel. Seven months later, he was elevated to the rank of brigadier general and named commandant of the U.S. Marine Corps. Now in charge of some 7,800 marines, Elliott returned to action in Panama in early 1904, where his two battalions supported the U.S. military effort after the Panamanian revolt against Colombia. Elliott remained in Panama until the new Panamanian government assumed control.

In his capacity as marine commandant, Elliott played an enthusiastic and direct role in advocating more recognition for the corps. His efforts were rewarded when Presidents Theodore Roosevelt and William Howard Taft issued executive orders clarifying the role of the U.S. Marine Corps. Promoted to major general in 1908, Elliott continued to serve as Marine Corps commandant until his retirement from active duty in November 1910. He died on November 4, 1931, in Washington, D.C.

Embalmed Beef Scandal

Event Date: December 21, 1898

U.S. Army procurement scandal arising from the Spanish-American War of 1898 in which hundreds of tons of meat sent to feed U.S. troops were thought to have been tainted. Major General Nelson A. Miles touched off the Embalmed Beef Scandal during his testimony to the presidential-appointed Dodge Commission on December 21, 1898. While defending his military decisions in Puerto Rico, Miles attacked the Commissary Department and, indirectly, the William McKinley administration with accusations that chem-

ically tainted meat had been deliberately issued to the troops and that this had resulted in many illnesses and deaths. Numerous army officers, including Theodore Roosevelt, supported this claim, but a subsequent court of inquiry could not prove that the beef had been tainted and censured Miles.

Miles's accusations centered on 337 tons of refrigerated beef and 198,508 pounds of canned beef sent to Cuba and Puerto Rico during the war. He contended that the refrigerated rations were so unpalatable that the men refused to eat them. He also claimed that the canned beef was not much better. To meet the low prices of competitive bidding, contractors often used waste and offal from other packing processes for the army rations. Miles claimed that when this meat was consumed, often disguised in stews, the results were diarrhea, dysentery, and even death. Many believed that the Commissary Department and its civilian contractors were experimenting with chemical preservatives, including boric acid, salicylic acid, and nitrate potash, which gave the refrigerated meat an embalmed smell and appearance. In support of Miles were reports provided by officers from the 4th, 6th, 9th, 12th, and 17th Infantry; the 1st, 3rd, and 9th Cavalry; and the 1st, 2nd, and 5th Artillery.

Many important military and political leaders responded to these charges, which quickly became a national sensation. Major General Wesley Merritt, who commanded the Philippines expedition, denied any incidence of bad beef under his authority. Not surprisingly, the meatpacking industry also denied any wrongdoing. Retired army major general Grenville Dodge, head of the presidential commission, found no concrete evidence of chemical tainting and concluded that Miles was attacking McKinley in an effort to become the next Democratic Party presidential nominee.

Commissary General Charles P. Eagan attacked Miles with considerable vehemence, accusing him of lying, deceit, and political chicanery. So harsh were Eagan's condemnations, in fact, that a military court later found him guilty of conduct unbecoming an officer. Secretary of War Russell A. Alger, himself the object of scrutiny during the scandal, attempted to bring charges against Miles for issuing unauthorized press releases. Almost all the participants in this scandal suffered significant damage to their reputations and careers.

In the end, neither the Dodge Commission nor the Miles Court of Inquiry could prove that the refrigerated beef was tainted, but they did conclude that the canned beef was of inferior quality. Congress released the two-volume *Record of Court of Inquiry* on March 30, 1900. But the political infighting and issues of dishonesty haunted the scandal's primary participants for much longer. Elihu Root ultimately replaced Alger as secretary of war, and Miles entered into a lengthy battle about military reform with the new secretary. The dissension over military reform eventually damaged both the army organization and Miles, who retired in disgrace.

For its part, the meatpacking industry suffered even more scrutiny, and writer-journalist Upton Sinclair mentioned the Embalmed Beef Scandal in his muckraking exposé *The Jungle*, published in 1906. Sinclair's book revived the charges of unhealthy and

Meat inspectors at the Swift & Company packinghouse in Chicago, circa 1906. Both hygiene and labor conditions within the meatpacking industry came under close scrutiny by so-called muckraking journalists at the turn of the century. Soldiers claimed to have been given tainted meat while fighting in the Spanish-American War. Exposés by writers such as Upton Sinclair helped bring about the passage of the 1906 Federal Meat Inspection Act. (Library of Congress)

unsanitary conditions in America's meatpacking industry (which was centered principally in Chicago) and prodded the Roosevelt administration into action. Indeed, Roosevelt, who had read Sinclair's book and was still convinced that the meat rations during the war had been tainted, pushed Congress into passing legislation to regulate more closely meatpacking and other food industries. The result was the Pure Food and Drug Act of 1906 and the Meat Inspection Act of 1906, two of the first significant pieces of legislation of the incipient Progressive era. Their passage is often attributed, at least in part, to the president's experiences with Spanish-American War meat rations.

Endicott Plan

Comprehensive plan to substantially fortify U.S. coastal defenses beginning in 1886 and named for U.S. secretary of war William Endicott. In the years immediately following the American Civil War, the condition and reliability of defenses designed to protect U.S. harbors and ports deteriorated steadily. Not until the early 1880s did Congress, the executive branch, and the armed services begin to address this issue. This decision was coupled with that of the construction of a more powerful modern navy. Advances in weapons technology also had rendered the old static coastal defenses largely obsolete. With naval strategy focused more on offensive capabilities, adequate coastal defenses would allow military planners to use fewer naval assets for protecting home shores and more for naval operations in foreign waters.

In 1886, newly inaugurated president Grover Cleveland appointed a board of inquiry that brought together military and civilian officials, under the direction of Secretary of War Endicott, to study the U.S. coastal defenses and to recommend plans of action to resolve these deficiencies. The result, after careful deliberations, was the 1886 Endicott Report, or Endicott Plan. Painting an alarming picture of American coastal defenses, the report urged the adoption of a \$126 million program to construct new breech-loading cannon, machine guns, floating batteries, torpedo boats, underwater mines, searchlights, and the like, all to bolster 29 U.S. coastal sites. The plan called for the procurement of 1,300 heavy guns and mortars. Not until 1888, however, did Congress begin funding the program (and then only a small part of it) with the creation of the Army Board of Ordnance and Fortification. The plan also resulted in the creation of the Army Gun Factory to produce the weapons called for in the report. Actual construction of forts did not begin until 1890, and this proceeded slowly and fitfully mainly because of congressional failure to provide adequate funds.

By 1897, only a small portion of the Endicott Plan had been met; only 30 of the prescribed 500 heavy guns and 70 of the 1,000 mortars were in place in the fortifications. Even more troublesome was the fact that an estimated 85,000 men would be needed to staff the new fortifications, although only about 8,500 would require extensive training. Once again, however, Congress refused to raise the

money needed to add artillery regiments to the army, and so the fortifications were badly undermanned.

As war with Spain loomed in early 1898, however, Congress finally added two new artillery regiments (the 6th and 7th), which would bring to 8,000 men the number of trained personnel needed to man the fortifications. This was possible thanks to the March 8, 1898, signing of the Fifty Million Dollar Bill, which finally broke the legislative logjam. Immediately thereafter, the Corps of Engineers and the Ordnance Department embarked on a crash course in coastal defense, adding guns, cannon, mortars, mines, ships, and the like to numerous fortifications around the country, particularly along the East Coast. Still, building and procurement lagged, and the Endicott Plan was not largely implemented until 1910. By then, of course, rapid advancements in weapons and naval technology had begun to render these installations increasingly outdated. Be that as it may, the Endicott improvements endured, with modification and modernization, until World War II.

Ernst, Oswald Hubert

Birth Date: June 27, 1842

Death Date: March 21, 1926

U.S. Army officer. Born near Cincinnati, Ohio, on June 27, 1842, Oswald Hubert Ernst entered Harvard University in 1858 and two years later was appointed to the United States Military Academy, West Point, where he graduated in June 1864 and was commissioned a first lieutenant in the engineers. In July 1864, he became assistant engineer of the Army of the Tennessee and served throughout the Atlanta Campaign. Following an assignment as a professor of engineering at West Point, he helped oversee construction of Pacific coast fortifications. Promoted to captain in March 1867, he commanded an engineer company and then returned to West Point as a professor of engineering, signaling, and telegraphy. In 1873, he published *A Manual of Practical Military Engineering*.

Beginning in 1878, Ernst was involved in engineering assignments on western rivers, including the Mississippi. In May 1882, he was promoted to major and given charge of river engineering projects in Texas. From 1888 to 1893, he was a member of the Missis-

issippi River Commission. Colonel Ernst was superintendent of West Point from April 1893 to June 1898.

Appointed brigadier general of volunteers in May 1898, Ernst commanded the 1st Brigade of the 1st Division of I Corps in the Puerto Rico Campaign. Landing at Ponce, Puerto Rico, his brigade fought in the Battle of Coamo on August 9 and the skirmish at the Asomante Hills on August 12.

Following the war, Ernst served as inspector general of U.S. troops in Cuba, and in 1899, he was a member of the commission studying possible routes for a canal across the Isthmus of Panama. From February 1903 to June 1906, he was president of the Ohio River Commission. He retired from the army in 1906 as a major general and died on March 21, 1926.

lacked the resources to do that and protect the American flank. In order to have prevented the Spanish reinforcement, he would have had to break contact with the American right flank. In any case, the insurgents had managed to delay the arrival of Escario's column until after the Battle of San Juan Hill. Nonetheless, Shafter's unwarranted charges created some ill will and served to undermine U.S. confidence in the insurgent forces.

Shortly thereafter advanced to brigadier general, Escario served as a commissioner and helped to negotiate the Capitulation of Santiago de Cuba Agreement. Repatriated to Spain at the end of the war, he subsequently served as the military governor of Alicante. He also won election to and served in the Spanish Cortes (parliament).

Escario García, Federico

Birth Date: Unknown

Death Date: Unknown

Spanish Army officer. Federico Escario García joined the Spanish Army and began his military career in the Philippines. Returning to Spain in 1872, he was badly wounded during the Third Carlist Civil War (1872–1875). Following his recuperation, he returned to active duty. In 1895, he was assigned to Matanzas, Cuba, and was then actively involved in fighting Cuban insurgents.

At the beginning of the Spanish-American War, Escario was a colonel and was stationed at Manzanillo, Cuba. On June 22, 1898, he led a column of 3,752 Spanish soldiers from Manzanillo in an effort to reinforce Santiago de Cuba, then under assault by U.S. expeditionary forces. This march, undertaken under adverse conditions, covered 160 miles of extraordinarily difficult terrain in 11 days. En route, the column fought more than 40 skirmishes with Cuban insurgent forces and suffered a 10 percent casualty rate from combat, disease, and desertion. In all, 27 soldiers were killed, and 3 officers and 68 soldiers were wounded. Escario arrived with his men at Santiago on the night of July 2.

Although Cuban insurgent Major General Calixto García y Iñiguez had wanted to send 2,000 of his men to intercept the column, U.S. V Corps commander Major General William R. Shafter had insisted that the insurgents maintain adequate strength in the Santiago area to protect the American right flank while at the same time guarding the Manzanillo Road. While García ordered General Salvador Hernández Ríos to intercept Escario's column, García

Estrada Palma, Tomás

Birth Date: July 9, 1835

Death Date: November 4, 1908

Cuban revolutionary and political leader who represented the Cuban Revolutionary Party in the United States and headed the Cuban Junta in New York beginning in 1895. Born on July 9, 1835, near Bayamo, Oriente Province, Cuba, Tomás Estrada Palma completed his secondary education in Havana and then studied law in Seville, Spain. The sudden death of his father, however, forced him to return home without finishing his degree.

In 1868, Estrada joined the Cuban rebels who were fighting against Spanish colonial rule during the Ten Years' War (1868–1878). He eventually became a commanding general and president of the provisional government in March 1876. In October 1877, Spanish forces captured him and exiled him to Spain, where he was briefly imprisoned.

Following the end of the Ten Years' War, Estrada was released and traveled to France, the United States, and finally Honduras, where he became a teacher, ran the postal service, and married the daughter of an ex-president. Estrada then traveled to the United States and settled in Central Valley, Orange County, New York, where he became a principal of a boys' school. He also established a high school for students from Latin America. He ultimately became a naturalized American citizen and staunch advocate of U.S. annexation of Cuba.

Cuban nationalist leader Tomás Estrada Palma, elected the first president of the Republic of Cuba in 1901. (John Clark Ridpath, *Ridpath's History of the World*, 1901)

While in New York, Estrada joined forces with José Martí and other Cuban exiles and helped found the Cuban Revolutionary Party in 1892. When Martí returned to Cuba to fight the Spanish in 1895 and was killed soon thereafter, Estrada took control of the organization and became its chief diplomatic representative in Washington. In September 1895, he was also instrumental in forming the Cuban Junta, which lobbied politicians and others in positions of power to champion their effort and pressure the Spanish to abandon Cuba. While in Washington, he fought against Spanish efforts to diffuse the independence movement by granting autonomy to the island. He also aided in the publication in the American press of Enrique Dupuy de Lôme's 1898 letter that was highly critical of President William McKinley. Estrada welcomed the war between the United States and Spain in 1898, and later endorsed the Platt Amendment as part of the Cuban constitution of 1901.

While still in the United States, Estrada was elected the first president of the Republic of Cuba in December 1901, although he did not campaign and represented no political party. Following a 25-year absence from Cuba, he returned to the island nation and took office in May 1902. The American flag was replaced with that of Cuba over the governor's palace at the time of his inauguration.

As president, Estrada continued policies initiated under the U.S. occupation that had lowered the national debt, established a budget

surplus, and improved public services. Working closely with American officials, he increased Cuban sugar exports to the United States, although Congress, in spite of a special session called by Roosevelt, refused to afford Cuban sugar preferential tariffs. In 1903, Estrada signed the treaty leasing Guantánamo Bay to the United States in perpetuity as an American naval base as part of the Platt Amendment. In 1905, he decided to run again for president as a candidate of the Moderate Party, during which he purged all members of other political parties, especially the Liberal Party, from office. The violent and fraud-ridden September 1905 election gave the Moderate Party an overwhelming victory, with Estrada elected to another term.

Excluded from power, in August 1906 the Liberal Party planned an uprising in the hopes of an American intervention under the Platt Amendment. Estrada responded by arresting members of the Liberal Party and suspending civil rights. Unable to put an end to the rebellion, he also hoped for American intervention and formally requested it in September 1906, threatening to resign his office if no aid arrived. Rather than send troops to Cuba, President Theodore Roosevelt established and sent a commission to investigate the problem. The commission concluded that election fraud had caused the revolt and recommended implementing some of the Liberals' demands. Estrada rejected the proposal and resigned as president on September 28, 1906. The United States then intervened to restore order in Cuba. Estrada returned to his birthplace and died in Santiago, Cuba, on November 4, 1908.

Evans, Robley Dunglison

Birth Date: August 18, 1846

Death Date: January 3, 1912

U.S. Navy admiral. Born in Floyd County, Virginia, on August 18, 1846, Robley Dunglison Evans was the son of a doctor. After his father died when Evans was 10, his family moved to Fairfax Courthouse, Virginia. The next year, Evans went to live with an uncle, a lawyer in Washington, D.C. From an early age, Evans wanted to become a naval officer, and a Utah territorial representative suggested that he move there, establish residency for a year, and secure an

appointment to the Naval Academy from that territory. Evans, then age 13, traveled to Salt Lake City in 1859. His party was attacked twice by Native Americans, and Evans was slightly wounded by an arrow. He passed the entrance exam for the Naval Academy and received a warrant as an acting midshipman on September 20, 1860. He graduated from the academy, then located in Newport, Rhode Island, as an acting ensign on October 1, 1863.

Evans served along the Atlantic seaboard and particularly distinguished himself as one of the leaders of the volunteer naval landing force that took part in the Union assault on Fort Fisher, North Carolina, on January 15, 1865. He was wounded four times that day, including severe wounds to his legs that almost led doctors to amputate both. Evans drew a pistol and threatened to shoot anyone who tried. Although he recovered, one of these injuries left him with a severe limp and the affectionate nickname of "Gimpy Evans."

Medically retired at the end of the war, Evans was advanced to master on the retired list on May 10, 1866, and lieutenant on the retired list on July 25, 1866. Appealing to Congress for reinstatement, he was returned to active duty and served on the Asiatic station then in the Caribbean and Mediterranean. He was promoted to lieutenant commander on March 12, 1868, and to commander on July 12, 1878.

Evans also had a scientific bent. In 1876, he invented a long-distance signaling lamp for use on naval vessels. During 1880–1882, he was equipment officer at the Washington Navy Yard and a member of the Naval Advisory Board that recommended that all future U.S. Navy vessels be constructed of steel. While in command of the gunboat *Yorktown* on Pacific station in 1891–1892, Evans took a strong stand against Chilean authorities at Valparaiso, Chile, skillfully handling a tense situation there following the killing of American sailors who had gone ashore from the cruiser *Baltimore*, commanded by Captain Winfield Scott Schley. Evans's performance at Valparaiso and expressed willingness to use force if need be led to his being known as "Fighting Bob." He again displayed ability in handling a tense situation while in command of a flotilla in the Bering Sea Sealing Dispute of 1892. After a brief tour with the Light-house Board, he was advanced to captain on June 27, 1893, and given command of the armored cruiser *New York* in the West Indies and then in European waters. During 1895–1898, he commanded the new battleship *Indiana*, and on March 26, 1898, with war with Spain looming, he took command from Captain William T. Sampson, who was appointed to head the North Atlantic Squadron, of the newest U.S. Navy battleship, the *Iowa*.

Evans opposed the formation of the Flying Squadron because it would divide U.S. naval forces. He supported Sampson's proposal that the fleet bombard the Havana defenses in the belief that this would bring an early end to the war, but authorities in Washington rejected the idea as too risky. Evans then took part in the bombardment of the Spanish defenses of San Juan, Puerto Rico.

Evans and his ship played a significant role in the subsequent Battle of Santiago de Cuba. The *Iowa* fired the first shot at the ships of Rear Admiral Pascual Cervera y Topote's squadron as they exited

Admiral Robley Dunglison Evans's career in the U.S. Navy began in the American Civil War. During the Spanish-American War, he commanded the battleship *Iowa* and took part in the Battle of Santiago de Cuba. (Library of Congress)

Santiago on July 3, 1898. Following the sinking of the Spanish ships, Evans undertook the task of rescuing their crews. His role in the crushing U.S. victory placed him among the naval heroes of the war. In the subsequent Sampson-Schley controversy, Evans gave credit to Sampson for the victory. Promoted to rear admiral in February 1901, he commanded first the Asiatic Fleet (1902–1904) and then the North Atlantic Fleet (1905–1907). The capstone of his career came in the assignment to command the U.S. Navy's Great White Fleet on its historic round-the-world cruise of 1907–1909. Illness forced him to leave the fleet at San Francisco in May 1907, and he retired from the navy that August. He wrote *A Sailor's Log: Recollections of Forty Years of Naval Life* in 1901 and *An Admiral's Log: Being Continued Recollections of Naval Life* in 1910. Evans died in Washington, D.C., on January 3, 1912.

Expansionism

American expansionism, marked by the annexation of overseas territories, was a direct result of the Spanish-American War. With the acquisition in 1898 of Hawaii, a process that began as early as the 1880s, and then the Philippines, Guam, and Puerto Rico resulting from the Treaty of Paris, the United States for the first time in its history was considered an imperial and colonial power.

At the conclusion of the American Civil War (1861–1865), a curious mixture of economics and ideology began pushing the United

States down the same path previously charted by European nations in Africa and Asia. Despite an earlier historical tradition of isolationism, the years between 1865 and 1900 were marked by notions of both commercial destiny and a political mission abroad. Yet it would not be until the war with Spain at the end of the 19th century that the United States would undertake an aggressive overseas expansionist posture.

Initially, after the Civil War, American territorial development was characterized by westward expansion, which had characterized the expansion of the nation since its founding. The antebellum Manifest Destiny ideology was carried to its fullest expression after 1865 with the settlement of the West and the encouragement of agricultural and manufacturing development. A period of great domestic growth and economic consolidation took place as a result of the achievement of a stronger national union.

The roots of American expansion abroad were at first economic and ideological rather than territorial. Even though American trade across the Pacific, in large measure stimulated by Commodore Matthew C. Perry's cruise to the Far East in the 1850s and the presence of American missionaries in China since the 1830s, indicated

The Hawaiian flag being lowered at Iolani Palace in Honolulu upon Hawaii's 1898 annexation to the United States. (Library of Congress)

the desirability of establishing naval bases and coaling stations for the new naval and commercial ships being built, America's primary objective was not the collection of colonial dominions. Small acquisitions in the Pacific, such as Wake Island in 1867, harbor rights in Pago Pago in Samoa in 1878, and the critical coaling station and naval base at Pearl Harbor in Hawaii in 1887, were valuable largely in terms of their strategic importance. It would not be until the 1880s and 1890s, however, that the U.S. government would endorse a more aggressive outward thrust. A series of diplomatic incidents involving nations in Latin America, including President Grover Cleveland's stand against Great Britain in its boundary dispute with Venezuela in 1895, caused the United States to give a clear indication of its intention to maintain and reassert the principles of the 1823 Monroe Doctrine in the New World.

Although not favoring an exclusive policy of colonization, American leaders agreed that it was time for the United States to accept a more commanding role in world affairs. The growing need of American manufacturers for more and bigger markets could only be satisfied by significantly increasing U.S. exports to Latin America. To a great extent this was prompted by three decades—1870s, 1880s, and 1890s—of falling prices, financial panics, and periods of severe economic depression. The farmer-labor discontent of the period was reflected in the political allure of the emerging Populist and Socialist parties. Businessmen in particular urged an expansionist policy but not necessarily extraterritorial acquisitions. Perhaps the most vocal supporters behind the expansionist thrust were publicists, missionaries, politicians, naval officers, and professors, who blended the philosophies of Manifest Destiny, Darwinian evolution, social Darwinism, Anglo-Saxon racism, militarism, patriotism, and economic determinism into a unique justification for territorial acquisition.

The ideological roots of American expansion overseas began in the 1880s. In that decade, John Fiske, who helped popularize Darwin's theory of evolution, published an influential article in *Harper's Magazine*. The article, titled "Manifest Destiny," proclaimed that it was the duty of Anglo-Saxon nations to exercise political domination over so-called backward territories and that the recent industrial progress of the United States demanded that it undertake a colonial policy. The Anglo-Saxon view of American history and democracy was also voiced by the Reverend Josiah Strong, whose *Our Country: Its Possible Future and Its Present Crisis* (1885) boldly asserted that the Anglo-Saxon race, the true upholders of the principles of Christianity and civil liberty, was destined to spread over the earth. It was thus the duty of the United States to assume the mantle of leadership for the future progress of the world.

Historian and economist Brooks Adams, a descendant of Presidents John Adams and John Quincy Adams, argued that the United States should take over the commercial role of England and the European centers of trade and expand its leadership with respect to overseas development. The most noted expansionist was Captain Alfred T. Mahan. His 1890 book, *The Influence of Sea Power upon History, 1660–1783*, became the bible for those favoring a more ex-

pansive American foreign policy. Mahan argued that a powerful navy was the most important factor in sustaining a great commercial state. In his opinion, the United States must look outward, and central to his strategic ideas regarding American foreign policy was the construction of an isthmian canal.

The war with Spain in 1898 provided the opportunity for American diplomacy, militarism, and expansionism to come together as one policy. To the American public, the Spanish-American War was largely considered an idealistic crusade for the liberation of Cuba. In actuality, it enabled American supporters of expansion to acquire valuable overseas possessions. During the war, the United States annexed Hawaii.

The acquisition of the Philippines by purchase from Spain was met with resistance, however. When the American military finally defeated the rebel forces of Emilio Aguinaldo y Famy in 1901, the United States largely gained control of all the islands in the archipelago and justified its presence on the grounds that it did not want them to fall into the hands of imperial rivals such as Germany and Japan. In addition, the United States received from Spain the territories of Guam and Puerto Rico. The liberation of Cuba was achieved, and its subsequent independence was guaranteed by the 1901 Platt Amendment. But American influence in the Caribbean and Central America increased considerably after the war.

After the Spanish-American War and during the Philippine-American War, increased U.S. influence in the Far East was also felt. Secretary of State John Hay's Open Door Policy was designed to enable America to gain its own economic sphere of influence in China. After the 1900 Boxer Rebellion, the United States did manage to gain an economic foothold in China, thereby ensuring an expanding Open Door Policy favorable to American business interests.

Meanwhile, in the first decade of the 20th century, President Theodore Roosevelt issued the Roosevelt Corollary (1904) to the Monroe Doctrine, expanding American influence in Latin America by proclaiming that the United States had the right to intervene in the countries of the Western Hemisphere to maintain order and prevent European rivals from using force to collect debts from their colonies. During the William Howard Taft administration (1909–1913), the policy of dollar diplomacy promoted economic investment over military intervention in Latin America, but U.S. marines were still deployed to places such as Nicaragua, Honduras, and Haiti.

The Spanish-American War became the springboard to U.S. expansion abroad. America was now willing to assume the responsibility for governing overseas dependencies. Its policies in the Far East and Latin America signified a new direction in American foreign policy, one that represented U.S. ascendancy to world power status.

F

V Corps

V Corps (Fifth Corps) was the U.S. Army force assembled to invade Cuba during the Spanish-American War. V Corps was officially organized at Tampa, Florida, with Major General William R. Shafter taking command on May 16, 1898.

Tampa proved a poor choice for a debarkation site because only a single rail line connected Tampa to Port Tampa, 10 miles distant. Although the original plan was for V Corps to number 25,000 men, there was insufficient time to assemble them all as well as a shortage of weapons and uniforms, let alone transports to lift the men. Thus, when V Corps departed Tampa for Cuba on June 14 in 29 transports, it numbered only 819 officers and 16,058 enlisted men, of whom only 2,465 were volunteers.

Most of the men in V Corps were in five large formations: three divisions, an independent brigade, and a volunteer brigade. Brigadier General Jacon F. Kent commanded the 1st Infantry Division, while Brigadier General Henry W. Lawton commanded the 2nd Infantry Division. Each numbered about 5,000 men. Major General Joseph Wheeler commanded the dismounted cavalry division, which numbered about 2,700 men. Brigadier General John C. Bates commanded the independent brigade of some 1,100 men, while Brigadier General Henry M. Duffield commanded the brigade of volunteers, numbering about 2,700 men. Only five regiments of volunteers participated in the first part of the campaign through July 1. They were the 21st U.S. Cavalry Regiment (the Rough Riders), the 2nd Massachusetts, the 71st New York, the 33rd Michigan, and one battalion of the 34th Michigan. V Corps had little artillery support: only one battalion of 16 3.2-inch guns. Eight large field guns went with V Corps to Cuba but were too unwieldy to be used. The Gatling Gun Detachment of 4 guns saw considerable action. Other artillery support was provided in 8 field mortars and one Hotchkiss revolving cannon.

V Corps was a collection of units rather than a cohesive force that could function as a unit. This was a direct consequence of the lack of training time. Generally speaking, the regular officers were well trained, but few had commanded large units before, and operating as divisions was new to an army that had been accustomed to fighting in isolated small units in the American West.

On June 22, V Corps began coming ashore at Daiquirí, about 16 miles east of Santiago. American journalists soon reported the disorganization that marked the descent on Cuba and its immediate aftermath. V Corps fought in the Battle of Las Guásimas (June 24), the Battle of El Caney (July 1), and the Battle of San Juan Hill (July 1). The later engagement also included the Battle of Kettle Hill, which made Lieutenant Colonel Theodore Roosevelt a national hero. During the siege of Santiago de Cuba (July 3–July 17, 1898), the 300-pound Shafter, suffering from gout, had to be carried about on an old door. Nevertheless, the Spanish surrender of Santiago on July 17 essentially ended the war in Cuba.

The prevalence of diseases such as malaria, typhoid, and yellow fever led to the controversial Round-Robin Letter and withdrawal beginning on August 7 of V Corps (then numbering 1,109 officers and 20,761 enlisted men). The men were sent to Camp Wikoff at Montauk Point, Long Island, New York. During the war, 2,459 members of V Corps were casualties: 243 men were killed in action, while 771 died of disease. Another 1,445 were wounded in action. V Corps was formally disbanded at Camp Wikoff on October 7, 1898.

Fifty Million Dollar Bill

U.S. defense appropriation bill signed into law by President William McKinley on March 9, 1898. The so-called Fifty Million Dollar Bill allotted \$50 million to strengthen American land and naval forces in preparation for war with Spain. As tensions between the United States and Spain intensified after the battleship *Maine* blew up in Havana Harbor on February 15, 1898, President McKinley and his cabinet were somewhat divided over how best to resolve the deteriorating Cuban situation. The president desired a peaceful resolution, but on March 5, 1898, he learned that the Spanish were negotiating to purchase two cruisers being built in England for

Brazil. The following day, he asked Joseph G. Cannon, powerful chairman of the House Appropriations Committee, to obtain funds for improving the U.S. military. Cannon and McKinley agreed that \$50 million, taken entirely out of the treasury's surplus, would suffice. Accordingly, on March 7, 1898, Cannon introduced a \$50 million appropriation bill for national defense.

On March 8, 1898, a brief debate took place in the House during which numerous representatives spoke in favor of the bill. It passed by a unanimous vote of 311 to 0. In the Senate, the measure passed by an equally lopsided margin of 76 to 0. Many politicians believed that war with Spain was still avoidable and thus viewed the Fifty Million Dollar Bill as a peace measure. They reasoned that Spanish officials might recoil from war upon learning of a freshly reinforced U.S. military. McKinley signed the bill into law on March 9, 1898, providing the Navy Department and the War Department with immediate funding. Appropriately for a looming maritime conflict, the navy received roughly 60 percent of the total funds distributed.

The desire to improve American coastal defenses was actually at the heart of the Fifty Million Dollar Bill. The War Department expended more than three-quarters of its allotment strengthening harbor fortifications, installing or refurbishing coastal defense artillery, and securing defensive minefields. Critics subsequently accused Secretary of the Army Russell A. Alger of interpreting the Fifty Million Dollar Bill too narrowly, arguing that he should have spent more on the army's Quartermaster, Medical, and Signal

Corps. Doing so, they believed, might well have avoided the confusion and shortages that bedeviled the early war effort.

By all accounts, the Navy Department used its allotment judiciously. Under the successive direction of assistant secretaries Theodore Roosevelt and Charles H. Allen, the sea service rapidly expanded its forces. It purchased or leased more than 100 auxiliary vessels, including cruisers, small combatants, and support ships. The navy used many of these vessels for coastal defense, but some also saw combat. Overall, the Fifty Million Dollar Bill significantly enhanced U.S. naval preparedness.

Filibuster

An individual who organized unauthorized armed expeditions against a foreign country, usually with the goal of overthrowing the existing government. Beginning in the mid-19th century, the term “filibuster” was applied to Anglo-Americans who undertook various expeditions in the Caribbean and Central America. The word comes from the Spanish *filibustero*, which was derived from the Dutch word *vrijbouter*, meaning freebooter. A freebooter was a private individual who made war on a foreign country without his home country’s permission.

An early filibuster was Aaron Burr, who between 1804 and 1806 organized and then launched a failed attempt to form his own country from territory in central and southwestern North American and Mexican territory. Another noted filibuster was William Walker, who led several expeditions to Mexico and Central America. In 1853, Walker tried—unsuccessfully—to foment an uprising in the Mexican states of Sonora and Baja California with the goal of wresting those states from Mexican control. In May 1855, he seized control of Nicaragua and ruled over it for two years before being ousted. His subsequent attempt to take over Honduras ended with his execution on September 12, 1860. Narciso Lopez, a Cuban émigré to the United States, launched three expeditions, all of which were unsuccessful, to Cuba between 1849 and 1851. His goal was the overthrow of Spanish rule there. John Quitman, a soldier and governor of Mississippi from 1850 to 1851, had supported Lopez’s expedition in 1850 and helped him assemble men and matériel for the attempted coup. Because of this, Quitman lost the governorship in 1851. In the summer of 1853, with the encouragement of President

Franklin Pierce, Quitman began assembling his own expedition to Cuba with the goal of overthrowing Spanish rule and establishing a state in which a slave economy might flourish. In May 1854, however, the Pierce administration withdrew its support for the filibuster out of fear that the addition of Cuba as a slave state would bring political chaos to the United States.

With the outbreak of the Cuban revolt against Spain in 1895, Cuban émigrés in the United States organized several filibuster expeditions to Cuba, which included providing arms and ammunition to the Cuban revolutionaries. The bases for these expeditions were located in Central America, Great Britain, and the United States, although the most important were in the United States. After 1895, Captain Johnny “Dynamite” O’Brien, an American, worked from New York and southern Florida to transport guns and ammunition to Cuba.

Although the U.S. government tried to stop the arms shipments, some nevertheless got through and the Spanish blamed the U.S. government for not stopping all of them. The Spanish government even accused both the Grover Cleveland and William McKinley administrations of supporting the Cuban insurrection against Spanish rule. While the revolutionaries in Cuba needed the support that the filibustering brought, they remained concerned that it could lead to an intervention by outside nations. Of 64 filibustering expeditions to Cuba from the United States, the U.S. government stopped 23, the Spanish stopped 2, and 2 others were lost at sea.

Filipino Nationalist Army

Indigenous Filipino insurgency force formed in August 1896 near Balintawak, Philippines, that fought first against the Spanish (1896–1898) and then the U.S. Army after 1898. The Filipino Nationalist Army was officially disbanded in April 1901 after its leader, Emilio Aguinaldo y Famy, was captured by American forces.

The insurgent forces had roots in the secret fraternal order Katipunan (Highest and Most Respected Association of the Sons of the Country), formed in 1892 by Filipino nationalist Andrés Bonifacio. By 1896, the Katipunan had some 30,000 armed members. When an informer betrayed the Katipunan to Spanish authorities, military resistance began with Bonifacio’s call to arms, the “Grito de

Filipino militiamen in training, 1898. (Library of Congress)

Balintawak.” A charismatic advocate of social reforms, Bonifacio was not, however, a capable military commander.

Throughout the war with Spain and with the United States, *principales*—leading citizens who formed local military companies with their tenants and clients—were essential to the nationalist cause. Among military officers who distinguished themselves and ultimately displaced Bonifacio was the self-proclaimed general, Aguinaldo, head of the town government of Cavite El Viejo. When a power struggle occurred within the insurgency movement, Bonifacio was taken prisoner and executed by the ascendant Aguinaldo faction.

Revolutionary forces were primarily from the Tagalog ethnic group. Many in the Ilocano and Bicol regions, afraid of a Tagalog-dominated government, aided Spanish authorities. Americans were sometimes able to use these ethnic divisions to their advantage, but they also discovered many Filipinos in Ilocano and Bicol fighting resolutely for Aguinaldo. Muslim residents of southern Mindanao revolted separately against Spanish authorities. In northwestern Luzon, Ilocano, and Pangasinan, an apocalyptic sect known as Guardia de Honor (Honor Guard) led guerrillas against large landowners, Spanish authorities, Filipino revolutionaries, and later the Americans. Some Guardia groups went over to the American side in 1900, however.

Insurgent forces contested eight provinces in central and southern Luzon until 1897, when Spanish regulars and their Filipino auxiliaries recaptured most of the area. Following the Cuban example, Aguinaldo adopted a guerrilla strategy, organizing Sandahatan (village militia units) with officers appointed by municipal councils. He declared Philippine independence on November 5, 1897, and issued the Constitution of Biak-na-Bato. According to the pact he had agreed to with the Spanish, he also called for an end to hostilities. In December 1897, the Spanish paid Aguinaldo and his key supporters 400,000 pesos to go into exile in Hong Kong. Aguinaldo promptly left for Hong Kong with some 30 other revolutionary leaders. Fighting continued nonetheless. Most Spanish troops came to be isolated in Manila, and by the autumn of 1898, a large part of the islands was commanded by regional Filipino forces who at least nominally recognized Aguinaldo.

Aguinaldo returned from Hong Kong on May 12, 1898, on an American ship. His return was arranged by Commodore George Dewey, who had just defeated the Spanish squadron in the Battle of Manila Bay. This was in accord with prewar U.S. Navy plans and Dewey’s assessment that the revolutionaries would be useful allies. Dewey distributed captured arms to the nationalist forces and generally refrained from interfering with Aguinaldo’s renewed decla-

ration of independence on June 12. Nor did the Americans intervene when Aguinaldo was named president of the revolutionary government on January 23, 1899.

After the first U.S. Army troops had arrived on June 30, 1898, in response to Dewey's proposal to capture the Spanish-held city of Manila, tensions between the Americans and Aguinaldo began to rise. Aguinaldo soon had Manila under siege, while his forces controlled much of the Philippines. Both armies intended to take Manila for themselves, and both objected to the lack of cooperation from the other. The U.S. government had decided not to cooperate with Aguinaldo and obtained a transfer of the islands from Spain. The killing of a Filipino soldier by an American GI in San Juan del Monte in February 1899 is usually recognized as the beginning of the Philippine-American War.

Many of Aguinaldo's advisers thought that a regular army uniformed and organized in European fashion would demonstrate that the Filipinos were a civilized people to be treated with respect. Aguinaldo himself sought a well-disciplined force under the direct command of the national government. However, the actual recruits available were a mix of Sandahatan militia, regional armies, personal followers of *principales*, Katipuneros, enthusiastic but undisciplined volunteers, and veterans of the Spanish colonial auxiliaries. Attacked by regular U.S. troops, the nationalists were repeatedly driven from fortified positions.

After November 1899, Aguinaldo returned to guerrilla warfare. Now perhaps at their apex, the nationalist forces totaled approximately 80,000 soldiers who were facing a better-armed and more effectively trained U.S. force of some 125,000 men. While Aguinaldo remained a symbol of the resistance, field command outside of northern Luzon fell to other military and regional leaders. Even as U.S. military officers established municipal governments, local officials often proceeded to form links with nationalist guerrillas.

As American forces continued to clash with the nationalists, at least 12 African American soldiers deserted their segregated infantry and cavalry regiments to join the Filipino cause. They were highly valued as marksmanship instructors. One of them, Private First Class David Fagen, became a first lieutenant in the Filipino Nationalist Army and was ultimately promoted to captain in September 1900.

Aguinaldo was captured on March 23, 1901, and two weeks later took an oath of allegiance to the United States. He then instructed all his officers to surrender, while American authorities declared a general amnesty to all nationalist soldiers. Americans who had joined the insurgency were excluded from the amnesty, however.

The nationalist armies were so regionalized that many units continued to fight, however, especially where popular support for the nationalist cause remained strong. In the Bicol district of southern Luzon, Major General Vito Bellarmino withdrew his forces with the civilian population into rugged rural terrain. He surrendered to the Americans on July 4, 1901, although pockets of guerrilla resistance held out longer under local leaders. In southwestern Luzon, Brigadier General Juan Cailles and Major General Miguel Malvar

appealed for mass support to continue the fight for independence. Cailles surrendered on June 14, 1901, but Malvar did not do so until April 16, 1902. Local resistance and a brutal pacification campaign by U.S. forces continued into 1903.

The Philippine-American War was a tragedy for the Filipino people, and the casualty figures are staggering. An estimated 18,000 Filipino Nationalist fighters died in the struggle, while anywhere from 250,000 to as many as 1 million civilians died as a result of the war. Many of them died from ancillary effects, such as malnutrition, poor sanitation, and disease. Indeed, a cholera epidemic that began during the war and continued beyond the cessation of major fighting killed many thousands of Filipinos. In contrast, American deaths were put at 4,324.

Filipino Revolutionary Movement

An organized effort by native Filipinos to end Spanish colonial rule, resulting in the Philippine Revolution against Spain from 1896 to 1898 and the Philippine-American War from 1899 to 1902. The Filipino revolutionary movement is considered the first anticolonial independence movement in Asia. It began in earnest when the Filipino reformer José Rizal was imprisoned and exiled for speaking out against Spanish leaders in 1892.

After Rizal's deportation, Andrés Bonifacio organized a militant revolutionary society in Tondo, Manila, on July 7, 1892. This society, Kataastaasan Kagalang-galang na Katipunan nang manga Anak nang Bayan (Highest and Most Respected Association of the Sons of the Country), known as the KKK or the Katipunan, was primarily supported by the working classes and peasants. The Katipunan provided the organization for armed rebellion to come. By 1896, the Katipunan had grown to some 30,000 members, including both men and women, throughout Luzon. Many female Katipuneras (as they were called), such as Teresa Magbanua y Ferraris, became successful military leaders.

The Katipunan worked secretly until the Spanish uncovered its operations on August 23, 1896, which forced the revolutionaries to

declare war. The first battle of the Philippine Revolution was fought on August 30, 1896, at San Juan Del Monte, where the reinforced Spanish garrison there routed Bonifacio and 800 Katipuneros. At first, the fighting was confined to Tagalog regions around Manila, Cavite, and Bulacan. Because the Spanish had effectively divided and segregated the people of the Philippines along ethnic lines, non-Tagalogs were initially suspicious of, or apathetic toward, the Tagalog-led revolution.

General Emilio Aguinaldo y Famy, a respected Katipunero, led several successful military campaigns, defeating Spanish forces at Imus in Cavite Province on September 5, 1896. Bonifacio and Aguinaldo now struggled for power, and Bonifacio was executed for alleged treason against the revolutionary government on May 10, 1897. Aguinaldo assumed full leadership of the revolutionary movement, which helped garner more support from the middle and upper classes as well as varying ethnic groups.

Fierce Spanish attacks then forced the Katipunan to retreat into the mountains. The two sides finally ended hostilities with the Pact of Biak-na-Bato on December 14, 1897. As part of the peace deal, Aguinaldo agreed to go into exile in Hong Kong in exchange for 400,000 pesos. On December 27, 1897, Aguinaldo and 25 of his leaders left the Philippines, planning to use the money for arms and ammunition to continue the revolution.

In March 1898, as relations between Spain and the United States tilted toward war, Commodore Edward Wood of the U.S. Navy offered Aguinaldo support to incite the native Filipino population against Spain. On April 22, 1898, just three days before the United States declared war on Spain, Aguinaldo met with the American consul general to Singapore, E. Spencer Pratt, to discuss strategy. Pratt promised Philippine independence under U.S. protection in exchange for Filipino military support against the Spaniards. Aguinaldo agreed, and he and 13 of his lieutenants returned to Cavite on May 19, 1898, aboard USS *McCulloch*. Aguinaldo conferred with Rear Admiral George Dewey aboard his flagship, the *Olympia*, and then returned to the countryside to engage the Spanish Army. By the time Major General Wesley Merritt's troops arrived from the United States in June, Aguinaldo held most of Luzon outside Manila.

Although Aguinaldo attacked Manila on August 12, 1898, Merritt controlled the city and excluded the Filipino Nationalist Army. When the Spanish Army surrendered on August 14, the U.S. Army accepted the terms and guaranteed the safe return of its soldiers to Spain. Aguinaldo was less than pleased that the Americans appeared to be reneging on their pledges and were usurping what he believed was his right to control Manila.

Aguinaldo promptly convened the Malolos Congress and declared Philippine independence on September 29. He then sent an

emissary, Don Felipe Agoncillo, to Washington, D.C., to conduct talks with President William McKinley, but the McKinley administration refused to acknowledge Agoncillo as a government representative. Agoncillo proceeded to the Paris Peace Conference but was again denied recognition by both the United States and Spain.

The Filipino revolutionaries reluctantly allowed the U.S. occupation, but they continued to pursue their own political goals. They elected Aguinaldo as the first president of the Philippine Republic, but his relationship with the United States was severely strained. On February 4, 1899, at San Juan Bridge, American troops commanded by Colonel John M. Stotsenberg shot and killed a Filipino soldier, provoking a firefight. Aguinaldo declared war on the United States on February 5, 1899.

The Katipuneros, still intent on independence, rejected American attempts at peaceable disarmament, and the Philippine-American War began with a fight over Manila. From March to September 1899, the Filipino Army of Liberation and the U.S. Army engaged in brutal fighting in Luzon, the Visayas, and elsewhere. In November 1899, Aguinaldo disbanded the army, turning the revolutionaries into guerrilla fighters. From 1899 to 1902, the United States fought its first foreign counterinsurgency war against the guerrillas. Major fighting ended in 1902 with a U.S. victory. Aguinaldo's vision of an independent Philippines would not become a reality until 1946.

Film

The Spanish-American War provided unique opportunities for the emerging film industry to use heightened patriotism and military developments to advance this new communication medium. The

earliest cinematic efforts took place in the decades following the American Civil War and were focused mainly on entertainment. The outbreak of the Spanish-American War in 1898 and the dawn of the American Century provided a wide array of opportunities to focus on new film genres and ideas, such as political themes, the horrors of combat, reports from newly acquired territories, and patriotic ideals. The Spanish-American War was the first conflict in which film played a significant role in recording events and garnering support for the war. These films, however, were quite unlike present-day movies. They lacked sound, were sometimes difficult to focus, and were usually quite short, some lasting little more than a couple of minutes.

The emergence of film as a means of communication can be traced back to a pair of events that occurred virtually at the same time. First, advances in technology spearheaded by the Edison Manufacturing Company and the American Mutoscope and Biograph Company, which produced most of the films during this period, ensured ready access to the necessary equipment. Second, the opening of a conflict that spanned the globe from the Atlantic to the Pacific provided excellent film footage, fresh concepts, and creative uses for the employment of film. Prior to the start of the war, many vaudeville houses had transitioned, in part, to accommodate short feature films as part of their performances. Between 1898 and 1901, however, the war was the dominant theme of these films and captured the support and imagination of many Americans.

In efforts to report the events of the war and to ensure its continued popularity, filmmakers provided reenactments of major battles and engagements. While a small number of films were actually recorded on the battlefield, most were staged on film sets constructed specifically for the purpose. The filmmakers were willing to circumvent the historical record, randomly mixing and matching military accoutrements to satisfy their needs, and to overlook significant factual points to achieve their artistic objectives. In *The Skirmish of the Rough Riders* (1899), for example, New Jersey National Guardsmen relied on secondhand accounts to recreate Colonel Theodore Roosevelt's charge up San Juan Hill during fighting in Cuba. In addition, the first truly propagandistic film, *Tearing Down the Spanish Flag* (1898), a 90-second film, was completely fabricated, yet the positive public response underscored the strong influence that film had on shaping public perceptions and attitudes.

The appearance of film as a major means of communication ensured that competing attitudes on the conflict were considered, compelling disagreements on the objectives of the war were aired, differing political perspectives were featured, and varying viewpoints on imperialism were highlighted. Because these ideas influenced a broad spectrum of the population and shaped public opinion, films became important barometers in political calculations. For instance, the drama *Love and War* (1899) told of the human sacrifices and antipathy toward the war and received wide acclaim from audiences. Because film theory and critical analysis did not exist at this point, producers relied on firsthand accounts of audience response to

An advertisement for “Lyman H. Howe’s new marvels in moving pictures” depicting an audience watching a film of an infantry attack during the Spanish-American War. (Library of Congress)

monitor the success of their endeavors, while politicians used the same responses to determine public attitudes.

While much effort was made to improve film production and delivery methods during the war years, the still picture remained the prominent feature in films produced during the Spanish-American War. Photographers on the front lines captured realistic visuals of the war using cumbersome equipment capable of transferring the images of war into still life. Still pictures were often inserted into war films with appropriate narrative that provided a context and backdrop for the scene. These documentaries were the primary means of engaging the American people.

American Vitagraph also sent two photographers with V Corps to Daiquirí at the behest of Roosevelt.

Films produced during the Spanish-American War were often called visual newspapers and became powerful tools for informing and shaping the opinions of the American people. There were, however, several shortcomings connected with this medium. The most glaring was the general inability to capture live war footage because of advances in weaponry that made battlefields extremely dangerous for photographers and because of the primitive nature of cinematic technology. Rapid movement of motion picture equipment

was also most difficult. As a result, the reliance on reenactments and commentaries frequently compromised the historical accuracy and importance of these efforts.

The most extensive collection of films produced during the Spanish-American War is maintained by the Recorded Sound Division, Library of Congress, which has digitized, catalogued, and summarized dozens of films from the period. Moreover, these efforts have been critically evaluated by film scholars who apply modern theories to these early endeavors to use film to reach mass audiences. These films cover battles, parades, ships, notable commanders and politicians, etc. Included among them are some short films pertaining to the Philippine-American War through 1901, but the brutality and unconventional nature of that struggle did not attract as much attention from filmmakers as had the Spanish-American War.

The Spanish-American War was the first war to be captured on film, which meant that the challenges and horrors of the events were shared by large segments of the population. While these early endeavors were rudimentary, they nevertheless laid an important foundation for new cinematic ideas and improved technology that would strongly influence film use in later wars. Just 15 years later, when World War I began, battles and engagements of all types were captured on film, and by that time technological advances in cinematic equipment and new forms of cinematography made film a widely accessible medium to people around the world.

In the 20th century, the Spanish-American War was not frequently the subject of Hollywood films. It was soon eclipsed by the far more important and global world wars. What is more, the war provided few pitched battles and lasted less than four months, characteristics that led many filmmakers to simply overlook it. The few films that did feature the conflict tended to be American-centric and rather patriotic in nature. In 1927, a silent film portraying the exploits of the Rough Riders was released, but surprisingly no other major films were made about that subject until 1997, when a made-for-TV miniseries titled *The Rough Riders* appeared, starring Tom Berenger (as Roosevelt), Gary Busey, Sam Elliot, and George Hamilton. The movie documented well the gritty realities of war but did nothing to diminish Roosevelt’s heroic standing in the conflict. A number of good documentaries have been made about the war. In 1999, the Public Broadcasting System (PBS) produced an excellent factual overview of the war titled *Crucible of Empire*. In 2007, the History Channel produced *The Spanish-American War: First Intervention*, which featured actors, reenactments, and scholars discussing the war, all of which was interspersed with film and still photos dating to the war itself, including the use of a replica of a camera used by the Edison Manufacturing Company for authenticity.

I Corps

One of eight U.S. Army corps created by the William McKinley administration in 1898 to fight the Spanish-American War. I Corps (First Corps) saw action during the July 21–August 12 Puerto Rico Campaign. McKinley's presidential order of May 7, 1898, created these corps, with the War Department responsible for staffing, equipping, and organizing them. Each corps was to consist of three infantry divisions. Each division would field three brigades, each of three regiments. At full strength, a corps could muster 30,000 men. Cavalry and artillery units would be assigned as needed.

I Corps was assigned to Camp Thomas, located on a former American Civil War battlefield at Chickamauga in northern Georgia. When this national military park was created, it was also intended to be a future troop mobilization and mustering-in center, and soldiers were able to train on its already-cleared battleground. Major General John R. Brooke, commander of the Department of the Gulf, took command of Camp Thomas and on May 16, 1898, was also assigned to command I Corps. Brooke, a native Pennsylvanian, had served in the Civil War, advancing to brigadier general by war's end. He remained in the regular army thereafter and in the spring of 1898 was in charge of what would become the largest military camp in the country during the Spanish-American War.

Camp Thomas also served as the mobilization point for III Corps, and so the camp accordingly grew very quickly, too quickly for Brooke to retain effective control. The troops were all volunteers, primarily National Guardsmen from various states, many of whom had no extensive camping experience. As a result, sickness quickly spread throughout the regimental bivouacs. Poor water quality, badly sited latrines, and a lack of medical personnel all contributed to the growing crisis. By the time the epidemic ended, 425 men had died—more than were killed during the war itself—mostly from typhoid. After Brooke and the 1st Division departed for Puerto Rico in late July, the government closed Camp Thomas in late August. The two remaining divisions of I Corps were sent to Lexington, Kentucky, and Knoxville, Tennessee.

Two brigades of Brooke's 1st Division, under the command of Major General James H. Wilson, departed Camp Thomas for Atlantic ports on July 5 and 22. They were slated to join the expedition to seize and occupy Puerto Rico, with Major General Nelson A. Miles in overall command of the expedition. Miles himself landed with a column of troops at the southern port of Guánica on July 25. Three days later Major General Wilson, with a brigade of his division, went ashore at Ponce. On August 3, Brooke led another column from the 1st Division ashore at Arroyo, 60 miles east of Ponce.

U.S. Army I Corps commander Major General Nelson Miles and his staff in Puerto Rico during the Spanish-American War. (Library of Congress)

Having secured Puerto Rico's southern coastline, Miles sent four columns inland to sweep the island of Spanish defenders. The American offensive began on August 7. Wilson's column of brigade strength moved northeast from Ponce along a military road, halting for the night near Coamo, a small village that was occupied by a force of Spanish troops. The next day, August 8, Wilson sent the 16th Pennsylvania to flank the enemy while his artillery and remaining infantry occupied the enemy's attention. When the Pennsylvanians opened fire and attacked, the Spaniards broke and fled, pursued by a company of New York cavalry. The brief engagement at Coamo cost the Spanish 208 casualties, most of them captured. Wilson's force suffered only a few soldiers wounded. Wilson's men then advanced toward the village of Aibonito, where more than 1,300 Spanish troops were entrenched. The American attack was scheduled for August 13 but was cancelled when word was received that an armistice had gone into effect while American and Spanish officials negotiated a formal end to the war.

Brooke's column, advancing from Arroyo, skirmished at Guayama and advanced inland to Guanmani, where, like Wilson, his attack scheduled for August 13 was halted by word of the armistice. With the end of hostilities, the U.S. troops could relax and wait for transportation back to the United States. The brief fighting in Puerto Rico was the extent of I Corps' involvement in the war. On January 16, 1899, I Corps was disbanded. By that time, most of its volunteer units had mustered out.

1st Marine Battalion

The 1st Marine Battalion was constituted on April 16, 1898, and disbanded on September 19, 1898. Consisting of 25 officers and 623 enlisted men, the battalion was formed at the Marine Barracks at the New York Navy Yard in Brooklyn by order of Secretary of the Navy John D. Long. Its record in the Spanish-American War helped define the role of the U.S. Marine Corps in the 20th century.

Initially consisting of four companies of infantry, the battalion became a combined arms force, with five companies of infantry and one company of artillery, all commanded by Lieutenant Colonel Robert Huntington. Six days after being given the order to form the battalion, Huntington and his men boarded the transport *Panther*. They arrived at Hampton Roads, Virginia, on April 23, 1898, and at Key West, Florida, on April 29. On June 7, the battalion was ordered to Cuba. Once there, it was to report to the captain of the U.S. Navy unprotected cruiser *Marblehead*, Commander Bowman H. McCalla, at Guantánamo Bay.

Rear Admiral William Sampson ordered Guantánamo Bay taken to serve as a coaling base and a hurricane shelter for ships on the blockade. The 1st Marine Battalion received the assignment of ending any threat from Spanish land forces to the ships in the harbor. On June 10, the battalion began coming ashore. It deployed on what became known as Camp McCalla at Fisherman's Point on the eastern side of the bay. During the next three days, the camp and its outposts were subjected to repeated Spanish attacks. The first Americans killed in battle in Cuba were 1st Marine Battalion privates James McColgan and William Dumphy, both of whom died on June 11. Three more marines and a naval acting assistant surgeon died before the attacks ended on June 14.

Taking the offensive on June 14, elements of the battalion and its Cuban rebel allies attacked Spanish forces stationed in the Cuzco Valley at the only freshwater well in the area. The Spanish forces were routed at the June 14 Battle of Cuzco Well, which ended in a Spanish withdrawal.

On June 25, elements of the battalion carried out an amphibious assault on Hicacal Beach on the bay's western shore to attack a Spanish force that had been hindering mine removal operations in the bay. Once ashore, the marines found that the Spanish forces had abandoned the position the previous day, and no fighting occurred.

On August 5, the battalion embarked with a naval convoy for an attack on Manzanillo. The town surrendered without the marines having landed. The battalion was then transported to Portsmouth Navy Yard, Seavey Island, Maine, where it was disbanded on September 19. On September 22, a portion of the battalion that had been sent to Washington was personally inspected there by President William McKinley.

During its brief existence, the 1st Marine Battalion earned distinction in several ways. First, two of its members—John Quick and John Fitzgerald—were awarded the Medal of Honor for their actions during the Battle of Cuzco Well. Second, its presence at Guantánamo kept the area's 7,000 Spanish troops from reinforcing Santiago. Third, while other military units suffered high sickness rates, the enforcement of a regimen of cleanliness in the battalion's camp resulted in the battalion having only 2 percent of its men on the sick list. Fourth, the battalion's exemplary record raised the consciousness of the American public to the role and capability of the U.S. Marine Corps, a branch of the U.S. Navy not well known at the time. Last and most importantly, the battalion demonstrated that the marines were capable of operating as a self-contained, mobile, combined arms force and taking and holding an advanced objective, defining a major future role of the U.S. Marine Corps in subsequent conflicts.

Fiske, Bradley Allen

Birth Date: June 13, 1854

Death Date: April 6, 1942

Naval reformer and inventor. Bradley Allen Fiske was born in Lyons, New York, on June 13, 1854. Growing up in New York and the Midwest, he displayed a knack for invention. Inspired by an uncle who was a naval officer, Fiske entered the United States Naval

U.S. Navy rear admiral Bradley Allen Fiske was a prominent naval inventor and reformer. (Naval Historical Center)

Academy at Annapolis and graduated in 1875. Afterward, he alternated between posts on shore and at sea. In these years, he became one of the navy's so-called Young Turks, progressive-minded officers who sought to reform and modernize the fleet, the ships of which had deteriorated markedly during the 1870s. Fiske produced an electric range finder as early as 1889 and two years later patented a naval telescopic sight. Mounted on a sleeve around the gun barrel, the sight did not recoil when the gun was fired.

Fiske's inventions brought him to the attention of the navy's Bureau of Ordnance, to which the navy twice assigned him. In that capacity, he supervised the installation of ordnance on the cruiser USS *Atlanta*, one of the navy's first steel warships, and later oversaw the installation of electric lighting and other electrical systems on other warships of the rapidly modernizing U.S. Navy. He became one of the navy's premier experts on electricity and in 1887 authored a well-regarded textbook on the subject, *Electricity in Theory and Practice*.

On the eve of the Spanish-American War in 1898, many U.S. cruisers and battleships carried Fiske range finders. Fiske personally used one of these, the stadimeter, to direct the gunboat *Petrel's* fire in the Battle of Manila Bay on May 1, 1898.

Fiske's inventions and wartime service earned him promotion to lieutenant commander in 1899. He attained the rank of captain

and his first command, the cruiser USS *Minneapolis*, in 1907. Following his promotion to rear admiral in August 1911, he rotated through the command of three different divisions of the Atlantic Fleet and briefly served as deputy commander of the fleet. In February 1913, Secretary of the Navy Josephus Daniels appointed Fiske aide for operations. The previous secretary of the navy, George von Lengerke Meyer, had established four aides to assist him. The aide for operations was the senior of these, and Fiske and other naval reformers hoped that the office would develop more authority and evolve into the nucleus of a naval general staff. In his new capacity, Fiske argued forcefully for the creation of that general staff, which he hoped to lead. He clashed routinely with Daniels over this issue and also his regular condemnation of the Woodrow Wilson administration's refusal to prepare for hostilities following the outbreak of World War I in Europe in August 1914.

Daniels accepted the need for a larger and better organized naval staff and a chief of naval operations to lead it, but he worried about maintaining civilian control of the navy. In 1915, he created a naval generation staff, but it lacked the full authority that naval reformers advocated. To lead it, he promoted the relatively unknown Captain William S. Benson over Fiske and several dozen other officers to become the first chief of naval operations. That same year, Daniels appointed Fiske president of the Naval War College at Newport, Rhode Island. Fiske retired the following year, having reached the mandatory retirement age of 62. He continued to write on naval affairs and served as president of the U.S. Naval Institute, the naval officers' professional organization, from 1921 to 1923. Over the course of his life, he wrote 6 books and 60 articles and patented 60 inventions. Fiske died in New York City on April 6, 1942.

Flagler, Daniel Webster

Birth Date: June 24, 1835

Death Date: March 29, 1899

U.S. Army officer and chief of ordnance during the Spanish-American War. Daniel Webster Flagler was born in Lockport, New York, on June 24, 1835. He enrolled at the United States Military Academy, West Point. He graduated fifth in his class in 1861 and was immediately commissioned a first lieutenant in the U.S. Army.

U.S. Army brigadier general Daniel Webster Flagler, chief of ordnance during the Spanish-American War. (*Photographic History of the Spanish-American War*, 1898)

During the American Civil War, he was breveted several times for exemplary service. He became widely known as the efficient chief of ordnance for the Army of the Potomac, serving in that department for the duration of the war.

After the war, Flagler held many different commands and at one time or another supervised all of the major U.S. arsenals. In 1871, at the rank of captain, he took command of the Rock Island Arsenal in southern Illinois. During the next 15 years, he improved and greatly enlarged the facility, turning it into one of the most important arsenals in the country. His improvements included the construction of several manufacturing plants, a fire house, a power plant, the Moline Bridge, and a railway line. Today, more than 100 years later, many of the buildings that Flagler designed and helped build at Rock Island still stand. He also played a major role in designing the army's new field artillery and coastal defense guns.

In January 1891, President Benjamin Harrison appointed Flagler the army's chief of ordnance, with appointment to the rank of brigadier general and advancement over two more-senior colonels in the Ordnance Department. In February and March 1898, in anticipation of the war with Spain, Flagler began to work closely with the Corps of Engineers to enhance coastal defenses along the eastern seaboard of the United States. This was a huge undertaking, as hundreds of guns had to be produced or procured. Flagler sharply increased production at the government's gun factories by adding

more shifts and operating them virtually around the clock. In addition, he ordered more than 200 light rapid-fire cannon from domestic as well as foreign suppliers. The Ordnance Department also vastly increased the stock of artillery shells, ordering 5,000 heavy-caliber shells during just one week alone in March 1898.

Flagler was criticized for canceling an order for enhanced rifle production at the onset of the war, sure in his belief that current inventories and production would produce more than enough weapons. When this proved not to be the case, at the end of April 1898 he ordered the immediate production of some 129,000 sets of infantry equipment, to include Krag-Jorgensen rifles. In less than two months' time, the Springfield Armory tripled the size of its workforce and was operating 20 hours per day. Similar increases were seen at other arsenals and manufacturing facilities around the nation.

Early in the war effort, Major General Nelson A. Miles sharply criticized the Ordnance Department and demanded that the War Department replace the Krag-Jorgensen with another weapon that had been previously rejected by Flagler. Miles also insisted that Flagler procure arms from abroad, something that Flagler hoped to avoid because of potential issues with quality control and shipping. Confident in Flagler's abilities, Secretary of War Russell A. Alger rebuffed Miles. The Ordnance Department nevertheless relied upon private contracts for millions of rounds of ammunition, artillery shells, fuses, and the like.

Despite several clashes with Miles and some early ordnance shortages, Flagler's department performed admirably during the Spanish-American War. There were no major weapons shortages, and Flagler worked effectively with the Corps of Engineers and the Quartermaster Department to ensure that equipment, ammunition, and weapons arrived at their final destination in timely fashion. Flagler died in Maryland on March 29, 1899, while still on active duty.

Flying Squadron

U.S. Navy squadron formed in response to public pressure to create a naval force to protect the East Coast of the United States and U.S. coastal shipping against possible Spanish attack. The Navy Department established the Flying Squadron at Hampton Roads, Virginia, on March 17, 1898. Commodore Winfield Scott Schley took command.

Spanish rear admiral and minister of the navy Segismundo Bermejo y Merelo had envisioned sending Rear Admiral Pascual Cervera y Topete with a powerful squadron of six large warships (the battleship *Pelayo* and large cruiser *Carlos V* along with the four armored cruisers that would go to Santiago de Cuba) supported by three destroyers, three torpedo boats, and the auxiliary cruiser *Ciudad de Cádiz* to operate from Cuba against the North American Atlantic coast.

In reality, however, Cervera's squadron would be built around four modern armored cruisers. On paper they appeared formidable, but the squadron was poorly trained, and the *Vizcaya* with its fouled bottom could make only about 14 knots. To make matters worse, two of its 5.5-inch guns were disabled.

Nevertheless, the Flying Squadron was assigned the task of patrolling the East Coast from Maine to the Florida Keys. Its mixed bag of warships initially consisted of the armored cruiser *Brooklyn* (flagship), the battleships *Massachusetts* and *Texas*, the large and fast but lightly protected cruisers *Columbia* and *Minneapolis*, and the collier *Merrimac*. While powerful, the squadron was limited in speed to its slowest unit, the older second-class battleship *Texas*. The *Texas* had an average sea speed of just 14 knots, while the flagship could steam at 20 knots. Added later to the squadron was the war-purchased protected cruiser *New Orleans*. Also added were the battleship *Iowa*, the auxiliary cruisers *Marblehead* and *Harvard*, and the collier *Sterling*. The *Columbia* and *Minneapolis* were subsequently detached.

Early in May 1898, the Flying Squadron was ordered to Key West, Florida, as Cervera was known to be heading for the West Indies. On May 19, Schley was ordered by Rear Admiral William T. Sampson to proceed from Key West to blockade Cienfuegos, Cuba. Schley was expected off Cienfuegos the next day but did not hurry in getting there. Instead, the Flying Squadron arrived off Cienfuegos only on the morning of May 22.

By May 20, Secretary of the Navy John Davis Long knew that Cervera had arrived with his squadron at Santiago de Cuba and issued orders to Schley to blockade Cervera there. Schley received these orders on May 24. Schley, however, was not convinced that Cervera was not in Cienfuegos and dithered off the port before steaming slowly toward Santiago. Schley did not arrive outside Santiago until May 26. It was fortunate for the Americans that Cervera did not sortie in the interval. While steaming to Santiago, Schley sent a dispatch to Long and Sampson announcing that he lacked sufficient coal to remain off Santiago. In reality, he had sufficient coal to blockade the port for many days. Once in place off Santiago, the Flying Squadron consisted of the flagship *Brooklyn*; the battleships *Iowa*, *Massachusetts*, and *Texas*; the protected cruiser *Marblehead*; the auxiliary warships *Vixen* and *Hawk*; and the collier *Merrimac*.

On May 31, Schley approached the harbor entrance and took under fire the Spanish flagship *Colon*, which had dropped down from the inner harbor. Schley had the *Massachusetts* (temporary flag), *Iowa*, and *New Orleans*. But the American warships fired from

a range of 8,000–9,000 yards while steaming at 9–10 knots, resulting in no damage to either Cuban shore fortifications or the Spanish ships.

Admiral Sampson joined Schley off Santiago on June 1 to take overall command. The Flying Squadron was disbanded and became the Second North Atlantic Squadron on June 21.

Food

The provisioning, transportation, storage, and preparation of food during the Spanish-American War posed many challenges in an era of limited refrigeration. Adding to that burden was the fact that the war was being waged in tropical climates hundreds and even thousands of miles from home and at the height of summer.

On the eve of the war, the average U.S. soldier was provided with three classes of rations. The garrison ration was comprised of fresh meat, bread or flour, locally acquired vegetables and fruits, unroasted coffee, salt, pepper, sugar, and vinegar. The field ration was more Spartan, consisting of bacon, hardtack (a form of dry biscuit or cracker), canned or desiccated vegetables, roasted coffee, salt, pepper, sugar, and vinegar. Finally, a travel ration for use by soldiers on board trains or transport ships in the absence of other fare provided the basic elements for a mess of soldiers to cook a stew or ragout and consisted of canned beef, baked beans, and tomatoes as well as the ubiquitous hardtack and roasted coffee. This ration arrangement had served the U.S. Army since the 1870s. While sufficiently nutritious, it was generally decried as bland and unimaginative. In 1897, Commissary General Charles P. Eagan sought to increase the variety of the enlisted men's diet by introducing canned salmon to the field and travel rations.

With war imminent, Eagan dispatched officers to purchase in bulk all the meat, vegetables, flour, and other sundries as possible. Commissary officers canvassed food distributors across the country, contracting with agents to meet a complex schedule of monthly deliveries of perishable foodstuffs to the volunteer camps in the United States. Meat deliveries were considered especially critical, as

Drawing by William Glackens of the midday mess of the 6th Cavalry Regiment in Cuba, 1898. (Library of Congress)

fresh beef was considered an essential component of the soldier's diet in camp. In this instance, Eagan implemented a novel solution. Beef carcasses purchased in bulk from meat packers were frozen and stored in refrigerated railroad cars and ships, ensuring in principle a steady supply of fresh meat for the camps and V Corps in Cuba. Finally, corps and division commissaries were authorized to make local arrangements, as need be, for bread and vegetables.

Eagan's program was partially successful. Foodstuffs generally arrived on schedule, suffering from only minimal spoilage. More vexing was the management of food stocks and their preparation by incompetent regimental and company cooks. According to army regulations, each company was to mess as a unit, with individual soldiers rotated as cooks.

While this arrangement worked well enough in the regular army units, volunteer units did not fare as well. Frequently, cooks mismanaged their monthly ration allocation, subjecting their companies to alternating periods of feast in the first week of the month and famine in the last days before a new food delivery. On July 7, 1898, Congress finally authorized the formal creation of permanent cooks with the rank and pay of corporal. However, enlistments for

the new position were slow, subjecting many soldiers to chronic shortages and poor food.

To supplement their rations, enlisted volunteer soldiers turned to food vendors and sutlers who surrounded the volunteer camps. Local families, farmers, and merchants did a brisk trade with local soldiers, with many unscrupulous entrepreneurs giving little heed to the quality of their wares. At both Camp Thomas and Camp Alger, corps commanders attempted to stem the tide of food-borne illnesses by banning sutlers from the camps, many of whom were hawking spoiled pies, turnovers, eggs, and sweets. In each case their efforts were unsuccessful, as the vendors merely set up shop just outside of the camp's main entrance.

For soldiers in Cuba and later the Philippines, the issue of food and rations was more problematic. In Cuba, efforts to provide fresh meat to V Corps were made, but frequently the frozen beef carcasses thawed and spoiled before reaching company bivouacs. At the end of long supply lines, soldiers ate field rations for days and weeks at a time, the monotony of hardtack and bacon broken only occasionally by the delivery of canned goods. On their arrival in the tropics, soldiers were lectured at length by medical officers of the

dangers of eating local fruits and vegetables. Fresh fruits, while nominally nutritive, were considered to be dangerous for men from temperate climates when combined with heavy exertion. In V Corps, the question of food was compounded by the lack of fresh water. The cauldrons normally used for boiling fresh water had been left behind in Florida, leaving the men to trust to luck in procuring safe water.

As typhoid spread across the volunteer camps and accounts of V Corps' struggle against the elements reached home, Eagan became a lightning rod of public outrage. His efforts to manage the timely delivery of fresh food and his press for qualified cooks were forgotten amid the scandals plaguing the War Department. Eagan's career was ruined in the aftermath of his own testimony against Commanding General Nelson A. Miles's criticism of the Subsistence Department, triggering the Embalmed Beef Scandal. After publicly declaring that "I wish to force the lie back into his [Miles's] throat, covered with the contents of a camp latrine," Eagan was court-martialed and suspended from duty, with full rank and pay, until his retirement. As part of the 1901 reforms initiated by Secretary of War Elihu Root, the Subsistence Department was incorporated into an expanded Quartermaster Department, with medical officers sharing with trained cooks the oversight of the quality of food and rations.

Foraker Amendment

An amendment to the 1899 Senate Military Appropriations Bill authored by Ohio senator Joseph Benson Foraker that banned the granting of franchises or concessions to non-Cuban entities (including those from the United States) during the U.S. occupation of Cuba. The appropriations bill was passed by Congress on March 3, 1899. Even before the Spanish ceded control of Cuba, American businessmen had begun to descend on the island with an eye toward acquiring control of Cuban land and industry and especially capturing franchises for potential monopolies such as railroads, telegraph, and electric power.

Although the Foraker Amendment unquestionably prevented exploitation of the island, it also hampered outside investment that Governor-General Leonard Wood thought vital. When Sir William van Horne proposed a rail line between Santa Clara and Santiago

that would have been the first land connection between Cuba's eastern and western coasts, Wood and Elihu Root devised a series of revocable permits that allowed van Horne's railway to circumvent the Foraker Amendment and traverse public lands. However, that was the exception rather than the rule, and American investment remained limited until after the occupation ended.

The Foraker Amendment along with two other amendments to military appropriations bills (the Teller Amendment to the 1898 bill and the Platt Amendment to the 1901 bill) in many ways defined the American occupation.

Fort San Antonio de Abad

A stronghold on the defensive perimeter (Zapote Line) of Spanish-held Manila in the Philippines. Fort San Antonio de Abad, also called Fort Malate, was located on Manila Bay's eastern coast and to the southwest of Malate, Manila's southern suburb. Approximately 500 feet south of a trench running from the bay eastward to an unnavigable swamp, this stone and mortar fortress was soundly constructed and mounted both old as well as modern defensive weaponry.

After the Spanish-American War began in April 1898, Spanish general Basilio Augustín y Dávila, Spain's governor-general in the Philippines, anticipating a U.S. move to take Manila, increased the armament of Fort San Antonio de Abad. It then mounted three 3.6-inch bronze field guns, four 3.2-inch bronze mountain guns, and two 3.2-inch steel mountain guns.

The fort's northern approach presented many physical obstacles. It faced a channel 100 feet wide and of uneven depth in its front, which approached the fortress from the east and then veered to the south before shifting westward into Manila Bay. Wetlands and dense thickets covered the approaches, but the channel was crossed by a stone bridge on the Calle Real Road adjacent to the structure. The bridge's entrances were overlaid by stone walls and sandbags and were held by Spanish troops supported by reserves. Linking the bridge and the fort was a trench system that ran westward to the bay for about 200 feet and eastward for 3,000 feet to Blockhouse No. 14. Fort San Antonio de Abad anchored the southern extremity of Spain's so-called Zapote Line protecting Manila.

In preparation for the U.S. assault on Manila in August 1898, U.S. brigadier general Francis V. Greene came ashore south of the fort and established his brigade in a bivouac known as Camp Dewey. He urged immediate destruction of the Spanish defenses because he was losing men to nighttime Spanish attacks. Greene asked VIII Corps commander Major General Wesley Merritt for ap-

The U.S. flag flies over Fort San Antonio de Abad (also known as Fort Malate) following its capture during the assault on Manila in August 1898. (Naval Historical Center)

proval to position the double-turreted monitor *Monterey* opposite the fort in order to destroy it. Its two 12-inch and two 10-inch guns easily outranged those in the fort, and Merritt agreed with the plan but was unable to persuade Commodore George Dewey, who thought that a short postponement would allow his secret negotiations to secure the surrender of Manila without a fight.

Once the sham First Battle of Manila began on August 13, the cruiser *Olympia* and its sister ships bombarded Fort San Antonio de Abad. The field guns of the *Utah* artillery lent support. The Spaniards failed to respond, and after 30 minutes, the 1st Colorado Volunteer Infantry Regiment of Greene's brigade went forward. His men advanced along the shore and crossed the channel in front of the fortress. Moving into the installation, they discovered it to be unoccupied except for two Spanish corpses and a wounded defender. Its parapet raked and its magazine exploded, Fort San Antonio de Abad never returned fire. It had been abandoned since the beginning of the bombardment.

France

A nation in Western Europe and a significant colonial power at the time of the Spanish-American War. With a turn-of-the-century population of about 38.5 million, metropolitan France encompassed approximately 213,000 square miles. It bordered Belgium, Germany, Switzerland, and Italy to the east; Spain and the Mediterranean Sea to the south; the Atlantic Ocean to the west; and the English Channel to the north. At the time of the Spanish-American War, France was second only to Great Britain and Germany in terms of military power and economic development. The Third Republic of France (1870–1940) was a constitutional republic with a parliamentary organizational structure. In 1898, the country was still struggling to recover from its ignominious defeat at the hands

of the Germans in the Franco-Prussian War (1870–1871). Adding to the internal upheavals of French politics and society, the country had a substantial socialist party and was in the process of a great scandal, known as the Dreyfus Affair, involving the army that sharply divided all of France.

France had a long and at times very close relationship with Spain dating back to the early 18th century when members of the same Bourbon family ruled both states. France and Spain also shared the bond of Roman Catholicism. Regarding the United States, the close relationship that the French enjoyed with the Americans during the American Revolutionary War had long since faded, the result of a number of diplomatic clashes. Among the most recent of these was the competition to build an isthmian canal linking the Atlantic and Pacific oceans. Economic rivalries over interests in the Caribbean had a deleterious effect on relations between the two nations as well. By the 1890s, French financiers had invested heavily in Cuban business concerns, primarily sugar production. Also, French participation in the world economy grew with the formation of the Union Coloniale Française in 1895. This organization consisted of a group of influential businessmen, financiers, and politicians whose goal was to lobby support for colonial ventures.

Considering existing commercial ties between France and Cuba, it should come as no surprise that the French favored retaining the status quo in Cuba as a means of protecting their own investments. For its part, Great Britain shared this view of the situation in Cuba. Such was the situation at the outset of the Cuban War of Independence that began in 1895. As the Cuban drive for independence progressed and Spain's policies on the island turned more brutal, French opinion changed. By 1896, officials in France and at the Vatican were warning Madrid to get the situation in Cuba under control. Even at this juncture, however, the French government sought to contain the struggle so as to keep it between Spain and its colony.

This attitude on the part of the French government did generate strong anti-French feeling in the United States. Indeed, by 1897 or so many Americans wanted to intervene directly in Cuba, citing humanitarian reasons. It was clear to many in France, however, that the U.S. interest in Cuba had financial overtones. The French found themselves bitterly attacked in the yellow press by publishers such as William Randolph Hearst. By the same token, however, although France opposed American intervention, it would not act to prevent an invasion of Cuba without the support of Great Britain and Russia. When war appeared imminent early in 1898, Spain's queen regent, María Cristina, requested aid from the French but was politely turned down. Clearly, Paris did not view the war as a direct threat to French national interests and would not act without the concert of other European powers.

Among the more boisterous critics of American intervention in Cuba were the members of the French Socialist Party. These politicians identified U.S. humanitarian propaganda as merely a cover to engage in the same sort of economic exploitation and political imperialism in which other European powers, including France, were engaged.

As tensions between the United States and Spain increased dramatically after the sinking of the U.S. battleship *Maine* in February 1898, France and Russia were reportedly prepared to intervene in the crisis. On April 6, 1898, French diplomats in the United States along with those of Great Britain, Germany, Russia, Austria-Hungary, and Italy all presented themselves as a group to President William McKinley to urge that the United States not intervene in Cuba. Such a mass demonstration on the part of European diplomats was unprecedented, but McKinley paid them no heed.

Keeping in mind this tense diplomatic situation, it is easy to see why relations between France and the United States cooled further during the initial phases of the Spanish-American War, which began on April 25. Nevertheless, as the fighting continued, the hostility between the two states began to subside. A French warship was present in Manila Bay as Rear Admiral George Dewey kept watch on Manila, and relations between Dewey and the French there remained cordial.

As it became clear that the Spanish could not hope to achieve a victory in the war, the Madrid government sought an intermediary through which to open a dialogue with the United States. Ultimately, France served in that capacity. On July 18, 1898, Spanish prime minister Práxedes Mateo Sagasta instructed his ambassador in Paris, Fernando León y Castillo, to contact the French ambassador in Washington, Jules-Martin Cambon. The purpose of the communication was for Cambon to inform the U.S. government that Spain was ready to open negotiations. The use of this third-party intermediary served to save face for both belligerents and hastened the peace process.

After successfully negotiating the Protocol of Peace on August 12, 1898, Cambon offered Paris as a venue for the formal peace conference, and talks opened on October 1, 1898. With active French participation, they concluded with the signing of the Treaty of Paris on December 10, 1898. One of the reasons for the success of the negotiations was that McKinley's goals for the settlement were not incompatible with those of France and the other European powers.

Much of France's ability to act as an intermediary despite its earlier opposition to the war stemmed from the fact that the country remained on the sidelines during the fight and exhibiting less assertiveness in diplomatic conversations with the United States. By the same token, the French possessed far greater economic interests and imperial holdings in North and West Africa, Southeast Asia, and the Middle East than they did in the Caribbean. French public opinion aside, the government realized the potential value of maintaining friendly relations with the United States.

Birth Date: December 19, 1849

Death Date: December 2, 1919

Prominent industrialist of the late 19th and early 20th centuries. Henry Clay Frick was born the son of a farmer of modest means in West Overton, Pennsylvania, on December 19, 1849. He studied literature and art at Otterbein University in Westerville, Ohio, but did not graduate. In 1870, he bought into a partnership with a cousin and two other men to build a coke oven near Pittsburgh. Coke (coal with the impurities burned off) was the primary fuel used in blast furnaces to make steel. An industrial boiler fuel, coke was in great demand during the Spanish-American War of 1898.

Owning 600 acres of coal-mining land and a few ovens for processing, Frick soon recognized the growing potential of steel. Indeed, steel was coming into heavy use for commercial and industrial construction as well as military production. He soon became manager of the firm H. C. Frick and Company. A product of the Gilded Age's capitalist belief in social Darwinism, Frick had very little regard for workers and rival businesses. After the Panic of 1873, which nearly bankrupted the company, Frick purchased most of his competitors' coal fields for far less than their actual value. In 1879, at age 30, Frick's fortune had exceeded \$1 million. His company was the largest producer of coke in the world with more than 40,000 acres of coal and 12,000 coke ovens.

In 1880, Frick met steelmaker Andrew Carnegie in New York City. The two entered into a partnership that further solidified their dominance in the steel industry. In 1889, after helping to modernize the industry, Frick was appointed chairman of Carnegie Brothers Steel. That same year, Carnegie retired from the direct management of the steel business. In 1892, the operations were reorganized as Carnegie Steel Company with Frick as manager. It became the largest steel company in the world with a worth of \$25 million.

Frick by now was well known for his heavy-handed dealings with workers and unions in the mills. He despised organized labor, believing that it represented an impediment to industrial growth. With an eye on profits and increasing margins, Frick and Carnegie forced a strike at the Homestead Works mill on June 30, 1892. It was one of the most dramatic and bloody labor confrontations in American history.

American industrialist Henry Clay Frick amassed great wealth as head of the Carnegie Steel Company. (Library of Congress)

When the Amalgamated Association of Iron, Steel, and Tin Workers threatened a strike at the steel mills in Homestead, Pennsylvania, Frick responded by locking out all 3,800 employees. Workers retaliated by taking control of the plant. Frick then arranged for 300 armed and deputized Pinkerton guards to retake the plant under the cover of darkness. The strikebreakers encountered fierce resistance from workers and townspeople as the guards fought to take back the factory. In all, 16 people were killed and hundreds were injured in the melee, but the Pinkerton guards were driven back.

Pennsylvania governor Robert E. Pattison then ordered the state militia to crush the strike and restore order. During the strike, Alexander Berkman, a Russian anarchist immigrant, shot and stabbed Frick in his office. Frick's wounds were not fatal. Leading industrialists and government officials applauded his stand against organized labor. Although Frick managed to stop the influence of organized labor in the steel industry, his antiunion posture drew scorn and bitterness from the general public.

At the end of the 1890s, Frick and Carnegie began battling over control of Carnegie Steel. In 1901, Frick negotiated the sale of Carnegie's plants to banking magnate John Pierpont Morgan. The sale paved the way for the formation of the U.S. Steel Corporation, which became the first business enterprise in the world to be valued at \$1 billion. Frick then ventured into railroad and real estate investments. He accumulated a sizable fortune during his lifetime,

and some \$50 million was donated to charity. A powerful industrial capitalist and controversial figure, Frick died in New York City on December 2, 1919.

Frye, William Pierce

Birth Date: September 2, 1830

Death Date: August 8, 1911

Republican politician, diplomat, and member of the U.S. Peace Commission that negotiated the December 1898 Treaty of Paris. Born in Lewiston, Maine, on September 2, 1830, William Pierce Frye graduated from Bowdoin College in 1850, studied law, and was admitted to the bar in 1853. He practiced law first in Rockland, Maine, before returning to his native Lewiston, where he also practiced law.

Frye began his public service career with several terms in the Maine legislature (1861–1862 and 1867) and also served as mayor of Lewiston (1866–1867) and state attorney general (1867–1869). He then won election to the U.S. House of Representatives and served during 1871–1881. In 1880, he was elected to the U.S. Senate, where he served from 1881 to his death in 1911.

During his tenure in the House and Senate, Frye provided service on a number of significant committees, including Foreign Relations and Commerce. While serving on the Commerce Committee, he took a strong interest in improving the nation's inland waterways. Likewise, he was a staunch supporter of a protective tariff and a significant participant in the periodic debates concerning the level of customs duties. He emerged as a major supporter of the American shipping industry and constantly sought to revitalize the American Merchant Marine.

In addition to his work in Washington, Frye became a popular spokesperson for the Republican Party and a favorite of audiences across the country. In his speeches to these large public gatherings, he expressed his strong advocacy of American expansionism. He was a strong advocate of U.S. involvement in Cuba, sparked by the destruction of the ship named for his state, the U.S. battleship *Maine*, and once war came, he strongly supported the war. President William McKinley asked Frye to serve on the commission to negotiate the peace settlement with Spain. Other members included William R. Day, Senator Cushman K. Davis, Whitelaw Reid, and Senator George Gray. The commission began its work in Paris on October 1, 1898.

While in Paris, Frye fully supported the position that the United States should take possession of both Cuba and the Philippines. When it briefly appeared as though the Spanish government would not accept the peace settlement, Frye brought up the possibility of payment to Spain of \$20 million. This proposal led to some criticism of Frye in the American press, but it certainly helped mollify Madrid's stance and ultimately cleared the way for acceptance by Spain. The Treaty of Paris was signed on December 10, 1898.

Frye returned to the United States and resumed his senatorial duties. He continued in office until his death in Lewiston, Maine, on August 8, 1911.

Funston, Frederick

Birth Date: September 11, 1865

Death Date: February 19, 1917

Adventurer, journalist, filibuster, and controversial yet popular U.S. Army officer best known for his exploits against Filipino nationalists and the capture of Emilio Aguinaldo y Famy during the Philippine-American War (1899–1902). Frederick Funston was born in New Carlisle, Ohio, on September 11, 1865, but moved with his family to Kansas when he was 16. He tried without success to gain entry to the United States Military Academy, West Point, and during 1885–1888 attended the University of Kansas but did not earn a degree. From 1888 to 1890, he worked as an assistant engineer for the Santa Fe Railroad and then took a position as a newspaper reporter in Kansas City, Missouri.

Unsatisfied with journalism, in 1891 Funston joined an expedition to California's Death Valley, where he served as a surveyor and explorer of the area's flora. When the expedition ended, he traveled to Alaska to explore the territory's botanical resources and served for two years (1893–1895) as an employee of the U.S. Department of Agriculture stationed in Alaska.

In 1896, inspired by the Cuban War of Independence (1895–1898), Funston participated in a filibuster expedition that brought arms and supplies to the Cuban rebels. He then joined the Cuban Revolutionary Army as a captain of artillery. Known as "Fightin'

U.S. Army brigadier general Frederick Funston, who played a key role in the capture of Filipino leader Emilio Aguinaldo in March 1901 during the Philippine-American War. (Library of Congress)

Fred,” he saw action in a number of campaigns but fell desperately ill from malaria and had to return to the United States in 1897.

Irrepressible, Funston recovered sufficiently by 1898 to join the U.S. Army when the war with Spain began. Commissioned a colonel of volunteers on May 13, 1898, he took command of the 20th Kansas Volunteer Infantry Regiment and in the late summer was sent to the Philippines. There he participated in Brigadier General Arthur MacArthur’s Luzon Campaigns.

When the Philippine-American War began in February 1899, Funston’s outfit played a major role in the fighting. Something of a publicity seeker, he made certain that his daring exploits against Filipino insurgents, many of which he led in person, were reported by American newspaper correspondents. Many of his actions, however, became highly controversial, and his direct participation in cavalry charges and bayonet assaults went against official army regulations, which called for a more junior officer or noncommissioned officer to lead such operations.

In April 1899, Funston personally led an assault against a rebel stronghold at Calumpit by swimming across the Bagbag River, crossing the Rio Grande under murderous fire, and engaging in a brief bayonet charge. Although the rebel camp was found to be de-

serted, Funston’s exploits made front-page headlines in the United States. He was rewarded with promotion to brigadier general of volunteers that same year.

In March 1901, Funston played a key role in the capture of Filipino leader Aguinaldo. Again leading the expedition, Funston and his men disguised themselves as Filipinos. Working with the Philippine Scouts, they gained access to Aguinaldo’s camp by pretending to be prisoners. Once inside the stronghold, Funston and his accomplices seized Aguinaldo and took him into custody. For this feat, Funston enjoyed great publicity in the United States. In recognition of his role in Aguinaldo’s capture, Funston was advanced to brigadier general in the regular army.

Funston’s exploits were not without controversy, however. He was repeatedly accused of having engaged in atrocities against Filipinos and approving the looting of Filipino homes and public buildings. The most outlandish allegations included the looting of Roman Catholic churches and the holding of a mock Catholic Mass to amuse his men. Funston managed to avoid any official charges, however, and in one case brought charges against a San Francisco newspaper for libel. By 1902, his controversial actions and anti-Filipino and proexpansionist statements had earned him the enmity of the Theodore Roosevelt administration, which officially reprimanded him. Still, Funston escaped any formal charges, and his popularity in the United States seemed to immunize him from significant trouble.

Funston continued his career in the army and served in a variety of posts. As commander of the Presidio in San Francisco, he took control of the city after the 1906 earthquake, playing an important role in the recovery efforts but also drawing criticism for his order that looters be summarily shot. In 1911, he published *Memoirs of Two Wars: Cuban and Philippine Experiences*. During U.S. operations against Mexico in 1914, troops under Funston’s command occupied Veracruz. Funston also took part in the hunt for Pancho Villa.

In November 1914, President Woodrow Wilson approved Funston’s promotion to major general. With the United States preparing to enter World War I, Wilson reportedly wanted Funston to head American forces in France, but ill health precluded this. Funston died suddenly of a heart attack in San Antonio, Texas, on February 19, 1917.

G

García, Pantaleon T.

Birth Date: July 17, 1856

Death Date: August 16, 1936

Philippine revolutionary and military and political leader. Pantaleon T. García was born in Imus, Cavite Province, on the island of Luzon in the Philippines on July 17, 1856. After completing his studies, he became a teacher. In 1896, he became part of the secret nationalist society known as the Katipunan, which sought to gain Philippine independence from Spain.

García joined the insurrection against Spain along with Emilio Aguinaldo y Famy when it broke out in August 1896. García fought the Spanish for nearly two years, was wounded, and rose to the rank of brigadier general. His wife, Valeriana Elises y Palma, often participated in his military campaigns. García, as judge advocate, conducted the pretrial treason hearings of the founders of the Katipunan, including Andrés Bonifacio, resulting in their court-martial and execution in the spring of 1897.

Despite the rebels' early successes, they were soon on the defensive against the Spanish authorities. García defended Imus and took part in the Battle of Puray in June 1897 before a truce was signed in December 1897. In December, García and his family relocated to Hong Kong as part of Aguinaldo's entourage, a move stipulated by the Pact of Biak-na-Bato. García's stay in Hong Kong was short-lived, however.

With war between the United States and Spain, the Spanish governor-general of the Philippines, General Basilio Augustín y Dávila, established a Consultative Assembly of Filipino notables in April 1898 in an effort to gain native support for Spain. García was one of the appointees. In May, however, García left the assembly and, shortly after the return of Aguinaldo to the Philippines, joined him

and Filipino insurgent forces as a zone commander near Manila. In July 1898, García attempted to negotiate the capitulation of Manila, but the Spanish—mostly out of pride—refused to surrender to Filipino forces and preferred to capitulate to the Americans in August.

García was also a representative to the Malolos Congress in September 1898 that established the Philippine Republic. Following the Spanish-American War, when it became evident that the United States would not grant independence to the Philippines, García took command of a division fighting the Americans in the Philippine-American War (1899–1902). Later he became chief of staff of the army. In November 1899, Aguinaldo, then president of the Philippine Republic, appointed García the political and military leader of the central government of Luzon.

In fighting against American forces in February 1900 in central Luzon, García was wounded and subsequently became quite ill. Sent to Jaen, Nueva Ecija, to recover, he was captured there by American troops in May. The following month, he accepted an amnesty issued by American authorities and took a pledge of allegiance to the U.S. government. He then served in several governmental positions including president of Imus and as a justice of the peace. García died in the Philippines on August 16, 1936.

García y Iñiguez, Calixto**Birth Date:** 1839**Death Date:** December 11, 1898

Cuban revolutionary and senior military commander in the Cuban revolutionary movement. Calixto García y Iñiguez was born around 1839 in Holguín, Santiago Province, Cuba. He fought with the rebels in the Ten Years' War (1868–1878), rising through the ranks to second-in-command of the army. Captured in 1874, he was imprisoned in Spain. After the war's end, he was released and traveled to New York City, where he lived among other Cuban exiles.

In 1880, García unsuccessfully attempted to invade Cuba from the United States and was again exiled to Spain, after which he returned to the United States. In 1895, he joined the Cuban revolt conducting guerrilla activities at the beginning of the Cuban War of Independence (1895–1898). By 1898, he commanded the Eastern Army, part of the Cuban Revolutionary Army.

Shortly before the United States declared war on Spain, the U.S. Army sent Lieutenant Andrew Rowan to García to gather intelligence for the planned invasion of Cuba. Rowan's exploits were immortalized in Elbert Hubbard's largely fictionalized best-selling story "A Message to García," making García perhaps the best known of the Cuban revolutionaries to Americans. It was García

who recommended that U.S. forces make Daiquirí their initial invasion site.

García's forces provided valuable intelligence and information and kept Spanish reinforcements from arriving during the July 1, 1898, battles at El Caney and San Juan Heights. But U.S. forces did not permit him to participate in the late July and early August 1898 surrender negotiations, causing much bitterness. To try to heal the rift between García and the Americans, U.S. Army brigadier general Leonard Wood invited him to the United States, where García was publicly honored and met with President William McKinley before his sudden death in Washington, D.C., on December 11, 1898.

Garretson, George Armstrong**Birth Date:** January 30, 1844**Death Date:** December 8, 1916

U.S. Army general of volunteers. Born in New Lisbon, Ohio, on January 30, 1844, George Armstrong Garretson moved with his family to Cleveland. He then worked in the wholesale grocery business. At the beginning of the American Civil War, he enlisted in the U.S. Army, serving from May to September 1862. Applying to the United States Military Academy, West Point, he was accepted in 1863. Graduating in 1867, he was commissioned a second lieutenant of artillery.

Garretson resigned from the army in 1870 and returned to Cleveland, where he worked in the wholesale grocery business until 1875. He was then employed by the Second National Bank, which became the National Bank of Commerce. He worked his way up from clerk to president in 1890, holding the latter position until his death.

Garretson had retained his interest in the military and served as a militia captain of Troop A of the Ohio Cavalry during 1887–1892. A staunch Republican, at the beginning of the Spanish-American War he offered his services to President William McKinley, who appointed him brigadier general of U.S. Volunteers on May 4, 1898. Garretson took command of the 2nd Brigade of the 1st Division, II Corps, at Camp Alger, Virginia. The brigade consisted of three regiments: the 6th Illinois Infantry, the 6th Mas-

sachusetts Infantry, and the 8th Ohio Infantry. The 2nd Brigade arrived at Siboney, Cuba, on July 11, 1898.

Following its arrival in Cuba, Garretson's brigade was assigned to Brigadier General Guy V. Henry's 1st Division of Major General Nelson A. Miles's Puerto Rican expeditionary force. Garretson's brigade landed at Guánica, Puerto Rico, on July 25, 1898. The next day, Garretson proceeded to Yauco with seven companies: six of the 6th Massachusetts Infantry Regiment and one of the 6th Massachusetts Infantry Regiment. Just before arriving at Yauco, Garretson's men skirmished briefly with two companies of the Spanish Patria Battalion commanded by Lieutenant Colonel Francisco Puig. Puig's orders called on him merely to determine the strength of the U.S. force, so he soon withdrew. This brief skirmish was, however, the first engagement of the Puerto Rico Campaign. Garretson's brigade arrived at Ponce on August 4 and then moved north to Adjuntas before reaching Utuado by August 16.

Discharged from service on November 30, 1898, Garretson returned to the banking business in Cleveland. He died in that city on December 8, 1916.

Gascoyne-Cecil, Robert Arthur Talbot

Birth Date: February 3, 1830

Death Date: August 22, 1903

British Conservative Party politician, prime minister, and foreign minister during the Spanish-American War. Robert Arthur Talbot Gascoyne-Cecil, third Marquis of Salisbury, was born on February 3, 1830, at Hatfield, Hertfordshire, England. Educated at both Eton and at Christ Church, Oxford, in 1851 he was advised to make a sea voyage for his health and spent nearly two years traveling around the world, including visits to South Africa; New South Wales, Australia; and New Zealand. On his return to England in 1853, he was elected, unopposed, to the House of Commons.

In July 1857, Gascoyne-Cecil married, but his new father-in-law objected to the match. Hard-pressed financially, Gascoyne-Cecil supplemented his income by writing for the *Saturday Review*, the *Standard*, and the *Quarterly Review*. In his writing, he revealed a considerable distrust of democracy. Also known for his skill in debate, he served as secretary of state for India during 1866–1867. In 1868, his career in the House of Commons ended with the death of his father, and he entered the House of Lords as Lord Salisbury.

Robert Cecil was prime minister of Great Britain three times and held that office during the Spanish-American War. (Library of Congress)

In 1869, Salisbury became chancellor of Oxford University. In 1874, when the Conservatives returned to power, he resumed his position at the India Office. In April 1878, he became secretary of state for foreign affairs. He supported the Ottoman Empire against Russia and pushed for a conference to discuss the Treaty of San Stefano, resulting in the Congress of Berlin of June–July 1878. He also arranged for Britain to secure Cyprus from the Ottomans.

After the Conservatives' defeat in the elections of 1880 and Benjamin Disraeli's retirement from politics, Salisbury became the Conservative Party leader in the House of Lords. In 1885–1886, he was both prime minister and foreign secretary, during which time Britain annexed Burma. In a speech, he announced that he believed that some peoples, including the Hindus, were unfit for self-government. He was prime minister for a second time in 1886–1892 and a third time in 1895–1902. In 1890, Germany acknowledged British control of Zanzibar, in return for which Salisbury gave up Heligoland to Germany.

Salisbury rejected U.S. president Grover Cleveland's declaration that the refusal of British Guiana to agree to arbitration with Venezuela constituted a violation of the 1823 Monroe Doctrine, but Salisbury also rejected appeals from Spain for support against the United States over Cuba. When Queen Regent María Cristina sent a letter to Queen Victoria asking for British assistance in preventing U.S. intervention, Salisbury convinced the queen to oppose such

a step. Salisbury and many other British politicians were already conscious of the need to secure the United States as a possible future ally against Germany. Indeed, Salisbury expressed the view that any concerted European policy would only strengthen the “war party” in the United States.

Following the start of the Spanish-American War, however, Salisbury favored some joint European action to bring about an early end to the fighting. This failed because President William McKinley was opposed to any European mediation of the conflict and because Spain was not then ready to negotiate. Following the war, Salisbury made concessions to the United States. He surrendered British rights in Samoa and agreed to abrogate the Clayton-Bulwer Treaty of 1850 and permit the United States to build the Panama Canal under its own control.

During Salisbury’s third period as prime minister and foreign minister, he also had to deal with a host of other important foreign policy issues, including the Kruger Telegram Incident of 1896 with the Germans, the Fashoda Crisis of 1898 with the French, the South African (Boer) War of 1899–1902, and the Anglo-Japanese Treaty of 1902. Salisbury resigned as prime minister in July 1902. He died on August 22, 1903, at his ancestral home in Hatfield, Hertfordshire, England.

Gatling Gun

The American Civil War (1861–1865) gave rise to a number of new weapons. Among these were several precursors to the modern machine gun, including Wilson Ager’s Coffee Mill. It took its name from the means of feeding the ammunition from the top of the weapon by a funnel and crank mechanism, all of which resembled a coffee mill.

Ager’s gun had a single barrel. The ammunition was formed of a steel tube that contained powder and a .58-caliber bullet and a nipple at the end for a percussion cap. Steady turning of the crank

U.S. Navy sailors drill with a Gatling gun aboard ship during the Spanish-American War. (James Rankin Young and J. Hampton Moore, *History of Our War with Spain*, 1898)

dropped a round into the chamber, locked the breech block in place, dropped a hammer that fired the round, and ejected the spent case. Ager claimed a firing rate of 100 rounds a minute, although the gun barrel could not have long withstood the heat thus generated.

Ager demonstrated his weapon before President Abraham Lincoln, and the U.S. Army eventually purchased 50 of them. The Coffee Mills proved unreliable, however, in combat use and were never employed en masse. Ultimately they were used in the defenses of Washington.

Confederate Army captain D. R. Williams also invented a mechanical gun. Mounted on a mountain-howitzer carriage, it was a 4-foot long 1-pounder of 1.57-foot bore. Operated by a hand crank, it utilized paper cartridges and could fire 65 shots a minute. It tended to overheat, and it was also not a true machine weapon in that ammunition was fed into it by hand.

Other such weapons also appeared, but the most famous of mechanical guns was that invented by Richard Jordan Gatling in 1862. Well aware of problems from the buildup of heat, Gatling designed his gun with six rotating barrels around a central axis, each barrel fired in turn and each with its own bolt and firing pin. Thus in a firing rate of 300 rounds per minute, each barrel would have been utilized only 50 times.

The Gatling gun employed a hopper for the ammunition similar to that of the Coffee Mill. The first Gatling gun also employed steel cylinders with a percussion cap at the end, a round, and paper cartridges with the charge. The production model did away with the percussion cap in favor of a rim-fire cartridge. Turning the crank rotated the barrels, dropped in the rounds, and fired each barrel in turn. The chief difference from the Coffee Mill was in the rotating multiple barrel design.

The U.S. Army's chief of ordnance Colonel John W. Ripley, who was well known for his opposition to innovative weaponry, blocked adoption of the Gatling gun. Gatling's North Carolina birth also seems to have worked against him. Despite Gatling's appeals to Lincoln, the army never adopted the gun. Its only use in the Civil War came when Major General Benjamin Butler purchased six of them at his own expense and employed them effectively in the Siege of Petersburg at the end of the war.

In 1864, Gatling redesigned the gun so that each barrel had its own chamber, which helped prevent the leakage of gas. Gatling also adopted center-fire cartridges. These and other refinements produced a rate of fire of about 300 rounds per minute. Finally, in 1866, the U.S. Army purchased 100 Gatling guns, equally divided between 6-barrel models of 1-inch caliber and 10-barrel models of .50-inch caliber. Gatling worked out a licensing agreement with Colt Arms to produce the gun.

The Gatling gun provided effective service in the Indian Wars in the American West and in the Spanish-American War. V Corps' Gatling Gun Detachment played an important role in the Santiago de Cuba Land Campaign, especially in the U.S. victory in the Battle of San Juan Hill of July 1, 1898. They were also utilized in the Puerto Rico Campaign.

Gatling guns also served with the U.S. Navy. Tested by the British government in 1870, the Gatling gun out-shot its competition by a wide margin and was adopted by both the British Army and the Royal Navy, in .42-caliber and .65-caliber versions, respectively. The Gatling gun remained the standard mechanical rapid-fire weapon until the introduction of the Maxim gun, the first true machine gun.

Gatling Gun Detachment, V Corps

Unit that played a significant role in the Battle of San Juan Hill on July 1, 1898. Detachment commander Lieutenant John Henry Parker was a strong advocate of employing machine guns offensively, and he pushed his weapons to the front and continued to advance them with the attacking troops.

Upon his graduation from the United States Military Academy, West Point, in 1888, Parker was assigned to the 13th Infantry Regiment. One of his duties was to train a crew in the use of the Gatling gun. He began to ponder ways of more effectively employing the Gatling gun in battle. In 1897, he submitted a paper outlining his ideas, including the design for a carriage that would allow a Gatling gun to be carried along with attacking infantry. He believed that such weapons should be used offensively as well as filling their traditional role in defense.

Although his paper was ignored, Parker continued to advocate an offensive role for the Gatling gun. At the beginning of the Spanish-American War, he went with his regiment to Tampa, Florida, to prepare for the invasion of Cuba. Although his regimental commander rejected his ideas, Parker submitted them to the corps staff. The ordnance officer at Tampa, Lieutenant Colonel John T. Thompson, acted as Parker's advocate and arranged for him to be appointed assistant ordnance officer. On May 27, 1898, V Corps authorized formation of a provisional Gatling Gun Detachment to be directly under the orders of corps commander Major General William Shafter. The detachment was allocated 4 guns of a shipment of 15 new weapons. Although Parker asked for a total of 43 men, he was at first assigned only 12.

When V Corps sailed from Florida to Cuba, the Gatling Gun Detachment was not initially included. Thompson, however, assigned the detachment the task of protecting the expeditionary force's ammunition, so they were able to sail on the transport *Cherokee*. Upon

Gatling gun on the firing line during the Battle of San Juan Heights, Cuba, on July 1, 1898. (John H. Parker, *History of the Gatling Gun Detachment, Fifth Army Corps, at Santiago*, 1898)

arriving in Cuba, Parker convinced Shafter to assign another 30 men to his detachment.

Parker had the opportunity to test his ideas on July 1, 1898, when V Corps attacked San Juan Heights, east of Santiago. Parker was ordered to support the cavalry division's attack there. At first, the Gatling Gun Detachment was charged with protecting the U.S. artillery. Under heavy fire from Spanish guns, they were quickly ordered to the rear. At 9:00 a.m., however, Parker was sent forward to support the advance, and he eventually brought his guns within 600 yards of the Spanish trenches on San Juan Hill.

Even though many of Parker's men were hardly trained, he opened a steady fire on the Spanish around 1:00 p.m. The Americans had been pinned down but were then able to begin an advance under cover of Parker's fire. After nine minutes of steady Gatling gun fire, the attackers had advanced to within 150 yards of the trenches, and Spanish defenders were beginning to stream to the rear. Parker pushed his guns forward and continued to lay down fire on the enemy trenches. The fortified Spanish position was soon taken, and the Gatling Gun Detachment took up defensive positions, helping to break up two Spanish counterattacks later in the day.

An appreciative Lieutenant Colonel Theodore Roosevelt noted the important role played by the Gatling Gun Detachment in the battle. For the remainder of the war, he insisted on having Gatling guns nearby. Other officers on the scene also spoke highly of the performance of the detachment and credited it with making possi-

ble the capture of San Juan Heights. Parker was forever known by the nickname "Gatling Gun Parker."

After the war, Parker continued to advocate machine-gun development in the U.S. Army. He wrote two books, *The History of the Gatling Gun Detachment, Fifth Army Corps, at Santiago, with a Few Unvarnished Truths concerning That Expedition* (1898) and *Tactical Organization and Uses of Machine Guns in the Field* (1899). Parker became one of the first U.S. Army officers to study how best to use the new machine weapons on a changing battlefield.

Germany

Germany in the late 1890s was the most powerful state on the European continent. Germany bordered France, Belgium, and the Netherlands to the west; Denmark, the North Sea, and the Baltic Sea to the north; Russia to the east; and Austria-Hungary and Switzerland to the south. A latecomer to the imperialist race, Germany nonetheless counted among its overseas possessions German East Africa, the Cameroons, German Southwest Africa, and Togoland in Africa. In Asia, it had the South Sea islands of New Guinea, the Bismarck Archipelago, the North Solomons, and the Marshall Islands. In addition, Germany possessed a base at Jiaozhou (then known as Kiao-Chau, Kiaochow, Kiauchau, or Ki-autschou), on the Shandong (Shantung) Peninsula in China. At the time of the Spanish-American War, Germany's population was approximately 54.5 million people.

Prussia and its allied German states had defeated France in the Franco-Prussian War (1870–1871), ending the long period of French European hegemony. In January 1871, while the war was still in progress, Prussian minister president Otto von Bismarck proclaimed the establishment of the German Empire. Germany not only took Alsace and much of Lorraine from France but also imposed on that nation a substantial indemnity of 5 billion francs that was several times the cost of the war to Germany and helped fuel a dramatic German economic industrial expansion. German foreign trade also burgeoned with German industries often competing chiefly with those of Britain and the United States. Germany's foreign trade was approximately equal to that of the United States.

The constitutional arrangement created by Bismarck, now German chancellor, placed considerable power in the emperor or kaiser. Nonetheless, Bismarck dominated Emperor Wilhelm I (1871–1888) and largely ran German affairs. Frederick III was already dying of throat cancer during the few months he was kaiser in 1888 and left no imprint. He was followed by his son and successor Wilhelm II (1888–1918).

Headstrong and rash, Wilhelm soon clashed with Bismarck and forced the “Iron Chancellor” into retirement in March 1890. In his foreign policy, the aggressive Wilhelm quickly alienated most of the leaders of the European powers. As a consequence, France broke free of the isolation imposed by Bismarck and was able to ally with Russia in 1894. Britain, which might have been an ally of Germany, was alienated by the kaiser's aggressive naval building program.

Wilhelm and his minister of marine Admiral Alfred von Tirpitz claimed that the new German battle fleet was defensive only, but there is every indication that the two men actually sought a navy large enough to challenge Britain, and even Britain allied with the United States for world naval mastery. Wilhelm was preoccupied with the navy and believed that a powerful fleet coupled with growing German industrial power would allow Germany, a latecomer to imperialism and world rivalries, to “find its place in the sun” as a major world power.

Germany's Kaiser Wilhelm II pursued an aggressive foreign policy and was determined to expand both Germany's navy and its overseas empire. (Hulton-Deutsch Collection/Corbis)

Wilhelm's aggressive, even bullying foreign policies isolated Germany in Europe except for Austria-Hungary. Wilhelm and leading figures in the German Navy had long anticipated the collapse of Spain's colonial empire. In early 1898, the kaiser, increasingly worried about U.S. naval and imperial aspirations, announced that he was determined, when the opportunity presented itself, to purchase or simply to seize the Philippines from Spain.

When the Spanish-American War began, Wilhelm II hoped to put together an anti-U.S. continental bloc. Although Wilhelm's grandmother, Queen Victoria, thought that the U.S. declaration of war against Spain was “monstrous,” British leaders were more upset by the kaiser's decision to increase the number of German capital ships and lend moral support to the Boers in South Africa. Consequently, the British government was already thinking of how it might improve relations with the United States against Germany, which was coming to be seen as Britain's principal trading rival as well as a threat to Britain's naval mastery. Without Britain's assistance, no such European alignment was possible.

Depiction by Frank Cresson Schell of the converted revenue cutter USS *McCulloch* firing a warning shot across the bow of the German cruiser *Irene* off Manila, 1898. (Library of Congress)

Following Commodore George Dewey's victory in the Battle of Manila Bay on May 1, 1898, Tirpitz and Wilhelm insisted on increasing the strength of the German East Asian Squadron in the hopes of securing territory in the Philippines. Wilhelm was intensely frustrated by the situation in the Philippines, professing to see there an informal agreement among the British and the Americans against Germany, especially with U.S. ships allowed access to British bases and able to take on coal. Captain Edward Chichester, the British squadron commander off Manila, also proved most accommodating to Dewey. In late May, Wilhelm was writing that the German naval increases of 1898 had come too late. By 1901, Germany would be much stronger at sea, and he hoped that Germany would then be able to "put forth demands and seize the initiative."

In any case, three German cruisers arrived in Manila shortly after the battle, followed on June 12 by the cruiser *Kaiserin Augusta* with East Asian Squadron commander Vice Admiral Otto von Diederichs. With the kaiser's full concurrence, Prince Bernhard von Bülow, state secretary for foreign affairs, had ordered the admiral to the Philippines so that he might secure firsthand knowledge of the situation there. Two additional German warships arrived a week

later, giving Germany six capital ships to but four for the U.S. squadron. This increase in German strength clearly altered the naval balance of power in the islands. Great Britain, by contrast, had three ships in Philippine waters, and France and Japan had one each.

Officially, Diederichs claimed that the German naval presence resulted from the need to protect German citizens and property in the Philippines, to prepare a possible evacuation of foreign nationals, and to solve certain logistical problems involving the transfer of troops. Dewey, however, was concerned that Germany might interfere with operations in the Philippines before Spain surrendered, thereby ensuring itself a role in the peace negotiations and ultimate disposition of Spanish territory. There were indeed rumors of a possible German intervention on Spain's behalf, of plans to occupy part of the Philippines, and of secret negotiations with the Filipino revolutionaries to establish a German protectorate. Indeed, it was quite true that Wilhelm and Bülow hoped that they might acquire one or more of the Philippine islands.

Dewey advised Washington of his concerns and, as a result, the Navy Department believed that it might be necessary to dispatch

an additional squadron to the Philippines. Plans to do this ended with the recall of Admiral Manuel de la Cámara y Libermore's Spanish Squadron and the signing of an armistice with Spain in August, pending a general peace settlement.

In the weeks following the Battle of Manila Bay, relations between Dewey and Diederichs grew uncomfortably strained. The Americans were irritated by what they perceived as willful interference. Indeed, they cited the excursions of German officers to the Spanish line of defense, a visit to Filipino nationalist Emilio Aguinaldo y Famy's headquarters by German representatives, the clandestine evacuation of the Spanish governor-general Basilio Augustín in the *Kaiserin Augusta*, and the establishment of a station on the Bataan Peninsula, where the Germans landed a detachment of troops. Dewey claimed that German ships had interfered with the U.S. naval blockade of Manila, a charge that Diederichs stoutly denied, arguing that his intentions were in strict accord with international laws of neutrality.

Meanwhile, there occurred off Manila what naval historian Holger Herwig has called "the single most destructive event in German-American relations before the First World War." Two successive incidents sparked this. The first was when a German ship failed to display colors until the Americans had fired a shot across its bow. The other occurred when a German warship approached the American squadron at night and had to be similarly warned. Tensions reached a climax on July 10, 1898, when Diederichs sent his flag lieutenant, Paul von Hintze, to protest to Dewey. In a face-to-face confrontation, Dewey told Hintze that if Germany wanted war, it could have it. Diederichs reported that he believed that Dewey's outburst was fired by an explosive mixture of rumors, American newspaper reports depicting Germany as an aggressor, and a certain unease resulting from the size of the German fleet. Realizing, however, that there was no particular sympathy for the Germans among Philippine revolutionaries, Diederichs yielded. He pointed out in a report that his presence had accomplished nothing and had probably done more harm than good to the German cause, damaging the German image abroad and alienating other powers. Indeed, the American press, duly informed of the incidents, adopted a strong anti-German stance.

At the same time, American intentions in the Philippines were unknown, and all imperialist players jockeyed into position, making sure to state their interests in the archipelago. Germany was not alone in hoping that the islands might be divided among interested powers or placed under an international mandate, something that Berlin tried to champion among the other European nations through diplomatic channels. But when annexationist sentiments in the United States grew stronger in the summer of 1898, other nations' chances for territorial gains in the Philippines all but evaporated.

When the first contingent of U.S. ground forces and three additional warships arrived to bolster Dewey's squadron, the confrontation between Dewey and Diederichs began to ease, and the German vice admiral moved on to Batavia (Jakarta) to attend a

Dutch state ceremony. Following the capture of Manila and the subsequent signing of the Protocol of Peace, ships belonging to foreign powers, including Germany, began to withdraw from Philippine waters. The German Empire instead proceeded to enter into negotiations with Spain for the purchase of some of its Pacific possessions, acquiring the Caroline, Pelew, and Ladrone islands, excluding Guam, in 1899.

Ghost Squadron

Reference to bogus sightings of Spanish rear admiral Pascual Cervera y Topete's squadron off the coast of Cuba in June 1898. On the night of June 7, 1898, the U.S. Navy gunboat *Eagle*, a converted yacht commanded by Lieutenant William Henry Hudson Southerland, reported sighting a Spanish cruiser and destroyer off the northern coast of Cuba. These were thought to be ships of Cervera's squadron, which had been presumed to be at Santiago de Cuba.

Unable to immediately verify the report, the departure of Major General William R. Shafter's V Corps for Cuba was halted. U.S. rear admiral William T. Sampson, commanding the ships blockading Santiago, was highly skeptical of the report, and he ordered Lieutenant Victor Blue ashore to verify the presence of the Spanish ships in the harbor at Santiago de Cuba.

Another bogus sighting occurred on June 10 when the U.S. Navy auxiliary cruiser *Yankee* arrived off Santiago and reported sighting eight ships, including a battleship. This mystery was solved the next day with the arrival off Santiago of the American tender *Armeria*, armed yacht *Scorpion*, and storeship *Supply* along with the British ship *Talbot*. Debriefing confirmed that these ships had been in the

vicinity of the bogus *Yankee* sighting, and Blue's report confirmed that the Spanish ships were still at Santiago. The false sightings led to a six-day delay in the departure of V Corps for Cuba, however.

Gilded Age

A reference to a historical era in the United States that lasted roughly from 1870 to 1900. The hallmarks of this turbulent period were mass immigration, industrialization, labor unrest, and a laissez-faire economy. The term "Gilded Age" was coined by Mark Twain in his 1873 book *The Gilded Age: A Tale of Today* (coauthored by Charles Dudley Warner). The use of the term "gilded" is interesting in that it means a thin appliqué of gold or silver on a particular surface or object, usually one that is not valuable in and of itself. In this instance, what Twain was alluding to was the thin veneer of opulence and prosperity that overlay a society that was beset with problems, including poverty, greed, corruption, and exploitation.

The gilded surface of American society was perhaps best represented by the robber barons of the era such as John D. Rockefeller, Andrew Carnegie, Jay Gould, Henry Clay Frick, and Cornelius Vanderbilt. These men had built huge industrial empires and amassed dizzying sums of money in the process. Their lavish lifestyles became the envy of the nation, but sometimes their wealth was achieved through unscrupulous business practices and the exploitation of their workers. On the other hand, many of these same men also created huge philanthropic endeavors that gave millions of dollars to various causes and institutions. Carnegie and Rockefeller were especially involved in philanthropy later in their lives. Thus, the Gilded Age gave birth to philanthropic endeavors much larger than any others in America's past.

In general, the American economy grew by leaps and bounds during the Gilded Age, but the resultant prosperity was not well dis-

tributed and was punctuated by frequent economic depressions. The Panic of 1873, for example, witnessed some 18,000 businesses declare bankruptcy and an unemployment rate of more than 14 percent. Every 7–10 years saw similar economic calamities, but at the time there were no government mechanisms in place to stem the ill effects of them or aid the millions who became jobless. At the same time, American farmers suffered greatly, as they were plagued by deep and mounting debt, falling prices, and high transportation costs. On the other hand, when times were good, industries and commercial enterprises both small and large flourished, and some farmers eagerly moved into the newly opened areas of the Great Plains and the American West. The Homestead Act, first signed into law in 1862, provided thousands of Americans with 160 acres of land, at no cost, in the vast western prairies, while railroads were hustling to keep up with demand throughout the nation.

To power the U.S. move toward a fully industrialized economy in these years, the nation needed an ever-expanding labor pool. This was accomplished largely through massive immigration. The second great wave of immigration began around 1880 and featured immigrants largely from Eastern and Southern Europe. Most of the immigrants were poor, uneducated, and unfamiliar with life in an urbanized, industrial setting. Yet most were eager to work and lay claim to the American Dream. These individuals worked in coal mines, quarries, and factories of every sort and on the railroads. Their labor was absolutely key to America's rise as a great industrial power. On the down side, many of the newly arrived immigrants suffered considerable discrimination because of their religion (Roman Catholic, Eastern Orthodox, and Judaism) and their inability at first to speak English. In cities, they were mostly relegated to slums and ghettos that featured deplorable and dangerous living conditions.

Toward the end of the 19th century, many industries underwent a flurry of consolidation. Large corporations formed trusts to skirt antimonopoly laws, which finally necessitated the power of the federal government to curb the worst abuses of such activity. Because of the huge sums of capital needed to start and sustain certain industries, mergers and trusts were most often found in the railroad, oil refining, meatpacking, steel making, and sugar-refining industries. Factories utilized scientific applications of labor activity to improve efficiency and increase profits. This, however, led to increasingly boring and monotonous work for unskilled and semi-skilled laborers. This coupled with dangerous working conditions

Percentage of U.S. Workforce Engaged in Various Industries, 1860–1920

Year	Agriculture	Manufacturing	Construction	Mining	Railroads	Other
1860	53%	14%	5%	2%	<1%	26%
1870	53%	19%	6%	1%	1%	20%
1880	51%	19%	5%	2%	2%	21%
1890	43%	19%	6%	2%	3%	27%
1900	40%	20%	6%	2%	4%	28%
1910	31%	22%	5%	3%	5%	34%
1920	26%	27%	3%	3%	5%	36%

The police charge rioters in Haymarket Square in Chicago, Illinois, on May 4, 1886. The riot occurred when a bomb exploded among a group of policemen as they attempted to disperse a giant labor rally in the square. Eleven people died in the incident. The illustration, which appeared in *Harper's Weekly* on May 15, 1886, was titled "The Anarchists Riot in Chicago." (Library of Congress)

in many occupations that killed or maimed thousands each year brought about the first significant attempts to unionize nonskilled workers. Many businessmen deplored unions, however, and the last 25 years of the 19th century bore witness to some of the worst and most violent labor-management clashes in U.S. history. These included the 1886 Haymarket Square Riot in Chicago in which 11 people died and hundreds of others were wounded, the 1892 Homestead Steel Strike, and the 1894 Pullman Strike, also in Chicago.

The rapid industrialization in the United States was not, of course, all bad. Not only did it expand the economy and the middle class substantially, but it also brought about a great assortment of inventions and technological advances. Between 1860 and 1890, the number of new patents issued by the government surpassed 500,000, or nearly 10 times as many as had been issued between 1800 and 1860. This flurry of technological innovation gave U.S. industries an edge over the competition. It also brought new technology that transformed peoples' lives. Thomas Edison's incandescent light bulb and electrical generation and distribution facilities provided many Americans with electrical lighting at a low cost and also allowed factories to operate around the clock, increasing output and profits. Alexander Graham Bell's 1876 inven-

tion of the telephone radically changed the way in which Americans communicated.

The Gilded Age also saw periodic efforts to reform the economic and political system, but by and large the period was marked by stagnation and stasis. During the 1880s and early 1890s, the power balance in Washington was nearly evenly divided between the Democratic Party and the Republican Party, meaning that little legislation that passed in Congress was bold or innovative. Conservative Democrats, sometimes referred to as Bourbon Democrats, were wedded to low taxes, low tariffs, and minimal government intrusion in the economy. They also eschewed imperial expansionism. Their views prevailed in the party until the mid-1890s, when the rural Democrats and Populist Party joined forces to advance the agenda of free silver. The Republican Party, favored by many businessmen and even some laborers, advocated high protective tariffs, government subsidies to expand industry and railroads, labor wages that surpassed those of Europe, and overseas expansion. The Populist Party, which enjoyed its heyday in the 1892, 1894, and 1896 elections, rapidly lost steam thereafter, but its reform agenda was picked up during the Progressive era (ca. 1900–1930).

Glass, Henry

Birth Date: January 7, 1844

Death Date: September 1, 1908

U.S. Navy captain who captured the island of Guam during the Spanish-American War. Born on January 7, 1844, in Hopkinsville, Kentucky, Henry Glass entered the United States Naval Academy in 1860. He graduated a year early, in May 1863, and was commissioned in the U.S. Navy as an ensign. He participated in the unsuccessful Union Navy bombardments of Fort Sumter in Charleston Harbor, South Carolina, in the summer of 1863. In February 1865, he took part in the Union capture of Georgetown, South Carolina, an important Confederate seaport located on Winyah Bay.

In 1868, Glass was promoted to lieutenant commander. In 1874, he received his first command, the sailing sloop *Jamestown*, first commissioned in the U.S. Navy in 1844 and then serving as a training ship. Glass was promoted to captain in 1894.

During the Spanish-American War, Glass commanded the cruiser *Charleston* in the Pacific. Launched in 1888, the *Charleston* was the first steel cruiser built for the U.S. Navy. Although decommissioned on July 27, 1896, the *Charleston* was quickly recommissioned on May 5, 1898, following the outbreak of the Spanish-American War. On May 21, 1898, Glass departed San Francisco for Honolulu. Then, on June 4, the *Charleston* departed Honolulu for Manila in the Philippines accompanied by three transports.

Once at sea, Glass opened his sealed orders. These directed him to capture Guam, the largest and southernmost of the Mariana Islands, before arriving in the Philippines. He arrived in the port city of Agaña, the capital of Guam, on June 20, 1898. He found the city virtually defenseless and the Spanish governor, Juan Marina, unaware that a state of war existed between the United States and Spain. The last message that Marina had received from the Spanish government was dated April 14, 1898.

On June 21, 1898, in a bloodless confrontation, Glass took Governor Marina and the 54 Spanish infantrymen on the island as prisoners of war. Glass ordered Spanish citizens disarmed and the American flag raised in the Plaza de España. The United States had conquered its first colony in the Pacific Ocean without a shot being fired. Glass made Spanish-American businessman Francisco Portusach Martínez acting governor of the island until a formal U.S.-controlled government could be established. Portusach, born in Barcelona, Spain, but a naturalized U.S. citizen, was the only American living on the island.

Within days after Glass and his Spanish prisoners departed for Manila, Portusach was overthrown by José Sisto, a Filipino who had served in the Spanish colonial government. Sisto was then promptly overthrown by a group of local Chamorro people who held power until the U.S. Navy returned in January 1899 and reinstated Sisto.

On June 22, 1898, Glass sailed to join Admiral George Dewey at Manila Bay. Glass arrived in Manila Bay on June 30 and participated in the U.S. naval blockade of Manila. Glass and the crew of the *Charleston* took part in the bombardment of Manila on August 13, 1898, that helped precipitate the surrender of Manila. Relieved of his command of the *Charleston* on December 12, 1898, Glass assumed command of the naval training station at San Francisco on January 23, 1899.

Glass was promoted to rear admiral in 1901. He participated in U.S. naval maneuvers off the Pacific coast of Panama in November 1903 that facilitated Panama's independence from Colombia. Glass died in Paso Robles, California, on September 1, 1908.

Goethals, George Washington

Birth Date: June 29, 1858

Death Date: January 21, 1928

U.S. Army officer, civil engineer, and key figure in the construction of the Panama Canal. George Washington Goethals was born in Brooklyn, New York, on June 29, 1858, to a family of Dutch immigrants. He pursued studies at the City College of New York from 1872 to 1876 and then entered the United States Military Academy at West Point, from which he graduated in 1880. He was one of only two members of his class selected for the Corps of Engineers in the U.S. Army and was commissioned a second lieutenant in June of that year.

Early in his military career, Goethals gained experience in the construction of canals, harbors, dams, and locks. He taught civil

U.S. Army engineer Colonel George Washington Goethals oversaw completion of the Panama Canal. Under his supervision, the project was completed a year ahead of schedule and came in under budget. (Library of Congress)

and military engineering at West Point from 1885 to 1889 and again from 1898 to 1900. Promoted to captain in 1891, he served as assistant to the army chief of engineers from 1894 to 1898.

During the Spanish-American War, Goethals was chief of engineers, holding the rank of lieutenant colonel of volunteers. From 1903 to 1907, he was a member of the Army General Staff and supervised the building of a canal at Muscle Shoals on the Tennessee River. He also worked on the construction of canals at Chattanooga, Tennessee, and at Colbert Shoals, Alabama. In the meantime, the United States had begun constructing the Panama Canal, an isthmian canal linking the Atlantic and Pacific oceans. The project faced many challenges and experienced slow progress in the first three years. In March 1904, when the canal's principal civilian engineer John F. Stevens resigned his post, President Theodore Roosevelt appointed Goethals chairman and chief engineer of the Isthmian Canal Commission.

Goethals had to overcome a host of complex problems involving engineering, logistics, personnel, climate, and health concerns. Personally overseeing all excavations and construction, he ordered several mountains near the center of the Panamanian isthmus leveled to minimize the canal's elevation. He expanded by a consider-

able margin the width of the canal, realizing the need for easy access and passage for ships of larger sizes. He also took into account the long-term defense needs of the waterway. When he was faced with the daunting challenge of damming the erratic Chagres River with the Gatun Dam and the formation of the Gatun Lake, he brought in more army and civilian engineers who had experience in building locks and dams. Approximately 45,000 people of varying nationalities labored on the canal project during 1904 to 1914.

Goethals and his team completed the canal almost a full year ahead of schedule and also under budget. He received many honors and awards for his achievements, and upon completion of the canal, President Woodrow Wilson appointed him the first governor of the Panama Canal Zone. Advanced to major general, Goethals served as governor from 1914 until his resignation and retirement on January 31, 1917.

Goethals was recalled to active duty in December 1917 following U.S. entry into World War I and served as acting quartermaster general of the army. Several months later, he became director of the Division of Purchase, Storage and Traffic. In this post, he had charge of all supplies and the movement of all troops within the United States and overseas. At his request, he was relieved of active duty in March 1919. Soon thereafter he established his own engineering and construction firm, George W. Goethals and Company, and became an engineering consultant to the Port Authority of New York on many projects, including the Holland Tunnel, the George Washington Bridge, and the Goethals Bridge, which was named in his honor. Goethals died in New York City on January 21, 1928.

Gómez y Báez, Máximo

Birth Date: November 18, 1836

Death Date: June 17, 1905

Cuban revolutionary and military leader. Máximo Gómez y Báez was born on November 18, 1836, into a lower middle-class family in the small town of Baní, Dominican Republic. He entered a Catholic seminary, but his studies were cut short with the invasion of the Dominican Republic by Haitian military forces. He joined the forces led by Dominican general Pedro Santen and saw action in a number of battles, fighting with particular bravery at the Battle of Santé in 1856. Gómez remained a captain in the Dominican Army until 1865, when he moved to Santiago de Cuba.

Although born in the Dominican Republic, Máximo Gómez y Báez took up the Cuban struggle for independence and became a general in the Cuban Ten Years' War (1868–1878). (Library of Congress)

While virtually all of Spain's colonies had achieved independence in the early part of the 19th century, Cuba was still part of the Spanish Empire. This situation had become increasingly unsatisfactory to many Cuban liberals, particularly because the Spanish government refused to extend even minimal representation to the Cubans. In 1868, a variety of Cuban groups undertook to separate from Spain through military action, and the Ten Years' War began. By this time, Gómez was living with his family in the jurisdiction of Bayamo, a center of that war's early actions. He joined the Cuban revolutionary forces six days after the declaration of war on October 16, 1868. By 1871, he led a campaign against the city of Guantánamo. Not only was the campaign a success, but from it emerged another great Cuban general, Antonio Maceo Grajales. From this moment forward, the lives of both of these men were always intertwined.

In 1873, after assuming command of the central department of Cuba with the rank of major general, Gómez seized the towns of Nuevitas and Santa Cruz from Spanish forces, adding them to the ever-growing number of places gained by the Cuban Revolutionary Army. In subsequent action against Spanish troops in February 1874, the fighting was so fierce that Gómez had two horses shot out from under him as he led his troops into battle. The success of Gómez and his troops caused alarm in Spain and among the Spanish military, prompting renewed effort on the part of the Spanish Crown to stanch the rebellion. In early 1875, as Gómez invaded Las

Villas, one of Cuba's central provinces, the Spanish government decided to send out General Arsenio Martínez de Campos and 40,000 reinforcements to reinvigorate the Spanish military effort in Cuba. Their arrival in early 1876 began to turn the tide in Spain's favor.

By the time the Pact of Zanjón was signed on February 10, 1878, ending the Ten Years' War, a disillusioned Gómez had already left Cuba. Traveling to Jamaica and then Honduras, where he was appointed an army general, he supported an ill-fated attempt to revive the war for Cuban independence in 1879–1880. With the failure of the Guerra Chiquita (Little War), all military efforts to make Cuba an independent state ceased.

By 1884, Gómez was in New York, where he joined exiled leaders, such as Maceo and the new leader and conscience of the Cuban cause, José Martí y Pérez, in an effort to obtain financial aid and people willing to fight for the independence of Cuba. Unfortunately for the cause, Gómez and Martí clashed over Gómez's leadership style, leading Gómez to return to his native Dominican Republic. In 1891, however, Martí organized the Partido Revolucionario Cubano (Cuban Revolutionary Party) and invited Gómez to join. Maceo also accepted the invitation to join the new party, reuniting the most effective triumvirate of Cuban leaders.

From 1892 until early 1895, these three men led many others in organizing and mobilizing support to renew the cause of Cuban independence. These efforts culminated with the start of the Cuban War of Independence on February 24, 1895, at Baire, Cuba, led by Maceo, now a major general. By April, Gómez and Martí joined the fighting in Cuba.

Tragedy struck swiftly, however, with the death of the charismatic Martí in a skirmish at Dos Ríos on May 19, 1895. Maceo and Gómez, who was now acting as generalissimo, continued to vigorously prosecute the war, and by 1896, the entire island was in rebellion against Spain. Unable to defeat the rebels with conventional military tactics, the Spanish government sent Captain-General Valeriano Weyler y Nicolau, who undertook a campaign of terror to suppress the revolution. A ruthless disciplinarian and effective tactician, Weyler introduced the *reconcentrado* (reconcentration) system, turning Cuba into a large concentration camp. The Cuban fighters held all the cities, so Weyler rounded up approximately 500,000 civilians from the countryside and placed them in camps from which they could not offer aid to the rebels. While this resulted in much suffering and many deaths from disease, not to mention international condemnation, it did deprive the guerrillas of their natural source of support.

On December 7, 1896, Maceo was killed along with one of Gómez's sons who had served as his aide. The fighting continued, however, as a war of attrition. In the meantime, the struggle in Cuba had become a cause célèbre in the United States through sensationalized accounts in the yellow press. Those in the United States who wished to expand U.S. imperial interests saw the Cuban conflict as a perfect opportunity. On April 19, 1898, the U.S. Congress declared war on Spain with the avowed intent of freeing Cuba. Gómez considered his military role primarily accomplished. His

policy of accommodation and cooperation with American forces ultimately led to a fundamental disagreement with other Cuban revolutionaries, including General Calixto García y Iñiguez, who resigned in protest after American forces refused to allow him to participate in the Spanish capitulation ceremonies on July 17, 1898.

After the United States joined the war, U.S. troops rapidly defeated the Spanish forces on the island. What became known as the Spanish-American War officially came to an end on December 10, 1898. The transfer of power took place on January 1, 1899, and U.S. domination of Cuba began.

Washington did not entrust the process entirely to the Cubans but supported efforts toward a constitutional government in Cuba. Many Cubans wanted Gómez to become president of the new republic, but he was far too discouraged by U.S. domination of Cuba to participate in their government. However, one of his last acts as commander of the revolutionary forces was to travel to Washington, D.C., and seek payment for his troops from the U.S. government. To this end, he accepted the offer of \$3 million and departed for Havana. He arrived there on February 24, 1899, exactly four years after the start of the Cuban War of Independence.

The acceptance of the U.S. offer by Gómez, however, created a rift between him and the new constitutional assembly. This body removed Gómez as commander in chief of the Cuban forces, which led to his retirement from public life. Gómez died on June 17, 1905, during a speaking tour in Cuba.

Gompers, Samuel

Birth Date: January 27, 1850

Death Date: December 3, 1924

American labor leader and founder of the American Federation of Labor (AFL). Born on January 27, 1850, in London, England, to a working-class Jewish family, Samuel Gompers, like his father, entered the cigar-making trade. The family immigrated to the United States in 1863, and Gompers quickly became active in the New York cigar makers' union.

Gompers's early labor philosophy contained socialist elements, and he advocated sharp and even confrontational action against

American labor leader Samuel Gompers was president of the American Federation of Labor for 35 years. (Library of Congress)

the excesses of employers and big business. However, by the time he helped found the AFL in 1886, which he headed until his death in 1924 (except for one year, 1895), he had largely rejected his earlier ideas of radical social change. Instead, he mainly sought economic advantages for workers. These included better pay, more benefits, and job security. Of somewhat lesser importance were working conditions, which for the skilled workers in the AFL were not a major issue. Specifically, Gompers sought to organize skilled tradesmen within the capitalist system.

Gompers refused to believe that unskilled workers could be organized and thus denied their admittance to the AFL during his nearly 40 years as the federation's president. He also eschewed political affiliations. As a result, the AFL did not participate in much of the violent labor unrest of the late 19th century, such as the 1892 Homestead Steel Strike or the 1894 Pullman Strike. By the early 20th century, the AFL was perhaps the most successful labor organization in the United States, with hundreds of constituent unions throughout the country.

Gompers's elitism and refusal to claim a political stake in the labor struggle helped lead to the formation of the Industrial Workers of the World in 1905, a labor organization aimed primarily at unskilled workers with a definite socialistic bent. Although Gompers's vision did not extend to the millions of unskilled or even semiskilled workers, his organization efforts nevertheless showed that big business in the United States would not for long enjoy unchecked supremacy over its employees.

Gompers allied himself with President Woodrow Wilson during World War I in hopes that labor loyalty would translate into government support once peace returned. Gompers served on the Advisory Commission to the Council of National Defense and in 1918 presented Wilson's famed Fourteen Points to labor groups in Europe. The AFL also sponsored loyalty organizations to combat socialist and pacifist labor groups opposed to the war. Following the war, the fear of Bolshevism led to attacks on organized labor, preventing any rapprochement.

Gompers attended the Paris Peace Conference in 1919 and assisted in the creation of the International Labor Organization (ILO) under the League of Nations. Increasingly, more radical labor leaders criticized Gompers for his alleged selling out to the Wilson administration during the war. In Gompers's final years, he helped export America's conservative brand of union organization to Latin America. Gompers died in San Antonio, Texas, on December 3, 1924.

Goodrich, Caspar Frederick

Birth Date: January 7, 1847

Death Date: January 26, 1925

U.S. navy officer. Caspar Frederick Goodrich was born on January 7, 1847, in Philadelphia, Pennsylvania, and in November 1864 graduated first in his class from the United States Naval Academy, then temporarily located in Newport, Rhode Island. He served with the European Squadron for most of the late 1860s, being promoted to lieutenant in 1868 and lieutenant commander in 1869. During the next decade, his career included routine service ashore and afloat, including several tours at the Naval Academy. In 1882, he was present at the British bombardment of Alexandria, Egypt, as executive officer of the U.S. Navy screw sloop *Lancaster*.

In 1884, Goodrich served on a navy board that called for setting up what would become the Naval War College in Newport, Rhode

Island. Promoted to commander that September, he then served on the Endicott Board (named for Secretary of War William C. Endicott), which reviewed the nation's coastal defenses and called for a major modernization program. In 1886, Goodrich became the officer in charge of the Naval Torpedo Station at Newport.

Goodrich twice served as president of the Naval War College in Newport, first from 1889 to 1891 and again from 1896 to early 1898. Between these two tours of duty, he served as commanding officer of the apprentice training ships *Jamestown* and *Constellation* and the gunboat *Concord*. During his second tour at the War College, in 1897 he helped develop potential war plans for campaigns in the Pacific Ocean and Caribbean. Promoted to captain that same year, he reported a plan for a Coast Signal Service in March 1898 just before being detached from the War College for Spanish-American War service.

In April 1898, Goodrich assumed command of the converted cruiser *St. Louis*, a former passenger steamer. In early May, his ship was one of three patrolling east of Martinique searching for Rear Admiral Pascual Cervera y Topete's squadron. Unsuccessful in this task, Goodrich's men were able to cut the telegraph cable between St. Thomas and San Juan, Puerto Rico, on May 13. On May 18, some of his men repeated this task at Santiago de Cuba, but they were driven off by Spanish fire when attempting the same at Guantá-

namo Bay the next day. On June 3, Goodrich took part in the initial operations designed to capture Guantánamo Bay for the use of the U.S. squadron blockading Cervera at Santiago. On June 21, Rear Admiral William T. Sampson put Goodrich in charge of landing the army's V Corps at Daiquirí and Siboney, a process he oversaw through June 26.

While present at the Battle of Santiago de Cuba on July 3, Goodrich and the *St. Louis* were not directly engaged. After the battle, he transported Cervera and other Spanish prisoners of war to Portsmouth, New Hampshire, before returning to Caribbean waters. In early August, Goodrich and the *St. Louis* were involved in the early stages of the Puerto Rico Campaign commanded by Major General Nelson Miles.

On August 8, 1898, Goodrich assumed command of the cruiser *Newark*, which was intended as the flagship of Commodore Winfield Scott Schley, although the war ended before it could assume this role. On August 9, Goodrich embarked on a mission to land U.S. Marines on the Isle of Pines but diverted to Manzanillo with a group of smaller warships upon receiving reports that the port's garrison was on the verge of surrender. On August 12, the day the Protocol of Peace was signed, his force briefly bombarded the city before learning of the cease-fire early the next morning. Goodrich later assisted in the salvage of the Spanish cruiser *Infanta Maria Teresa*, which had gone down with the rest of the ships of Cervera's squadron at Santiago de Cuba on July 3.

Goodrich's assignments after the war included seagoing commands on the monitor *Puritan*, cruisers *Richmond* and *Minneapolis*, and battleship *Iowa* and service ashore at two navy yards, Philadelphia in 1901 and Portsmouth, New Hampshire, in 1903. Promoted to rear admiral on February 17, 1904, he served until late 1906 as commander in chief of the Pacific Fleet. During this period, forces under his command provided assistance to the city of San Francisco following the devastating earthquake there in April 1906. From 1904 until 1909, he also served as president of the United States Naval Institute. Following a brief tour of duty at the Navy Department in early 1907, he finished his active career as commandant of the New York Navy Yard from 1907 to his retirement on January 7, 1909.

One of many retired officers recalled to active duty during World War I, Goodrich served as officer in charge of the Pay Officers' Material School until November 8, 1919, when he retired for a second and final time. He died on January 26, 1925, in Princeton, New Jersey.

Gorgas, William Crawford

Birth Date: October 3, 1854

Death Date: July 4, 1920

U.S. Army surgeon and surgeon general of the United States. Born on October 3, 1854, in Mobile, Alabama, William Crawford Gorgas was the son of the former Confederate chief of ordnance and grandson of a former governor of Alabama. He was raised on the family plantation near Mobile and, unable to obtain an appointment to West Point, decided to join the Army Medical Corps after obtaining a medical degree from Bellevue Medical College in New York. In the 1880s, while stationed at Fort Brown, Texas, he met Marie Doughty, his future wife, while they were both recovering from yellow fever. Because he was subsequently immune to the disease, Gorgas spent much of the next two decades in posts where yellow

U.S. Army surgeon William Crawford Gorgas is best remembered for helping to eradicate yellow fever in Cuba and in Panama, which greatly eased construction of the Panama Canal. (Library of Congress)

fever was common. In 1898, during the Spanish-American War, he was sent to Cuba to be the director of sanitation.

Working under Brigadier General Leonard Wood, who was both a physician and Cuba's military governor, Gorgas applied the research done by Walter Reed's Yellow Fever Commission into a coordinated effort to rid Cuba of mosquitoes. The resultant mosquito control program, which included draconian punishments for leaving standing water, virtually eradicated yellow fever and dramatically reduced the incidence of malaria within less than three years. Since the legs of hospital beds were placed in flat dishes filled with water to keep crawling bugs from getting onto patients, Gorgas treated the water and placed screens around patients to keep the disease from spreading.

In 1904, the United States acquired the rights to the Panamanian isthmus and bought the equipment left by the French after their failed effort to dig a canal. Realizing that the death rate among workers from yellow fever and malaria had been a major factor in the French failure, the army sent Gorgas to take charge of sanitation in the Canal Zone. Unfortunately, the Canal Commission and Colonel George Goethals were unwilling to spend any money on improving sanitary conditions and controlling mosquito breeding. An outbreak of yellow fever in late 1904, however, convinced the Canal Commission to fund Gorgas's attempts at mosquito control. Because of insufficient funding, it was not until late 1905 that yellow fever and malaria were eradicated in the Panama Canal Zone. Following President Theodore Roosevelt's visit to the Panama Canal Zone, Gorgas was made a member of the Canal Commission. Determined to see the completion of the Panama Canal, he refused an offer in 1911 to become president of the University of Alabama. He was the only U.S. official who remained on the canal project from beginning to end.

In 1914, Gorgas was promoted to brigadier general and named surgeon general of the United States, an office he held through World War I. He is credited with having made the medical corps more efficient and with standardizing medical evaluation of new recruits.

Retiring from the army in 1918, Gorgas accepted an offer from the Rockefeller Foundation to travel to South America to advise on the eradication of yellow fever and malaria. He also served as president of the American Medical Association and the American Society of Tropical Disease. Gorgas died in London on July 4, 1920, shortly after suffering a stroke. Following a large funeral in St. Paul's Cathedral, his body was returned to the United States and buried in Arlington National Cemetery.

Gorman, Arthur Pue

Birth Date: March 11, 1839

Death Date: June 4, 1906

Vocal anti-imperialist and U.S. Democratic senator from Maryland (1881–1899 and 1903–1906). Arthur Pue Gorman was born on March 11, 1839, in Woodstock, Maryland. From 1851 to 1855, he served in the U.S. Senate as a page. He was made a messenger in the Senate post office in 1855, assistant postmaster in 1861, and postmaster in 1865. During the 1860s, Gorman, an avid baseball player, was an early supporter of the Washington Nationals Base Ball Club, an organization that helped to propel baseball to its position as America's most popular pastime. A supporter of President Andrew Johnson, Gorman left his Senate position in 1866 to be the collector of internal revenue for the fifth district of Maryland, a position he held until 1869.

Gorman served in the Maryland House of Delegates from 1869 to 1875 and in the Maryland Senate from 1875 to 1881. He was also president of the Chesapeake and Ohio Canal Company from 1872 to 1882. In 1880, he was elected to serve in the U.S. Senate. A Bourbon Democrat, he was a conservative who supported banking and railroad interests, promoted laissez-faire capitalism, encouraged the gold standard, and opposed U.S. overseas expansion and imperi-

A U.S. senator from Maryland, Arthur Pue Gorman was a staunch anti-imperialist and an outspoken opponent of the Spanish-American War. (Chaiba Media)

alism. In 1884, he was the campaign manager for Grover Cleveland's first presidential campaign. Gorman was reelected to his Senate seat in 1886 and 1892. During the 1890s, he created and held the unofficial position of Democratic floor leader in the Senate.

In 1893, West Virginia representative William Wilson introduced a bill in Congress to reduce tariff rates in order to fulfill President Grover Cleveland's 1892 campaign promise to lower tariff rates set by the 1890 McKinley Tariff, which had increased the tariffs on imports to the United States to 48 percent and was particularly detrimental to American farmers. Although the tariff was passed by the House of Representatives with minor alterations, Gorman significantly altered the legislation in the Senate with more than 600 amendments, greatly limiting the impact of the new legislation on tariff rates. As such, the resulting Wilson-Gorman Tariff of 1894, which reduced the tariff rate to just 42 percent, was a victory for Gorman and a humiliating defeat for Cleveland. This coincided with the onset of a sharp and deep economic depression that began in 1893 and that resulted in a Democratic rout in the 1894 off-year elections and the 1896 presidential election.

Although Gorman had displayed scant interest in foreign affairs during his political career, after the explosion of the U.S. Navy battleship *Maine* on February 15, 1898, his interest in foreign affairs increased. On March 26, he announced his support for U.S. intervention in the Cuban crisis. Gorman supported President William McKinley's declaration of war on Spain but was concerned about how the war would be financed and argued for a bond issue as the best approach. Gorman also argued that big business should fund a portion of the war effort. He refused to support the 1898 Treaty of Paris that ended the Spanish-American War on the grounds that it provided for the acquisition of an American colonial empire. He believed that the acquisition of the Philippines would involve the United States in a bloody war of conquest, a scenario that proved largely correct. Meanwhile, he had lost his reelection bid to Republican Louis F. McComas in November 1898.

Gorman, however, did not leave politics and won the other Maryland Senate seat in the 1902 election. On March 6, 1903, he was unanimously elected the first chairman of the Democratic caucus in the Senate. Gorman died of a heart attack in Washington, D.C., on June 4, 1906.

Gould, Jay

Birth Date: May 27, 1836

Death Date: December 2, 1892

American financier and railroad magnate. Jay Gould, born Jason Gould in Roxbury, New York, on May 27, 1836, grew up in poverty and as a youth labored on his family's small dairy farm. Although his last name led many to conclude erroneously that he was Jewish, he was in fact a Presbyterian. Physically and temperamentally ill-suited to farming, he became a surveyor. After a brief period of speculating in the tanning of animal hides, he began to buy stock in small railroads during the 1860s.

Gould was the prototype of the greedy robber baron and corrupt railroad owner who bribed politicians for his own material advancement. He successfully manipulated railroad stock to his personal advantage and built a huge fortune. After deflating the price of railroad stock, he would purchase the stock, revalue the company, and make substantial profits. He was portrayed in newspapers, especially by the political cartoonist Thomas Nast, as a reckless speculator and greedy capitalist.

In 1867, Gould became a director of the Erie Railroad. In 1869, he and his business associates James Fisk and Daniel Drew used bribery, chicanery, and manipulation to prevent Cornelius Vanderbilt from acquiring control of the Erie Railroad. That same year,

Although born in poverty, Jay Gould became immensely wealthy as a financier and railroad tycoon. He became well known for his aggressive business practices. (Library of Congress)

Gould and his business partners bribed President Ulysses S. Grant's brother-in-law to obtain information about the government's proposed gold purchases. Gould then began to buy massive quantities of gold in an attempt to corner the market. He hoped that the increase in the price of gold would elevate the price of wheat and lead to increased freight business for the Erie Railroad. Gould's gold speculations caused an economic panic on September 24, 1869, known as Black Friday. Although he emerged from the fiasco financially intact, his reputation had been badly tarnished. After Fisk's death in 1872, Gould was removed as a director of the Erie Railroad. Undeterred, he now began to buy a controlling interest in the Union Pacific Railroad and other western railroads. By 1880, he controlled more than 15 percent of the entire U.S. railroad system.

Gould's questionable and ruthless business practices notwithstanding, the eventual outcome of most of his activities was usually beneficial to the expansion and development of the United States. He was a firm supporter of the development of a consolidated national transportation and communication system. During the 1880s, he was instrumental in obtaining control of the American telegraph industry for Western Union and developing the elevated train system in New York City. During the Spanish-American War, his vision of creating a modern communication system based on the telegraph greatly facilitated the American war effort, as did the nation's impressive railway network. Gould died of tuberculosis on December 2, 1892, in New York City. At the time of his death, he was reputedly the wealthiest person in the United States.

Grant, Frederick Dent

Birth Date: May 30, 1850

Death Date: April 12, 1912

U.S. soldier and diplomat and the eldest son of Ulysses S. Grant. Fredrick Dent Grant was born on May 30, 1850, in St. Louis, Missouri. For the first three years of his life, the Grant family lived on military posts in Michigan, New York, and Missouri. In 1853, Grant's father was posted at Fort Vancouver, Washington. His father's salary, however, was not sufficient to take his family to the West Coast. Grant and his mother, who was eight months pregnant with her second child, remained in Missouri. After Grant's father resigned from the U.S. Army in 1854, the family lived on a farm near

U.S. Army brigadier general Frederick Dent Grant, son of Ulysses S. Grant, commanded troops in both Puerto Rico and the Philippines. (Library of Congress)

St. Louis until 1858, when they moved to Galena, Illinois. Grant attended public school in Galena until the outbreak of the American Civil War.

In June 1861, Grant's father rejoined the U.S. Army as a colonel in command of the 21st Illinois Volunteer Infantry. The younger Grant, whose resemblance to his father was uncanny, accompanied his father on the march across Illinois to northern Missouri. He returned to Galena once the 21st Illinois Infantry had reached Missouri. He then rejoined his father after the Battle of Belmont on November 7, 1861, and stayed with him until February 1862. In the spring of 1863, he rejoined his father and accompanied him during the siege and capture of Vicksburg (May 22–July 4, 1863). In 1864, just before the Battle of the Wilderness (May 5–7, 1864), his father sent him to Burlington, New Jersey, to attend school. In 1866, he enrolled at the United States Military Academy at West Point.

Grant graduated from West Point in 1871 and was assigned to the 4th U.S. Cavalry. Almost immediately, he took a leave of absence to take a job as a civil engineer for the Union Pacific Railroad. In the autumn of that year, he served as General William Tecumseh Sherman's aide-de-camp during his tour of Europe. Grant returned to the United States in 1872 to rejoin the 4th Cavalry in Texas. In March 1873, he was advanced to lieutenant colonel and became a staff member for Lieutenant General Philip Sheridan. Grant also accompanied George Armstrong Custer during the Black Hills expedition in 1874. Grant resigned from the military in 1881 and be-

came a businessman in New York City. In 1885, in the months prior to his father's death, he helped his father prepare his autobiography. In 1888, Grant became U.S. minister to Austria, a position he held until 1893. In 1894, he became a commissioner of police in New York City, a post he held until the outbreak of the Spanish-American War.

In 1898, Grant joined the 14th New York Volunteers at the rank of colonel. On May 27, 1898, he was promoted to brigadier general of volunteers. He fought in Puerto Rico during the war and commanded the military district of San Juan after the war. From April to November 1899, he led the 2nd Brigade, 1st Division of VIII Corps, in the Philippines during the fight against the Filipino insurgents. In November 1899, he was transferred to the 2nd Brigade, 2nd Division. In June 1900, he took command of northern Luzon, where he waged a number of battles against the Filipino revolutionary forces. On February 18, 1901, he was commissioned a brigadier general in the regular army.

In October 1901, Grant helped defeat Filipino insurgents in Samar and Leyte and facilitated the transfer to civilian rule in 1902. After returning to the United States, he was promoted to major general in February 1906. Grant remained in the army until his death from cancer on April 12, 1912, in New York City.

Gray, George

Birth Date: May 4, 1840

Death Date: August 7, 1925

Jurist, Democratic U.S. senator (1885–1899), and diplomat. George Gray was born on May 4, 1840, in New Castle, Delaware. His father was a prosperous attorney. After graduating from Princeton University in 1859, Gray attended Harvard University Law School before being admitted to the Delaware bar in 1863. He took up the practice of law in his hometown of New Castle for a time with his father. Gray continued his practice uninterrupted until 1879, when he successfully ran for the position of attorney general for the State of Delaware, which he held until 1885 and through which he made many connections in the Democratic Party.

When U.S. senator Thomas F. Bayard resigned his seat in 1885, Gray was elected by the state legislature to fill the vacancy. He was sworn in on March 18, 1885, and was reelected in 1887 and again in 1893. While in the Senate, he gained a solid reputation for his work.

George Gray, Democratic senator from Delaware and U.S. circuit court of appeals judge. Gray served on the commission that paved the way for peace talks to end the Spanish-American War. (Library of Congress)

He served on numerous committees including the Committee on Patents, the Committee on Privileges and Elections, and the Committee on Revolutionary Claims.

In August 1898, Gray took on a new diplomatic role by serving on the Joint High Commission, which was designed to smooth U.S.-Canadian relations. The commission convened in Québec. Immediately thereafter, he served on the commission that paved the way for peace talks between Spain and the United States in the aftermath of the Spanish-American War. This process resulted in the December 1898 Treaty of Paris. Although Gray and President William McKinley were not in the same political party, the two men were close friends and confidantes. Gray did not support Philippine annexation but did support the treaty because he believed that added deliberations—or a renewed war—would be more damaging than the treaty itself.

In 1899, Gray lost his bid for reelection but that same year was appointed by McKinley to a judgeship in the U.S. Circuit Court of Appeals for the Third District, a post he held until 1914. In 1900, Gray was appointed by the president to the Permanent Court of Arbitration at the Hague, Netherlands, and would be reappointed to this position three additional times between 1900 and 1920. Gray also served on the commission that President Theodore Roosevelt

appointed in 1902 to investigate a disruptive coal strike in Pennsylvania.

Gray served on several international commissions charged with mediating international disputes. From 1890 to 1925, he was a member of the Smithsonian Institution's Board of Regents. He also served as a trustee and vice president for the Carnegie Endowment for International Peace. Gray died in Wilmington, Delaware, on August 7, 1925.

Great Britain

Island nation lying to the west-northwest of the European continent. Great Britain is surrounded by water, with the English Channel to the south, the North Sea to the east, and the Irish Sea and the Atlantic Ocean to the west and north. In the 1890s, Great Britain included all of the British Isles, including Scotland, Ireland, and Wales. With a population of more than 30 million in the 1890s (not including its overseas territories), Great Britain also ruled over extensive overseas possessions and protectorates, which spanned the globe from the Far East to the Asian subcontinent to the Middle East and Africa. On the eve of the Spanish-American War, Great Britain was beyond question the world's leading economic and military power, but this position was under pressure from other powers, notably Germany and the United States.

Throughout the 19th century, Great Britain was a nation of superlatives. It was the first nation to industrialize, took the lead in the defeat of Napoleon Bonaparte in 1814, assembled the world's largest overseas empire, and possessed a potent military establishment, including the largest and most advanced navy in the world. As a result of industrialization and empire building, Britain was the world's leading economic power throughout much of the century and enjoyed a significant head start over its continental neighbors in this regard.

Classical liberalism was the guiding political philosophy in Britain throughout the 19th century. Gradually, the franchise was extended to the middle class in the Great Reform Bill of 1832, male industrial workers in the Reform Bill of 1867, and male agricultural workers in the Reform Bill of 1884. As a result, the middle class played an increasing role in British politics as the aristocracy gradually declined. Middle-class values became dominant in Victorian England (so-named for the British monarch Victoria, who ruled from 1837 to 1901). These emphasized sober living and respectability. Liberal reforms reached most levels of society such as

the military, education, and housing, which contrasted sharply with the more revolutionary fervor that periodically engulfed France.

The excesses of early 19th-century industrialization began to be redressed with the legalization of labor unions and socialist critics of classical economic liberalism. Ireland remained a problem, as government after government debated over the issues of home rule and the intractability of Irish Protestants in Ulster. But perhaps the biggest challenges facing Britain lay in the rapidly changing international order of the late 19th century.

By the 1890s, Britain possessed an expansive colonial empire covering 12 million square miles and a quarter of the world's population. The Royal Navy had secured Britain's military and economic supremacy by protecting its extensive trading interests, and the British led in the world of global finance and insurance.

Since the end of the Napoleonic Wars in 1815, Britain pursued a foreign policy of splendid isolation concerning continental affairs, intervening only when the international balance of power was threatened. It was imperative, then, that the British protect their freedom of action. This reality made them shun formal alliances, particularly military and political.

In the late 19th century, Britain grew increasingly isolated as a result of the new diplomatic realities taking shape in Europe. After experiencing several decades of unquestioned leadership, the British faced foreign policy challenges from different areas of the globe. Britain faced Russian encroachment toward India and its growing presence in China. Britain also faced colonial disputes with France in Asia and Africa and the challenging of Japan. By 1894, France and Russia had signed a formal alliance, which caused much alarm in London. On the European continent, Germany posed a threat with the largest and most powerful army in Europe. In 1890, Kaiser Wilhelm II initiated a new German foreign policy based on direct competition with Britain in the colonial realm and with the building of a powerful German Navy.

The overwhelming lead that Britain enjoyed in industry and in naval strength steadily eroded in the closing years of the century. A chief reason for this development was the spread of industrialization throughout Europe and the United States. One of the stark realities that Britain faced was a united Germany, whose population and industrial capacity was growing steadily after 1870. For example, German coal production grew from less than 90 million tons in 1890 to under 280 million tons in 1914 as opposed to Britain's at just over 290 million tons. In the last two decades of the 19th century, Britain's industrial and commercial preeminence shrank markedly. In 1880, Britain commanded about 23 percent of world manufacturing and world trade. By 1913, that had dropped to 14 percent.

While Britain's traditional industries such as coal, textiles, and ironware continued to increase in production, it lost its lead to newer industries of the late 19th century such as steel, chemicals, machine tools, and electrical products. These industrial statistics alarmed the British government because of their diplomatic ramifications. If British industry fell behind the Germans in, say, steel

Joseph Chamberlain embodied two major trends in political life in Great Britain during the late 19th century: social reform and imperialism. Arguing for an end to Great Britain's isolationist policies, Chamberlain enthusiastically supported an alliance between Great Britain and the United States. (Library of Congress)

production, this meant that the Germans could potentially out-produce the British in military goods such as battleships, which could threaten British interests worldwide. And although the British were most concerned about the growing rivalry with Germany, the fantastic increase in U.S. industrial output was also cause for concern. By 1898, the Americans were producing more steel than the British and Germans combined.

This trend toward gradual decline did not go unnoticed by the British leadership. Prime Minister Robert Gascoyne-Cecil, Lord Salisbury, saw the need for Britain to end its traditional isolationist policy. In 1898, he argued that the expansionist policies of the late 19th century had left Britain vulnerable. By that date, there were calls from various sectors of the British leadership for an alliance between Great Britain and the United States. Joseph Chamberlain, the colonial secretary, was the most vocal supporter for such an arrangement. Realizing Britain's isolation, he reached out to the United States as the best-placed nation for an alliance based on obvious cultural similarities, shared language, and compatible world-views. Such views were also championed in the British press. While the British government construed the rise of the United States as a

reminder of Britain's eroding supremacy, the British people considered it preferable to Germany's bid for world hegemony.

For much of the 19th century, the United States was generally hostile toward Great Britain, largely as a result of the American Revolution, the War of 1812, and British actions during the American Civil War. By the late 1890s, however, a series of significant events prompted both countries to seek more amicable relations. By cultivating American friendship, British decision makers hoped to have gained a partner in ensuring that the balance of power would continue to tilt in Britain's favor.

The First Venezuela Crisis (1895–1897) marked a turning point in relations between the United States and Britain. After much bluster and diplomatic posturing on the part of the Grover Cleveland administration, in September 1896 Britain and Venezuela agreed to submit to arbitration to end the crisis. On February 2, 1897, Britain and Venezuela assembled an arbitration tribunal that would determine the boundary between Venezuela and British Guiana, and in 1899 the tribunal awarded most of the claims to British Guiana.

When Congress declared war on Spain on April 25, 1898, continental powers such as Germany and Austria sided with Spain's position over Cuba, with Kaiser Wilhelm II taking the lead in attempting to organize an anti-American coalition. As relations between the United States and Spain continued to worsen, the British Foreign Office neither refrained from taking measures supporting Spain nor took part in any actions designed by any European powers that would humiliate the United States. Ultimately, rivalries among the European powers coupled with British neutrality precluded any intervention on behalf of Spain.

Britain declared its neutrality upon the start of the conflict. During the war, Lord Salisbury's cabinet had three objectives. The first was to remain neutral and adhere to international agreements respecting neutrality. Second, it hoped to protect British interests in areas where the conflict would take place. Third, it wished to preserve and continue to court American friendship, which was now considered vital to Britain's international security. These three ideals proved difficult to reconcile. As a result, the first objective of maintaining strict neutrality was modified to fulfill the last two.

Despite its neutrality, Britain took steps that clearly favored the United States throughout the conflict. For example, British officials allowed Commodore George Dewey to send messages to Washington through the Hong Kong cable, the only such communication system spanning the Pacific Ocean. Second, the British delayed the official proclamation of its lease in Mirs Bay in China so that American warships could make use of that anchorage. In Canada, British authorities expelled a Spanish agent on dubious grounds, while at the same time they allowed American agents to conduct espionage activities in Gibraltar. The British consul in Singapore was useful in assisting the U.S. consul E. Spencer Pratt in contacting Filipino rebel leader Emilio Aguinaldo y Famy in May 1898, who then returned to the Philippines. The British squadron sent to Manila in effect helped bolster Dewey's small squadron against that of Germany

there, and the British commander Captain Edward Chichester, while following correct international procedures, made no secret of his support for the Americans and Dewey. The British also aided the United States in consolidating control of the Philippines by lending landing craft to gain control of the island of Panay and sending a gunboat to intervene in gaining control of Cebu, a strategic location in the central Philippines.

Between May and July 1898, the Spanish government hoped that Britain would mediate an end to the conflict. Despite British assurances, however, the Spanish government became convinced that Britain had shown partiality to the United States throughout the conflict. As it turned out, French mediation facilitated an end to the war on August 12, 1898. After that, Salisbury supported an American presence in Asia and even wrote President William McKinley that he would be disappointed if the United States did not take possession of the Philippines.

The Spanish-American War firmly established the rapprochement between the United States and Britain, which would last into the 21st century. Also, Britain's benevolent neutrality thwarted Kaiser Wilhelm II's intrigues for a continental alliance against the United States on behalf of Spain, ensuring a Spanish defeat and in return gaining American goodwill during Britain's conflict against the Boers in 1899. Indeed, British policies and actions during the war enabled the nations to settle several outstanding differences and disputes and paved the way for what many historians have come to call a special relationship between the two nations. Among the most notable of the resolved differences came about in the November 1901 Hay-Pauncefote Treaty, which gave the United States the green light to construct the Panama Canal without British involvement, something that the 1850 Clayton-Bulwer Treaty had required. This also appeared to be tacit British acceptance of the 1823 Monroe Doctrine and America's right to control the Western Hemisphere. Indeed, with Britain's recognition of American hegemony in the Americas, the Western Hemisphere was the only corner of the world that posed no troubles for Britain as it grappled with troubles and rivalries in Europe, Asia, and Africa.

Great Britain, Policies and Reactions to the Spanish-American War

Great Britain's attitude toward the Spanish-American War, manifested in the actions of the British government and prevailing public opinion, was one of sympathetic neutrality toward the United States. This stance reflected a continuing effort by British policy makers to pursue a rapprochement with the United States and gain American support for British policies in Europe and the Pacific. In 1898, general British opinion regarded U.S. intervention in both Cuba (and later the Philippines) as wholly admirable and in no sense a threat to Britain's interests. Surely, however, Britain's sympathetic neutrality also reflected its growing trepidation over Germany, including the ambitious German naval construction program to build a powerful high seas fleet, not to mention Germany's increasing interest in securing an overseas empire and its expanding international trade. Indeed, Germany, which had become Great Britain's biggest rival and potential adversary by the 1890s, compelled British policy makers to pursue greater accommodation with the United States. Many point out that this began the enduring Anglo-American alliance, or special relationship, that exists to the present day.

Britain's attitudes toward the war reflected a marked shift from the tension that had prevailed in Anglo-American relations throughout the 19th century. This change had begun with the settlement of the First Venezuela Crisis (1895-1897). This Anglo-American confrontation, which began over a boundary dispute between Venezuela and British Guiana, led to a crisis in which the Grover Cleveland administration demanded that Britain accept American mediation to settle the dispute. The crisis led the British finally to recognize U.S. predominance in Latin America and the Caribbean, as first set forth in the 1823 Monroe Doctrine.

The evolution of Britain's attitude toward American overseas expansionism in general and the U.S. war with Spain in particular had a number of sources, including practical and historical considerations. Many Britons in policy- and opinion-making positions viewed U.S. expansion into overseas colonies as inevitable. In this view, the United States had reached a stage in its social and economic development wherein overseas expansion was an imperative, driven both by economic exigencies and the desire to join the club of great powers. It was therefore necessary to reach an accommodation with growing U.S. power rather than to confront it. Of course, the cultural affinity between Britain and the United States and the shared language made this task considerably easier.

Many in the United Kingdom welcomed U.S. expansion in Asia and the Pacific as compatible with British interests. As an example, British officials sought American assistance in China. In March 1898 the British minister in Washington, Sir Julian Pauncefote, approached the U.S. State Department about cooperating in protecting free trade in China. The United States had refused any initial commitment because of the growing crisis in Cuba but nevertheless left its options open. Britain was becoming increasingly concerned with Germany's growing military and economic power and the ag-

Poster showing personifications of America (Columbia and Uncle Sam) and Great Britain (Britannia and John Bull), holding hands in friendship, and vignettes of naval battles, 1898. The poster cites such diverse reasons for "kindred interests" as common language, resources, integrity, valor, colonial success, chivalry, and invincibility. (Library of Congress)

gressive overseas expansionism of Kaiser Wilhelm II. At the same time, Britain was becoming increasingly isolated in Europe, and its ability to absorb new possessions and compete with the other expanding colonial powers (Germany, France, Russia, and Japan) seemed more limited.

Spain's impending collapse threatened to open a power vacuum that many in Britain feared Germany would fill. In the view of many informed Britons, an American presence in the Caribbean, East Asia, and the Pacific was better than a German one. When the United States annexed the Philippines in 1898, there was a widespread sense of relief that Britain no longer had to bear the imperial burden in East Asia alone. Indeed, the British regarded the Americans not as colonial rivals but as fellow workers in the task of better ordering the world and tutoring so-called backward peoples, to use the patronizing language of the day.

Practical considerations surrounding the global balance of power were fed by the emotional appeal of perceived racial and cultural affinity. Spokesmen for Anglo-Saxonism in Britain linked British and U.S. imperialism to the destiny of the Anglo-Saxon race to expand and rule nonwhite peoples in the Eastern and Western

Hemispheres. The shared instincts of Anglo-Saxonism were therefore compelling the Americans into an expansionist policy. The prevailing official view in the Lord Salisbury government, as well as informed public opinion, was that American isolation was no longer possible or practical and that the United States had to assume its rightful place alongside Britain on the world stage.

The perception of inherited racial impulses propelling the United States outward conveyed a strong feeling of racial affinity, and newspaper editorials in the United Kingdom often emphasized this racial link. It was a purely emotional concept, of course, inspired by a perceived spirit of Anglo-Saxon brotherhood and requiring nothing more than the racial relationship as an incentive to closer association and mutual support. The racial argument generated great enthusiasm among its advocates along with contempt among some in governing circles who were more practical even when advocating Anglo-American collaboration. Nevertheless, it probably provided the most powerful incentive in Britain to support U.S. policy from 1898 to 1900 or so. Many contemporary observers asserted that the British public and government sided with the United States in its war with Spain because of racial and cultural similarities tied to bonds of common language, history, and tradition. This supranationalism produced a concept of Anglo-American homogeneity that made mutual sympathy and support natural and proper.

In regard to Cuba and the Philippines, the application of Anglo-Saxon solidarity took differing forms. The U.S. acquisition of Cuba appeared to many British observers to be imperative given the island's proximity to the United States, the heavy American capital investment there, and Cuba's strategic location astride potential isthmian canal roots through Central America. Indeed, many figures in the British government were dismayed when Congress passed the 1898 Teller Amendment renouncing any American desire to annex Cuba. As in the Philippines, many Britons believed that Cuba was better off, and their own country's interests safer, if Cuba had come under U.S. rule. Britain did not see U.S. dominance in the Caribbean as a threat to the British West Indies or to British interests in Central America.

In any case, prevailing opinion in the British Isles viewed the war against Spain as a war of liberation being waged by the United States for humanitarian purposes. This was in concert with American views as well. British sympathy for the American cause also manifested itself in a number of practical measures that the government took to support U.S. military operations and impede those of Spain. For example, British military officials did not allow the Spanish Mediterranean Squadron to take on coal in Egypt, thus delaying its departure for Cuban waters. Likewise, in Hong Kong, an allegedly neutral port, British authorities allowed the U.S. Asiatic Squadron to use cable facilities to communicate with Washington, thus facilitating orders from the U.S. Navy Department to Commodore George Dewey to deploy to the Philippines. The British also delayed officially proclaiming their lease of Mirs Bay from China so that American naval vessels would not have to be ordered from that port when war broke out.

It was in Philippine waters, however, that British sympathy for the United States became most apparent. News of Dewey's victory over the Spanish Philippines squadron in the Battle of Manila Bay on May 1, 1898, brought naval forces from a number of nations—including both Germany and Britain—to the Philippines. The German force was the first to arrive, followed by those of Britain and France. The British and French commanders and their officers treated the Americans courteously and cooperated with the U.S. blockade of the islands. Friction quickly developed, however, between Dewey and the German naval commander, Vice Admiral Otto von Diederichs, over the latter's open sympathy for Spain and Germany's violation of Dewey's blockade regulations. The tension intensified when Germany put out diplomatic feelers about a naval base at Subic Bay and land leases in the islands.

Subsequent events gave rise to a legend that only the interposition of British naval vessels between Dewey's and Diederich's forces prevented the Germans from interfering with the U.S. blockade. Reality was more prosaic. The Germans had positioned ships around Grande Island at the mouth of Subic Bay, leading Dewey to suspect that the Germans were using that island to smuggle supplies to the Spanish. In a July 13, 1898, incident, the Germans' placement of their ships had prevented Filipino guerrillas fighting with U.S. forces from taking Grande Island. When Dewey sent two of his cruisers to investigate, the Germans quickly withdrew, and American sailors and marines quickly occupied the island. British ships were in the vicinity but were not involved. Dewey's report of the near confrontation, fanned by inflammatory press reports, led to intensified anti-German and pro-British sentiment in the United States.

These events in the Philippines and the reaction to them in Britain and the United States illustrate how Anglo-American relations had evolved during the Cuban crisis and the ensuing Spanish-American War. British sympathy for the United States in the 1898 war had far-reaching consequences for U.S. relations with Britain and for international politics in general. U.S. policy makers were grateful for the position that Britain had taken during the war, and many Americans in the foreign policy establishment wasted no time in calling for closer cooperation between the two powers.

The new American attitude was evident in the U.S. during Britain's war in South Africa with the Boer states of Transvaal and the Orange Free State—the Boer War—from 1899 to 1902. Opposition to Britain among the European powers was overwhelming, and the war contributed to growing British isolation in Europe. Washington, however, did not share this outlook and adopted a policy that leaned heavily toward the United Kingdom. The Americans did not confront the British over their blockade of the South African states and actually provided supplies to the British forces. American sympathy for the British grew in part from the fact that the United States was also fighting to suppress an insurgency in the Philippines. Above all, however, it took a pro-British stance because the experience in the Spanish-American War had convinced many Americans that British and U.S. interests complemented each other, that a British defeat in South Africa would undermine British cred-

ibility as a great power, and that such an erosion of Britain's standing in the world would be bad for the United States.

The Spanish-American War thus provided a starting point for growing Anglo-American cooperation and mutual sympathy that has endured for more than a century.

Greely, Adolphus Washington

Birth Date: March 27, 1844

Death Date: October 10, 1935

Polar explorer, army officer, and chief signal officer during the Spanish-American War. Born on March 27, 1844, in Newburyport, Massachusetts, Adolphus Washington Greely entered the U.S. Army in 1861, at age 17, at the beginning of the American Civil War as a private. He served in the Volunteers throughout the war, saw action in numerous battles, and was breveted major by 1865. The following year, he was commissioned in the regular army as a second lieutenant in the infantry.

In 1881, now a first lieutenant, the intrepid Greely was placed in charge of an expedition to locate the North Pole and establish the first meteorological station there. The expedition set a new record for having explored the most northern latitude ever recorded, at 83 degrees, 24 minutes north, but became trapped at Cape Sabine on Ellesmere Island, waiting for months for relief ships to arrive. The ships did not arrive until 1884, by which time 21 of Greely's 27-man team had died from starvation, exposure, or illness. The 6 survivors, including Greely, were near death when they were finally rescued. Greely returned home to a hero's welcome and became internationally known for his exploits.

In 1886, Greely was promoted to captain. In March 1887, President Grover Cleveland elevated him to chief signal officer of the U.S. Army as a brigadier general, a position he held for nearly 20 years. During and immediately after the Spanish-American War,

U.S. Army officer and Arctic explorer Adolphus Washington Greely was chief signal officer during the Spanish-American War. (Chaiba Media)

Greely supervised a number of major and ambitious projects involving the construction and laying of telegraph lines for military use. Indeed, 800 miles of lines were constructed and operated in Puerto Rico, 3,000 miles in Cuba, and 10,200 miles in the Philippines. Using his previous polar experiences, Greely supervised the construction of 4,000 miles of cable, including submarine and land cables, in Alaska. He also introduced wireless telegraphy there. At the time, it was the most extensive wireless system in the world. Greely was largely responsible for the military's later adoption of wireless telegraphs.

In 1903, Greely served as the U.S. delegate to the International Telegraph Conference held in London and the International Wireless Telegraph Conference held in Berlin. In 1906, he was advanced to major general and took command of the Northern Division. That same year, he transferred to the Pacific Division, where he directed relief operations after the devastating San Francisco earthquake of 1906. He retired from active service in 1908.

Greely's retirement years were filled with organizational work, scientific endeavors, and writing. He was a founding member of the National Geographic Society and helped establish the first free library in Washington, D.C. He also wrote numerous books, including *Three Years of Arctic Service* (1886), *American Explorers*

(1894), and *Reminiscences of Adventure and Service* (1927). In 1935, just prior to his death, Congress awarded him the Medal of Honor for his outstanding commitments to the military and sciences. Greely died in Washington, D.C., on October 10, 1935.

Greene, Francis Vinton

Birth Date: June 27, 1850

Death Date: May 13, 1921

U.S. Army officer, politician, and writer. Born in Providence, Rhode Island, on June 27, 1850, Francis Vinton Greene was the son of American Civil War hero Major General George Sears Greene. The younger Greene graduated first in his class from the United States Military Academy, West Point, in 1870 and was commissioned a second lieutenant in the artillery. Originally assigned to the 4th U.S. Artillery Regiment, he transferred to the U.S. Engineer Corps in 1872 and helped survey the northern boundary of the United States with Canada from Lake of the Woods, Minnesota, to the Rocky Mountains. Promoted to first lieutenant in January 1874, he served as both a military attaché and an engineer until being promoted to captain in January 1883. He was the American military attaché to the U.S. legation at St. Petersburg, Russia, during 1877–1879 and observed Russian forces in action during the Russo-Turkish War (1877–1878). Returning to the United States, he served as assistant engineer of public works for the District of Columbia until he returned to the United States Military Academy at West Point as an instructor in practical military engineering during 1885–1886.

Greene resigned his regular army commission to become the president of the Barber Asphalt Paving Company in 1886. He could not completely leave the military behind, however, and joined the New York National Guard. He was appointed first in December 1889 as engineer and major of the 1st Brigade, New York National Guard, and then in January 1892 as colonel of the 71st Regiment, New York National Guard. When the Spanish-American War began, he raised the 7th New York Infantry Regiment (Volunteers) and was quickly promoted to brigadier general, U.S. Volunteers.

Assigned to the Philippine Expeditionary Force, Greene commanded the 2nd Brigade of Brigadier General Thomas M. Anderson's

Brigadier general of volunteers Francis Vinton Greene commanded the 2nd Brigade during the First Battle of Manila in the Philippine-American War. (*Photographic History of the Spanish-American War*, 1898)

2nd Division in the First Battle of Manila. Greene's brigade formed the left of the U.S. attack along Manila Bay, with Brigadier General Arthur MacArthur's 1st Brigade farther inland on the U.S. right. Unaware that Major General Wesley Merritt, commanding the U.S. forces, had made arrangements with Spanish commander in Manila General Fermín Jáudenes y Alvarez to surrender the city to the Americans once they had taken the Spaniards' outer defenses, Anderson, Greene, and MacArthur prepared for a tough fight on August 13, 1898. With orders to capture the inner city and keep Philippine insurgents under Emilio Aguinaldo y Famy out of the suburbs, the sharp skirmish for the outer Spanish defenses that lasted slightly more than an hour was only the first act of the battle.

Around 11:30 a.m., Jáudenes surrendered the inner city. With help from the Spaniards, Greene then secured Manila's suburbs north of the Pasig River. Eventually, Merritt's forces controlled the citadel and most of Manila's suburbs. For his actions in the First Battle of Manila, Greene was appointed major general of volunteers, but he again resigned from the army in February 1899.

Returning from the Philippines, Greene became active in the Republican Party of New York. He became president of the New York Republican Committee in 1900 and served as a delegate to the Republican National Convention in Philadelphia that same year. A

good friend of Theodore Roosevelt, Greene corresponded regularly after the Spanish-American War with the New York governor, then president of the United States. In January 1903, Greene accepted the position of New York City police commissioner, a job he held until 1904. In his later years, he became president of the Niagara-Lockport and Ontario Power Company.

In addition to his civic and business duties, Greene was a military historian of some note. His published works include *Deflections of the Plumb-Line along the 49th Parallel* (1876), *The Russian Army and Its Campaigns in Turkey* (1879), *Life of Nathaniel Greene, Major General in the Army of the Revolution* (1893), *The Present Military Situation in the US* (1915), and *Our First Year in the Great War* (1918). Greene died in New York City on May 13, 1921.

Gridley, Charles Vernon

Birth Date: November 24, 1844

Death Date: June 5, 1898

U.S. Navy officer and captain of the cruiser *Olympia*, Admiral George Dewey's flagship, during the Battle of Manila Bay on May 1, 1898. Charles Vernon Gridley was born on November 24, 1844, in Logansport, Indiana. When he was an infant, his family moved to Hillsdale, Michigan, where he grew up. Not a gifted student, Gridley graduated from the United States Naval Academy, Annapolis, in 1864 close to the bottom of his class. Assigned to the screw sloop *Oneida*, Acting Ensign Gridley participated in the Union blockade of the South in the Gulf of Mexico during the final months of the American Civil War, including the sanguinary Battle of Mobile Bay on August 5, 1864. In 1871, now a lieutenant commander, Gridley was transferred to the navy's first iron-hulled warship, the *Michigan*, which was based in Erie, Pennsylvania. In 1872, he married and decided to raise his family in Erie. He was promoted to commander in 1882 and to captain in March 1897.

On July 28, 1897, Gridley was assigned command of the *Olympia*. At 5:40 a.m., on May 1, 1898, from the deck of the *Olympia*, Dewey commanded: "You may fire when you are ready, Gridley." This signaled the opening of the Battle of Manila Bay, which resulted in the prompt destruction of the entire Spanish Pacific squadron. Gridley was not in the best of health, having already suffered dysentery and liver cancer. The stress of events caused his health to deteriorate precipitously. After the battle, Dewey relieved

U.S. Navy captain Charles Vernon Gridley commanded the flagship *Olympia* during the Battle of Manila Bay. (*Photographic History of the Spanish-American War*, 1898)

the visibly ill Gridley from command and ordered him home on the passenger liner *Coptic*. On June 5, 1898, while the *Coptic* was in harbor at Kobe, Japan, Gridley died. His cremated remains were transferred to the United States and interred in Erie's Lakeside Cemetery. Four U.S. warships were subsequently named in his honor.

“Grito de Baire”

Spanish for “Shout of Baire” or “Cry of Baire.” “Grito de Baire” marked the beginning of the third and final Cuban insurrection of the 19th century, becoming the war cry of the Cuban War of Independence of 1895–1898. The war began on February 24, 1895, a date established by the writer José Martí, the father of Cuban independ-

ence. On that date, the insurrection started more or less at the same time in four locations in Cuba. The first was in Bayate, under the direction of Bartolomé Masó; the second was in Ibarra, under Antonio López Coloma and Juan Gualberto Gómez; the third was in Guantánamo, under Emilio Giró and Periquito Pérez; and the fourth was in Baire, under the brothers Mariano and Saturnino Lora.

On February 24, when the latest insurrection began, the Lora brothers caught the attention of the Cuba people early on, and so the revolt was said to have begun in Baire, a small town in southeastern Cuba, thus the “Shout of Baire.” In reality, of course, the insurrection broke out in at least four major locations simultaneously, an event that Martí himself had carefully orchestrated for maximum effect. His thinking on this was twofold. First, he hoped to frighten and overwhelm Spanish authorities with a rebellion that was not limited to one area, and second, he wanted to incorporate as many Cubans as possible into the movement, realizing that there was strength in numbers. Unfortunately, less than three months after the Grito de Baire, Martí was killed on May 19, 1895, in a clash with Spanish troops on the outskirts of Dos Rios in Oriente Province.

The 1895–1898 Cuban War of Independence was the third in a series of Cuban uprisings against Spanish rule since 1868. In October 1868, the Ten Years' War began with the “Grito de Yara,” a rallying cry signifying an attack on the small village of Yara by the Cuban revolutionary Carlos Manuel de Céspedes y del Castillo. Martí and his followers obviously used this to inform their own rallying cry 27 years later. The Ten Years' War endured until 1878, with the Spanish maintaining control of the island and only undertaking token reforms. In August 1879, the Guerra Chiquita (Little War) broke but petered out in 1880. Most Cubans were exhausted and demoralized by the earlier struggle and so did not rally to the revolutionary cause.

In 1895, however, many Cubans did rally to the cause. Even after the death of Martí, the undisputed intellectual and spiritual father of the revolution, Cuban revolutionaries moved quickly to establish a governing assembly and a revolutionary army to carry the insurrection to all parts of the island. Máximo Báez y Gómez, commander in chief of the revolutionary army, launched a series of effective assaults against Spanish troops that began in the east and ranged all the way to the western parts of Cuba by 1896. Although the Cuban insurgents were unable to decisively defeat the Spanish, they harassed them enough so that they took drastic measures, including General Valeriano Weyler y Nicolau's infamous *reconcentrado* (reconcentration) system that resulted in the brutal relocation of approximately 500,000 Cubans, many of whom lost their lives in the squalid reconcentration camps.

Continued armed assaults against the Spanish, the destruction of sugar plantations and processing plants, and largely successful lobbying efforts on the part of the Cuban Revolutionary Party virtually ensured an American intervention by 1898. When it became clear that Spain would not relinquish Cuba or engage in fundamental reform there, the United States decided to take action and declare war in April 1898. This decision had been made considerably easier with

the mysterious destruction of the U.S. battleship *Maine* in Havana Harbor on February 15, 1898. Now the battle cry “Grito de Baire” became part of the U.S. war effort, although American military forces paid only lip service to the Cuban revolutionaries during the short conflict. When the conflict ended in August 1898, the Cubans had thrown off the shackles of Spanish rule but were clearly in a subservient position to the United States. The island nation would remain a virtual economic colony of the United States until 1959, when a revolution led by Fidel Castro would cast off all things American and convert the nation to a Marxist-Leninist state.

Guam

A Pacific island covering approximately 200 square miles. Guam is the southernmost island in the Mariana Island chain and the largest island in Micronesia. At the outbreak of the Spanish-American War, Guam had been a Spanish possession for more than 200 years. The culture of the island was a mix of Spanish Catholic customs and traditional island beliefs. The island was of little importance to the Spanish Empire, as it had only a few thousand inhabitants and no significant economic resources.

On June 21, 1898, the U.S. Navy cruiser *Charleston*, commanded by Captain Henry Glass, arrived at Guam with orders to secure the island for the United States. When Glass ordered his sailors to open fire on the Spanish garrison, the action was misinterpreted as a salute. The last communication to the island from Spain had arrived before the declaration of war, and the Spanish governor was completely unaware of the state of war between the two nations.

After a short bout of negotiations and a great deal of confusion, on June 22 Governor Juan Marina surrendered the island and its inhabitants to American control. No combatants or civilians were injured in the short-lived Battle of Guam. The entire Spanish garrison of 54 soldiers was taken prisoner and soon repatriated to Spain at American expense. With the Treaty of Paris, signed on December 10, 1898, Spain agreed to permanently cede control of Guam to the United States.

The U.S. Navy soon established a naval base and coaling station on Guam, which had an excellent natural harbor for facilities. The navy and American expansionists had wanted Guam as a vital fu-

eling station for warships and merchant vessels crossing the Pacific Ocean in the East Asia trade. The naval installation at Guam proved critical to trade and national security because it was an important way station for vessels traveling to and from the Philippines, which the United States had also annexed from Spain during the Spanish-American War.

Four days after the December 7, 1941, Japanese attack on Pearl Harbor, Japanese troops invaded Guam. Most of the American garrison had evacuated the island prior to the Japanese landings. The Japanese occupation of Guam lasted for almost three years. On July 21, 1944, a second battle commenced at Guam, with Japanese resistance continuing until August 10. Of the 18,500-man Japanese garrison, fewer than 500 surrendered.

Guam is currently an unincorporated U.S. territory with a semi-autonomous self-elected government. In 1952, Congress declared that all individuals born on Guam were U.S. citizens. In 1968, Congress granted the residents of Guam the right to elect a governor and a lieutenant governor to oversee the island's government. Since 1972, Guam has been allowed to send one nonvoting member to the U.S. House of Representatives. In 1982, the citizens of Guam voted to pursue commonwealth status under the U.S. government, but as of 2006, the island remains an unincorporated U.S. territory.

Guánica, Puerto Rico

Town on the southwestern coast of Puerto Rico that was the site for U.S. landings on July 25, 1898. Guánica is located on a deep-water harbor and is 15 miles west of Ponce. It has been identified as the landing point for Christopher Columbus during his second voyage to the New World in 1493. The town was founded in 1508. Guánica is about 100 miles from San Juan.

Major General Nelson A. Miles, commander of the U.S. expeditionary force for Puerto Rico, departed with his troops from Guantánamo, Cuba, on July 21 in the transports *Columbia*, *Macon*, and *Yale*. U.S. Navy captain Francis J. Higginson commanded the naval escort consisting of the battleship *Massachusetts* (flagship), cruiser *Dixie*, and armed yacht *Gloucester*. Initially, the plan called for Miles to land at Cape Fajardo on the northern coast of Puerto Rico. Once at sea, however, he changed the objectives to Ponce and Guánica on the southern coast. He knew from intelligence reports that the Spanish were expecting him to land at Fajardo and had prepared accordingly. The city of Ponce, by contrast, was only 70 miles from San Juan and offered a ready source of supplies.

U.S. transports off the port of Guánica, Puerto Rico, in 1898. (Library of Congress)

In the early morning of July 25, a small naval landing party of 28 sailors commanded by Lieutenant Harry M. P. Huse, executive officer of the *Gloucester*, came ashore at Guánica. A dozen Spanish loyalists opened fire on the landing force but quickly dispersed to spread the alarm. There was no resistance when the landing party raised the U.S. flag in the town at 11:00 a.m. Huse secured 10 lighters in the harbor and used these to help bring ashore the 6th Massachusetts Infantry and 6th Illinois Infantry Regiments. Upon landing, the American forces immediately moved east toward Yauco and on July 27 advanced on Ponce.

In 2000, Guánica had a population of 9,247 people. It is today the site of the Guánica Dry Forest Reserve, the largest remaining tract of tropical dry coastal forest in the world and an International Biosphere Reserve. The dry forest has 700 plant species, of which 48 are endangered and 16 are unique. The surrounding area produces sugarcane and salt.

Guantánamo, Battle of

Start Date: June 9, 1898

End Date: June 17, 1898

Battle between U.S. Marines and Spanish forces at Guantánamo, Cuba, that occurred on June 9–17, 1898. It was in fact the first significant land action in the Spanish-American War. Guantánamo, located about 45 miles east of Santiago de Cuba, is situated on one of several well-protected bays on the southeastern coast of Cuba. With a population of some 8,000 people at the start of the war, Guantánamo had a garrison of 5,992 men commanded by Spanish general Félix Pareja Mesa. After reinforcements were sent to Santiago, however, it dropped to 5,592 men and would later receive only minor reinforcements. Pareja believed that the United States would attempt a major landing at Guantánamo, so he had his men build extensive defenses around the town.

The U.S. flag being hoisted at Guantánamo, Cuba, on June 12, 1898. (Library of Congress)

On May 10, 1898, the U.S. auxiliary cruiser *St. Louis* and tug *Wompatuck* tried, without success, to cut the undersea cable to Haiti. A small field piece and aggressive action by the small Spanish gunboat *Sandoval* drove off both American ships. The *Sandoval* had been laying a small minefield when the two U.S. ships approached. Shore gunfire put 12 rifle holes in the *Wompatuck*'s funnel. Because the American ships could not cut the cable at Guantánamo, they steamed to Haiti and, in relatively shallow international waters, hauled up the cable and cut it.

Believing that Rear Admiral Pascual Cervera y Topete's squadron could possibly be in Santiago, on May 28 Secretary of the Navy John Davis Long ordered Commodore Winfield Scott Schley to seize Guantánamo as a protected anchorage for coaling and other naval operations. Sampson ordered a reconnaissance, and on June 7 the 1st Marine Battalion embarked at Key West, Florida, for Guantánamo with the plan of seizing the bay. That same day, the auxiliary cruisers *Marblehead* and *Yankee*, under the overall command of Commander Bowman H. McCalla, entered Guantánamo Bay, reduced the Spanish shore fortifications at the entrance of the bay, chased the *Sandoval* farther up the bay, and landed a small contin-

gent of marines who seized and destroyed the cable station before reembarking.

On June 9, McCalla returned to Guantánamo to prepare for the arrival of the 1st Marine Battalion. The next day, his two ships bombarded Spanish strong points guarding the harbor. Just a few hours later, 21 officers and 615 men of Lieutenant Colonel Robert W. Huntington's 1st Marine Battalion in five infantry companies, along with four attached sailors, landed on the east side of the outer harbor. In addition to rifles and pistols, the battalion had an artillery battery with four 3-inch rifles as well as a machine gun. The men were also supported by U.S. warships offshore, including the battleship *Oregon*. The marines advanced to a nearby hill and there established Camp McCalla. When the Spanish fired on the camp on June 11, the first land battle of the Spanish-American War began. On June 12, 60 Cuban insurgents joined the marines. In three days of fighting, the marines sustained casualties of three dead and three wounded. The Spanish suffered some 60 casualties, including 20 prisoners. Among those who witnessed the Guantánamo fighting was American journalist Stephen Crane, who wrote a gripping account of the battle for *McClure's Magazine*.

Following the Battle of Cuzco Hill on June 14 and as a consequence of U.S. naval gunfire support, by June 15 the Spanish had been driven from the eastern coast of the lower bay. Huntington ordered two companies of marines and 50 insurgents to attack a well supplying the Spanish with water. Supported by gunfire from the U.S. Navy gunboat *Dolphin*, Huntington's men destroyed the well and captured 20 Spanish soldiers.

In the meantime, the *Sandoval*, operating behind the safety of its minefield, ferried men and supplies across the bay. To counter this and to destroy a small Spanish fort, Rear Admiral William T. Sampson dispatched the *Texas* to join the *Marblehead* and gunboat *Suwanee* to shell the Spanish shore positions on June 15. Closing to 2,300 yards, the ships silenced the fort in about an hour of shelling. The American ships also located and swept two mines. The *Sandoval* then withdrew farther up the bay. Fighting essentially ended by June 17 with a total cost to the marines to that point of 6 dead and 16 wounded. General Pareja proceeded to fortify the interior, concerned that the Americans might launch a U.S. land offensive from Guantánamo Bay.

During June 21–22, the Americans removed 48 mines from Guantánamo Bay. Later it became an anchorage for coaling and re-supply operations. It also served as a staging point for the invasion of Puerto Rico. Major General Nelson A. Miles departed from Guantánamo Bay on July 21 for that island. Guantánamo officially capitulated on July 25. The marines remained at Guantánamo until August 5. The U.S. Navy was so enamored with Guantánamo and Guantánamo Bay that it insisted that the Cubans lease the area to the United States in perpetuity. The United States continues to maintain a sizable naval base at Guantánamo, and it also serves as a controversial detention center for enemy combatants during the War on Terror.

American War. Since 1959, the Guantánamo Bay Naval Base has maintained a hostile perimeter, surrounded and opposed by Cuban military forces. The Cuban government argues that the base is an illegal attack upon Cuban sovereignty and should be returned to Cuban control. Since the September 11, 2001, terrorist attacks in the United States, Guantánamo Bay Naval Base has played a controversial role in the War on Terror, housing hundreds of detainees captured in Afghanistan and Iraq. The detainees, suspected of membership in terrorist organizations, have become a divisive political issue within the United States because many of them have been held for four years or more without having been charged with a crime.

Guantánamo Bay first came under Spanish control in 1494, when the Italian explorer Christopher Columbus landed in the harbor and claimed the territory on behalf of the Spanish Crown. Guantánamo Bay remained under Spanish sovereignty for 400 years. In the latter half of the 19th century, Cuban citizens rebelled against Spanish control. Sympathy for the plight of the Cubans provided much of the impetus for calls that the United States intervene, which ultimately led to the Spanish-American War. The Teller Amendment to the U.S. declaration of war guaranteed that the United States would not annex Cuba during or after the war, but it was largely a political maneuver to deflect criticism that the William McKinley administration was bent on creating an overseas empire. This amendment was superseded by the Platt Amendment of 1901, which declared that the United States would use force in Cuba whenever it deemed necessary and gave the United States the right to establish a naval base in Cuba.

Guantánamo Bay, an excellent natural harbor close to the city of Santiago, provided a safe haven for U.S. naval vessels blockading the island in 1898. When the Treaty of Paris ending the war was signed on December 10, 1898, Spain agreed to evacuate Cuba and recognize its independence. At the time of the Spanish withdrawal, the U.S. Army was in almost complete possession of the island.

On February 23, 1903, Cuban president Tomás Estrada Palma, who was born an American citizen, agreed to lease the territory surrounding Guantánamo Bay to the U.S. Navy in perpetuity. The area would technically remain a Cuban territory but would be under complete American control. The United States saw it as a coaling station and naval base. In exchange for the lease, the U.S. government agreed to pay \$2,000 in gold coins annually. This amount doubled in 1934; in exchange, the lease became permanent unless both governments agreed to dissolve it. In effect, the United States could not be legally forced to leave the area.

When Fidel Castro seized power in Cuba in 1959 and went on to establish a communist dictatorship, he immediately called for the United States to abrogate the treaty and evacuate Cuban soil. The U.S. government ignored his demand. Although the United States continued to send payments for the lease in the form of a yearly government check, Castro refused to cash the payments. However, in more recent times, the Castro government has cashed the payment checks from the United States, leading American diplomats to conjecture that Castro had implicitly accepted the terms of the

Guantánamo Bay Naval Base

U.S. Naval Base located near the southeastern tip of Cuba and the only American military installation located in a communist country. Guantánamo Bay has been under direct U.S. control since the Spanish-

agreement. No doubt, Cuba's struggling and cash-strapped economy may have had more to do with this than Castro's acceptance of Guantánamo Bay Naval Base.

During the 1962 Cuban Missile Crisis, American residents of the naval base were ordered to evacuate the station. Relations between Cuba and the United States along the station's borders were tense then and remain so today. Both nations have planted massive minefields as well as other static defenses along the perimeter. The American minefield remained in place until President William J. Clinton ordered its removal in 1996. The Cuban military has made no effort to remove its mines surrounding the base, however. Almost 10,000 U.S. troops remain on active duty at Guantánamo Bay Naval Station.

Other points of contention between the United States and Cuba concerning the base have included water usage and the legality of the original treaty. Prior to 1964, the United States purchased water rights from Cuba to supply the base. In that year, Castro ordered the pipelines closed. The U.S. Navy responded by constructing desalination plants at the base. The 1969 Vienna Convention on the Law of Treaties declared all treaties coerced by force or threat of force to be void. Since 1969, Castro has argued that Cuba was forced to lease the area to the U.S. government and thus should be released from the obligation.

In the last three decades of the 20th century, Guantánamo Bay Naval Station was used as a holding facility for Cuban and Haitian refugees intercepted at sea while attempting to enter the United States by boat. The refugees were placed in detention centers on the base, but the detention camps were shut down under a ruling by Judge Sterling Johnson Jr. that they were unconstitutional. By 1995, all of the inhabitants of the camps had been evacuated. The base is still used as a temporary facility for migrants interdicted along the U.S. coastline, however.

In 2002, the Department of Defense directed that certain individuals captured in the so-called War on Terror would be sent to Guantánamo Bay for detention and interrogation. By the end of the year, four facilities, specifically Camps Delta, Echo, Iguana, and X-Ray, were under construction to imprison suspected members of the Al Qaeda terrorist organization as well as their allies and supporters captured in Afghanistan and Iraq. The decision to hold terror suspects at Guantánamo Bay quickly became a controversial subject for the American public. Allegations of mistreatment of prisoners soon emerged from the camps. In particular, certain segments of the public objected to harsh interrogation techniques utilized in the camps.

The situation of detainees in Guantánamo has provoked harsh criticism both domestically and internationally. Although President George W. Bush has repeatedly asserted that the detainees do not fall under the protections of the Geneva Convention Relative to Prisoners of War (1949), he also announced that they would be voluntarily extended the protections of the convention. Detainees at the prison have been denied opportunities to speak with attorneys, and most have not been formally charged with any crimes.

Critics of this policy argue that the prisoners have been denied their rights to due process by the Bush administration, which created special military commissions to hear cases. In 2005, a federal district court agreed, arguing that because Guantánamo Bay is under complete U.S. control, constitutional protections apply to detainees on the base. Furthermore, the court announced that members of the Taliban, the deposed government of Afghanistan, were entitled to prisoner of war status, although such status was not extended to members of Al Qaeda. In 2006, the U.S. Supreme Court reversed the district court's ruling in part, holding that detainees do not have a constitutional right to habeas corpus. The court did, however, rule that detainees must be tried in military courts-martial as provided by statutory law rather than by the special military commissions appointed by the Bush administration. In 2006, the United Nations General Assembly and the European Union formally requested the closure of the detainee camps at Guantánamo Bay Naval Station. As of early 2009, the prison remained open.

Guayama, Battle of

Event Date: August 5, 1898

Battle of the Puerto Rico Campaign. Guayama, located in southeastern Puerto Rico some five miles inland from its seaport of Arroyo, had an 1898 population of some 14,000 people. At the end of May, the town was garrisoned by a single Spanish company of 123 men. However, following the U.S. landing at Guánica on July 25, the Spanish departed the town, and the mayor of Guayama sent word to Major General James H. Wilson at Ponce asking for U.S. protection against a possible Spanish return.

On August 4, U.S. troops under Brigadier General Peter C. Haines of Major General John R. Brooke's command at Arroyo were ordered to move on Guayama and secure it. Haines departed Arroyo early in the morning on August 5 with the 4th Ohio and the 3rd Illinois Infantry Regiments. At 11:00 a.m., the Americans encountered Spanish outposts outside Guayama and skirmished briefly with a 40-man Spanish guerrilla force commanded by Captain Salvador Acha.

In the brief fight, the Spanish side suffered 2 dead and 15 wounded. The Americans had only 4 or 5 wounded, all from the 4th Ohio. After the fight, the Americans entered the town of Guayama to a cheering populace. In a brief encounter north of Guayama on August 8, the Spanish were driven off with three shots from two of the American Sims-Dudley dynamite guns.

Gullón y Iglesias, Pío

Birth Date: 1835

Death Date: 1916

Spanish politician and minister of state. Born in Astorga in 1835, Pío Gullón y Iglesias was editor of the progressive newspaper *El Día* and an author. A leader of the Liberal Party, he was elected as a deputy from Astorga and also served as a senator in the Spanish Cortes (parliament). Despite Gullón's limited experience in foreign affairs, Prime Minister Práxedes Mateo Sagasta appointed him as minister of foreign affairs on October 4, 1897. Gullón believed that Spain could not win a war with the United States and, although officially rejecting U.S. offers to mediate tensions over Cuba, unofficially sought the assistance of several European powers, including the French government and even the Vatican, to resolve the crisis short of war. When these efforts failed, he advocated making concessions to the United States to avert war.

When the war began, Gullón came under heavy criticism for suggesting concessions and was replaced as minister of foreign affairs by the Duke of Almodóvar del Río on May 15, 1898. Gullón died in Madrid in 1916.

Gunboat Operations, Philippine Islands

Following the Battle of Manila Bay on May 1, 1898, U.S. Navy ships blockaded Manila until army forces could arrive. In August, army troops captured the city. Over the next five months, gunboats helped U.S. troops seize key positions around the islands. When the Philippine-American War began in February 1899, naval gunfire helped repulse Filipino attacks on Manila. In the insurgency that followed, U.S. Navy gunboats provided essential mobility to American troops and played a vital role in winning the Philippine-American War. Indeed, gunboats were absolutely essential during an insurgency that theoretically spanned some 7,000 islands and 500,000 square miles of terrain.

Rear Admiral George C. Remey, who commanded the Asiatic Squadron, deployed its gunboats and other small warships to four patrol zones: one on the island of Luzon; the second on the islands of Panay, Mindoro, Palawan, and Occidental Negros; the third on the Moro country of the Sulu group and southern Mindanao; and the last one on the Visayas group composed of Cebu, Samar, Leyte, Bohol, Oriental Negros, and northern Mindanao from the Straits of Surigao to the Dapitan Peninsula. Some gunboats patrolled as far away as Borneo and China to cut off arms shipments to the Filipino guerrillas.

The gunboats patrolled Philippine waters to isolate Filipino forces on individual islands and interdict the flow of arms and supplies to them. The gunboats also supported ground operations with firepower, escorted troop transports, covered landings, and evacuated endangered garrisons. Ships, particularly the army's improvised troop transports, frequently ran aground, and gunboats then helped pull them free, frequently under hostile fire. At night, gunboats sailed deep behind insurgent lines, landing and retrieving scouts who reported on enemy positions and strength. The gunboats maintained communication with scattered army and marine garrisons and mobile columns and delivered their supplies, pay, and mail.

To supplement its meager forces, the navy seized 13 former Spanish gunboats and converted yachts and other small civilian craft to naval service. Most of these gunboats, particularly the converted yachts, were of small size. They averaged about 90 feet in length and carried a variety of weapons including 1-, 2-, and 3-pounder guns; 37-millimeter cannon; Colt and Gatling guns, and various small arms. Among them, however, were a few heavily armed warships such as the *Petrel*, an 892-ton, 176-foot gunboat armed with four 6-inch guns that earned it the nickname "Baby Battleship." A landing force from the *Petrel* seized the important port of Cebu in the first weeks of the war.

Despite the acquisition of Spanish and converted civilian ships, the navy could rarely deploy more than two dozen gunboats to patrol the thousands of islands and numerous navigable rivers of the Philippines. Dispersed across the islands, gunboats generally operated singly or in pairs.

Fairly typical of gunboat operations were the final campaigns to secure the island of Samar. Despite earlier campaigns there, including a celebrated effort by Major Littleton W. T. Waller and 300

The U.S. Navy gunboat *Petrel* operated in Philippine waters during the Spanish-American War and the Philippine-American War. (Naval Historical Center)

marines, Filipino insurgents continued to operate on Samar, eluding U.S. forces in its dense jungle and mountainous terrain. In January and February 1902, the gunboats *Frolic* and *Villalobos* carried soldiers on a series of raids on Samar that yielded valuable intelligence and led to the capture of Filipino commander Vicente Lukban. Four more gunboats arrived in March, and these allowed their commander, Lieutenant Commander Washington I. Chambers, to blockade the island, cutting off vital supplies to the insurgents, particularly food, which Samar imported from neighboring islands. In April, Chambers's squadron embarked the troops of Brigadier General Frederick D. Grant and carried them deep into the island along its rivers. These forces overran the insurgents' main camp and harried them across the island in a three-week campaign that forced their surrender, ending the war on Samar two months before the official proclamation of peace on July 4, 1902.

As the war wound down, the navy shifted gunboats to other operations. Some worked to suppress the slave trade among the Moros in the Sulu archipelago, southern Mindanao, and southern Palawan. Others hunted pirates in Philippine and Chinese waters. Gunboats thus played a vital role in the Philippine-American War. Without them, conquest of the Philippines might well have been impossible.

Gussie, USS

An aging side-wheel steamer that gained notoriety when the U.S. Army used it during an ill-fated attempt to land arms and equip-

ment to Cuban rebels prior to the U.S. invasion of Cuba. The mission was undertaken in May 1898. Although unsuccessful, the expedition resulted in the first action in Cuba during the Spanish-American War. The *Gussie*, displacing 998 tons, was built in Wilmington, Delaware, in 1872.

On April 10, 1898, the U.S. Army chartered the *Gussie* from the Southern Pacific Company for use as a transport at the rate of \$350 per day. Shortly after the declaration of war, the army, unable at that time to land any significant numbers of troops in Cuba, concentrated on supplying arms to the Cuban insurgents who were fighting the Spanish forces on the island. On May 10, the *Gussie* departed from Tampa, Florida, commanded by Captain Joseph Dorst of the 4th U.S. Cavalry Regiment. The ship carried in its hold a load of arms and equipment, Companies E and G of the 1st U.S. Infantry, several officers of the Cuban insurgency, Cuban pilots, and mules and horses. There were also several newspaper reporters on board, including Rufus Zogbaum and Stephen Bonsal.

The mission became a comedy of errors. Both the expedition and its intended recipients and destination—the forces of General Pedro Diaz in the Pinar del Rio Province—were widely reported in American newspapers. The *Gussie*, gaily painted red and white, was towed out of port by the New York *World's* chartered tugboat in broad daylight, and Spanish authorities in Cuba quickly learned of the ship's departure. In attempting to pass through the U.S. Navy blockade of Cuba, U.S. Navy ships, not having been informed of the ship's mission, fired shots across the *Gussie's* bow and briefly stopped it.

Two days after its departure, the *Gussie* was easily spotted by residents and soldiers as it passed the Cuban port city of Havana, and its movements were communicated by Spanish signaling stations along the coast. At Mariel, the ship came under fire from Spanish cavalry, but the attack was quelled by the U.S. warships now accompanying the *Gussie*: the U.S. Revenue Service cutter *Manning* and the armed yacht *Wasp*. The *Gussie* continued westward to Cabañas Bay, where it sent in two of its boats with 40 men. Unfortunately, the landing point was within two miles of Fort Cabañas and its 2,000-man Spanish garrison. The Americans landed and penetrated into the jungle. The Cuban insurgents also landed but failed to make contact with local guerrilla forces. Shortly after landing, the Americans came under attack from a Spanish force. The actions of the American skirmish line and fire from the supporting troops on the *Gussie* repelled the Spanish assault, however.

Given the proximity of Spanish forces and the expedition's inability to contact the local insurgency, supplies were not landed, and the landing force withdrew to the beach and then returned to the *Gussie* under covering fire from the supporting warships. In the skirmish, only one member of the expedition was slightly wounded, a San Francisco *Post* correspondent. Reportedly, on the Spanish side, a colonel and several soldiers were killed. After spending another day off the Cuban coast and with the Americans unable to secure a suitable location to land its cargo, the *Gussie* returned to Tampa. Its failed expedition was widely reported in the newspapers.

In early June, the *Gussie* was employed in a second attempt to land arms to the Cuban insurgent forces, this time in the Bay of Caibarién. It was accompanied by the armed yacht *Suwanee* and gunboat *Newport*. Although the insurgents were present at the landing point, the shallowness of the water and the presence of a small Spanish gunboat caused the abandonment of the landing attempt. The *Gussie* returned to Key West, again unsuccessful. The army continued to employ the *Gussie* as a transport. Its official lifting capacity was 120 men and 300 horses. When Major General William Shafter's V Corps was convoyed to Cuba, the *Gussie*, designated as Transport Number 3, carried teamsters and packers accompanying the expedition. The ship continued to operate with the army until September 11, 1898. Perhaps the most significant outcome of the *Gussie's* first expedition was the imposition of stricter censorship of important military operations to avoid revealing these to the Spanish.

H

Hanna, Mark

Birth Date: September 24, 1837

Death Date: February 15, 1904

U.S. businessman, Republican Party politician, and political adviser. Marcus Alonzo Hanna, better known as Mark Hanna, was the prototype of the modern political adviser and served brilliantly as President William McKinley's campaign manager in the critical election of 1896. Born on September 24, 1837, in New Lisbon, Ohio, Hanna briefly attended Western Reserve College before embarking on a career in business. After the American Civil War, Hanna, now based in Cleveland, Ohio, became wealthy as a transporter of goods and provider of services to the nascent steel and coal industries in western Pennsylvania and eastern Ohio. During the 1880s, Hanna, a Republican, began his political career as an adviser to politicians and political candidates. His close association with prominent businessmen in Ohio and Pennsylvania proved quite beneficial in his attempts to raise money for political campaigns.

In 1888, Hanna orchestrated Ohio senator John Sherman's unsuccessful attempt to secure the Republican nomination for president. Not deterred by failure, Hanna helped William McKinley become governor of Ohio in 1891. Hanna then became McKinley's chief political adviser and helped with his reelection in 1893. Realizing McKinley's political appeal with voters, Hanna launched McKinley's successful bid for the presidency in 1896. As chairman of the Republican National Convention, Hanna raised \$3.5 million for McKinley's campaign fund, an enormous amount of money for the time. Wealthy industrialists, distrustful of Democratic candidate William Jennings Bryan's insistence on free silver and populist rhetoric, willingly contributed funds to McKinley, who championed the gold standard and protective tariffs.

During the 1896 campaign, McKinley outspent Bryan by a margin of 12 to 1. Democrats, Populists, and Free Silver Republicans accused Hanna of protecting big business. Nevertheless, Hanna's campaign strategy, which employed an unprecedented 1,400 people, inundated the public with pro-McKinley advertisements, concentrated on specific issues such as the gold standard, and capitalized on McKinley's considerable speech-making abilities. While Hanna collected funds from wealthy donors, McKinley met delegates on his front porch in Canton, Ohio. Hanna's campaign strategy became the prototype for American presidential campaigns during the 20th century.

After his election, McKinley appointed Ohio senator John Sherman to be his first secretary of state, and the Ohio state legislature chose Hanna to fill Sherman's position in the U.S. Senate. Hanna's power in Congress was naturally enhanced by his friendship with McKinley. Hanna consistently cautioned McKinley against war with Spain until public opinion, encouraged by yellow journalism, demanded it. This course of action caused friction with Republicans such as Theodore Roosevelt, who favored an early war, and Sherman, who was strongly opposed to U.S. expansionism. McKinley ultimately followed Hanna's advice and did not call for war until Spanish atrocities in Cuba, the infamous Dupuy de Lôme–Canalejas Letter, and the sinking of the *Maine* in February 1898 significantly outraged the majority of the American public.

Hanna, who did not favor the maverick Theodore Roosevelt, was unable to block the Progressive Republican effort to make Roosevelt the Republican vice presidential candidate in 1900. Following McKinley's assassination in 1901, Hanna's political power was sharply diminished, with the Republican Party dominated for a time by its progressive wing. Despite his antipathy toward Roosevelt, Hanna vigorously supported construction of an isthmian

Republican Party political operative Marcus Alonzo Hanna introduced innovative political campaign techniques and helped secure the election of President William McKinley. (Library of Congress)

canal in Panama. A potential contender for the Republican presidential nomination in 1904, Hanna died of typhoid fever in Washington, D.C., on February 15, 1904.

Harvard Incident

Event Date: July 4, 1898

The unintentional shooting of Spanish prisoners of war (POWs) on the U.S. Navy auxiliary cruiser *Harvard* on July 4, 1898, off the coast of Siboney, Cuba. Six Spaniards were killed and another 13 were wounded in the incident. The *Harvard* was launched in 1888 as the

civilian schooner-rigged steamship *City of New York* for the Inman line. In 1893, it was reregistered under the American line as the *New York*. It was designed chiefly as a transatlantic passenger ship. On April 26, 1898, the *New York* was pressed into service by the U.S. Navy as an auxiliary cruiser, renamed the *Harvard* and placed under a civilian crew. Sent to the Caribbean on April 30 to undertake scouting duties, it returned to the United States in early June, at which time its crew officially became part of the U.S. Navy at Newport News, Virginia. Arriving off the Cuban coast on July 1, 1898, the *Harvard* rescued more than 600 Spanish naval officers and seamen following the naval battle at Santiago de Cuba on July 3.

With some 600 Spanish prisoners aboard ship, the 9th Massachusetts Volunteer Infantry was designated to help the *Harvard*'s crew guard the POWs. Between 10:30 p.m. and midnight on July 4, a Spanish prisoner stepped over a line that had been painted on the ship's deck. The POWs had been warned not to step over the line. A sentry ordered the prisoner to return to his former position, but he did not respond. The guard then fired his weapon, allegedly into the air, to get the POW's attention. This prompted the other POWs to rise. The commotion caused other members of the 9th Massachusetts to panic, believing that the prisoners were staging an uprising. Within a few seconds, the soldiers fired a volley into the crowd of POWs, resulting in 6 dead and 13 wounded.

The *Harvard Incident* was ruled a tragic mistake that had not resulted from premeditation or malfeasance. The language barrier and the inexperience of the U.S. soldiers were likely the cause of the shootings. The Spaniard who had been ordered to step away from the line had probably been attempting to get air on a torridly hot and humid night and had not heeded the sentry's warning because he did not speak English. Overall, U.S. forces treated Spanish POWs well, and the *Harvard Incident* was an exception.

Havana, Cuba

Principal city of Cuba and the center of Spanish colonial government. Havana (La Habana in Spanish) was not only the premier city in Cuba, but it served as the cultural and political center of the entire West Indies. Havana is located on Cuba's northwestern coast less than 100 miles south-southwest of Key West, Florida, and had an estimated population of about 200,000 people at the beginning of the Spanish-American War. In addition to its strategic location

Broad thoroughfare in the city of Havana, 1898. (*Photographic History of the Spanish-American War*, 1898)

on the Florida Strait, the city also boasts an excellent natural harbor that facilitated great trade activity. At the time of the Spanish-American War, Havana and Havana Harbor were well fortified, as the Spanish hoped to safeguard its busy port and prevent would-be enemies from gaining egress to the island via the harbor.

An integral part of Havana's defense was Morro Castle (Castillo de los Tres Reyes Magos del Morro), a massive, medieval-appearing fortress that the Spanish first built in 1589 at the entrance to Havana Harbor. It sits on a promontory that gives it a commanding presence that may be seen for several miles in any direction. In 1845, the Spanish built a lighthouse at Morro Castle to aid in ship navigation.

Also part of the city's defenses was La Cabana, or La Fortaleza de San Carlos de la Cabana, situated at the eastern edge of Havana Harbor and built in 1763 by King Carlos III at the end of the Seven Years' War (1756–1763). The fort sat on elevated ground that aided in defense and ship navigation.

Europeans were first evident in the area of Havana as early as 1509, when they first visited the area during Sebastián de Ocampo's expedition around the island. The following year, the first Spanish colonists arrived in the vicinity of what would become Havana, launching almost 400 years of Spanish rule over Cuba. Havana was formally established in August 1515 but not in its present location. The conquistador Diego Velázquez de Cuéllar established Havana

on the southern coast of Cuba. In 1519, Havana was relocated to its current location on the northern coast. With time, Havana became the principal port in the West Indies and an important center of trade, commerce, and Spanish cultural influence in the region.

From June 1762 to July 1763, Havana was occupied by the British during the Seven Years' War. Until the city fell to the United States in 1898, this brief period was the only time since the beginning of the 16th century that the Spanish had not controlled the city. By the early 19th century, Havana was one of the most prosperous and populous cities in all of the Americas. In addition to the millions of dollars of goods that entered and exited Havana from the world over, the city boasted one of the world's largest shipyards, El Arsenal.

Interestingly, during the Spanish-American War Havana saw little action and remained largely untouched. It certainly suffered the momentary effects of the American naval blockade, but little fighting occurred in Havana, and the city would not be occupied by American forces until December 1898, months after the conflict ended. Perhaps Havana's biggest contribution to the war was the fact that it played host to the scene of the destruction of the U.S. battleship *Maine* on the night of February 15, 1898. The *Maine* suffered two explosions, of then unknown origin, while it sat anchored in Havana Harbor. While the disaster did not in and of itself start the Spanish-American War, it certainly increased tensions significantly between Spain and the United States.

views were articulated by many newspaper editors, by congressional leaders, and even by U.S. presidents.

By the mid-19th century, European and American plantation owners had begun to acquire large swaths of land for the cultivation of cash crops throughout the islands. As such, they wielded considerable power, much to the consternation of the monarchy and native islanders. Before long, the planter class began to clash with the Hawaiian constitutional monarchy over using government funds to recruit cheap labor from the Cape Verde Islands, Puerto Rico, China, and Japan. This not only threatened the livelihoods of the island natives but also threatened a radical change in the social and cultural makeup of Hawaii.

In the final month of her short reign, Queen Liliuokalani asserted her authority over advisers who were linked to plantation interests. She did not prevail. On January 17, 1893, Liliuokalani was overthrown by a cabal of plantation owners and other businessmen in Honolulu. Almost all of them were white Europeans and Americans. Their rebellion received the immediate support of U.S. minister to Hawaii John Stevens, who sent for a contingent of U.S. Marines to secure the islands and prepare them for eventual annexation to the United States.

In the United States, lame-duck president Benjamin Harrison favored annexation. But his term expired only six and a half weeks after the overthrow of the queen in Hawaii. That interval was too short to effect annexation in the U.S. Congress. Harrison's successor, Democrat Grover Cleveland, officially repudiated the overthrow in a message to Congress on December 18, 1893, but did nothing to restore the status quo ante. Cleveland opposed U.S. imperial expansion and had no intention of supporting Hawaiian annexation. In 1894, resolutions criticizing the 1893 coup d'état were introduced in the House of Representatives and U.S. Senate. Although they were not adopted, these anticipated a congressional apology in 1993 for the American role in overthrowing a government that it had once recognized as sovereign.

The 1893 overthrow of the Hawaiian monarchy also generated domestic Hawaiian opposition to annexation. Hawaiian-language documents in the U.S. National Archives testify to the antiannexation views held by 80 percent or more of native Hawaiians aged 16 and older who had signed petitions in 1897 and 1898. After 1893, Japanese foreign minister Ōkuma Shigenobu, contended that only a minority in the Hawaiian Islands favored annexation. He suggested that a plebiscite precede any annexation. With a concern for maintaining harmonious relations with Japan, the U.S. Senate Foreign Relations Committee carefully considered Ōkuma's objections. But on August 14, 1897, Secretary of State John Sherman rebuffed Ōkuma.

Nevertheless, during 1897–1898, President William McKinley's annexation treaty languished, failing to attract sufficient support from U.S. senators whose votes would be needed to meet the constitutionally required two-thirds supermajority. In lieu of a full treaty, politicians desirous of taking the Hawaiian Islands also advocated passage of a bill or a joint resolution to be passed by both houses of Congress.

Commodore George Dewey's success in the Battle of Manila Bay on May 1, 1898, only sharpened the context of congressional debates concerning Hawaii. Furthermore, U.S. involvement in the Philippine-American War (1899–1902) highlighted the military advantage of permanent U.S. naval access to a mid-Pacific coaling station in the Hawaiian Islands. During a secret session of the U.S. Senate on May 31, 1898, Massachusetts senator Henry Cabot Lodge, an inveterate expansionist, and a majority of senators expressed support for annexing the Hawaiian Islands as a coaling station and base for military operations in the Philippines. Senator John T. Morgan of Alabama also touted the climate of the Hawaiian Islands for what U.S. soldiers and sailors of later generations would call rest and recreation.

As an alternative to the deadlocked annexation treaty, legislators resurrected an earlier alternative of a bill introduced into both houses of Congress that was said to be equivalent to a treaty of annexation. Ultimately, a majority of the Senate supported what became the Newlands Resolution. Having received simple majorities in the House and Senate, it was signed by President McKinley on July 7, 1898. This act officially annexed Hawaii. On April 30, 1900, Congress declared the Hawaiian Islands a U.S. territory.

Hawkins, Hamilton Smith

Birth Date: 1834

Death Date: March 27, 1910

U.S. Army officer. Hamilton S. Hawkins was born in South Carolina in 1834, the son of an army surgeon who died during the Mexican-American War (1846–1848). Hawkins entered the United States Military Academy, West Point, with the class of 1856 but left the academy in 1855 when he was found deficient in academics. With the beginning of the American Civil War, despite his family's Southern roots he fought for the North and was commissioned a second lieutenant of infantry in 1861. He participated in numerous battles, including Gettysburg.

Hawkins remained in the army after the war and took part in several campaigns against the Plains Indians, including service as

a battalion commander of the 6th Infantry Regiment against the Utes in Colorado in 1880. From 1888 to 1892, he served as the commandant of cadets at West Point, becoming the only officer in the history of the United States Military Academy to return as commandant after having failed to graduate.

With the beginning of the Spanish-American War, on May 4, 1898, Hawkins was advanced to brigadier general of volunteers and took command of the 1st Brigade, 1st Division of V Corps, in the invasion of Cuba. The brigade consisted of the 71st New York Volunteer Regiment as well as the 6th and 16th Infantry Regiments of the regular army. Landing at Daiquirí in June, Hamilton's unit saw brief action in the Battle of Las Guásimas (June 24, 1898).

Hawkins's major action during the campaign to seize Santiago de Cuba came during the Battle of San Juan Hill (July 1, 1898). His brigade was tasked with the main attack on San Juan Hill itself, while Brigadier General Samuel Storrow Sumner's cavalry division assaulted the heights on the right of the brigade to capture nearby Kettle Hill. On the morning of July 1, Hawkins's brigade crossed the San Juan River and turned south to form up for the assault on the hill. The brigade was positioned in an open field of high grass below the hill. More than 500 Spanish troops defended the hill from trenches and a blockhouse. These defenses were supported by barbed-wire obstacles. Hawkins's two aides assisted the positioning of the brigade's regiments: Lieutenant Jules Ord positioned himself in a tree to observe the cavalry brigade positioning to the infantry's right flank, and Lieutenant Dennis Michie guided units on the ground. Michie was soon killed by Spanish rifle fire from the heights above the assembly position.

As the brigade formed below San Juan Hill, the 6th and 16th Infantry Regiments were in the lead, with the inexperienced volunteers of the 71st New York in reserve. In the ensuing confusion as units were positioned, the 71st took significant casualties and was prevented from withdrawing only through the intervention of Brigadier General Jacob Ford Kent. All of the regiments came under heavy and accurate rifle fire from the heights, which caused many casualties. Eventually, the order was given to begin the assault on the hill.

At that point, Lieutenant Ord requested permission to lead the assault on the hill. Hawkins, because of his experience commanding costly assaults during the Civil War, was doubtful of the brigade's chances for success and hesitated. Ord then indicated that as long as he was not denied permission, he would charge. Hawkins neither gave nor forbade the charge. The lieutenant then rallied the infantry and began the charge.

As Ord led, Hawkins followed behind, officially ordering charge sounded by the buglers. Hawkins positioned himself between the 6th and 16th Regiments and led the main body of the brigade up the hill behind Ord. Ord himself was the first to encounter the Spanish position and was killed by a Spanish rifleman. Hawkins was quite conspicuous leading the main body of the brigade, his thick white mane of hair making him an obvious target as the brigade advanced. He led the brigade throughout the

battle despite being wounded severely in the foot. Inspired by Ord's example, the brigade secured the heights as the Spanish survivors retreated.

The assault on San Juan Hill was the last major episode of Hawkins's military career. In October 1898, he returned to the United States after being promoted to major general of volunteers. Shortly thereafter, he retired. Hawkins died in General Springs, New York, on March 27, 1910.

Hay, John Milton

Birth Date: October 12, 1838

Death Date: July 1, 1905

U.S. diplomat, secretary of state (1898–1905), and principal architect and author of the Open Door Policy in the Far East. Born in Salem, Indiana, on October 12, 1838, John Milton Hay grew up in Springfield, Illinois. He graduated from Brown University in 1858 and read law while working in his uncle's Springfield office, which was adjacent to the office of Abraham Lincoln and William Herdon. During the American Civil War, President Lincoln appointed Hay one of his private secretaries. In March 1865, he was appointed secretary to the United States legation in Paris. From 1867 to 1868, he was chargé d'affaires in Vienna, and in 1869, he became secretary of the legation in Madrid.

Hay returned to the United States in 1870 and embarked on a career as a journalist and writer. Under the guidance of senior journalist Whitelaw Reid, Hay published editorials for the *New York Tribune* until 1875. He published a book of poems in 1871 and an unsigned antilabor union novel, *Bread Winners*, in 1884. In 1890, along with John C. Nicolay, Hay completed the ten-volume *Abraham Lincoln: A History*.

Astute investing and marriage to a wealthy heiress enabled Hay to acquire a modest fortune. Except for a brief period in 1878 as assistant secretary of state, he remained out of government circles. He did, however, manage to meet and establish friendships with a number of influential people including Henry Adams, Henry Cabot Lodge, William McKinley, and Theodore Roosevelt.

John Milton Hay was a poet, novelist, and historian as well as U.S. secretary of state under Presidents William McKinley and Theodore Roosevelt, when he helped introduce the Open Door Policy in the Far East. (Library of Congress)

In 1897, Hay was coaxed back to diplomacy and accepted appointment as ambassador to Great Britain. He was a staunch advocate of Anglo-Saxon cooperation and favored U.S. overseas expansion. As ambassador, he kept President McKinley informed of European attitudes regarding U.S. diplomatic policies. During the Spanish-American War, Hay arranged for the British government to handle U.S. consular affairs in Spain. On July 27, 1898, Hay wrote a letter to Roosevelt describing the conflict as “a splendid little war,” a moniker that has been used to the present day.

In August 1898, McKinley appointed Hay secretary of state. Hay helped negotiate the Treaty of Paris leading to the important acquisition of the Philippine Islands, which Hay favored, along with taking Puerto Rico. When the treaty was signed on December 10, 1898, the United States paid Spain \$20 million for possession of the Philippines, while both Puerto Rico and Guam were ceded to the United States. Spain also relinquished its claim to Cuba, which became independent, although the United States secured a strategic naval base there in Guantánamo Bay.

Diplomatic initiatives in the Far East and the pursuit of overseas economic markets ultimately resulted in Hay’s Open Door Policy. In the 1890s, tensions had mounted in China as European nations established their own spheres of influence in the region. In

1899, Hay circulated the Open Door Notes to the major imperial powers in an effort to keep China open for trade to all. On September 6, 1899, he sent the first of his notes to Berlin, London, and St. Petersburg. A subsequent missive was delivered to Tokyo, Rome, and Paris. Hay’s notes did not insist upon the territorial integrity of China; they applied only to the “relatively small foreign leaseholds and spheres of influence” that had recently been established there. In reality, Hay’s Open Door was designed to promote increased American trade and not China’s rights. Most important, his diplomatic efforts prevented the possible outbreak of war among the competing nations in China.

Hay’s careful diplomacy also helped ease tensions in the 1900 Boxer Rebellion. A group of fanatical Chinese opponents of Western influence, known to the West as Boxers, killed a number of foreigners and trapped members of the foreign legations in the besieged city of Beijing (Peking). Hay was instrumental in securing the addition of some 2,500 U.S. troops from the Philippines to the 18,000-man international rescue expedition that broke the siege of the foreign embassies and ended the uprising. He also supported U.S. participation in the First International Peace Conference at The Hague in 1899 in an effort to promote world peace through international arbitration and disarmament.

In 1901, Hay was successful in replacing the Clayton-Bulwer Treaty of 1850 with the Hay-Pauncefote Treaty. This treaty, negotiated with the British, provided that the United States could construct, own, and fortify a waterway across Central America. The treaty opened the way for U.S. control of a canal linking the Caribbean to the Pacific Ocean. Hay’s final diplomatic effort, though largely undertaken by President Theodore Roosevelt, was the Hay-Bunau-Varilla Treaty (1903). This agreement replaced the Hay-Herran Treaty that had been signed with Colombia. In November 1903, after a successful revolt and secession from Colombia, Panama’s new leader, Philippe-Jean Bunau-Varrilla, accepted a payment of \$10 million down and \$250,000 a year in exchange for a 10-mile zone permitting the U.S. extraordinary sovereignty to construct and control what later became the Panama Canal.

Hay remained in office until the year he died. His most significant achievement, the Open Door Policy, was never a legally binding concept. Yet it did reflect American efforts to continue its Manifest Destiny—this time outside North America—and economic imperatives that required expanded overseas markets to absorb U.S. goods and prevent economic stagnation. Hay died in Falls, New Hampshire, on July 1, 1905.

Hay–Bunau-Varilla Treaty

Treaty between the United States and Panama, signed on November 18, 1903, that provided for the U.S. lease of a canal zone in Panama. Following the Colombian Senate's rejection of the Hay-Herrán Treaty, which had provided for a 99-year renewable lease of a canal zone across Panama, then a Colombian province, in exchange for a payment of \$10 million and \$250,000 a year, President Theodore Roosevelt was determined to overcome what he deemed Colombian obstruction and to secure the canal zone prior to the 1904 election.

He secretly worked with banker John Pierpont Morgan and former French associate of the New Panama Canal Company and now Panamanian businessman Philippe Bunau-Varilla to orchestrate a revolution in Panama. On November 3, 1903, Panama rose in revolt and declared itself independent of Colombia. The U.S. Navy then prevented Colombia from landing troops in Panama. Roosevelt recognized the independence of Panama on November 6, and the Hay–Bunau-Varilla Treaty between U.S. secretary of state John M. Hay and Bunau-Varilla was ratified on November 18.

The Hay–Bunau-Varilla Treaty provided that the United States would secure a lease of a zone 10 miles wide across the Isthmus of Panama in perpetuity. The United States secured full sovereignty of the zone as well as the right to fortify it. The treaty also gave the United States control of the holdings of the New Panama Canal Company and the Panama Railroad Company. In exchange, the United States guaranteed the independence of Panama and agreed to pay \$10 million initially and \$250,000 per year beginning 9 years

A political cartoon showing President Theodore Roosevelt digging a canal across Panama and throwing dirt in the direction of Bogotá, Colombia. The United States made possible the independence of Panama from Colombia, and the treaty with Panama enabled the United States to begin construction of the Panama Canal. (Library of Congress)

after ratifications of the treaty. The treaty was ratified by the U.S. Senate on February 23, 1903.

Construction on the canal began in 1904 and was completed in 1914. In 1977, President Jimmy Carter signed a treaty providing for the gradual transfer of the Panama Canal to Panama, which assumed total control in December 1999.

Hay-Herrán Treaty

Treaty between the United States and Colombia signed on January 22, 1903, that provided for the U.S. lease of a canal zone in Panama and that was subsequently rejected by the Colombian Senate. The idea of building a canal across the Isthmus of Panama dates back to the Spanish colonial period. The California Gold Rush of 1849 created a tremendous economic incentive for the United States to build such a canal. Although the 1850 Clayton-Bulwer Treaty between the United States and Great Britain provided for a joint venture, the completion of the first transcontinental railroad temporarily removed the necessity of a canal. French promoter Ferdinand de Lesseps, who in 1869 had successfully completed the Suez Canal linking the Red Sea and the Mediterranean, attempted to build a canal across Panama in the 1880s but failed miserably. Despite de Lesseps's failure, as the United States began building a modern navy in the 1880s, expansionists such as Captain Alfred Thayer Mahan renewed the push for an isthmian canal so that the navy could shift naval assets from the Atlantic to the Pacific and vice versa as needed.

The need for a canal was demonstrated during the Spanish-American War when the battleship *Oregon* had to embark on a 14,500-nautical mile voyage around South America in order to reach the Caribbean in time to participate in the conflict. Although Nicaragua was considered as a possible site, a volcanic eruption there shifted debate in Congress to Panama. To ensure that the canal would be controlled by the United States, Secretary of State John Hay negotiated the Hay-Pauncefote Treaty of 1901 with Great Britain, replacing the previous Clayton-Bulwer Treaty. Meanwhile, a syndicate headed by John Pierpont Morgan purchased the assets of the defunct French Panama Canal Company. In 1902, Congress passed the Spooner Act, which approved \$40 million for the purchase of Morgan's Panama Canal Company on the condition that Colombia agreed to a long-term lease.

Following the passage of the Spooner Act, Hay negotiated a treaty with Colombia. Signed on January 22, 1903, between Hay and Dr. Tomás Herrán, the treaty provided for the United States to receive a 99-year lease (with option of renewal) of a 6-mile-wide canal zone in Panama, then a province of Colombia, in exchange for \$10 million up front and \$250,000 per year. Although the treaty was accepted by the U.S. Senate after considerable debate, the Colombian Senate rejected it on August 12, 1903, seeking at least \$25 million, especially since the United States was prepared to pay the Panama Canal Company \$40 million.

Angered at what he deemed Colombian obstruction and determined to secure the canal zone prior to the 1904 election, President Theodore Roosevelt helped orchestrate the controversial Panamanian Revolution in November 1903. After promptly recognizing the independence of Panama, the United States secured the Hay-Bunau-Varilla Treaty, which provided the same terms as the Hay-Herrán Treaty. In 1921, the United States agreed to pay Colombia \$25 million to settle its claims over the controversy.

Hay-Pauncefote Treaty

Treaty signed between Great Britain and the United States on November 18, 1901, that superseded the 1850 Clayton-Bulwer Treaty concerning rights to an isthmian canal in Central America. The Hay-Pauncefote Treaty paved the way for the construction of the Panama Canal, which began in 1904 and was completed in 1914. Negotiations concerning a Central American canal linking the Atlantic and Pacific Oceans were undertaken in 1899 by U.S. secretary of state John Hay and Julian Pauncefote, 1st Baron Pauncefote, who was the British ambassador to the United States from 1893 to 1902.

The negotiations that resulted in the 1901 agreement were torturous, and there were actually two Hay-Pauncefote Treaties: one negotiated in 1899 but never implemented and a second one signed in November 1901. Each involved a separate set of talks. The main objective was to amend the Clayton-Bulwer Treaty. Finalized in the winter of 1899, the first treaty gave the United States the sole right to construct a canal in Central America, relieving it of the burden of having to share the project with the British. The treaty stipulated that any canal built would be in a neutral zone (similar to the Suez

Canal, which was already in existence) and could not be militarized or otherwise fortified. Finally, the agreement called for equal access to all ships regardless of the nation of origin, including during times of war.

The negotiations and resultant treaty engendered much criticism in the United States, even among the Republican Party. Its critics claimed that the treaty did not go far enough and placed too many restrictions on the American operation of an isthmian canal. Not until February 1900 did the treaty make its way to the U.S. Senate, whose job it was to ratify or amend the agreement. Quite concerned over establishment of a neutral zone and the inability of the United States to fortify a canal zone, many senators had grave reservations about the negotiations, and so the treaty languished in the Senate. After nearly 10 months of hand wringing and deal making, the Senate ratified the treaty on December 20, 1900. However, the senators had attached to it three amended articles. First, there was to be a complete abrogation of the Clayton-Bulwer Treaty; second, fortification of a canal zone had to be permitted; and third, no other nations would be permitted to enter into the treaty.

The Senate's amendments all but nixed the deal in London, which was less than happy with the American's tinkering with the agreement. This forced the recommencement of negotiations, again between Hay and Pauncefote, to arrive at a settlement that both nations could accept. On November 18, 1901, the second set of negotiations resulted in the signing of a second Hay-Pauncefote Treaty. This time, the agreement sailed through the Senate, which ratified it without reservations or amendments on December 16, 1901.

The new treaty entirely abrogated the Clayton-Bulwer Treaty so long as the United States built the canal and managed it. Neutral rights were to be respected but under the lone guarantee of the United States, and the nonfortification clause was struck from the treaty. This last compromise had been the greatest bone of contention for many Americans. The remainder of the treaty echoed that of the 1899 version.

It had been the Spanish-American War and the rise of the United States as a major power in the Atlantic and Pacific after 1898 that spurred renewed interest in the construction of a Central American canal. The rationale for this rested on military and economic exigencies. Prior to the Panama Canal's construction, a ship traveling from San Francisco to New York had to travel approximately 14,000 miles through the Drake Passage and around Cape Horn, whose waters were often treacherous. After the canal opened in 1914, a ship traveling between the same two cities traveled only about 6,000 miles, a tremendous savings in time traveled, fuel, and manpower. Not only was this a boon to international commerce and trade, but the U.S. Navy recognized an isthmian canal as an absolutely essential ingredient to national security and the ability to shift naval assets between the Atlantic and the Pacific. The size of the navy could now be somewhat smaller, as the canal largely obviated the need for a large Pacific and Atlantic fleet. A Central American canal also allowed the United States better access to Central

and South America in case of war and significantly strengthened American command of the Caribbean.

Hayes, Webb

Birth Date: March 20, 1856

Death Date: July 26, 1934

American soldier and businessman who contributed to the establishment of Union Carbide, one of the largest and most advanced chemical companies in the world. James Webb Cook Hayes was born on March 20, 1856, in Cincinnati, Ohio, the second son of U.S. president Rutherford B. Hayes and Lucy Webb Hayes. During the American Civil War, the younger Hayes spent extended periods with his father, who had been assigned to U.S. Army captain George Crook in Clarksburg, West Virginia. Crook, a fellow Ohioan who eventually became the U.S. Army's most skilled Indian fighter, enjoyed the young boy's company and became his godfather.

Although Hayes enrolled at Cornell University in 1873, he abandoned his university studies in 1875 to work as his father's secretary during his third term as governor of Ohio. After his father won the controversial presidential election of 1876, Hayes moved to Washington, D.C., to serve as his father's secretary and personal bodyguard.

In 1881, after his father left the White House, Hayes moved to Cleveland, Ohio, to be the treasurer of the Whipple Manufacturing Company. In this capacity he amassed a fortune during the Industrial Revolution of the late 19th century. In 1887, Hayes and three associates formed the National Carbon Company, located in Cleveland. Hayes served as the vice president of the company, which supplied America with carbon-arc electrodes, motor brushes, and rods used in carbon-zinc batteries.

The National Carbon Company eventually merged with Linde Air Products, Prest-O-Lite, and the Union Carbide Company, which produced ferro-galvanized metal for armor plating during the Spanish-American War, to form the Union Carbide and Carbon Corporation in 1917. In 1920, Union Carbide developed an economical way to make ethylene from natural gas, giving birth to the modern petrochemicals industry. In 2001, Union Carbide became a wholly owned subsidiary of the Dow Chemical Company.

Webb Hayes, the son of President Rutherford B. Hayes, volunteered for service in the Spanish-American War and distinguished himself in the fighting in Cuba as a major in the 1st Ohio Cavalry Regiment. (Rutherford B. Hayes Presidential Center)

While working for the National Carbon Company, Hayes joined the Ohio National Guard. After the 1896 election of fellow Ohioan William McKinley to the presidency, Hayes served as an unofficial adviser to McKinley. At the outset of the Spanish-American War, Hayes volunteered for military duty and was commissioned at the rank of major in the 1st Ohio Cavalry. He fought in the Santiago Campaign and was wounded during the Battle of San Juan Hill. He subsequently participated in the invasion of Puerto Rico and was promoted to lieutenant colonel before being sent to the Philippines. There he coordinated a successful mission to reinforce U.S. soldiers besieged by Filipino rebels on Vigan Island on December 4, 1898. He was awarded the Medal of Honor for his heroism.

Hayes remained in the U.S. Army after the conclusion of the Spanish-American War. He served in the China Relief Expedition

during the Boxer Rebellion and was an official observer during the Russo-Japanese War (1904–1905). Retiring from the military, he went on to serve in the Ohio House of Representatives.

In 1916, he donated his father's papers and the family estate at Spiegel Grove to the State of Ohio to establish the Rutherford B. Hayes Presidential Center. By establishing the first presidential library, he set a valuable precedent for subsequent chief executives. Hayes died in Fremont, Ohio, on July 26, 1934.

Hearst, William Randolph

Birth Date: April 29, 1863

Death Date: August 14, 1951

Newspaper and publishing magnate who helped pioneer yellow journalism just prior to and during the Spanish-American War. William Randolph Hearst was born in San Francisco, California, on April 29, 1863, the heir to a mining fortune and the only child of Senator George Hearst. As a student at Harvard University (class of 1885), Hearst first acquired a taste for the newspaper business while working on the *Lampoon*, a student periodical. After expulsion from Harvard for a series of sophomoric capers prior to graduation, he joined the staff of Joseph Pulitzer's *New York World* from which he launched his career as one of the legendary giants of American journalism.

Given the *San Francisco Examiner* by his father in 1887, Hearst used his penchant for journalism as a springboard from which to develop the colorful, theatrical style that was to become his trademark. His brand of journalism concentrated on the flashy and dramatic, sometimes at the expense of facts. In 1895, he moved into the New York market, buying the *New York Journal*. Using the vast family fortune, he proceeded to hire the best newspaper people he could find, including some from his competitor, Pulitzer.

Hearst arrived on the New York scene just as the Cuban War of Independence was getting under way. Attracted to the high-profile story potential of the Cuban cause, he focused the *Journal's* efforts in support of the Cubans. His stories invariably portrayed the Spanish officials, especially newly appointed military commander General Valeriano Weyler y Nicolau (dubbed "the Butcher" by Hearst), as ruthless tyrants. Although the *Journal* was not the only U.S. paper to take up the Cuban cause, it was the flashiest and arguably the most vocal. And it had a large readership, which added to its impact.

As head of a vast newspaper empire in the United States, William Randolph Hearst helped introduce yellow journalism and bring on the Spanish-American War. (Library of Congress)

Late in 1896, Hearst sent artist Frederic Remington to Cuba to sketch scenes depicting the inhumane treatment of Cubans. After only two weeks, however, Remington grew tired of the assignment and cabled his publisher that he wished to come home. Remington also stated that there would be no war. Hearst is alleged to have told Remington to provide the sketches, and he (Hearst) would provide the war.

Hearst never missed an opportunity to undertake a scheme that promised an attractive return in publicity or readership. One such plot was to rescue political captive Evangelina Cisneros from a Cuban prison on the Isle of Pines. Cisneros had been jailed by the Spanish for helping her father, a revolutionary, escape from captivity. Calling her a Cuban Joan of Arc, Hearst launched a major campaign on her behalf. Meanwhile, he dispatched reporter Karl Decker to rescue Cisneros, which the enterprising reporter managed to do. Hearst himself traveled to Cuba as a war correspondent in June 1898. He personally witnessed the fighting there and wrote accounts of the war for his own papers. He was particularly critical of the War Department for being so ill-prepared to conduct a war.

Along with Pulitzer, Hearst created what came to be known as yellow journalism. The term came about because two comic strips from the competing *World* and *Journal* featured characters garbed in bright yellow. As competition between the two papers intensified, with one vying to outdo the other, the brand of journalism spawned by this competition was referred to as yellow journalism, which lent itself to sensationalist stories, often embellished with

sketchy details, in order to sell more newspapers. Following the war, Hearst acquired numerous newspapers and periodicals, building an unrivaled publishing empire. At the zenith of his power, he owned 18 newspapers in a dozen cities and 9 periodicals, including *Harper's Bazaar* and *Good Housekeeping*. He did not limit himself to the printed word, however; he also acquired a motion picture studio, Cosmopolitan Productions. There can be little doubt that Hearst's newspapers kept the public eye on events in Cuba and fanned the flames of prowar sentiments in the United States.

In 1919, Hearst began construction of his famous castlelike home at San Simeon, California. This structure, which was completed in 1925, was given to the State of California in 1959, eight years after Hearst's death. Hearst died in Beverly Hills, California, on August 14, 1951. Orson Welles's *Citizen Kane*, considered one of the best films ever produced, is based loosely on Hearst's career.

Hellings, Martin Luther

Birth Date: 1841

Death Date: 1908

Businessman and telegrapher who aided in military intelligence operations during the Spanish-American War. Martin Luther Hellings was born in Jenkinstown, Pennsylvania, in 1841 and served in the American Civil War. He saw action in numerous engagements and was wounded severely at the September 17, 1862, Battle of Antietam. During the war, he became interested in telegraphy, which ultimately led to a successful career in the field. Soon after the war ended, he joined the Western Union Telegraph Company. By the time of the Spanish-American War, he was managing the Ocean Telegraph Company, a subsidiary of Western Union located in Key West, Florida. He also had connections in high places and was a personal friend of Captain Charles Sigsbee, the commander of the ill-fated U.S. battleship *Maine*.

Hellings used his contacts and his knack for telegraphy to assist the war effort. In recognition of his abilities and contribution, the War Department commissioned him a captain in the U.S. (Volun-

teer) Army Signal Corps in May 1898. In fact, Hellings had already been involved with gathering intelligence on Spanish activities on the island of Cuba before the conflict began.

Hellings passed intelligence to the U.S. government in two ways. First, he arranged for the transmittal of secret messages from the U.S. consul in Cuba utilizing steamships owned and operated by the Plant Railroad and Steamship Company. This was especially the case prior to the beginning of armed hostilities. In this instance, Hellings's connections paid off handsomely. His wife came from a prominent and wealthy Florida family who had introduced him to Henry Bender Plant, the head of Plant Railroad and Steamship Company. It was through Sigsbee's initiative that Hellings first began collecting and passing intelligence to the U.S. government. This began as early as late 1897.

Hellings also used his long-standing contacts in Cuba to gather and transmit useful military intelligence. Working with Domingo Villaverde, a Western Union telegrapher in Havana who sympathized with the Cuban rebels, Hellings received many transmissions regarding Spanish activities and troop deployments in Cuba. Most notably, Hellings was the first person to alert Washington that Rear Admiral Pascual Cervera y Topete's squadron had arrived at Santiago de Cuba, information that Hellings had received from Villaverde. These operations were so secret that Secretary of War Russell A. Alger did not know about them until the war had ended.

Hellings remained with Western Union after the war and died in 1908.

Henry, Guy Vernor

Birth Date: March 9, 1839

Death Date: October 17, 1899

U.S. Army general. Born near Fort Smith, Arkansas, on March 9, 1839, Guy Vernor Henry graduated from the United States Military Academy, West Point, on May 5, 1861, and was commissioned a second lieutenant. He served throughout the American Civil War and in 1893 was belatedly awarded the Medal of Honor for his actions in the Battle of Cold Harbor on June 1, 1864, when he was a colonel of volunteers and commander of the 40th Massachusetts Regiment. Leading his brigade in an assault on the Confederate position during the battle, he had two horses shot from under him.

Following the Civil War, Henry fought in the Indian Wars of the American West and was breveted a brigadier general in the U.S. Army for his valor in the Battle of the Rosebud in Montana in 1876 in which he was shot in the face. As a major he served in the all-black 9th U.S. Cavalry Regiment during 1881–1894 and, as a colonel, commanded the all-black 10th U.S. Cavalry Regiment.

Henry was commanding Fort Assiniboine in north-central Montana when the Spanish-American War began. Appointed brigadier general of volunteers on May 4, 1898, he took command of the 1st Division of VII Corps at Tampa, Florida. Ordered to Cuba to participate in the Santiago Campaign to capture that city, he arrived in Cuba with his 3,300 men aboard the transport *St. Paul*. Following the surrender of Santiago on July 17, he was assigned to Major General Henry A. Miles's expeditionary force that invaded Puerto Rico. Henry's division departed Guantánamo on July 21 in the *Comanche* and landed at Guánica, Puerto Rico, on July 25. His force then moved through Yauco to Ponce. On August 6, he led his division from Ponce to Arecibo, where he was to rendezvous with forces under Brigadier General Theodore Schwan arriving from Mayagüez. Held up by heavy rains, Henry's men had only reached Utuado before the war was ended by the Protocol of Peace of August 12, 1898. Advanced to brigadier general in the regular army in October 1898, Henry commanded the military district of Ponce. On December 9, 1898, he succeeded Major General John R. Brooke as military governor of Puerto Rico and was promoted to major general of volunteers. Among Henry's actions, he eliminated taxes on basic food items. He served until May 9, 1899, when he was replaced by Brigadier General George W. Davis. Henry died in Washington, D.C., on October 17, 1899.

A son, Guy V. Henry Jr., also graduated from West Point, served in the Spanish-American War, and attained the rank of major general in the army.

Higginson, Francis John

Birth Date: 1843

Death Date: September 13, 1931

U.S. Navy officer. Francis John Higginson was born in Deerfield, Massachusetts, in 1843. He joined the navy as an acting midshipman on September 21, 1857. After graduating from the United

U.S. Navy captain Francis J. Higginson commanded the battleship *Massachusetts* during the Spanish-American War. (Library of Congress)

States Naval Academy, Annapolis, in July 1862, he served in the South Atlantic Blockading Squadron off Charleston during the American Civil War. He was the executive officer of the screw sloop *Housatonic* when that ship was sunk by a spar torpedo on the Confederate submarine *H. L. Hunley* on February 17, 1864. Higginson was promoted to lieutenant on August 1, 1862; to lieutenant commander on July 25, 1866; to commander on June 10, 1876; and to captain on September 27, 1891. Captain Higginson commanded the Brooklyn Navy Yard before taking command of the battleship *Massachusetts* in 1897.

During the Spanish-American War, Higginson's battleship took part in the naval blockade of Cuba. Higginson then commanded the naval escort for Major General Nelson A. Miles's expeditionary force to Puerto Rico that landed on the island at Guánica on July 25, 1898. Higginson was advanced to commodore on August 10, 1898. Following the war, he chaired the Lighthouse Board. Advanced to rear admiral on March 3, 1899, he subsequently commanded the North Atlantic Fleet during 1901–1903. In September 1902, Higginson participated in war games that pitted 16 of his ships in a simulated attack on Atlantic army coastal forts. He retired from the navy on July 19, 1905. Higginson died in Kingston, New York, on September 13, 1931.

Hines, John Leonard

Birth Date: May 21, 1868

Death Date: October 13, 1968

American soldier, quartermaster in Cuba in 1898, and participant in the Philippine-American War beginning in 1900. John Leonard Hines went on to fight in France during World War I and become chief of staff of the U.S. Army from 1924 to 1926. Born in White Sulphur Springs, West Virginia, on May 21, 1868, he graduated from the United States Military Academy, West Point, and was commissioned a second lieutenant. He then served with the 2nd Infantry Regiment in Nebraska and Montana until the outbreak of the Spanish-American War.

In April 1898, prior to the departure of the 2nd Infantry for Cuba, Hines was promoted to first lieutenant. He was acting quartermaster of the 2nd Infantry during the Cuban expedition and participated in the Battle of San Juan Hill (July 1, 1898). For his Cuban service, he was awarded the Silver Star. He remained on active duty in Cuba until 1900, when he was sent to the Philippines to assist in fighting Filipino insurgents there. In December 1900, he was promoted to captain and assigned to the 23rd Infantry.

With the end of the Philippine-American War, Hines served as an army quartermaster in the United States, Japan, and the Philippines during 1901–1912. In May 1912, he was promoted to major and reassigned to the 6th Infantry Regiment. From 1913 to 1914, he was adjutant of the U.S. Army's Western Department. From 1914 to 1916, he was adjutant of the 8th Infantry and the El Paso District. During 1916–1917, he served as adjutant to Brigadier General John J. Pershing in the Punitive Expedition into Mexico, which sought to capture Francisco "Pancho" Villa. At this time Hines and Pershing established a lasting friendship. In 1917, Hines became assistant adjutant of the Eastern Department. Promoted to lieutenant colonel in May 1917, he became adjutant of that department.

Following U.S. entry into World War I, Hines served as assistant to the adjutant of the American Expeditionary Forces from May to October 1917. In October 1917, he was promoted to colonel and assigned to the 16th Infantry, which fought under French command in France. In April 1918, he was promoted to brigadier general and given command of the 1st Brigade of the 1st Division, which fought at the Second Battle of the Marne in July 1918. In August 1918, Hines was advanced to major general and took command of the 4th Division of V Corps. He had gone from a quartermaster staff officer to a corps commander in 18 months and was the only American officer to consecutively command a regiment, a brigade, a division, and a corps during World War I.

From 1918 to 1919, Hines commanded III Corps in occupation duties in the German Rhineland. He then reverted to the peacetime rank of brigadier general and, from 1919 to 1921, commanded the 2nd, the 4th, and then the 5th Divisions.

In March 1921, Hines was advanced to regular army major general. He commanded VIII Corps from 1921 to 1922 and subsequently served as deputy chief of staff of the U.S. Army from December 1922 to September 1924. Pershing was instrumental in securing Hines's appointment to succeed him as chief of staff of the army, a post Hines held from September 1924 to November 1926. He then commanded IX Corps and, during 1930–1932, the Philippine Department. Hines retired from the military in May 1932. He died in Washington, D.C., on October 13, 1968. In 2000, as part of the Distinguished Soldiers series, he was honored on a U.S. postage stamp.

Hist, USS

U.S. Navy armed yacht that saw significant action in Cuban waters during the Spanish-American War. Originally built as the civilian yacht *Thespia*, the ship was purchased by the U.S. Navy in April 1898 for wartime service. Armed with a single 3-pounder and four 1-pounder guns, the *Hist* was commissioned on May 13, 1898, at New York. The ship served as a dispatch vessel between Santiago and Guantánamo and saw action several times during the war. In company with the gunboat *Hornet* and armed tug *Wompatuck* on June 30, 1898, the *Hist* captured a Spanish-crewed schooner; engaged the Spanish gunboat *Centenila*, which it helped sink; and fired upon Spanish troops at Niguero. The actions occurred near Manzanillo, Cuba.

Later that same day, June 30, the *Hist* engaged a flotilla of Spanish combatants (eight gunboats and a torpedo boat) and shore batteries at Manzanillo. During the brief engagement, the *Hist* was hit 11 times but suffered no casualties while covering the withdrawal of the more heavily damaged *Hornet*. In this particular engagement, the U.S. ships managed to sink one of the Spanish gunboats and disable the torpedo boat.

Although the *Hist* was not engaged in the actual naval battle at Santiago de Cuba on July 3, 1898, the ship rescued 142 Spaniards from the disabled cruiser *Viscaya* following the battle. On July 11, members of the *Hist*'s crew helped cut the telegraph cable between

Media Luna and the Quizaro Islands. The *Hist* returned to Manzanillo on July 15, sinking 10 small Spanish ships. Five days later, it bombarded Santa Cruz and cut the Punta Carapacho–Cayo Obispo cable. When hostilities ended in August, the *Hist* had just completed another mission in the Manzanillo area.

The *Hist* remained in the postwar navy, going in and out of commission several times. Active service involved tours as a dispatch and supply vessel in the Caribbean and service as a tender to submarines and the frigate *Constitution*. The *Hist* was decommissioned for the last time on July 24, 1911, and then sold.

Hoar, George Frisbie

Birth Date: August 29, 1826

Death Date: September 30, 1904

U.S. politician, charter member of the Republican Party, U.S. congressman (1869–1877), and U.S. senator (1877–1904). Born on August 29, 1826, in Concord, Massachusetts, George Frisbie Hoar was the grandson, son, and brother of prominent lawyers and politicians. He attended Concord Academy before graduating from Harvard College in 1846 and from Harvard Law School in 1849. He then entered private law practice in Worcester, Massachusetts.

Hoar was initially a supporter of the Free Soil Party in Massachusetts but then became one of the leading organizers of the Republican Party along with his brother E. Rockwood Hoar and his father Samuel Hoar. George Hoar was elected to the Massachusetts House of Representatives in 1852 and to the Massachusetts Senate in 1857. He went on to serve in the U.S. House of Representatives from 1869 to 1877. While in the House, he was a member of the Electoral Commission for the bitterly contested presidential election of 1876 and was also involved in pursuing the successful impeachment proceedings against Secretary of War William W. Belknap, who served in the Ulysses S. Grant administration from 1869 to 1876. In 1877, Hoar was elected to the U.S. Senate, where he served until his death in 1904.

Although he was a prominent figure in the Republican Party, Hoar rejected much of the party partisanship that was common at the time. He did not hesitate to criticize even his own party members when they were involved in political corruption or other scandals. He championed many reforms, including women's suffrage

Republican U.S. representative and senator from Massachusetts George Frisbie Hoar was a staunch advocate of American imperialism. (Chaiba Media)

and the rights of African Americans and Native Americans. He was also an outspoken opponent of the anti-Catholic and anti-immigrant American Protective Association.

During the Spanish-American War, Hoar became one of the leading adversaries of President William McKinley's expansionist foreign policy. Hoar especially condemned the administration's involvement in the Philippines and the Philippine-American War as a waste of lives on both sides. He strongly believed that the conflict would inflict more harm than good because the image of the United States as the beacon of democracy and freedom would suffer in a war that smacked of Old World colonialism.

By early 1902, some of the darker aspects of the Philippine-American War were becoming clear to the American public with increasingly frequent reportage of atrocities committed by both sides. Brigadier General Jacob Hurd Smith's orders during the Samar Campaign for his men to "kill everyone over the age of ten" and make the island "a howling wilderness" became a cause for great concern in Congress. Hoar, who was only one of two anti-imperialist Republican members of the Committee on the Philippines, demanded an investigation. The Committee on the Philippines, under the chairmanship of Republican senator Henry Cabot Lodge, was entrusted with the investigation, which was not open to the public. Between January 31 and June 28, 1902, the committee, which was also called the Lodge Committee, held several closed hearings regarding alleged cruelties inflicted upon Filipino

prisoners by American servicemen. The hearings became a forum for Lodge (a proponent of imperialism) and Hoar to present their opposing positions regarding U.S. imperialist policies.

In addition to his political career, Hoar was active in other endeavors. In 1865, he was one of the founders of the Worcester County Free Institute of Industrial Science (now the Worcester Polytechnic Institute). He was an overseer of Harvard University during 1874–1880 and again from 1896 until his death. In 1880, he served as a regent of the Smithsonian Institution, and he was also a trustee of the Peabody Museum. He chaired the National Unitarian Conference in 1899 following his brother's death and served terms as president of the American Historical Association and the American Antiquarian Society. His *Autobiography of Seventy Years* was published in 1903. Hoar died on September 30, 1904, in Worcester, Massachusetts.

Hobart, Garret Augustus

Birth Date: June 3, 1844

Death Date: November 21, 1899

Vice president of the United States (1897–1899). Garret Augustus Hobart was born in Long Branch, New Jersey, on June 3, 1844. He graduated at the top of his class from Rutgers College, New Brunswick, New Jersey, in 1863. He did not see American Civil War service but taught school and then was a clerk for the grand jury of Passaic County, New Jersey, in 1865. He then read for the law. Admitted to the bar in 1866, he opened a legal practice in Patterson, New Jersey. He was elected a judge in Patterson in 1868.

In 1871, after his father-in-law Socrates Tuttle was elected mayor of Patterson, Hobart was appointed as the city counsel. The next year, he was elected as counsel for the board of freeholders. He was then a member of the New Jersey General Assembly from 1872 to 1876, serving as its Speaker in 1874, and the State Senate from 1876 to 1882 and was its president during 1881–1882. He was the first individual to have held the leadership positions in both houses of the New Jersey legislature.

Vice President Garret Augustus Hobart favored U.S. territorial expansion overseas and played a key role in the acquisition of the Philippine Islands. (Library of Congress)

Hobart acquired considerable personal wealth as a corporate attorney and was also involved in the banking industry. He was a member of the Republican National Committee during 1884–1896. Seen as an ideal choice to unite business interests behind William McKinley and as an easterner who would balance McKinley, who was from the Midwest, Hobart was nominated by the Republican Party in 1896 for vice president on the ticket headed by McKinley. The Republican ticket won the election of November 1896, and Hobart served as vice president of the United States from March 4, 1897.

As vice president, Hobart completely agreed with McKinley's conservatism and enjoyed a close relationship with the president. Although Hobart did not attend cabinet meetings, the president consulted with him on a regular basis and considered Hobart a trusted adviser. The Hobarts acquired a house on Lafayette Square that soon became known as the "Little Cream White House." There the Hobarts entertained lavishly. McKinley's wife was an epileptic, and Jennie Hobart fulfilled many of the functions of First Lady.

Hobart presided over the Senate during the debate on belligerent rights that followed the sinking of the battleship *Maine* in Havana Harbor in February 1898. In early April 1898, he informed

McKinley that he could no longer hold back the Senate on this issue and that if McKinley did not act soon, the Senate would declare war on its own. McKinley then called on Congress to declare war, which Hobart strongly supported.

Hobart played a key role in the U.S. acquisition of the Philippine Islands. Following the Senate ratification of the Treaty of Paris, on February 14, 1899, Hobart cast the deciding vote that rejected the Bacon Amendment. It disclaimed any intention by the United States to exercise permanent sovereignty, jurisdiction, or control over the Philippines. The Bacon Amendment also advocated early recognition of Philippine independence.

Beginning in early 1899, Hobart suffered fainting spells brought on by heart problems. He died of heart failure in Patterson, New Jersey, on November 21, 1899. This created the opening for Progressive Republicans to nominate Spanish-American War hero and New York governor Theodore Roosevelt as McKinley's running mate in 1900. Roosevelt went on to become president in 1901 after McKinley was assassinated.

Hobson, Richmond Pearson

Birth Date: August 17, 1870

Death Date: March 16, 1937

U.S. Navy officer and politician. Richmond Pearson Hobson was born on his mother's plantation in Greensboro, Alabama, on August 17, 1870. After completing private school, he attended Southern University in his hometown before enrolling in the United States Naval Academy, Annapolis, at age 14. He graduated first in his class in 1889 despite being ostracized by his fellow cadets for his devout religious beliefs and strict observance of the honor code. He then studied naval architecture in France from 1890 to 1893.

Returning to the United States, Hobson was appointed a naval constructor at the Navy Department in Washington, D.C., traveling to various naval shipyards along the East Coast. In 1897, he taught at Annapolis before being assigned to Key West, Florida, on the eve of the Spanish-American War.

In May 1898, Admiral William T. Sampson ordered Lieutenant Hobson to scuttle the *Merrimac*, a collier (coal-transporting ship), at the entrance of the harbor at Santiago de Cuba in order to try to trap the Spanish squadron moored there. Under darkness in the early morning hours of June 3, 1898, Hobson and a crew of seven volunteers were nearing the harbor entrance when they were discovered.

U.S. Navy lieutenant Richmond Pearson Hobson commanded the collier *Merrimac* in an unsuccessful effort on June 3, 1898, to block the entrance to Santiago Harbor, Cuba, and bottle up the Spanish squadron there. He was then taken prisoner. (John Clark Ridpath, *Ridpath's History of the World*, 1901)

The Spanish shore batteries then opened fire on the *Merrimac* and disabled its steering as Hobson attempted unsuccessfully to turn the ship to starboard and detonate charges to sink the vessel in the appropriate location. The ship went down in Santiago Harbor well past the entrance, its upper deck still above water. All crew members escaped unharmed but were taken prisoner by the Spanish, who praised them for their brave deed. Hobson and his crew were held in Morro Castle, located on a high bluff overlooking the harbor. For their action, the members of the crew were awarded the Medal of Honor in 1899, all except Hobson who, as an officer, was not then eligible for the award.

The Spanish exchanged Hobson on July 6, 1898. He found himself a hero and celebrity and made numerous appearances across the United States. Following the war, the navy appointed him to determine if any Spanish warships could be raised and salvaged in Cuba and the Philippines. In all, five ships were salvaged. Because of eye problems, Hobson requested a medical discharge from the navy, which was denied in 1900. In 1901, the U.S. Congress issued a joint resolution praising Hobson for the *Merrimac* mission and promoted him to captain. The navy appointed him as its representative to both the Buffalo Exposition and the Charleston Exposition (1901 and 1902, respectively). He resigned from the navy in 1903.

After leaving the navy, Hobson became a sought-after speaker and lectured across the country. The following year, in 1904, he was elected to the U.S. House of Representatives, where he served until 1916. In Congress, he was regarded as a leading authority on naval affairs, working closely with President Theodore Roosevelt, a former assistant secretary of the navy, to improve the navy while warning of the threat posed by Japan and Russia. Hobson also championed women's suffrage and prohibition, views that helped end his political career. After leaving politics, he continued to press for national prohibition and fought against drug abuse, leading several national and international antidrug and antialcohol organizations.

In 1933, Hobson received the Medal of Honor for his exploits aboard the *Merrimac*. The next year, he was promoted to rear admiral (retired) and received a pension by special act of Congress. Hobson died in New York City on March 16, 1937, and was buried in Arlington National Cemetery.

Holguín, Cuba

Major inland city of southeastern Cuba. Holguín is located northwest of Santiago de Cuba and played a small role during the Santiago de Cuba Land Campaign (June 22–July 17, 1898). Founded in 1545, Holguín was named for its founder, Spanish military officer García de Holguín, and was originally called San Isidoro de Holguín. The city was industrialized at the time of the Spanish-American War and featured sugar-processing plants and mining and smelting operations. It was also a rail terminus for eastern Cuba. Cuban revolutionary General Calixto García y Iñiguez hailed from the area, as would Fidel and Raul Castro.

Until 1905, Holguín was located in Santiago de Cuba Province, serving as its capital city. In that year Holguín was incorporated into a new province, known as Oriente (East). In 1976, Oriente Province would be broken up into five smaller provinces: Las Tunas, Granma, Holguín, Santiago de Cuba, and Guantánamo. The city is now the capital of Holguín Province.

On July 3, 1898, when the Spanish squadron was decisively defeated in the Battle of Santiago de Cuba, Major General William Shafter, commanding V Corps, contacted Spanish general José Toral y Vázquez, commander of the Spanish garrison at Santiago de Cuba, requesting that he surrender the city. Shafter threatened to shell the city if Toral refused. Nevertheless, Toral did not surrender

but instead pursued additional negotiations. In a counterproposal, he suggested that the Spanish be allowed to leave their garrison, surrender the city, and march unimpeded to Holguín while retaining their arms. Shafter viewed the counteroffer in a positive light, but Washington insisted on unconditional surrender. After a brief and light battle on July 10 and 11, Toral agreed to Shafter's conditions on July 13. The surrender went into effect on July 17 upon the agreement of Governor-General Ramón Blanco y Erenas.

Homestead Steel Strike

Start Date: June 30, 1892

End Date: November 20, 1892

Labor strike at the Homestead steel mill, part of the giant Carnegie Steel Company in western Pennsylvania located along the Monongahela River about seven miles southeast of Pittsburgh. The strike began with a lockout of striking employees on June 30, 1892; escalated to armed conflict on July 6 that killed 10 and injured dozens more; and ended on November 20 in a humiliating defeat for the strikers. The Homestead Steel Strike was one of the worst labor-management conflicts in U.S. history and was an ill omen of more labor unrest to come during the turbulent decade of the 1890s.

The conflict pitted the Amalgamated Association of Iron and Steel Workers (AA) against the management of Carnegie Steel, in

particular Henry Clay Frick who headed most of the company's operations. Although Andrew Carnegie, the company's founder, had variously voiced his support for unions, Frick was a rabid union basher. Carnegie knew this but nevertheless left for a vacation in Scotland in the late spring of 1892. This left Frick, a ruthlessly cruel man, in sole control of contract negotiations with the union. It was his hope to crush the steel union by issuing it an ultimatum and then locking workers out if they refused to accept his conditions.

During new contract negotiations that had commenced in February 1892, AA negotiators had requested a general wage increase in light of cost-of-living increases. Complaining about the falling prices for steel, Frick countered with a 22-cent decrease in wages for nearly half of the company's AA workers. The union balked, and Frick asserted on April 30 that if the union did not come to an agreement within 30 days, the company would no longer negotiate with the union, with the tacit understanding that AA workers would be terminated. Meanwhile, Carnegie had clandestinely encouraged Frick to take any means necessary to crush the union. To reinforce his message, Frick began slashing the wages of nonunionized employees. Then, on June 25, he declared a permanent end to the stalled negotiations and prepared for a lockout.

On June 28, Frick began locking out selected union workers, and on June 29, all of the AA workers were locked out. Many of the nonunion workers voted to strike in sympathy, with the total number of workers locked out climbing to 3,000, far more than Frick had anticipated. To show that he meant business, he ordered the construction of a 3-mile-long fence, 12 feet in height, that surrounded the closed plant. The fence even had a barbed-wire top and holes for rifles. The striking workers quickly dubbed the Homestead mill "Fort Frick." When local police authorities proved unable to handle the massive strike, Frick called in a small army of Pinkerton detectives, essentially a private police force, to guard the mill's perimeter and keep the strikers out. This precipitated a melee that became one of the most infamous labor-management battles in U.S. history.

Hoping to reopen the plant with nonunion workers, Frick was determined to break through the strike lines to allow new workers in.

Work Stoppages in the United States, 1881–1903

Illustration from *Frank Leslie's Illustrated Weekly*, July 14, 1892, of Homestead Steel strikers attacking Pinkerton men. During the Homestead Strike in July 1892, union strikers drove the Pinkerton agents from the plant site. State militia, however, allowed nonunion labor, or scabs, to enter the factory. (Library of Congress)

Because the plant was surrounded by strikers, the only way in was by river barge. On the night of July 5, 1892, some 300 Pinkerton detectives armed with Winchester rifles took to the Monongahela River in two barges to take back the steel mill. The workers had gained knowledge of the Pinkerton assault and stood in wait, determined not to allow the small army to land. Around 3:00 a.m. on July 6, workers sounded the plant's whistles, rousing the workers as the barges approached. They dashed toward the plant, and as the barges came into view, several workers opened fire. The Pinkertons returned fire as the throng of workers closed ranks to form a human shield against an attempted landing. At 4:00 a.m., the Pinkertons prepared to land and wade ashore. It is unclear who fired first, but a hail of gunfire ensued, and the Pinkertons were forced to retreat onto the barges. As the Pinkertons sat in the middle of the river, the strikers tried desperately to sink the barges with gunfire, homemade incendiary devices, and even an old 20-pounder cannon.

At 8:00 a.m., the Pinkertons attempted another landing but were forced back by gunfire. One striker even lobbed dynamite sticks at

the barges, hoping to set them afire. Meanwhile, the strikers were being reinforced by steelworkers from neighboring areas, including Pittsburgh. Sporadic fighting occurred all through the day until the Pinkertons were forced to surrender at around 5:00 p.m. When the carnage was over, 3 Pinkertons and 7 strikers lay dead, while perhaps 150 or more were injured.

On July 7, the Pennsylvania State Militia was mobilized. The soldiers took the strikers by surprise, dispersed them, and managed to reopen the plant. Within a few days, the management staff was back in their offices in the Homestead mill, and a steady stream of nonunion workers began pouring into the plant while the militia held the strikers at bay. The standoff continued until November 20, 1892, when AA members voted to end the strike. They had lost the war. The union had been nearly bankrupted by the strike as it struggled to pay its members who had been locked out, and it had lost much of its support after the fight with the Pinkertons. After the strike, the AA had only negligible influence in Carnegie Steel, and Frick had ultimately won by emasculating the union. The Homestead Steel Strike was a clear harbinger of more labor unrest to come as the Panic of 1893 and the economic depression of 1893–1897 settled in.

Hong Kong

Key port city in southeastern China and the center of Filipino expatriate activity, intelligence, and diplomatic communications during the Philippine Revolution and the Philippine-American War. Hong Kong Island is located on the eastern side of the Pearl River Delta in China. Hong Kong, meaning “fragrant island,” borders the Guangdong (Canton) Province to the north and the South China Sea to the east, south, and west. Initially occupied by the British in January 1841 during the Opium Wars between Britain and China, Britain secured Hong Kong from China in the Treaty of Nanjing (Nanking) of 1842. Hong Kong then became a crown colony and remained so until 1997, at which time the British turned the city over to the People's Republic of China. Today, Hong Kong is one of the world's greatest and most diverse cities, a city of old and new, East and West. Approximately 6.86 million people now call the city home.

Hong Kong's close proximity to Manila and the protection granted to political refugees there by the British colonial govern-

ment made the city an ideal location for the Filipino resistance. Working from this center of international trade, the Filipino revolutionaries could easily contact other foreign agents, facilitating both diplomatic exchanges and the purchase of weapons and military supplies.

Beginning in 1872, persecuted Filipinos fled to Hong Kong, seeking a haven for their anticolonial activities. José Rizal, who later formed the Liga Filipina, lived in that city before the Philippine Revolution of 1896. During that revolution, Filipino ilustrados and resistance leaders, such as Felipe Agoncillo, built intelligence networks and diplomatic contacts while in exile in Hong Kong. They also formed the Hong Kong Junta to organize resistance activities against Spain and later the United States.

In 1897, the Pact of Biak-na-Bato exiled Emilio Aguinaldo y Famy and other revolutionaries to Hong Kong. Aguinaldo and his compatriots quickly established a base of operations there to smuggle arms, food, clothing, and medicine back to the Philippines. During this time, the Filipino leaders also worked to establish diplomatic ties with the United States, Japan, and Australia.

At the outbreak of the Spanish-American War, Aguinaldo and the junta negotiated with the U.S. Navy in Hong Kong for a return to the islands. In May 1898, the U.S. Navy returned Aguinaldo to the Philippines; he believed that he had the support of the United States against Spain. The Hong Kong Junta became the Filipino Central Committee, an arm of the Philippine Department of Foreign Affairs, that sent diplomatic representatives to Paris, Tokyo, Madrid, London, and Washington, D.C.

The Philippine-American War began in February 1899, and Hong Kong became a de facto center of government and operations for the First Philippine Republic. Filipinos abroad sent news to the committee in Hong Kong, which distributed it to the Philippines informing the Filipino populace of American anti-imperialist debates, U.S. elections, and party platforms. American anti-imperialists often communicated with the Hong Kong Junta, pledging support and offering updates on U.S. public reaction to the war. Indeed, the Hong Kong Junta employed the American anti-imperialists as a conduit for their propaganda in the United States, sending war reports and pleas for independence through these channels in an attempt to stir public sympathy in their favor.

Intelligence and diplomatic operations continued in Hong Kong until the end of the Philippine-American War in 1902. The U.S. State Department formally assumed diplomatic control of the Philippines from 1902 to 1941, delegitimizing the Filipino Central Committee in Hong Kong. However, Agoncillo and Filipino expatriates continued their propaganda campaigns and communications in support of Philippine independence until July 31, 1903, when they officially disbanded the Filipino Central Committee.

Hormigueros, Battle of

Event Date: August 10, 1898

The site of a brief skirmish on August 10, 1898, between U.S. troops under the command of Brigadier General Thomas Schwan and Spanish troops under Captain José Torrecillas during Major General Nelson A. Miles’s Puerto Rico Campaign. The town of Hormigueros, Puerto Rico, is located seven miles south of Mayagüez. The Battle of Hormigueros was the first engagement involving Schwan’s troops during the campaign.

Schwan’s column of 1,447 men departed Yauco on August 9 and had moved through Sabana Grande and San Germán to Mayagüez before they encountered Torrecillas’s 6th Company of the Alfonso XIII Battalion and a company of guerrillas at Hormigueros. The engagement between the two sides lasted for about two hours, after which the Spanish withdrew. In the skirmish, the Spanish lost 1 dead and 9 wounded according to Spanish reports and about 50 casualties according to U.S. reports. The Americans lost 1 killed and 16 wounded. The rapid withdrawal of the Spanish forces following the engagement allowed Schwan to occupy Mayagüez the next day.

Hospital Corps

Organization established in August 1886 for hospital attendants. Since the first women’s nursing school in the United States was not established until 1873, there was no supply of female hospital nurses, and in 1898, the corps was entirely male. The Hospital Corps was divided into three classes—steward, acting steward, and private—and in time of war was charged with providing patient care in military hospitals as well as with running the military ambulance service.

Each regiment had four litter bearers, and it was intended that those men, after serving for a year and passing an examination,

Litter bearers of the Hospital Corps load wounded soldiers into a horse-drawn ambulance. (*Photographic History of the Spanish-American War, 1898*)

could be promoted into the Hospital Corps. A private in the Hospital Corps, after serving a year and passing another examination, could be promoted to acting steward. Initial rules called for another year of service and yet another examination for promotion to steward, but personnel shortages led to reducing the service requirement to three months during the Spanish-American War. The minimal pay differential between the Hospital Corps and line regiments coupled with physically demanding work and the risk of infection led to the corps being quite unpopular and chronically understaffed.

As of May 1, 1898, the Hospital Corps comprised 99 hospital stewards, 100 acting stewards, and 592 privates, but these men served in the regular army and thus did not address the needs of the rapid volunteer expansion. The April act of Congress that established the volunteer force authorized 1 steward for each regular army battalion, 25 hospital privates for each regiment, and an additional 50 privates for each division. These men were, however, attached to the line units, and no formal hospital corps was authorized for the new volunteer units. Even those National Guard units that already had hospital corps were forced to disband them. As a result, regimental nursing was regularly done by farm boys and city dwellers who typically had neither training nor enthusi-

asm for their jobs. Most had been assigned to hospital duty because they were either poor soldiers or were physically unable to function as combat soldiers.

The obvious deficiency led to a change in the law allowing transfer of 25 men from each regiment and an additional 50 men from each division to a hospital corps. In spite of the change, the hospital nursing in the volunteer units remained inadequate. Line commanders often simply refused to give up men to the Hospital Corps. Those who did get posted were of wildly variable ability. At the top end were men who had been pharmacists, medical students, and even practicing physicians in civilian life. At the bottom were what historian Mary Gillett has referred to as “drunkards, epileptics, and other worthless men,” shunted off from units that did not want them. A course in hospital nursing had been developed at Washington Barracks, but the rapid expansion of the volunteer force left no time for training new corpsmen, and most were simply given the *Handbook for the Hospital Corps* and trained on the job.

By June, the Hospital Corps numbered 133 stewards, 172 acting stewards, and 2,940 privates, and by November, the corps had grown to more than 6,000. However, the greatest improvement in hospital care came as a result of Surgeon General George Stern-

berg's authorization to contract with 1,700 female nurses. After the war, the Dodge Commission recommended retention of a permanent Hospital Corps for volunteer units to be supplemented by a reserve corps of trained female nurses.

Howell, John Adams

Birth Date: March 6, 1840

Death Date: January 10, 1918

U.S. naval officer. Born in Bath, New York, on March 6, 1840, John Adams Howell entered the U.S. Navy as an acting midshipman in September 1854, becoming a midshipman in June 1858. During the American Civil War, he saw duty in the blockade of the Confederacy and participated in the Battle of Mobile Bay in August 1864. Promoted to lieutenant in April 1861, he became a lieutenant commander in March 1865. Following the Civil War, he interspersed tours with the North Atlantic Squadron and coast survey duty. He was also assigned shore duty at the United States Naval Academy, being promoted to commander in April 1872 while with the Coast Survey.

Howell was a scientifically inclined officer known for his work on gyroscopes and other inventions, and while serving at the Naval Academy in 1870 he conceived the Howell Torpedo. His first command at sea was with the screw steamer *Adams* on the Pacific Station from 1879 to 1881. During the 1880s, he held a series of ordnance-related postings, continuing to aid in the development of torpedo technology even though the Howell Torpedo never overcame its design flaws and ultimately lost out to an improved version of the Whitehead Torpedo. Howell also invented a disappearing gun carriage.

Howell was promoted to captain in March 1884 and, in December 1888, assumed command of the cruiser *Atlanta*, one of the navy's first steel warships. In the early 1890s, he served as president of the navy's Steel Board with responsibility for ensuring the quality of steel being used to build the rapidly expanding modern navy. From 1893 to 1896, he served as commandant of the Washington Navy Yard, being promoted to commodore in May 1895. In June 1896, he assumed the position of commandant at the League Island Navy Yard in Philadelphia, Pennsylvania, remaining in this position until January 1898.

When it came time to select a new commander of the U.S. Asiatic Squadron in late 1897, Howell was one of three candidates for the position. Although he had political backing from Senator

William Chandler of New Hampshire, a former secretary of the navy, in the end Howell lost out to Commodore George Dewey. Assistant Secretary of the Navy Theodore Roosevelt perceived Dewey to be the more aggressive officer and pushed him for the post.

Instead, Howell relieved Rear Admiral Thomas O. Selfridge Jr. in command of the European Squadron, then concentrated at Lisbon, Portugal, in early February 1898. As war loomed with Spain, this squadron, including the cruiser *San Francisco* (flagship) and the recently purchased cruiser *New Orleans*, returned to the United States in mid-April. Later that month, Howell was assigned command of the Northern Patrol Squadron, a small force intended to assuage public fears of a possible Spanish attack by patrolling the East Coast between Delaware and Maine. Employing the *San Francisco* as his flagship, Howell never had more than six ships under his command, almost all of them recently purchased converted cruisers. As expected, his squadron never had to face a Spanish attack.

On June 25, 1898, with only a remote potential Spanish threat and with Rear Admiral Pascual Cervera y Topete's squadron blockaded at Santiago de Cuba, Howell was ordered to Key West, Florida, to assume command of the 1st Squadron of the North Atlantic Fleet. He relieved Commodore John Watson on July 1 and assumed command of the American blockade of Cuba's northern coast for the rest of the war.

Promoted to rear admiral on August 10, 1898, Howell briefly commanded the North Atlantic Fleet later that month before going ashore that fall for the remainder of his naval career. He served as president of the Naval Examining Board from November 1898 to October 1900 and president of the Naval Retiring Board from November 1898 to March 1902. He retired in March 1902 upon reaching the statutory age limit. Howell resided in Atlantic City, New Jersey, for a time and died on January 10, 1918, in Warrenton, Virginia.

Hubbard, Elbert

Birth Date: June 19, 1856

Death Date: May 7, 1915

American writer, editor, and publisher and author of the wildly popular "A Message to Garcia," an essay extolling the virtues of

Elbert Hubbard wrote the popular inspirational essay “A Message to Garcia” during the Spanish-American War. (Library of Congress)

American initiative and ingenuity. Born on June 19, 1856, in Bloomington, Illinois, Elbert Hubbard was raised in Hudson, Illinois. His father was a country doctor.

Hubbard’s first job was selling soap door-to-door for the Chicago-based firm of J. Weller & Company. In 1875, his brother-in-law John Durrant Larkin established J. D. Larkin Manufacturer of Plain and Fancy Soaps in Buffalo, New York. Larkin hired Hubbard as his first salesman. With Hubbard’s assistance, the company grew rapidly. Hubbard introduced the tactic of visiting homes, leaving a sample of Larkin’s soap for the family to try and returning a few days later to sell soap to the pleased family. Hubbard also pioneered the concept of mail order merchandising. In 1878, Hubbard and Larkin formed a partnership and incorporated the company as the Larkin Soap Company.

Hubbard published his first of many novels in 1891. He sold his share of the soap company in 1892 for \$75,000 in order to pursue a full-time literary career. He then enrolled at Harvard University but quickly became disillusioned with formal academic studies and set out on an extended tour of Britain. English socialist William Morris introduced Hubbard to the arts and crafts movement. Influenced by Morris’s success with Kelmscott Press, on his return to the United States in 1895 Hubbard founded an arts and crafts community in East Aurora, New York.

Hubbard’s reformist community of artists and craft workers grew rapidly. Members of the community, known as Roycrofters, established their own factory, printing press, blacksmith shop, farm, and bank. They even built an inn for visitors and marketed a line of gifts that included handcrafts, candy, jam, and furniture. The self-sufficient community grew to more than 500 people by the end of the 19th century and had a strong influence on American design and architecture during the early decades of the 20th century. The Roycroft Press printed books on handmade paper bound in tooled leather.

Hubbard was the editor and publisher of the *Philistine* in the late 1890s. In June 1895, he published the first edition of *Philistine*, which continued until his death. The magazine provided Hubbard with a venue for transmitting his opinions and philosophy. He published thousands of inspirational essays supporting rugged individualism. The essays were intended to help Americans cope with the emergent forces of industrialization and urbanization. His most famous and influential essay, “A Message to Garcia,” was written in one hour on February 22, 1899. The essay was first published in the March 1899 issue of the *Philistine* and recounted the actions of Andrew Summers Rowan, an American soldier who was ordered to carry a message to Cuban revolutionary Calixto García y Iñiguez just prior to the Spanish-American War. In the essay, Hubbard praised the soldier for his initiative, fortitude, and ingenuity. For the rest of his life, Hubbard was one of the most popular lecturers in the United States. His success enabled him to launch another magazine, *The Fra*, in 1908.

Hubbard turned East Aurora into an intellectual gathering point and was frequently called “the sage of East Aurora.” In 1907, he gave the American poet Carl Sandburg the chance to speak publicly, launching him on his career. In 1908, Hubbard published four of Sandburg’s poems in *The Fra*. In 1912, Hubbard eloquently wrote about Ida Straus, the wife of Macy’s department store co-owner Isidor Straus, who refused to abandon her husband while the British passenger liner *Titanic* sank in the North Atlantic in 1912. Rather ironically, Hubbard and his wife perished on May 7, 1915, when a German submarine sank the *Lusitania*, the British luxury passenger ship on which they were passengers. The ship went down just eight miles off the Irish coast. Hubbard’s son Bert continued to run the Roycroft community until it closed in 1938.

Hull, John Albert Tiffin

Birth Date: May 1, 1841

Death Date: September 26, 1928

Businessman, attorney, Republican Party politician, and U.S. congressman from Iowa (1891–1911). John Albert Tiffin Hull was born in Sabina, Ohio, on May 1, 1841, but moved to Iowa with his family in 1849. He attended the public schools there and then pursued studies at Indiana Asbury College (now Depauw University) and Iowa Wesleyan College before taking up the study of law at Cincinnati Law School in Ohio. In the spring of 1862, he received his law degree and was then admitted to the bar later that same year. Anxious to begin his practice, he made his way to Iowa's capital city of Des Moines.

Before Hull began his practice, however, he decided to enlist in the Iowa 23rd Volunteer Infantry Regiment. Commissioned a lieutenant, he rose to the rank of captain before he was wounded in combat in October 1863. He then resigned his commission and returned home to take up his law practice.

In addition to law, Hull was involved in farming and banking, which made him a wealthy man at a relatively young age. By the early 1870s, he had also become interested in Republican Party politics, which led him to elective office in his native state. In 1872, he became the secretary of the Iowa State Senate, a post to which he was reelected in 1874, 1876, and 1878. In 1878, he was elected as Iowa's secretary of state and was reelected in 1880 and 1882. Continuing his political ascendancy, he secured election to lieutenant governor in 1885, a post he held until 1889.

Hull decided to move into national politics and campaigned for a congressional seat representing Iowa in 1890. Winning the election, he was sworn into office on March 4, 1891. He rose in seniority to become the chairman of the House Military Affairs Committee. It was in this capacity that he became a lightning rod of controversy between the U.S. Army and the National Guard.

In March 1898, just weeks before the war declaration against Spain, Hull introduced a bill designed to streamline U.S. defenses and build up the U.S. Army so that there would be a ready reserve of men in case of war. He helped write the legislation, which became known as the Hull Bill, with the aid of the U.S. War Department, and as such it had the support of both President William McKinley and Secretary of War Russell Alger. It was Hull's intention to address deficiencies in mobilization and reserve forces for the long haul rather than simply react to the likely conflict with Spain. What Hull and Alger envisioned was a ready reserve force within the U.S. Army that could quickly swing into action at the first sign of war.

Hull now found himself in the middle of an ugly tug-of-war between the U.S. Army and the National Guard. When a vote was taken on the Hull Bill on April 7, 1898, the measure was defeated by a large margin of 155 to 61. Hull abandoned the bill altogether, and the nation mobilized for the Spanish-American War based upon old systems that dated to the American Civil War and before. Un-

fortunately, the defeat of the bill compelled the McKinley administration to pursue an enlistment program during the war that was rife with political influence. The net result was a highly decentralized mobilization apparatus that brought with it great waste and inefficiency. Many saw the failure of the bill as a rebuke of Secretary Alger and, to a smaller degree, Representative Hull.

Hull left office in March 1911 after losing a renomination bid and returned to the practice of law, this time in Washington, D.C. He retired in 1916 and died in Clarendon, Virginia, on September 26, 1928.

Hull Bill

Congressional bill sponsored by Republican U.S. representative John A. T. Hull designed to restructure manpower mobilization for U.S. ground forces. The bill was introduced in March 1898 but was defeated by a wide margin on April 7, 1898.

The Hull Bill called for the creation of three battalions in each U.S. Army regiment, the third battalion being essentially a reserve force that would be a skeleton battalion during peacetime. By structuring U.S. forces in this manner, the War Department believed that it could deflect criticism that the bill was creating a large peacetime standing army, at that time anathema to most Americans. Despite this shell game, however, the size of the army would still have nearly quadrupled to almost 105,000 men. The Hull Bill would have virtually eliminated the practice of relying on the states for manpower. The National Guard would have been relegated chiefly to coastal defense and as a reserve pool of soldiers, which the U.S. Army could tap when necessary.

The bill, which was fully supported by the William McKinley administration, was not without precedent. In 1818, Secretary of War John C. Calhoun had urged a mobilization act that would provide for an expandable army in time of war by keeping in place a permanent peacetime staff. Implicit in the Calhoun and Hull approach was the idea that effective planning and staffing in peacetime would provide for smoother mobilizations in times of war.

By creating a reserve force structure and reducing reliance on the National Guard, the Hull Bill drew the ire of the National Guard. Not surprisingly, the National Guard and its supporters mounted a quick and vociferous campaign designed to torpedo the bill. Much of the resistance to the Hull Bill came from a cabal that included

Populists, southern Democrats, and National Guardsmen. Within the National Guard, the bill ran into the most trouble with guardsmen from the Midwest and the interior South. They apparently feared that the bill would marginalize them even more than guardsmen from the East Coast and that they would play third fiddle to the U.S. Army during wartime. Many also believed that they would have no say in manpower mobilization if the War Department and the U.S. Army were running the show exclusively.

On April 7, 1898, the Hull Bill was defeated by a lopsided margin of 155 to 61. Hull did not alter the bill or attempt to reintroduce another. For Secretary of War Russell A. Alger, the defeat was seen as a rebuke of his leadership. Within a week, however, the McKinley administration had written an entirely new manpower mobilization bill that did not slight the National Guard. The act, passed on April 22, empowered the president to create a volunteer army and allowed him to limit the first call-up of volunteers to National Guard members. The quota from each state was based on population. This allayed the fears of many guardsmen, who did not oppose a second bill passed on April 26 that created a regular army force of 65,700 men. Any new recruits to the army would merely be added to existing units and would be compelled to muster out at war's end.

Huntington, Robert Watkinson

Birth Date: December 2, 1840

Death Date: November 17, 1917

U.S. Marine Corps officer who led the 1st Marine Battalion at the Battle of Guantánamo, Cuba (June 3–15, 1898). Robert Watkinson Huntington was born in Hartford, Connecticut, on December 2, 1840. In 1860, he undertook studies at Trinity College in Hartford but left school in April 1861 at the beginning of the American Civil War to enlist in the 1st Connecticut Volunteer Regiment. That June he received a commission as a second lieutenant in the U.S. Marine Corps. The marine battalion to which he was assigned was attached to the 1st Brigade of the U.S. Army's 2nd Division. As such, Huntington saw

considerable action, beginning with the First Battle of Bull Run on July 21, 1861. In June 1864, he was promoted to captain.

After the Civil War, Huntington remained in the Marine Corps. He served during a number of sea and land tours, rising to the rank of major in 1889 and lieutenant colonel in 1897. When the United States declared war on Spain in April 1898, he was commanding the Marine Barracks at the New York Navy Yard (Brooklyn). He was immediately reassigned to command the 1st Marine Battalion, which accompanied Rear Admiral William T. Sampson's North Atlantic Squadron to Cuba.

On June 10, 1898, Huntington's force, which had been augmented by five infantry companies and a small artillery battery numbering 650 men, made an amphibious landing on the eastern edge of Guantánamo Bay. There Huntington hastily established Camp McCalla, with jungle on one side and the ocean on the other. After coming under Spanish sniper fire on the evening of the landing and much heavier fire beginning on June 11, Huntington's men endured almost constant action over a span of nearly 100 hours. On June 13, Huntington decided to mount an offensive against the Spanish, which began the next day. In the meantime, he ordered the vulnerable Camp McCalla relocated closer to the shore and within sight of U.S. warships in the harbor.

On June 14, Huntington's men assaulted and defeated the Spanish in the Battle of Cuzco Well. The Spanish then withdrew, which secured both the marine beachhead and Camp McCalla from further attacks. It also helped to secure the lower bay for the United States. On August 5, Huntington was ordered to break camp and board the U.S. auxiliary cruiser *Resolute*. From there he led his men to Manzanillo, where on August 12 his men helped secure that city as the armistice went into effect.

By early September, Huntington and his 1st Marine Battalion had arrived back in the United States, and on September 16 he disbanded the unit. Meanwhile, he had been promoted to colonel on August 10, 1898, as a reward for his performance in the Battle of Guantánamo. After disbanding his outfit, he returned to the Marine Barracks at the New York Navy Yard as commandant. In 1900, he retired from active service. Upon retirement, Huntington resided in Charlottesville, Virginia, where he died on November 17, 1917.

Ilustrados

Filipino elite who contributed to the development of Philippine nationalism. The *ilustrados*, defined as “enlightened ones,” appeared during the 19th century and stemmed mainly from the Chinese mestizo community and partly from the *principalía*, or landowning families, in the Philippines. Some Spanish mestizos and creoles, or Spaniards native to the Philippines, participated in the movement as well. Soon to displace the *principalía*, this new upper-class influence originated from wealth in land and money.

The *ilustrados* were a close-knit clique, with many engaged in the law and medical professions. The circle disparaged parochial issues and fostered numerous interprovincial ties. Its members’ higher education, extensive travel, and contacts with American and European entrepreneurs instilled in them an affinity for liberal, worldly, and Occidental worldviews. By the late 19th century, the *ilustrados* emerged as the principal spokesmen for Philippine nationalist sympathies.

In general, most *ilustrados* believed that the Filipino nationalist spirit could best be nourished by increasing education and educational opportunities and by developing a unique sense of Filipino identity. They criticized Spain’s discriminatory appointments in the church, the army, and the government of the Philippines. Once the group became more Westernized, it sought equal treatment between Filipinos and Spaniards as well as between the Philippines and Spain, pressing for progressive changes such as those that were evolving in Europe at the time. The *ilustrados* tar-

geted the Catholic Church in particular. For some 300 years, its monastic orders had dominated much of the political and economic life of the colony. These orders also owned substantial property, much of it useful farmland, desired by the Filipino elite. Strong *ilustrados* protests were frequently registered in Cavite Province, where the religious orders owned considerable real estate.

The Philippine nationalist crusade began in earnest with an uprising at the Cavite armory in 1872 by the garrison’s soldiers and laborers. It was quickly crushed by the Spanish authorities. A number of *ilustrados* were apprehended, three clergymen were put to death, and a number of *ilustrados* fled or were exiled. The 1872 episode, however, converted many formerly reluctant fellow travelers to the nationalist cause.

Opposition to Spanish colonialism, at first moderate, developed in Spain and other countries as well. Emigré propagandists such as José Rizal, Marcelo del Pilar, and Graciano López Jaena protested Philippine conditions and advocated changes in the colonial order. The talented Rizal’s two books, *Noli Me Tangere* (Touch Me Not), published in 1887, and *El Filibusterismo* (The Reign of Greed), published in 1891, contributed to a maturing patriotic sentiment. This overseas campaign, identified as the Propaganda Movement, issued the biweekly *La Solidaridad* (Solidarity) in Barcelona by 1889. Many *ilustrados* were involved in Rizal’s abortive Liga Filipina, founded in 1892.

When a rebellion against Spanish rule broke out in 1896, many *ilustrados*, including Ant3nio Narciso Luna de St. Pedro, Apolinario Mabini, and the exiled Rizal, refused to support the revolutionary Katipunan. Moreover, when the Spanish-American War began two years later, the elite backed Emilio Aguinaldo y Famy but at the same time urged the insurgents to tone down their war aims. When the Philippine-American War (1899–1902) began, several *ilustrados*

endorsed Aguinaldo, but many others collaborated with the United States and served on its seven-panel governing body.

Immigration

At the time of the Spanish-American War, the United States was in the midst of the longest sustained period of mass immigration in its history. In the 1880s and 1890s especially, immigrants arrived in the United States in numbers never seen before or since. In those two decades alone, 9.5 million people immigrated to the United States. Indeed, the United States saw unprecedented numbers of immigrants reaching its shores from about 1840 to 1920, accounting for the largest single migration of people in modern history.

Immigrants came to the United States in two principal waves between 1840 and 1920. During the first period, roughly from 1840 to 1880, most came from Ireland, Britain, France, Germany, and Scandinavia. Sometimes referred to as “old immigrants,” these individuals hailed from Northern and Western Europe and were more attuned with Anglo-Saxon culture. Many were also able to speak English. A sizable number of them were Protestant. The second wave of immigration, however, beginning around 1880 and lasting until 1920 or so, was comprised of immigrants mainly from Southern and Eastern Europe and Asia (principally China). The largest concentrations came from Italy, Greece, Russia, Poland, southern Germany, and other places in Central and Eastern Europe. Unlike the first wave of immigrants, most were Roman Catholic, Eastern

Orthodox, or Jewish and had little knowledge of Anglo-Saxon culture and even less ability to speak English upon arrival.

While there were some immigrants who served in the U.S. armed forces during the Spanish-American War, their numbers were quite small. Many newly arrived immigrants were not citizens and therefore were poor candidates for military service. Furthermore, their inability to speak or properly understand English also served as a roadblock for service in the armed forces. And because few of the newly arrived immigrants were literate or well-educated, the War Department saw little use for them. Finally, the persistent stereotyping of and discrimination toward immigrants—particularly those from Eastern and Southern Europe—would not have allowed their inclusion in the ranks in any significant numbers. Nevertheless, immigrants played a key role in American society at the time because they were providing the cheap labor necessary to power the nation’s industrial colossus, which had allowed it to take its place among the world’s great powers by the 1890s.

The impact of mass immigration on the United States is difficult to overemphasize. Not only did it provide the human resources for the American Industrial Revolution, but it also fundamentally altered the demographic and ethnic makeup of the nation. It was immigration—far more than internal migration—that turned the United States from a rural, agrarian nation to an urbanized, industrial nation between 1860 and 1900. Indeed, the growth of American cities was without parallel. During those 40 years, New York’s population ballooned from 850,000 to 4 million, while Philadelphia’s rose from 650,000 to 1.5 million. The fastest-growing big city, however, was Chicago, which saw a stunning 1,800 percent increase in its population (from 110,000 to 2 million). Other cities underwent similarly explosive growth, which transformed the country into a nation of big cities and swelling urban populations. Predictably, this same growth ensured that the United States went from being a predominantly Protestant Anglo nation to a polyglot country of many ethnic groups practicing Judaism and Catholicism in great numbers.

Immigrant settlement patterns were not hard to figure out. Scandinavians and immigrants from northern Germany and Holland tended to locate in the upper Midwest (Minnesota, Wisconsin,

sin, Michigan), where they established farms in good soil and in climactic conditions that were not very different from the lands they left behind. These immigrants generally had more money than the later-arriving immigrants and thus were often able to purchase inexpensive land and continue their agrarian ways. Most of the immigrants from Ireland, Italy, Poland, Russia, etc., tended to settle in the growing big cities, where economic opportunities in industrial production were most prevalent. Many of these groups settled in homogenous enclaves, where they felt more comfortable living with people who spoke the same language or practiced the same religion. Before long, however, these immigrant enclaves became festering slums riddled with crime, substandard housing, disease, and the like.

American slums presented government officials and reformers alike with major challenges. While most city governments were unable or unwilling to ease such conditions, social reformers saw in the slums a perfect opportunity to bring progressive-style reforms to the nation's teeming immigrant population. Indeed, settlement houses, patterned after Jane Addams's Hull House in Chicago, became a common phenomenon in many big cities toward the end of the 19th century. The settlement houses provided badly needed resources for immigrants, including language instruction, education, work placement programs, vocational training, child and health care, and the like. Nevertheless, conditions for many immigrants in U.S. slums were appalling. Many lived in dark, dank apartments and tenements, sometimes with more than one family living in just one or two small rooms, with no running water or electricity. Many such places had no sewage disposal systems, using communal out-houses behind the buildings; such areas also had little or no fire

protection (and the tenements themselves were wooden tinder-boxes). As late as 1900 and even after slum conditions had markedly improved, New York City's Lower East Side had 50,000 inhabitants but just 500 bathtubs.

Still, however, in less than a generation, most immigrants had left such conditions behind them as they became upwardly mobile. They did so almost exclusively by beginning their new lives as unskilled or semiskilled day laborers in American factories, mines, ports, railroads, etc. Although the need for such unskilled labor skyrocketed in the last third of the 19th century, the influx of immigrant workers was so immense that there was often a labor surplus, which was a great boon to the industrialists but a bitter pill for most workers. Because labor competition was so keen, employers could usually get away with paying their workers pitifully low wages. They could also get away with allowing them to work in dangerous situations, which caused the deaths of thousands of workers each year. Efforts to organize immigrant and unskilled laborers were only partially successful. Many unions did not want to admit immigrants to their ranks, and the American Federation of Labor (AFL) went out of its way to draw up policies that excluded most immigrants, African Americans, and women. Only the Knights of Labor actively sought to organize immigrants, but the organization itself was not terribly effective in attaining its goals.

Another problem engendered by immigration was the meteoric rise of child labor and the exploitation of women. Many children, some as young as 6 years old, were put to work in factories because their parents could not afford to support them. Others were kidnapped and forced to work or were entered into a form of slavery by unscrupulous padrones (an older immigrant who took money

Two young boys climb on a spinning frame to mend broken threads and put back empty bobbins at a Macon, Georgia, textile mill in 1909. (Library of Congress)

from newly arrived immigrants in exchange for jobs, housing, etc.). In 1880, an estimated 1.118 million children under the age of 16 were in the workforce, or about one out of every six U.S. children. Many immigrant women worked outside the home, usually in menial service jobs or in dangerous factory employment. They were usually paid one-third to one-half the compensation men received for the same job. The influx of children and women into the workplace served to further drive down wages and increase joblessness among immigrants.

During the Spanish-American War, many immigrants were ambivalent about the conflict and American imperialism. As immigrants, most did not speak out against the war or its aftermath for fear of being punished. Indeed, a good many seemed to support the war (at least in public). The Knights of Labor supported the Cuba rebels but did not support U.S. expansionism and denounced President William McKinley's attempt to annex Hawaii in 1897. When the USS *Maine* exploded in February 1898, the International Association of Machinists lamented the tragedy but was quick to note that no such public outcry accompanied the deaths of thousands of workers in U.S. factories. In the end, the Spanish-American War and its aftermath provided many Americans with a diversion from the social and economic ills that beset the nation at the time, many of which were derived directly or indirectly from immigration.

Immunes

Name given to 10 regiments of the U.S. Army supposedly immune to tropical diseases. On May 11, 1898, Congress authorized recruitment of 10,000 men from southern states who were supposedly immune to diseases incident to the tropics. The impetus for the creation of these regiments came from the high incidence of disease, especially yellow fever, prevalent in the tropics. The Immunes were the 1st through 10th U.S. Volunteer Infantry Regiments.

The effort largely fell apart, however, as these regiments included men from mountainous areas of the South as well as recruits as far removed as New Jersey. Four of the regiments, the 7th through the 10th, were made up African Americans, as it was as-

sumed—fallaciously as it turned out—that they possessed general immunity to tropical diseases.

As V Corps commander Major General William R. Shafter in Cuba reported increasing cases of yellow fever among U.S. troops there, in mid-July 1898 Secretary of the Army Russell A. Alger informed Shafter that he was ordering two of the Immunes regiments to Santiago de Cuba. Indeed, the 3rd, 4th, 5th, and 9th Regiments served in occupation duties in Cuba, while the 6th Regiment performed the same duty in Puerto Rico.

Imperialism

The United States was a relative latecomer to a wave of expansionism in which the industrialized Western nations (along with Japan and tsarist Russia) came to dominate most of the underdeveloped world and its nonwhite peoples in the last third of the 19th century. The arguments that American imperialists advanced to justify American overseas expansion and the war with Spain in 1898 had already been heard in Europe over the previous century. Western imperialism and expansionism was grounded in a set of cultural, political, economic, and racial assumptions that postulated the superiority of the white Western nations of Europe and America and the obligation of white civilization to carry the benefits of Western civilization to the nonwhite peoples of Asia and Africa.

These ideas were perhaps best embodied in Rudyard Kipling's poem "The White Man's Burden," first published in 1899. The primary tenants of what became this so-called new imperialism had been developed in Great Britain beginning in the 1820s and 1830s by British historians Thomas Carlyle and Thomas Macaulay, both of whom postulated that Great Britain, through the development of its democracy, had a special place in history and a special mission in the world. The ideal of the special mission of the Anglo-Saxon peoples was further developed in the middle of the 19th century by intellectuals such as Sir Charles Dilke, Sir John Seely, and Joseph Chamberlain. The work of these individuals influenced a generation of proimperialist thinkers throughout the United States and Europe between 1870 and 1900, including Jules Ferry in France and Americans Theodore Roosevelt and William Graham Sumner.

Arguments for imperialism often complemented those of other ideologies, such as nationalism, capitalism, and racism. The pe-

Stereograph distributed by Keystone View Company captioned "The Philippines, Porto Rico and Cuba—Uncle Sam's burden. (With apologies to Mr. Kipling)," 1899. (Library of Congress)

ripheral relationship of imperialism to other ideologies is partly because empire was external to, but dependent upon, the domestic politics and economies of the imperial powers. To provide imperialist ideology with coherence and relevance, its advocates related overseas expansion to those issues that directly affected the public as national interests. Thus, imperialism, in the form it took in the late 19th century, evolved from intellectual currents that dated from the end of the Napoleonic Wars in 1815. These modes of thought were strengthened by economic and industrial growth, the spread of literacy and the print media, and intensified nationalist feelings. This form of nationalism, which had been stimulated by total social mobilization during the wars of 1792 to 1815, was combined by imperialists with religious fervor to assure the peoples of Great Britain and France (to be joined after 1870 by Germany, Italy, Russia, Japan, and the United States) of the rightness of their cause and their duty to carry the fruits of Western civilization to the lesser peoples of the world.

The rise of the new imperialism also corresponded to the opening of new areas of exploration in subequatorial Africa and Southeast Asia and new opportunities for the expansion of Western political influence in the Middle East. These new opportunities were the products of technological change and medical advances that reinforced notions of cultural and racial superiority. The opening of Southeast Asia in the 1850s and 1860s and of equatorial Africa in the 1870s resulted from the development of shallow-draft steamers and gunboats that could negotiate inland rivers such as the Niger in

Africa and the Mekong and Red rivers in Indochina. Even more significant were medical advances such as the development of quinine and other preventive measures that enabled Westerners to contain malaria and enabled Europeans to penetrate into the interiors of Africa and Asia without fear of death from that disease.

All imperialist thinking throughout the 19th century grew from an assumption of cultural superiority that pervaded Western society. Whether humanitarian or racist (or often both), this assumption was seldom questioned and was often viewed as a historical (or divinely inspired) given. Imperialism was grounded in a strain of Western nationalism that glorified the European and North American nation-state and saw industrial growth and the development of the modern nation-state as a process that would inherently lead to goodness. The general objective of this ideology was the glorification of the nation through both the extension of its territory (continental and overseas) and the elevation of its responsibilities. The combination of possession and control of territories and peoples along with the moral purpose of uplifting subject peoples gave empires their grandeur.

Ideas of white Western racial and moral superiority were reinforced in the late 19th century by the ideology of social Darwinism, a transliteration of Charles Darwin's principles of evolution and natural selection from the world of plants and animals to that of man. Social Darwinism, first propounded by Herbert Spencer, suggested that certain races—namely those with Anglo-Saxon ancestry—were better fitted to survive, flourish, and rule than others. This conclusion could be justified in terms of material, scientific, and intellectual progress and superiority. The corollary to this argument was that those white nations that did not seek overseas colonies to strengthen their power and influence would be eclipsed by those that did. This perspective added fuel to colonial rivalries that intensified in the years after 1870 when newly unified Germany and a more aggressive and self-confident United States began to assert their right to a slice of the colonial pie.

The perception of moral and cultural superiority was reinforced by more tangible considerations of power such as national security and domestic stability. Imperialism was viewed as more than a moral imperative. Colonial expansion was considered a practical necessity. The roots of late 19th-century expansionism lay in the Industrial Revolution and economic growth. The period from 1870 to 1900 was a time in which rapid industrialization was disrupting older, more traditional social relationships and pressing on foreign affairs in new and disturbing ways. Many advocates of imperialism considered colonial policy as a safety valve for the steam-driven industrial machine. The domestic dislocation that industrialization produced, especially population shifts from country to city, raised fears of social discontent if not revolution.

These fears intensified during the period of general economic stagnation of the 1880s and 1890s, known as the Long Depression. Imperialists argued that this impending internal crisis could be averted only through overseas expansion. Settlement colonies could absorb surplus population, not to mention excess goods.

Tropical possessions could provide raw materials and become markets for manufactured goods. Markets in colonial possessions could stimulate domestic production and head off unemployment at home. This notion of colonies as sources of strength was most pronounced in Britain, where its overseas colonies (particularly India and the white Dominions of Australia and Canada) were viewed as the main source of British power. Their expansion would ensure that Britain would be able to match its main rivals—Germany, France, and Russia—in economic and military strength and prestige. Likewise, French officials and observers viewed France's revival in the wake of its defeat by Germany in the Franco-Prussian War of 1870–1871 as being linked to France's expansion in Indochina and equatorial Africa. German expansionists, meanwhile, viewed Germany's acquisition of colonies as essential to match Britain and France.

Finally, the far ends of empire might shelter malcontents who threatened revolution in their home countries and would provide opportunities for a generation of young men seeking opportunities for adventure and a chance to prove their masculinity. Two generations of peace in Europe after 1815 had created a restless generation of young men educated in the public schools of England and the universities of continental Europe and anxious to prove themselves in the same manner in which their forebears had done in the Napoleonic Wars or, in the case of the United States, the Civil War.

The imperialism of the late 19th and early 20th centuries was thus driven by intellectual currents that fed on intensifying rivalries among the great powers of Europe that extended into Africa, the Middle East, and Asia as those nations sought colonies to strengthen themselves. The faces of imperialism abounded. The imperialism of prestige was joined by the imperialism of geopolitics in which global strategy played a decisive role. Prestige and strategic considerations were joined by the imperialism of trade in which the possession of colonies could be justified as outlets for home manufactures. There was social imperialism in which domestic social problems could be alleviated or diverted through the use of colonies as outlets for surplus populations and for young men seeking to prove themselves. There was no single theory of imperialism or expansionism suitable for all conditions and all climes. Indeed, there was no single purpose animating the thinking of high-minded idealists, profit seekers, adventurers, or political manipulators. Imperialism was a convenience of the age. That reality would prove equally true for the United States as it emerged as a global power in 1898.

Imus River, Battle of

Event Date: September 3, 1896

Filipino insurgent victory over the Spanish at the town of Imus in Cavite Province of the Philippines on September 3, 1896. In Cavite, the Katipunan (the secret Filipino revolutionary organization) was split into two factions. The Magdaló's provincial council was directed by Baldomero Aguinaldo (first cousin to insurgent leader Emilio Aguinaldo y Famy) and headquartered at Kawit (formerly Cavite Viejo). The Magdiwang's provincial body was headed by Mariano Alvarez and based at Noveleta. On August 31, 1896, the Cavite Katipuneros rose up and assaulted the Spaniards in the municipal office at San Francisco de Malabon. At Kawit the Magdaló's Candido Tirona took the Spanish outpost with little trouble. In the meantime, Emilio Aguinaldo advanced on Bacoar to intercept Spanish troops dispatched from Manila and was routed.

Aguinaldo then withdrew and prepared to engage the Spaniards stationed at Imus. Runners circulated throughout Cavite urging natives to rise in support of the rebellion. Baldomero Aguinaldo and insurgents departed for Imus but were repulsed there by a Spanish force. On September 1, 1896, Emilio Aguinaldo united with his cousin and with 2,000 men compelled the Imus defenders to withdraw into the town's abbey. The Spanish, although trapped, fended off insurgent efforts to drive them out. Even friars took up weapons to fire at the attackers. The battle became a stalemate until Emilio Aguinaldo ordered an adjacent grain storehouse torched. The smoke from the flames overcame the Spaniards, and they laid down their arms.

The next night, the insurgents made ready to do battle with Spanish troops marching on Imus. Aguinaldo oversaw the construction of fortifications and elaborate trench works, and a bridge leading to Imus was dismantled so that the Spaniards would not see the cut until they had traversed part of the span. Furthermore, a captured artillery piece was concealed with foliage and positioned to be able to fire directly on the bridge. Finally, early on September 3, Aguinaldo deployed his poorly armed followers in well-hidden entrenchments or prone behind sheltered posts.

Some 500 Spanish troops approached and, observing no insurgents about Imus, tramped toward the partly razed span. By the time the vanguard realized that they had walked into an ambush and that the bridge was impassible, Aguinaldo's entrenched rebels were pouring fire into their ranks. The insurgent leader then ordered a detachment to ford the waterway and give chase, but the

rebels wallowed in the shoulder-deep current, and some were swept away. Thereafter, Aguinaldo personally led a detachment across the river, telling his men to link arms. As a consequence, the insurgents gained the distant bank, assaulted the Spanish flank, and prompted a number of the Spanish soldiers to flee. Many became mired in mud, and the Filipinos cut down a number of them with edged weapons.

In addition to killing a number of Spanish soldiers, the insurgents captured 70 rifles and additional military gear. Among the weapons recovered was the Spanish commander's sword. The inscription read: "Made in Toldeo, Spain, 1869." Because this was his birth year, Aguinaldo decided to carry the sword in future engagements.

Within seven days of the battle, most of Cavite's towns were freed of Spanish forces. Hailed as a great military leader, Aguinaldo solidified his position at the forefront of the revolutionary movement.

Insular Affairs, Bureau of

U.S. government agency responsible for administering certain U.S. territories, including the Philippines. The Bureau of Insular Affairs was created in 1902 and endured until 1939. The bureau effectively superseded the Division of Customs and Insular Affairs, created in 1898 to administer civil affairs and customs in Cuba and the Philippines. In 1900, that agency was renamed the Division of Insular Affairs. When the Bureau of Insular Affairs was created it operated under the aegis of the War Department. It continued to be run by the War Department until 1939, at which point the agency was reorganized and moved to the Department of the Interior. Because the bureau fell within the purview of the War Department, its head was always a U.S. Army general.

Although the Bureau of Insular Affairs administered civil government, it came under the direction of the War Department chiefly because the United States had created a military-style occupation in the newly acquired territories secured as a result of the Spanish-American War. Military planners also hoped to keep territorial affairs within the War Department because of the strategic significance of the Philippines. The bureau did not at first exercise control over Puerto Rico. That island was administered via a civilian government with limited popular sovereignty per the Foraker Amendment of 1899 (also known as the Organic Act of 1900). Included in this government was a governor and executive council appointed by the U.S. president, a 35-member representative body,

and a judiciary system. Beginning in 1909, the civilian government of Puerto Rico was administered through the Bureau of Insular Affairs. In 1934, the bureau's supervision of Puerto Rico was moved to the Division of Territories and Island Possessions under the aegis of the Department of the Interior.

Other regions also fell under the supervision of the Bureau of Insular Affairs, including for a time customs in Cuba, the Panama Canal Zone from 1904 to 1905, and the supervision of customs in Haiti and the Dominican Republic. Guam, Hawaii, American Samoa, and the U.S. Virgin Islands were not within the bureau's domain. Instead, they were supervised by the U.S. Department of the Navy according to the dictates of the Organic Act of 1900.

In the Philippines, the Bureau of Insular Affairs maintained a necessarily high profile and oversaw all civilian government functions, including public works, educational activities, medical care, tax and customs collections, police and fire protection, and military defenses. The bureau's legacy was generally a positive one in that it maintained order and improved the lot of many Filipinos.

Insular Cases

Series of cases after the Spanish-American War that defined the status of the territories acquired from Spain as well as the constitutional rights of subjects in the territories. Although the United States had expanded across the continent of North America during the 19th century, the territories acquired had been adjacent to existing states, were intended for settlement by U.S. citizens, and were set on a path for future admission to the union as states. In the case of the Louisiana Purchase of 1803, the treaty acquiring the territory guaranteed citizenship for the existing European population. The Treaty of Guadalupe-Hidalgo with Mexico in 1848 also provided U.S. citizenship to former Mexican citizens in the territories acquired as a result of the Mexican-American War. It is important to note, however, that citizenship was not extended to Native Americans in either treaty.

The acquisition of Hawaii, Guam, Puerto Rico, and the Philippines as a consequence of the Spanish-American War raised a number of constitutional issues, since these territories were outside the continental United States and were not intended for eventual statehood. The central issue was whether the Constitution followed the

flag. Anti-imperialists argued that the residents of the newly acquired territories were entitled to the same constitutional protections that had previously been afforded to the inhabitants of territories. Imperialists asserted that Congress had the authority to define how these territories would be governed and the rights that would be extended to the subjects residing in them. The conflict between these two arguments would ultimately be decided by the U.S. Supreme Court in a series of cases collectively known as the Insular Cases.

In 1901, the Supreme Court ruled on two cases involving Puerto Rico that set important precedents on the status of the newly acquired territories. In *DeLima v. Bidwell*, the Court ruled in a 5–4 decision that the port collector in New York had wrongly accessed tariff duties on sugar imported from Puerto Rico. The majority held that the Treaty of Paris had not made Puerto Rico a foreign country as had been the case with Cuba and that in the absence of congressional regulation taxes could not be imposed on goods imported from Puerto Rico. In *Downes v. Bidwell*, the Court ruled on the constitutionality of the Foraker Amendment, which had established a civil government in Puerto Rico and imposed import duties on goods from the islands. Although the Court upheld the Foraker Amendment, including the provision on tariff duties, in a 5–4 decision, the majority did not agree on a common doctrine on the status of territories. In a concurring opinion, however, Justice Edward Douglass White developed the incorporation doctrine, which emphasized the power of Congress to define the status of the territories and, more importantly, the rights and privileges enjoyed of the inhabitants. In short, White asserted that the territories were in a subordinate position and that the Constitution applied only to the extent that Congress chose to apply it.

The majority opinion and White's concurring opinion in *Downes* was challenged by Justice John Marshall Harlan in a stinging dissent: "The idea that this country may acquire territories anywhere upon the earth, by conquest or treaty, and hold them as mere colonies or provinces—the people inhabiting them to enjoy only such rights as Congress chooses to accord them—is wholly inconsistent with the spirit and genius as well as with the words of the Constitution." Despite Harlan's vigorous dissent, which reflected the political debate within the country, the Court would soon adopt White's incorporation doctrine as the constitutional law of the land.

In 1904, the case of *Dorr v. United States* came before the Court. Convicted for libel under a law passed by the Philippine Commission, Fred L. Dorr sought to overthrow his conviction on the grounds that his Sixth Amendment rights had been violated because he had not been tried by a jury. In an 8–1 decision in which two justices concurred and Harlan dissented, the Court applied White's incorporation theory, upholding Dorr's conviction on the grounds that the Philippine Commission operated on the guidelines established by Congress and that a trial by jury was not required because Congress had not required it.

The Court did make one significant departure from the incorporation doctrine in *Weems v. United States* in 1910. This case in-

The U.S. Supreme Court, 1906. The justices, pictured from left to right are William H. Moody, Oliver Wendell Holmes Jr., Rufus W. Peckham, David J. Brewer, Melville Weston Fuller (chief justice), John Marshall Harlan, Edward Douglass White, Joseph McKenna, and William R. Day. (Library of Congress)

volved a Coast Guard officer in the Philippines who had been sentenced to 15 years' hard labor after being convicted under a preexisting Spanish law. In a 6–2 decision in which White and Justice Oliver Wendall Holmes Jr. dissented, the Court set aside the conviction and sentence on the grounds that the punishment did not fit the crime. Indeed, Justice Joseph McKenna's majority opinion marked the first time that the Supreme Court invoked the Eighth Amendment's ban on cruel and unusual punishment to overturn a conviction.

Despite the decision in *Weems v. United States*, the Supreme Court consistently applied the incorporation doctrine in subsequent decisions. In *Dowdell v. United States* (1911), the Court ruled 8–1, with Harlan dissenting, that criminal trials in the Philippines did not require 12-person juries because Congress had not required them. As a result, the Insular Cases clearly established the principle that territories were firmly under the jurisdiction of Congress and that the Constitution applied only as Congress saw fit to apply it with the exception of extreme circumstances, as in the *Weems* case.

Japan

Japan, although not directly involved in the Spanish-American War, demonstrated in the late 19th century appreciable interest in the Philippines as a potential trading partner, a destination for Japanese emigrants, and perhaps a colony. At both the official and nonofficial level, the Japanese maintained contacts with Philippine independence movements against Spanish rule and kept a close watch on their development. Although the Japanese government acquiesced in U.S. annexation of the Philippines in 1898, throughout the early decades of the 20th century Japanese nationalists continued to hope that the Philippines could be included in a Japanese sphere of influence in East Asia.

Early Japanese interest in the Philippines dated back before the Spanish took control of the islands in the 1560s, when Spanish officials noted the existence of significant trade between the northern Philippines and Japan. In 1570, 20 Japanese settlers were already living in Manila. From then until the early 17th century, Japanese merchants traded wheat flour, weapons, and other goods to Manila in exchange for Chinese silk, and from 1584 onward Spanish commercial vessels likewise visited Japan. Roman Catholic missionaries based in the Philippines also launched proselytizing ventures in Japan.

In 1592, the expansionist Japanese shogun Hideyoshi demanded that Spain acknowledge his suzerainty over the Philippines, a request that the Spanish ignored but one that foreshadowed subsequent Japanese ambitions to rule the islands. By the early 1620s,

the population of the Japanese quarter in Manila sometimes surpassed 3,000 people. From 1611 onward, however, the Tokugawa shogunate subjected foreign missionaries and Japanese Christians to intensifying persecution, and in 1624 all Spaniards were expelled from Japan. After a major Christian uprising in Japan in 1638, the Japanese authorities responded by ending all outside contacts, the beginning of more than three centuries of Japanese isolation from the Western world. The relatively small number of Japanese who remained in the Philippines gradually intermarried with and assimilated into the indigenous population. During Japan's isolation, shipwrecked Japanese fishermen were occasionally cast up on Philippine shores, some settling where the seas had brought them, others returning to Japan.

More significant contacts between Japan and the Philippines, still under Spanish rule, resumed in the 1860s after the forcible opening of Japan to Western commerce and dealings the previous decade. In 1868, Spain and Japan signed a treaty of amity, commerce, and navigation, and thereafter the two governments remained on courteous terms. Although handicapped at first by arbitrary Spanish customs duties and procedures in Manila, over the next two decades trade between Japan and the Philippines grew substantially. By the 1880s, Japan was exporting coal and rice to the Philippines and importing Philippine-grown tobacco and sugar. Spanish and Japanese officials both sought to encourage trade in these and other commodities. Some Japanese officials also viewed the Philippines, like many other territories throughout Asia, as a potential destination that might absorb Japan's surplus population as immigrants, although attempts by Spain and Japan to reach an agreement allowing and regulating such immigration proved fruitless. In 1888, Japan opened a consulate in the Philippines to protect the interests of its citizens in the islands. Japanese-Philippine trade

(Library of Congress)

grew substantially in the subsequent decade due largely to growing Japanese imports of Philippine goods.

From the 1880s onward, the growing number of Japanese nationalists viewed the Philippines, together with Korea, Manchuria, and other island territories in the western Pacific and beyond, not just as valuable trading partners but also as potential targets for Japanese annexation. During the 1880s and 1890s, the Japanese Meiji government was eager to revise the so-called unequal treaties that Japan had concluded with Western governments in the 1850s so as to rescind their provisions granting foreign extraterritoriality and gain Japanese tariff autonomy. The Japanese government, therefore, never officially endorsed such territorial ambitions, which might have obstructed its pursuit of these more immediate goals. Japanese leaders preferred to pursue cautious expansion within a framework of cooperation with Western powers.

Nationalist objectives were expressed by such leading figures as educator Yoshida Shoin, teacher to several prominent Meiji leaders, who urged the extension of Japanese control over Manchuria,

Korea, Formosa, and the Philippines, arguing that these would serve as bases from which Japan could repel Western imperialists in Asia, including Britain, Russia, France, and the United States. From the early 1880s onward, several scholarly societies, the Tokyo Chigaku Kyokai (Tokyo Geographical Society), the Tokyo Keizaigaku Kyokai (East Asian Society), and the Shokumin Kyokai (Immigration Society), likewise demonstrated considerable interest in the Philippines. In newspaper articles and other popular writings, their members suggested that Japanese should settle the Philippines and other island territories in Pacific Oceania and encourage the development of trade and industry there.

Some authors also advocated Japanese support for the burgeoning Philippine independence movement against Spanish rule, suggesting that Japan might assist the still backward indigenous Philippine people in efforts to expel all Western influences from Asia. The implication was that benign Japanese leadership would then replace harsh and alien Spanish rule, bringing a new era of strength and prosperity to the islands, while an influx of Japanese immigrants would boost the skills and competitive capabilities of the existing native population.

In the early 1890s, some Japanese military officers suggested that given growing Spanish weakness, as opposition to Spanish colonial rule grew not just in the Philippines but also in Cuba, Morocco, and the Marianas and Caroline islands, Japan might be forced to take over the Philippines in order to save them from annexation by the rising power of Germany, whose imperial ambitions for foreign colonies had developed rapidly throughout the 1880s. Despite the existence of such grand designs, in November 1893 the Japanese Foreign Office closed its Manila consulate on the grounds that the unsettled state of the Philippines, where nationalist opposition was already provoking harsh repression by Spanish officials, made the islands inhospitable and unattractive to Japanese settlement. The consulate did not reopen until October 1896.

Throughout the 1890s, Spanish officials in the Philippines and Madrid were outwardly cordial but privately suspicious of Japanese intentions toward the Philippines and other Spanish holdings in the Pacific, including Guam and the Caroline Islands. Prominent Japanese, meanwhile, maintained close contacts with Philippine independence activists, and the Japanese consulates in Manila, Hong Kong, and Washington painstakingly monitored the actions of Philippine nationalists.

After Japan's victory over China in the Sino-Japanese War (1894–1895) and its annexation of the island of Taiwan, some Philippine rebels, notably Jose Ramos, looked to Japan for leadership in a Pan-Asian struggle against Western domination. In August 1895, Ramos fled to Japan, settling there, taking a Japanese wife, and unsuccessfully attempting to purchase Japanese armaments for a projected revolt against Spanish rule. Other prominent Philippine activists followed Ramos to Japan, where they met frequently with Japanese military officers and civilians sympathetic to their cause. From 1896 onward, when the Philippine rebellion began, the Japanese government at the request of Spain likewise kept both Philippine and Spanish support-

ers of independence in Japan under close surveillance. In particular, Japan took no actions likely to compromise the negotiation of a new Treaty of Friendship and General Intercourse between Spain and Japan, concluded in January 1897, that provided for the revision of tariffs in Japan's favor.

When the United States declared war on Spain in April 1898, Japan proclaimed a policy of official neutrality. With the permission of the Spanish government, Japan sent military officers to the Philippines as observers. It also blocked purchases of arms in Japan by indigenous rebels. Throughout the war, Japan joined Germany, Britain, and France in maintaining a naval presence in Manila Harbor, observing the formalities of neutrality with great correctness. Following the American naval victory in the Battle of Manila Bay (May 1, 1898) and the blockade of the Philippines, Japan pursued a policy of watchful waiting, quietly indicating its willingness to take over the Philippine Islands should the United States be reluctant to annex the archipelago or, alternatively, to assume a condominium there in conjunction with the United States and perhaps Great Britain.

Whatever their private regrets, when U.S. president William McKinley announced in late 1898 that his country intended to retain the Philippines indefinitely, Japanese leaders acquiesced in the American decision. Fears that either Japan or Germany might otherwise rapidly seize the Philippines were indeed one factor impelling American officials in their decision to keep their new acquisition.

While reluctant to alienate the powerful United States, Japanese expansionists continued to cherish wistful and covetous dreams of the Philippines. In the early 20th century, many American military officials administering the islands emulated their Spanish predecessors in demonstrating strong suspicions of Japanese ambitions. American military intelligence personnel invariably paid close and watchful attention to visiting Japanese pearl fishermen and merchants, suspecting that their ostensible activities were mere cover for espionage missions to assess the state of American defenses and the islands' potential for colonization by Japan. From 1902 onward, Japanese businessmen established branches of major trading companies in Manila, and the number of Japanese residents also grew dramatically, reaching 9,874 by 1919. In 1918, 375 Japanese trading vessels visited the Philippines. In 1919, the Japanese consulate in Manila was promoted to a consulate general, and in 1920 it established a branch in Davao.

The growing assertiveness of Western powers, especially the United States, in the Pacific at the turn of the century was probably one reason why Japan, especially after concluding an alliance with Great Britain in 1902, began to pursue its own territorial objectives more aggressively than in the past. In 1904, Japan went to war with Russia, seeking to take over Russia's special rights in the northeastern Chinese provinces of Manchuria and also control of the Korean Peninsula. During World War I, Japan declared itself one of the Allies and promptly took the opportunity to attack and annex several German-owned islands in the northwestern Pacific. In December 1914, Japanese forces besieged and captured

the German treaty port of Tsingtao in Shandong Province, a concession that Japanese officials likewise sought to retain. During World War I, Japan also demanded special rights and privileges in China that would have effectively reduced that nation to a Japanese protectorate. Throughout the 1920s, the Washington treaty system effectively maintained the status quo in the Pacific. During the 1930s, however, Japanese nationalists came to power and began to pursue the expansionist goals of a Pan-Asian and Japanese dominion of the Pacific first articulated by their intellectual forebears during the 1880s. In December 1941, Japanese forces launched an invasion of the Philippines, and from then until 1945 the islands experienced harsh Japanese military occupation, a practical demonstration that domination by an Asian power was no less oppressive than Western imperialism.

Jingoism

Term that refers to excessive or chauvinistic patriotism or nationalism. Jingoism is usually associated with going to war or having warlike attitudes. The origin of the word “jingo” probably dates back to the 17th century and seems to have been a catchphrase used by magicians. It was also used as an interjection indicating surprise or to add emphasis to a subject. However, the association of the word with extreme patriotic or nationalistic feelings did not occur until the late 19th century.

The terms “jingo” and “jingoism” date to the late 1870s and were a result of the Russo-Turkish War (1877–1878), which brought about a Russian victory. The Treaty of San Stefano, which formally ended the hostilities, required the Ottoman Empire to cede territory south of the Caucasus Mountains to Russia, provided independence

Joseph Pulitzer and William Randolph Hearst dressed as the Yellow Kid, each pushing against opposite sides of a pillar of wooden blocks that spells “WAR,” 1898. to Serbia and Romania, promised reforms in Bosnia, and indicated that Bulgaria would become autonomous. The Russian victory and occupation of Istanbul along with the treaty aroused much concern in Great Britain, which, along with France, had worked to prevent a Russian incursion into the eastern Mediterranean Sea and into the Middle East. War talk flared in Britain as public opinion began to call for a confrontation with Russia to protect British interests in the region. Reflecting the attitudes of many, a song written for a popular entertainer of the time, Gilbert MacDermott, contained the lyric that gave rise to the term jingoism: “We don’t want to fight, but by jingo if we do, We’ve got the men, we’ve got the ships, we’ve got the money too!” London war hawks latched on to the song and were first referred to as “Jingoes” in the London *Daily News* in March 1878. The British government dispatched naval units to the Mediterranean, and a general Anglo-Russian war seemed likely.

Diplomacy saved the day, however, as the crisis was defused by the 1878 Treaty of Berlin, which reworked the San Stefano agreement. Russia kept the territory south of the Caucasus Mountains, Serbia and Romania remained independent, and Istanbul was restored to the Ottomans. Great Britain acquired the island of Cyprus, which was of great strategic value to Britain’s position in Egypt and the Suez Canal, while France expanded from Algeria into Tunisia. By 1880 or so, “jingoism” became a fixed word in the English language.

The term was often applied to American expansionists in the 1890s and early 1900s, most notably among them Theodore Roosevelt, John Hay, Alfred Thayer Mahan, Henry Cabot Lodge, and William Randolph Hearst, to name but a few. American jingoism at the turn of the century reflected a revived sense of Manifest Destiny tied together with a strong sense of extracontinental imperialism. Many Americans, including numerous business leaders such as the railroad tycoon E. H. Harriman, believed that the United States was destined to expand beyond its borders. These influential men argued that America should extend its authority over other lands by political, economic, or military means.

American jingoism is probably best illustrated by the events leading up to the nation’s declaration of war against Spain in April 1898. The American public had closely followed the events in Cuba since the outbreak of revolution there in 1895. Most favored Spain’s removal from the island and its replacement by American influence if not outright acquisition. Fueling this growing American sentiment for war with Spain in the late 1890s were business interests, certain expansionist politicians, and the sensationalist yellow press. Indeed, the circulation war waged for readers by newspaper magnates Hearst and Joseph Pulitzer played a significant role in the shaping of jingoist attitudes among Americans. Both newspaper empires sent correspondents to Cuba to cover the fighting between

Cuban rebels and the Spanish forces there. The exaggeration of events, sensationalist writing, and graphic reporting of Spanish atrocities helped arouse the sentiments of Americans in support of the Cuban revolution. Ultimately, this led to increasing pressure on the William McKinley administration to go to war with Spain.

Screaming headlines in the press asked how long the United States would sit idly by while the Spanish committed atrocity after atrocity in Cuba, suggesting that the nation had a moral obligation to intervene. Tied to this was the growing fear raised by business interests that American property in Cuba would be lost or destroyed unless the United States intervened. Adding to the increasing pressure for war were Democratic charges that the McKinley administration was cowardly and unwilling to safeguard American interests. Even jingoist members of McKinley's own party, Roosevelt in particular, were frustrated by the president's reluctance to go to war. Eventually, however, the president would bow to public and political pressure, and the United States would declare war on Spain. The rationale for war emphasized a variety of concerns: the need to protect American property and citizens overseas, the defense of U.S. interests abroad, and the moral obligation to intervene for humanitarian reasons. Clearly, the American war with Spain was jingoism in action.

Nor was the United States the only nation that felt the effects of jingoist sentiments. Other examples include Japan's war with China in 1894–1895 and especially Japan's war with Russia in 1904–1905. Competition with Russia for influence in and control of Korea and the northeastern region of China energized strong public sentiments for war in Japan on both occasions. Jingoist sentiments might also be attributed to the outbreak of almost any war in the 20th century as well.

Jingoism is probably best thought of in a pejorative context. Critics of wars that are perceived as unnecessary or imperialist in nature may accuse national leaders of jingoism. Those opposed to or critical of the Iraq War (2003–) have labeled President George W. Bush and other members of his administration, particularly Vice President Richard Cheney and Secretary of Defense Donald Rumsfeld, for example, as jingoists. Jingoists are unlikely to brand themselves as such when pressing for an aggressive foreign policy or arguing for war. Critics and opponents of excessive patriotic or nationalist zeal and their role in bringing about war are most likely to accuse those who favor such attitudes or policies as jingoists.

Journalism

Journalism played a critical part in U.S. involvement in the Spanish-American War. Moreover, it had a distinct impact on the decision to go to war in April 1898. The jingoistic, nationalistic, and sensationalistic press at the time stimulated and enhanced the American spirit of national assertiveness, American sympathy for the Cuban revolutionaries, and American disenchantment with autocratic Spanish colonial rule in Cuba. Although the American press did not create the hostile American public opinion that led to the Spanish-American War, it did report the growing hysteria in the United States, magnify those sentiments, and bring them to the forefront of public awareness.

Two major newspaper magnates, William Randolph Hearst and Joseph Pulitzer, engaged in a fierce competition with each other, perceiving in the growing tensions with Spain a chance to increase readership. In the months leading up to the Spanish-American War, Hearst and Pulitzer employed journalists to write vivid anti-Spanish articles, which were augmented with graphic illustrations from some of the nation's foremost artists. The newspaper articles, known as yellow journalism, enraged an American public already predisposed to forcibly ending Spanish colonial rule in Cuba. Thus, by the time the USS *Maine* exploded in Havana Harbor on February 15, 1898, national sentiment was clearly against continued Spanish domination in Cuba. Given the role of journalists in the months leading up to the Spanish-American War as well as during the war, historian Charles H. Brown's interpretation of the Spanish-American War as "the correspondents' war" seems plausible.

Hearst, owner of the *New York Herald*, took great interest in the plight of the Cuban revolutionaries and saw the uprising in Cuba as a chance to boost the circulation of his newspaper over his chief rival, Pulitzer, owner of the *New York World*. When Hearst arrived in New York City in 1896, Pulitzer was already employing yellow journalism techniques successfully. To surpass Pulitzer's financial success, Hearst used sensationalist journalism, headlines set in large black letters, full-page editorials, graphic illustrations, and controversial cartoons to increase readership. He also lured journalists and illustrators away from Pulitzer's newspaper by offering them much larger salaries. Hearst was even successful in enticing internationally known authors such as Mark Twain to write for his paper.

Hearst and Pulitzer purposely ordered their writers to distort their reports of the situation in Cuba and to emphasize the most violent aspects of Spanish attempts to quell the Cuban insurrection. Rather than reporting events objectively, editors presented their opinions as fact. Lacking other sources of information, most Americans had no other news source to determine the veracity of newspaper reports. Although Pulitzer was the first to practice yellow

People in front of the *New York Journal* building reading newspaper bulletins during the Spanish-American War. (Library of Congress)

journalism on a large scale, Hearst's journalistic activities prior to and during the Spanish-American War have made his name synonymous with yellow journalism.

In 1896, in an attempt to quell the Cuban rebellion, the Spanish government appointed General Valeriano Weyler y Nicolau as governor of Cuba and ordered him to crush the revolutionaries there and restore order to the island. Weyler's draconian *reconcentrado* (reconcentration) policy, which brought the deaths of thousands of Cubans, was vividly portrayed in a negative light by the American press. Nicknaming Weyler "the Butcher," Hearst bombarded the American public with hair-raising tales of Weyler's alleged atrocities. American newspapers claimed that more than 400,000 Cubans had died during the Cuban War of Independence. Although this number was grossly exaggerated, Americans were nonetheless outraged. *New York Journal* reporter Richard Harding Davis and *New York World* reporter Stephen Crane provided numerous stories depicting Spanish atrocities.

After the Spanish government replaced Weyler with a less controversial general in late 1897, Hearst searched for new grist to justify U.S. intervention in Cuba. To boost readership and further his agenda, he sent famed artist Frederic Remington to Cuba to provide drawings of new Spanish atrocities.

Two events in February 1898—the Dupuy de Lôme–Canalejas Letter and the sinking of the U.S. battleship *Maine* in Havana Harbor—further increased newspaper coverage of events in Cuba and ratcheted up tensions between the United States and Spain. On Feb-

ruary 9, 1898, the *New York Journal* and the *San Francisco Examiner* published Spanish minister to the United States Enrique Dupuy de Lôme's letter to José Canalejas in which Dupuy de Lôme bitterly criticized President William McKinley. Canalejas, a personal friend of the minister, was at the time serving in an official capacity in Havana. Hearst termed it—rather dramatically—as the “worst insult to the United States in its history.” The explosion of the *Maine* in Havana Harbor on February 15, 1898, allowed U.S. newspapers to increase their pressure on McKinley and Congress to declare war on Spain.

Most American newspapers, without any evidence, began asserting that the sinking of the *Maine* was a deliberate act on the part of Spanish officials. On February 16, 1898, the *New York Journal* carried the headline “The War Ship *Maine* Was Split in Two by an Enemy's Secret Infernal Machine.” Americans across the country, fueled by the persuasiveness of yellow journalism, felt justified in demanding that McKinley force the Spanish government to relinquish control of Cuba. Although Spanish culpability in the explosion has never been proven, the majority of the American public, chanting “Remember the *Maine*,” clamored for retribution.

On April 4, 1898, the *New York Journal* issued a million-copy press run dedicated to the war in Cuba. American war sentiment, fueled by yellow journalism, convinced McKinley to ask Congress for a war declaration later that month. During the war, American journalists frequently accompanied American troops into battle. Journalists highlighted the exploits of American heroes such as George Dewey and Theodore Roosevelt. Richard Harding Davis, one of only three men granted honorary membership in the Rough Riders, provided newspaper readers with one of the best firsthand narratives of Roosevelt's charge up San Juan Hill. According to Davis, the American victory at the Battle of San Juan Hill was “as inevitable as the rising tide.” The Spanish-American War, therefore, can justifiably be called the first media war in American history.

K

Katipunan

Revolutionary Filipino nationalist association founded by Andrés Bonifacio in 1892 that agitated for Philippine independence from Spain. Bonifacio and his followers had summarily dismissed the reform agenda of the Spanish colonial system and instead advocated armed rebellion to rid the Philippine archipelago of Spanish rule. Unlike the Liga Filipina, also established in 1892 and dedicated to Filipino independence through gradual, nonviolent means, the Katipunan advocated immediate and violent measures against the Spanish.

On July 7, 1892, Bonifacio, Valentín Díaz, Teodoro Plata, Ladislao Diwa, and Deodato Arellano met in Tondo, a section of Manila, and created the Kataastaasan Kagalang-galang na Katipunan nang manga Anak nang Bayan (Highest and Most Respected Association of the Sons of the Country), or Katipunan. Bonifacio and his comrades bonded by marking their membership certificates in blood. The Katipunan was a highly secretive organization with ceremonial rites akin to the Masonic Order.

The founders established a triangular scheme for recruitment to the Katipunan. Original members enlisted two new members unknown to each other but acquainted with the person who enrolled them. Those two individuals would then follow suit. When the triangular method proved insufficient by October 1892 it was dropped, and members were encouraged to recruit as many newcomers as possible. The association also settled on entrance fees and monthly dues.

The Katipunan, like the Liga Filipina, organized three sovereign assemblies. The Supreme Council, the association's top-reigning body, included a president, a treasurer, a fiscal affairs officer, and a controller. The Provincial Council spoke for the provinces, while the Popular Council represented the municipalities. The presidents of the latter bodies and the Supreme Council comprised the

Katipunan Assembly. A Judicial Council passed on rules violations and resolved members' differences.

The Katipunan proclaimed three objectives. Politically, it sought Philippine independence. Morally, it sought to further good manners, basic health, and upright ethics while denouncing religious extremism and unsound character. Civilly, the association emphasized self-reliance. Protection of the indigent and the persecuted fell under its jurisdiction, as did aid to ill members and their kin, including the funding of funerals. Following unsuccessful terms of Arellano in 1892 and Roman Basa in 1893, Bonifacio was elected president (*supremo*) in 1895 and again in 1896.

The Katipunan possessed a three-graded membership and established a women's branch. The organization utilized a secret code for communications, celebrated annually on February 17 in memory of three martyred Filipino priests, and published the newspaper *Kalayaan*, which Spanish authorities shut down in March 1896. Despite its failure to receive the endorsement of José Rizal, founder of the Liga Filipina, the association boasted a membership of 30,000 people by 1896. The Tagalog-speaking population of central Luzon strongly supported the Katipunan, with that island's Cavite Province being a stronghold of the organization.

In August 1896, the Katipunan launched a series of offensives against Spanish forces in and around Manila. The Spanish authorities brutally beat these back. Mass arrests of Filipino revolutionaries followed, with the imprisonment and execution of many, including members of the Katipunan. In 1897, an internal power struggle between Bonifacio and Emilio Aguinaldo y Famy and their differences concerning land and agricultural reforms led Aguinaldo to order Bonifacio's detention. Stripped of power, Bonifacio was executed on Aguinaldo's orders on May 10, 1897. Thus, by June 1897, Aguinaldo and his faction had taken control of the

Katipunan as well as the ongoing revolt against the Spanish colonial government.

Birth Date: September 14, 1835

Death Date: December 22, 1918

U.S. Army officer. Jacob Ford Kent was born in Philadelphia, Pennsylvania, on September 14, 1835. He entered the United States Military Academy, West Point, and was commissioned a second lieutenant and assigned to the 3rd U.S. Infantry Regiment after graduation in 1861. During the American Civil War (1861–1865), he received three brevets for gallantry and meritorious service. He remained in the army after the Civil War, spending almost 30 years on garrison duty in the South and in the American West, rising to the rank of colonel.

When war with Spain began in April 1898, Kent was appointed brigadier general of volunteers and given command of the 1st Division in V Corps. The division sailed for Cuba from Tampa, Florida, arriving off the coast on June 22. One of Kent's brigades then conducted a feint landing at Cabañas to divert Spanish attention from the real U.S. landing at Daiquirí. V Corps commander Major General William R. Shafter seems to have forgotten about Kent's division, for it was not recalled for three days.

Kent's men came ashore at Siboney on June 25. The division took part in the Battle of San Juan Hill (July 1, 1898). Charged with securing the main road to Santiago, the division entered the battle with a strength of 235 officers and 4,869 enlisted men. During the fighting, it suffered 14 officers and 87 men killed, 37 officers and 563 men wounded, and 59 missing in action. After the fall of Santiago de Cuba, Kent signed the Round-Robin Letter of late July 1898 urging the immediate evacuation of American troops from Cuba to avert an epidemic of yellow fever among U.S. servicemen.

Shortly thereafter, Kent left Cuba. He served for only a few weeks in the Philippines and was advanced to major general of volunteers. He returned to the United States in October 1898, was promoted to the permanent rank of brigadier general, and on November 30, 1898, retired after 40 years of army service. Kent retired to Troy, New York, and died there on December 22, 1918.

Kettle Hill, Battle of

Event Date: July 1, 1898

The Battle of Kettle Hill on July 1, 1898, was part of the general U.S. Army assault on San Juan Heights, the last major natural barrier to the port of Santiago, Cuba. Kettle Hill was a smaller elevation, located just before the northern extension of San Juan Heights. U.S. Army V Corps troops, commanded by Major General William R. Shafter, had disembarked some 16 miles east of Santiago at Daiquirí on June 22, 1898. Kettle Hill, held by some 750 Spanish troops, was the first objective before San Juan Heights.

While Brigadier General Henry W. Lawton's 2nd Infantry Division attacked Spanish troops at the nearby town of El Caney,

Brigadier General Jacob F. Kent's 1st Infantry Division and Major General Joseph Wheeler's Dismounted Cavalry Division advanced toward San Juan Heights. With Wheeler ill, Brigadier General Samuel S. Sumner had charge of the Dismounted Cavalry Division. Shafter, situated at El Pozo two miles away, had envisioned Lawton's troops defeating the Spanish troops at El Caney in two hours and then moving south to join Kent's and Sumner's divisions for a combined assault on San Juan Heights.

The American attack on San Juan Heights, however, was delayed when Lawton's troops took longer than the anticipated two hours to quell Spanish resistance at El Caney. The men of the 2nd Infantry Division and the Dismounted Cavalry Division were meanwhile coming under fire from Spanish troops on the heights. After waiting for several hours and taking casualties from Spanish fire from the heights, many of the American officers grew impatient waiting for new orders from Shafter. At 1:00 p.m., three hours after the planned time for the assault and on his own responsibility, Sumner ordered an attack. On the left, Brigadier General Hamilton S. Hawkins's 1st Brigade of Kent's division moved up the western slope of San Juan Heights. Receiving important fire support from the Gatling Gun Detachment, they reached the summit.

At the same time that the infantry troops were securing San Juan Heights, Sumner's dismounted cavalymen on the right flank were moving up Kettle Hill. The 9th U.S. Cavalry Regiment led the attack, closely followed by the 1st Volunteer Cavalry Regiment (the Rough Riders) and the 1st U.S. Cavalry. Meanwhile, the 3rd U.S. Infantry, 6th U.S. Infantry, and 10th U.S. Cavalry moved partway up the hill.

Lieutenant Colonel Theodore Roosevelt of the Rough Riders was among the first leaders at the top of the hill. He was one of the very few officers to proceed on horseback, but a wire fence had forced him to dismount near the crest and make the last 40 yards on foot. There were no Spaniards there when the Americans made the summit, as they had withdrawn ahead of the American advance. By 1:15 p.m., 15 minutes after the attack began, the Americans were in possession of Kettle Hill.

The Americans on Kettle Hill then opened an intense fire on San Juan Hill to the north. Roosevelt secured permission from Sumner and then led his men down the western slope, past a small lagoon, and up the northern extension of San Juan Hill to secure the part of San Juan Heights north of the El Pozo–Santiago Road. The attack cost the Dismounted Cavalry Division 35 dead and 328 wounded. It also made Roosevelt a national hero. He used reportage of his role in the battle to help win election as governor of New York in 1899 and nomination as the Republican vice presidential candidate in 1900. His role in the fight for Kettle Hill was popularized by American journalists and illustrators. *New York Sun* journalist Richard Harding Davis, the best-known newspaper correspondent of the war, wrote eloquently of Roosevelt's charge up the hill. Frederic Remington's painting *The Charge of the Rough Riders* was even more laudatory of Roosevelt's heroism. Commissioned by Roosevelt himself, the painting depicts Roosevelt in the background on

horseback, pistol drawn, leading the men forward. Although many of the Rough Riders wanted Roosevelt to receive the Medal of Honor, Secretary of War Russell Alger, upset that Roosevelt had written a report demanding the immediate return to the United States of troops suffering from disease, refused to endorse the recommendation. Nevertheless, on January 16, 2001, President William Jefferson Clinton posthumously awarded Roosevelt the Medal of Honor for his actions at Kettle Hill and San Juan Hill. Although the award came more than a century after the deed, Roosevelt was the first president of the United States to receive the highest U.S. award for valor.

Key West, Florida

Southernmost city in the United States and a key mobilization point for U.S. naval forces during the Spanish-American War. Key West is located closer to Cuba than Miami, Florida. The city was officially incorporated in 1896 with a population of 300 and did not grow until the 1920s. The major Florida port was Tampa. As such, it held strategic importance in the buildup for the war and was also heavily influenced by the large Cuban population there.

Key West is actually an island, part of the extensive system of keys—or small islands—that run southwest from the Florida peninsula's southern tip. Key West lies 130 miles southwest of Miami (but some 160 miles by automobile) and 106 miles northeast of Havana, Cuba. Key West is 85 nautical miles from Cuba. At the time of the Spanish-American War, Key West had excellent port facilities and boasted Fort Zachary Taylor, a large U.S. Army fort established in 1840 but continually upgraded. The fort played a role in the American Civil War (1861–1865) and a fairly prominent role during the war with Spain. The fort underwent modernization and reconstruction during and after the war. Because of its extreme southern clime along the 24N latitude, Key West experiences tropical weather for much of the year. The island city has hot, humid, and rainy summers and warm, relatively dry winters. Its precarious

Fort Taylor and the town of Key West, Florida, 1898. (Library of Congress)

perch in the Straits of Florida, however, makes it vulnerable to summer and autumn hurricanes.

Key West was home to a sizable number of Bahamians of European lineage (mostly English) who frequently referred to themselves as Conchs, for the shellfish that was an important part of their diet. In the last third of the 19th century, Key West's population began to grow quickly. Because of the Cuban independence movements (and related military struggles) of the period, a good number of Cubans fled their island home and took up residence in Key West. By 1890, Key West had more people than any other Florida city. Of the 19,000 people who lived there in 1890, probably close to half were of Cuban origin. This large influx of Cubans changed the cultural fabric of the island and gave rise to a major cigar-making industry, which churned out 100 million cigars per year by the mid-1890s. Cuban immigration to the area gave it a unique, multicultural makeup, and Key West has had many Cuban mayors.

On the eve of the Spanish-American War, Key West was not only one of Florida's most populous cities but was also its most wealthy city. The influx of well-to-do Cubans and the rise of the cigar industry played a role in this prosperity, but the city's traditional industries, such as fishing and salt production, were factors as well. For many years, many Key West inhabitants made small fortunes from marine salvaging. Indeed, a thriving business was made salvaging shipwrecks in the adjacent waters, whereby ships' cargoes were redeemed and oftentimes sold for lofty sums. Shipbuilding and ship refurbishment were also lucrative industries, although by the 1880s the largesse earned from maritime adventures had begun to decline.

Because of its strategic location in the Florida Strait between the Atlantic Ocean and the Gulf of Mexico, Key West became the primary mobilization and embarkation point for U.S. naval assets in

the East. Once gathered there, they were dispatched to Cuba when the war commenced in April 1898 to blockade Cuba. Also, many in the American press corps assembled in Key West and sailed for Cuba from the city's port. The ill-fated U.S. battleship *Maine* departed for Cuba from Key West, and after the ship was destroyed by an explosion in Havana Harbor on February 15, 1898, its dead sailors were buried in Key West. Also, the initial U.S. Navy investigation into the deadly explosion was conducted at the customhouse in Key West. Because Key West was not yet served by a rail line (which would not occur until 1912) linking it with the mainland, it was never actively considered as a site for army mobilization or embarkation.

Kimball Plan

U.S. Navy strategic plan for war with Spain over Cuba. The Kimball Plan was named for Lieutenant William Warren Kimball, its principal author. In the several years before the beginning of the war, officers at the new Naval War College were charged with drafting a plan for war with Spain. They submitted their findings to Lieutenant Kimball, then serving in the Office of Naval Intelligence. Completed in 1896 and officially known as the "War with Spain 1896," the Kimball Plan envisioned the Caribbean as the chief theater of U.S. military operations based on the goal of liberating Cuba from Spanish rule. The plan saw the navy assuming the primary role, since a naval war was assumed to be less costly and the navy could operate in all seasons.

The centerpiece of the Kimball Plan was a naval blockade of Cuba, but it also called for two offensive naval operations: the first against Spanish ports, navy bases, and trade to keep the Spanish Navy from interfering in Cuba, and the second for a descent on Manila by the U.S. Asiatic Squadron to take that city as a base for controlling the trade of the Philippines and as an inducement for Spain to sue for peace. The plan did not foresee acquisition of the Philippine Islands, nor did it provide for the employment of army troops in Cuba. The Cuban fighting was to be left to the insurgents, who would thus liberate their own country. The only limited role for U.S. ground forces might be the seizure of Havana, in which case operations would be mounted from Tampa, Florida. Such an invasion, the planners believed, would surely end the war.

The Navy Department was not happy with the Kimball Plan. Subsequent plans gave more attention to a blockade of Puerto Rico and operations by the U.S. Army in Cuba to attack Spanish Army forces there.

Kipling, Rudyard

Birth Date: December 30, 1865

Death Date: January 18, 1936

British author. Joseph Rudyard Kipling's writings about early British colonial life in India made him a favorite of critics and readers alike as his support for imperialism contributed to his early popularity. He was born in Bombay, India, on December 30, 1865. In 1878, his parents sent him to boarding school at the United Services College in Devon.

In 1882, Kipling returned to India to live with his parents in Lahore. He remained there for seven years, working as a journalist and editor. His first position was as an assistant editor for the *Civil Military Gazette*. He astonished his readers by revealing the secrets of the governing class and Indian life. During his time in Lahore, he also wrote a myriad of satirical verses, which he published as *Departmental Ditties* in 1886. In 1888, he published more than 70 short stories in seven paperback volumes.

In his writing, Kipling criticized Anglo-Indian society by revealing the discrepancies in class relationships and English imperialism. Another theme he explored was that of the common British soldier in India. As such, he examined soldiers' relationships with Indians and often romanticized their stories. He also wrote children's books, which he intended to be accessible to both children and adults. Many of his stories were set in India or in the jungle.

Literary critics had not only welcomed Kipling in England but also glorified him. They also quickly turned on him when in 1891 he published his first novel, *The Light That Failed*. However, *Life's Handicap*, a collection of short stories published that same year, was enormously successful with the public. As Kipling fell from grace in the critic's eyes, he grew more popular with his reading public. In 1892, he published *Barrack Room Ballads*, a collection of enormously successful poems. His literary apex occurred during the 1890s.

Kipling replaced Alfred Lord Tennyson as the most popular English writer in 1892. Several years later, after the Spanish-American War and the Boer War had broken out, Kipling responded by pub-

Popular British author Rudyard Kipling was a staunch supporter of imperialism. (Library of Congress)

lishing in the London *Times* the solemn poems "A Fleet in Being" and "The Day's Work." On February 4, 1899, he published "The White Man's Burden," a poem to guide the United States as it commenced a new empire in the Philippines. While some have interpreted the poem as a satirical indictment of imperialism, the poem did evoke explicit imperialist attitudes for which Kipling was denounced as a racist, an elitist, and a jingoist. In the poem, Kipling's white man symbolized the more advanced race and thus the more advanced civilization. The white man's place on the upper rung of the racial hierarchy bestowed on him the responsibility to direct the "lesser breeds" despite the difficulty of such a task. This responsibility also commanded that it was the white man's duty to spread law, order, literacy, and morality in the way that it was recognized by other white men.

In 1901, Kipling published the children's story *Kim*, his final and perhaps most enchanting portrayal of Indian life. He wrote political commentary in the ensuing years in addition to two well-received children's stories, *Puck of Pook's Hill* (1906) and *Rewards and Fairies* (1912). In 1907, he became the first Englishman to receive the Nobel Prize in Literature.

Kipling also made notable attempts to write verse that did not conform to English tradition. In 1903, he published *The Five Nations*, a collection of South African verse for which he was satirized with parodies and received vehement protests. Indeed, he was

developing a new elliptical style with more somber subjects, which came through perhaps most clearly with *Traffics and Discoveries* (1904), *A Diversity of Creatures* (1917), and *Debits and Credits* (1926).

Kipling's popularity waned in the 1920s, and the wholesale destruction of World War I had greatly altered European opinion on imperialism and jingoism. Although his books remained top sellers, for many his message had become outdated. Kipling's body of work includes 5 complete romances, 250 short stories, 1,000 pages of verse, and numerous miscellaneous volumes. Living out his later days alone and secluded, Kipling died on January 18, 1936, in London. His autobiography, *Something of Myself*, was published posthumously in 1937.

Knights of Labor

Labor union founded in 1869 in Philadelphia by Uriah H. Stevens, who with eight other fellow tailors formed the organization to promote worker solidarity. Before long, the union became the largest labor organization in the United States. Unlike the American Federation of Labor (AFL), which would be founded by Samuel Gompers in 1886, the Knights of Labor (KoL) did not eschew politics or involvement in the political process.

Under Uriah Stevens's successor, Terrence Powderly, who led the union for years, the goals of the KoL included the creation of a brotherhood of workers, an end to child and convict labor, equal pay for women, cooperative employer-employee relationships, and the institution of a progressive income tax. Although it began as a sort of secret fraternal organization (indeed some of its early organization resembled that of the Free Masons), under Powderly the KoL branched out, allowing both women and African Americans to join its ranks, a radical concept at the time. Powderly's utopian-like goals, however, limited the organization's effectiveness, and its decentralized management made national oversight and unity difficult to achieve.

Regardless of these difficulties, the KoL expanded exponentially during the 1870s and early 1880s, boasting more than 700,000 members by 1885 or so. Its members represented all levels of skill, from unskilled day laborers to highly skilled craftsmen and tradesmen. At the same time, the KoL included nearly 50,000 women, organized into 192 women's assemblies, in its ranks by 1885. The

organization also had many African American members, although they were organized into separate groups.

The KoL presided over a number of strikes in the last third of the 19th century, including the great railway strikes of 1877 during which 100 people were killed, more than 1,000 were jailed, and 100,000 were out of work. Typically, however, Powderly shied away from the use of the strike to achieve his union's goals, as this conflicted with his ideal of employer-employee cooperation. Needless to say, the organization's effectiveness was rather hindered by this mind-set.

The year 1886 marked the high-water mark for the KoL. Two events that year conspired to work against the organization, which then rapidly began losing membership and influence. Before the KoL had reached its apogee, however, its power was such that in 1886 it had begun to organize even agricultural workers, including workers in the sugar fields of Louisiana and the Deep South. In 1887, some 10,000 sugar workers went out on strike, 90 percent of whom were African Americans and members of the KoL. The first death blow to the union was the 1886 Haymarket Riots in Chicago. Occurring in May to coincide with May Day labor observances, the riots broke out between strikers at the McCormick Harvesting Machine Company and Chicago police. The KoL had no direct involvement in the work stoppage. On May 4, a bomb was thrown into the police ranks, and this began a melee in which 7 policemen and 4 workers were killed and scores more wounded. Although the KoL was not involved in the events, it was nonetheless blamed for the violence. The second event that served to bring down the union was the founding, also in 1886, of the AFL, which drew much of its membership from disaffected members of the KoL, especially skilled workers.

Despite these problems, the KoL survived into the early 1900s, although its membership and clout had clearly been eviscerated by the mid-1890s. The advent of other competing unions—with better organization and more concrete goals—took a heavy toll on the organization. It was still potent enough, however, to have taken a prominent role in the 1894 Pullman Strike in Chicago, which saw many members of the KoL join ranks with the newly created American Railway Union, cofounded by Eugene Debs. By the time of the Spanish-American War, the KoL was on its way out, yet it did voice its objections to American overseas expansion along with numerous other labor unions.

Labor Union Movement

Labor unions, which began to form in the United States in the late 1860s and early 1870s, were largely a response to the rise of mass industrialization. As industrialization came to predominate the U.S. economy by the 1870s and 1880s, workers at all levels—from skilled to unskilled—saw the need to band together to exact better wages and improved working conditions from their employers. Unionization was crucial in the last third of the 19th century because many factories and workplaces featured dangerous conditions and back-breaking labor, often for scandalously low wages. Those injured in workplace accidents had no recourse and no income, frequently falling into abject poverty or becoming a drain on their family. And for those families whose husbands or fathers died in industrial accidents, there was no monetary remuneration whatsoever.

Labor unions sought to redress these grievances by pressuring employers to offer higher pay, better benefits, more job security, and safer working conditions. Many unions also took on the role of a quasi-welfare agency. Using the dues they collected from their members, many unions and labor federations offered injury benefits to members hurt on the job and even offered modest death benefits to the families of those killed on the job. By the turn of the century, some unions were offering old-age benefits. Using the time-tested rule that there is power in numbers, unions brought workers together to engage in collective bargaining; employ coercive methods such as strikes, slow-downs, and sit-ins when necessary; and influence the political process. Some unions and federations were more politically oriented than others, while groups such as the American Federation of Labor (AFL) largely avoided politics as a means to achieve workers' goals in its early years.

Although unions would appear to be modern contrivances that were responding to modern problems, they can actually be traced

back to Europe during the Middle Ages. In medieval Europe, skilled craftsmen and artisans formed skill-specific groups, called guilds, by which to organize themselves. They also used the guilds to control who practiced the trade and created a fairly elaborate system of training their own kind. Young people entering the craft or art began as apprentices and worked their way up to become journeymen and master craftsmen after a predetermined period of time. Unions in the 19th century were much broader in scope and very much larger in size, now having to accommodate millions of unskilled, semiskilled, and skilled workers in such workplace settings as factories, mines, and railroads. Also added to the mix was the influx of women workers (who usually had the lowest-paying jobs) and even children as young as seven or eight years old.

In the United States, labor organizations embraced a variety of positions and ideologies that ranged from radical anarchist-socialist to conservative accommodation with employers. In general, the more radical associations were neither very effective nor long-lived. Unlike in Europe, where trade unionism at the time was often equated with socialism and anarchism, unionism in the United States followed a generally more conservative and less confrontational trajectory.

Localized unions of tradesmen and craftsmen sprang up in the United States as early as the 1780s and 1790s, but generally speaking, the era of mass unionization in American did not begin until after the American Civil War (1861–1865). The first federation of unions took the form of the National Labor Union (NLU), which formed in 1866 but was essentially defunct by the early 1870s. With as many as 600,000 members at one point, the group became obsessed with seeking political solutions to problems rather than pursuing collective bargaining, which proved its undoing.

As the NLU self-destructed, a new umbrella labor organization, the Knights of Labor (KoL), had developed, led first by Uriah

U.S. Labor Unions by Industry, 1897–1907

Stephens and then by Terrence Powderly. This organization sought to be all-inclusive in its membership, going so far as to extend its ranks to include women and African Americans, a fairly radical move for the time. The KoL began in 1869 as a sort of fraternal or-

ganization of workers but quickly branched out and even permitted employers to join the union. The group was not well organized, however, and local unions exercised so much power that the national leadership was unable to shape its goals. It was also faulted for being overly secretive (some of its underpinnings were taken from the Free Masons, a fraternal and secret society) and harboring unrealistic goals, such as the creation of a brotherhood of workers. The KoL was dealt a serious blow during the 1886 Haymarket Riots, from which it never recovered. By the mid-1890s, it was a moribund organization.

In 1886, Samuel Gompers formed the American Federation of Labor (AFL), a confederation of unions representing only skilled workers. The AFL was very successful, having dodged the labor violence of the 1890s and becoming the preeminent national labor organization by 1900. Gompers accomplished this by limiting the group's goals to seeking better pay, better benefits, and more job security. The AFL also began establishing insurance for its members to protect them in case of accident or their families in case of death. Above all, Gompers was highly pragmatic and took a conservative approach to collective bargaining. While he did not shrink from the use of strikes, he also believed in the free-market capitalist system and agreed that businessmen had a right to their profits as long as they treated their employees equitably.

During the 1880s, many industrialists had repressed labor union activity. By the 1890s, however, economic depression, high unemployment, and falling wages compelled many unions to reassert themselves. The decade saw some of the worst labor unrest in American history. In the wake of the infamous 1886 Haymarket Riots in Chicago, which brought down the KoL, the 1892 Homestead Steel Strike and the 1894 Pullman Strike stand out as the most violent labor-management clashes of the 1890s. In both cases, labor and management refused to compromise, and the situation quickly spiraled out of control, resulting in scores of deaths and injuries and millions of dollars in property damage.

Despite the excesses that some unions employed to attain their goals, the labor union movement was an essential part of industri-

alization. It helped protect growing numbers of factory workers from exploitation and dangerous conditions, checked the seemingly unbridled power of businessmen and the so-called robber barons, and provided a mechanism by which workers could come together as peers united in a common cause. For many workers, unions were a way to acculturate to a modern, industrialized America. In addition, groups such as the AFL acted as a welfare agency of sorts in an era in which the federal government had no role whatsoever in social policy.

Ladrone Islands

The 15 Ladrone Islands (also known as the northern Marianas) were in 1898 a Spanish colony in the western Pacific Ocean. The islands are located some 3,500 miles west of Hawaii and 1,500 miles east of the Philippines. The islands, which constitute part of a submerged mountain range, form a portion of the larger island group known as Micronesia. The islands have a total land area of 389 square miles, and only 6 of them are inhabited. They are spread over some 400 miles, with the largest, Guam, located at the southern end of the chain. Two other large islands, Tinian and Saipan, are 100 miles north.

In 1521, the explorer Ferdinand Magellan was the first European to discover the islands. It was Magellan who gave them their name. Landing on Guam, he secured supplies from the natives. He assumed that these were gifts, but the natives thought they were trading and took one of Magellan's boats, leading him to call the islands the *Islas de los Ladrones* (Islands of Thieves).

Spain officially acquired the islands in 1668, and the Jesuits then renamed them Las Marianas in honor of Spanish Queen Mariana of Austria, the widow of Philip IV of Spain. At the time of the Spanish-American War, the Ladrone Islands were under the general government of the Philippines. Guam then had a population of 9,630 people and a Spanish 60-man garrison.

Following his victory in the Battle of Manila Bay (May 1, 1898), Commodore George Dewey had requested additional stocks of ammunition as well as ground troops. On May 18, the protected cruiser *Charleston*, commanded by Captain Henry Glass, departed San Francisco with the requested ammunition. Glass's orders called for him to stop at Guam, the largest and most southernly of the Ladrone Islands. His orders were to make prisoners of the Spanish military garrison and destroy Spanish fortifications as well as any

Spanish warships. The goal of the operation was to establish a base along the route from the Hawaiian Islands to the Philippines, thereby preventing Spanish interference with U.S. ships making the transit.

At Honolulu on May 28, the *Charleston* joined the transports *Australia*, *City of Peking*, and *City of Sydney*. The latter lifted a total of 2,500 troops destined for operations in the Philippines. All four ships then proceeded to Guam.

When the U.S. squadron arrived at Guam on June 22, it found no ships in port. The ruined fort guarding the outer harbor was unmanned. The *Charleston* then fired a few rounds at a second unoccupied fort to gauge the range. Local officials, unaware that war had been declared, came aboard the *Charleston*, apologizing for not being able to return what they assumed to have been a salute. Captain Glass informed them that the United States and Spain were at war.

The next day, Glass sent ashore a small force to arrange the surrender of the Spanish, which was quickly and easily accomplished. When the Americans departed Guam on June 22, they took with them the island's 61-man garrison (5 officers and 56 enlisted men) and several Spanish officials as prisoners. Leaders of the local Chomorro population were given charge of the island's affairs until U.S. forces could return. Guam and the remainder of the ungarrisoned Ladrone Islands were thus secured without bloodshed on either side. Guam was in fact the first overseas possession of Spain captured by U.S. forces in the war.

During subsequent treaty negotiations with Spain, the United States insisted on the cession of Guam. In early 1899, Spain sold the remainder of the Ladrone Islands to Germany for roughly \$4.1 million. Germany then incorporated them into its New Guinea protectorate. The islands remained under the German flag until 1914, when they were captured by Japan shortly after the beginning of World War I. Mandated to Japan by the League of Nations in 1920, they were captured by U.S. forces in 1944 during World War II. Turned into bases for U.S. B-29 bombers, the islands were used for the strategic bombing of Japan; indeed, the B-29s that dropped the atomic bombs on Hiroshima and Nagasaki were both based on Tinian in the Marianas. In 1947, the Marianas, except for Guam, were formed into the U.S. Pacific Trust Territory of the Pacific Islands. Guam is today a U.S. territory, while the remaining islands constitute a Commonwealth of the United States.

Lake Lanao Campaigns

Start Date: May 1902

End Date: November 1903

U.S. military campaign on the island of Mindanao during the Philippine-American War. During 1902–1903, the area around Lake Lanao, a large body of water in the western part of the island of Mindanao in the southern Philippine archipelago, was the scene of some hard fighting between U.S. troops and the Muslim inhabitants of the region. The 100,000 Muslims of Mindanao and the nearby Sulu Archipelago had been given the name Moros by the Spanish, whom thought they resembled the Moors of North Africa. Perpetually troublesome to the Spanish, the recalcitrant Moros also posed a potential threat to U.S. efforts to pacify the region after the Spanish-American War.

In August 1899, U.S. Army brigadier general John C. Bates secured a treaty with the sultan of Sulu that provided for recognition of U.S. sovereignty, promised noninterference in the religion and customs of the Moro people, and promised subsidy payments to the sultan and his principal chieftains. The treaty secured the de-

sired ends of Moro neutrality in the Philippine-American War then raging and enabled the United States to establish some military outposts in Moro territory. By 1901, the army had established camps in Mindanao and had begun moving into the Lake Lanao region with a goal of civilizing the natives and securing harmonious relations. The Moros, meanwhile, had grown increasingly resentful. Although some Moro datus (chieftains) were on more or less friendly terms with the United States, many were overtly hostile, and attacks on small parties of U.S. soldiers grew more frequent.

In September 1901, impressed with Captain John J. Pershing's views and work, Brigadier General George W. Davis, commander of the Department of Mindanao-Jolo, appointed him to command the remote post of Iligan on the north-central coast of Mindanao, not far from the northern shore of Lake Lanao. Pershing's mission was to establish friendly relations with the Moros. It was an assignment that he had sought even though it was regarded as a particularly difficult undertaking.

In May 1902, while Pershing was at work at Iligan, Colonel Frank D. Baldwin commanded Camp Vicars on the southern shore of Lake Lanao. Baldwin believed that force rather than patience was

the answer and responded to Moro harassment of his working parties, who were building a road inland from the coast to Lake Lanao, by launching a punitive strike from Malabang. The subsequent campaign resulted in fierce fighting and the eventual destruction of Moro forts, or cottas, at Bayan and Binadayan.

Despite the success of his military campaign, Baldwin's superiors, Brigadier General George W. Davis and Major General Adna R. Chaffee, military governor of the Philippines, thought that Baldwin had acted too aggressively and failed to work hard enough to achieve harmonious relations with the Moros. Accordingly, in June 1902, they replaced Baldwin with Pershing. Although he commanded a regimental-size force at Camp Vicars as only a captain, Pershing possessed the qualities that Chaffee and Davis sought in a leader in that especially challenging situation. Through patience and hard work, Pershing had demonstrated an ability to establish a good rapport with Moros on the north side of Lake Lanao. Whether he would be able to reprise his success around the southern shore of the lake remained to be seen.

In spite of his best efforts, when Pershing assumed command at Camp Vicars, he discovered that a significant number of Moros continued to ambush patrols and steal into army camps at night in order to secure weapons. Occasionally they fired into the camps at night. Ultimately, Pershing concluded that some punitive action was necessary. In late September 1902, he conducted a campaign that subsequently destroyed several Moro cottas at Guaun and Bayabao, employing artillery to good advantage. Pressing on toward Maciu, Pershing sent emissaries ahead to negotiate, but they were rebuffed. He resumed his advance but was forced to pull back when he was unable to cross an inlet of Lake Lanao that separated Maciu, Sauir, and Talub.

Returning with engineers, Pershing ordered that a road be built around the inlet, and by October 1, he confronted the cottas, from which flew the Moro red flags of war. Pershing's artillery pieces made short work of the Moro forts, and on October 3, he returned to Camp Vicars, having destroyed 10 cottas and inflicted heavy casualties with few losses of his own. In November, he renewed his efforts to persuade the Moro leaders, notably the sultan of Bacolod, to accept the U.S. terms. Although the terms were subsequently rejected, offensive operations did not resume until the following spring.

In April 1903, Pershing was authorized to move against the intractable Bacolod leader and departed Camp Vicars on April 3 with a strong column. Three days later, after much maneuvering over rugged terrain, Pershing surrounded the powerful Moro cotta at Bacolod, located on a ridge above Lake Lanao. On April 7, he attacked amid a furious rainstorm. By dark, the cotta was ablaze from artillery fire. Again, Moro casualties were heavy, but Pershing also had allowed many to escape, hoping that, having witnessed his military power, they might persuade other Moros that further resistance was futile.

In May, Pershing continued his sweep around Lake Lanao, defeating the Moros at Taraca and destroying more cottas. The expedition was supported by a fleet of gunboats that pursued and

attacked the Moro *vintas* (a type of canoe). By May 10, Pershing was back at Camp Vicars, holding the distinction of being the first American to lead an expedition completely around Lake Lanao.

Pershing's honesty and compassion in dealing with the Moros and his readiness to inflict punishment when necessary led to a resolution of the problem. In November 1903, Moro Province governor Leonard Wood led a final punitive military campaign in the Lake Lanao area. Taken together, these campaigns broke Moro resistance. Although some individuals continued to harass U.S. troops, these expeditions by and large ended any major Moro threat.

Lamberton, Benjamin Peffer

Birth Date: February 24, 1844

Death Date: June 9, 1912

U.S. naval officer who served as chief of staff to Commodore George Dewey during the Battle of Manila Bay. Benjamin Peffer Lamberton was born in Cumberland County, Pennsylvania, on February 24, 1844. He attended Dickinson College (Carlisle, Pennsylvania) for three years before settling on a navy career. In 1861, he was appointed to the United States Naval Academy, Annapolis. Graduating from the academy in 1864, he saw service at the end of the American Civil War aboard the schooner *America*. Promoted to lieutenant commander in 1868 and commander in 1885, he held a variety of posts, including that of inspector on the Lighthouse Board in Charleston, South Carolina.

On April 22, 1898, just three days before the formal U.S. war declaration against Spain, Commander Lamberton arrived in Hong Kong aboard the protected cruiser *Baltimore*, which was carrying ammunition to the U.S. Navy's Asiatic Squadron. He had been ordered to assume command of the protected cruiser *Boston* in the Asiatic Squadron, but its commanding officer refused to relinquish the command on the eve of war with Spain.

Commodore George Dewey, commander of the Asiatic Squadron, meanwhile sought to end the conflict among his officers by appointing Lamberton as his chief of staff. Lamberton subsequently served

with distinction on the bridge of Dewey's flagship USS *Olympia* during the Battle of Manila Bay (May 1, 1898). Dewey's report on the engagement with Spanish naval forces was complimentary to Lamberton.

The day after the battle, Lamberton went ashore from the gunboat *Petrel* to the Cavite Arsenal and Navy Yard to demand that the Spanish surrender the installation. Despite an attempt by the Spanish officer-in-charge to delay, Lamberton insisted on unconditional surrender, telling the Spaniards that he would order the *Petrel* to open fire if they refused. The white flag was raised shortly thereafter, and an American naval landing party took control. Lamberton also assumed responsibility for the transfer to Manila of wounded and sick Spanish personnel from the steamer *Isabel*.

When U.S. Army units reached Manila, Lamberton was appointed as the naval representative to a commission responsible for working out the details of the Spanish surrender. Congress subsequently recognized him for eminent and conspicuous conduct during the campaign. In late May 1898, the newly promoted Captain Lamberton was appointed commanding officer of the *Olympia*.

Following the war, Lamberton went on to serve in the Atlantic and Pacific and also had four assignments with the Lighthouse Service. In 1903, he was advanced to rear admiral, but in 1906 his navy service ended because of eye problems that would eventually

leave him blind. Lamberton died on June 9, 1912, in Washington, D.C. A destroyer was named in his honor.

Lamont, Daniel Scott

Birth Date: February 9, 1851

Death Date: July 23, 1905

Businessman, government bureaucrat, and secretary of war from March 5, 1893, to March 5, 1897. Daniel Scott Lamont was born in Cortland County, New York, on February 9, 1851. He attended Union College in Schenectady, New York, and in the late 1860s became an engrossing clerk (one who prepares official documents for publication) in Albany, New York. He was also an assistant journal clerk for the State of New York. By 1872, Lamont was serving on the staff of the Democratic Party's state committee and had become active in Democratic politics. From 1875 to 1882, he was chief clerk for New York's Department of State. In 1883, he began serving on the staff of New York governor Grover Cleveland and in 1884 was serving as Cleveland's private secretary, a post he kept after Cleveland became president in March 1885. When Cleveland left office, Lamont found work with financier and Democratic operative William C. Whitney.

When Cleveland was reelected president in 1892, Lamont was tapped to become secretary of war, a position he held for the entirety of Cleveland's second term. An activist secretary, Lamont urged numerous reforms and endeavored to reorganize and modernize the U.S. Army. Among other initiatives, he recommended that infantry regiments be reorganized into three battalions. He also urged Congress to appropriate funds to expand the U.S. Army to 30,000 men. Lamont argued that this would place the United States in a better position to field an effective fighting force in short order during time of war. Although his recommendation would have added only 5,000 additional men to the army, Congress balked at the expense, and the plan was never carried out. The United States may well have been in a better position when war came with Spain in 1898 had Lamont's prescriptions been filled.

Lamont also helped create a centralized records system for all U.S. Army documents and impressed upon Congress the need to demarcate and preserve U.S. battlefields, particularly those from the American Civil War. Lamont had a rocky relationship with Major General Nelson A. Miles, who became commanding general

Daniel S. Lamont was U.S. secretary of war during 1893–1897. Congress rejected his appeals for a modest expansion of the army. (Chaiba Media)

of the army in September 1895. Miles, an egomaniacal, vain, and combative individual, constantly sought to upstage everyone else, including Lamont.

When Cleveland left the White House in 1897, Lamont returned to the business world. His successor as secretary of war was Russell A. Alger. Lamont served as vice president of the Northern Pacific Railway Company from 1898 to 1904 before retiring to Millbrook, New York, where he died on July 23, 1905.

Las Guásimas, Battle of

Event Date: June 24, 1898

Second major land action between U.S. and Spanish forces in Cuba during the Spanish-American War. The first encounter took place on June 14, 1898, in the Battle of Cuzco Well when a U.S. Marine

battalion secured Guantánamo after heavy fighting. The Battle of Las Guásimas occurred on June 24.

Located about three miles from Siboney, Las Guásimas was situated at the junction of a narrow footpath and El Camino Real (the Royal Road), which led to Santiago de Cuba. After three years of fighting between the Cuban revolutionaries and Spanish forces, most of eastern Cuba had experienced the war in some fashion. A small hamlet to begin with, Las Guásimas had been abandoned by June 1898 and was then a rather nondescript place along the way to Santiago. Because of its location along a high ridge, however, it offered the Spanish a strong defensive position.

Major General William R. Shafter's V Corps commenced its main advance on Santiago, moving inland from the landing site at Daiquirí on June 22. Earlier that same day, Brigadier General Henry Ware Lawton's division began its independent movement toward Siboney under orders to repel any Spanish attack that might come down El Camino Real. Lawton found Siboney abandoned by its Spanish defenders and advised Shafter accordingly. In view of that turn of events, Shafter directed Lawton to continue his advance toward Santiago.

Shafter's orders were not directed specifically to Lawton but instead went to the senior officer present. As it turned out, that was Major General Joseph "Fighting Joe" Wheeler, the ex-Confederate general who had been appointed by President William McKinley to command the expedition's lone cavalry division. Wheeler was a Georgian turned Alabaman (he represented Alabama in Congress when war was declared), and McKinley had selected him as a gesture to help heal old North-South wounds.

While Lawton was reporting to Shafter, Wheeler opted to take advantage of what seemed like a golden opportunity. Ranging far out in front with a small detachment of U.S. soldiers and Cuban guerrillas, Wheeler discovered that the Spanish, who had evacuated Siboney, were now digging in along the ridge at Las Guásimas, a few miles farther along El Camino Real. Wheeler was anxious to fight the Spanish. Shafter had wanted him to oversee the rest of the landing, but the restless, diminutive Wheeler believed that he needed to see what the situation looked like up ahead. Given that Shafter's orders were directed to the senior officer present, Wheeler was more than willing to interpret these to meet the current situation and to attack, which he proposed to do the next day, June 24. Learning of Wheeler's plan, Lawton was angry at having been upstaged. He attempted to inform Shafter and have the attack called off, but the commanding general was still aboard ship and could not be contacted.

In the wake of the U.S. landing at Daiquirí, meanwhile, the Spanish commander at Santiago, General Arsenio Linares, had ordered

Estimated Casualties of the Battle of Las Guásimas

	<i>Killed in Action</i>	<i>Wounded</i>
Spain	10	25
United States	16	52

Kurz & Allison print depicting the Battle of Las Guásimas near Santiago, Cuba, on June 24, 1898. (Library of Congress)

a withdrawal toward Santiago on June 23. To facilitate this move, he had directed Brigadier General Antero Rubín Homet to establish defensive position along the ridge at Las Guásimas. Pondering the situation, Linares then became convinced that the Americans might well move along the coast to the San Juan River and then proceed upriver to Santiago. Fearing that such a move would cut off his troops at Las Guásimas, Linares ordered Rubín to retire to Santiago on June 24.

As Wheeler evaluated the situation and made his plans to attack, he seems to have had some knowledge of the Spanish plans for withdrawal from intelligence supplied by Cuban revolutionaries commanded by General Demetrio Castillo. Wheeler's plan called for Brigadier General Samuel B. M. Young's brigade, composed of the 1st and 10th U.S. Regular Cavalry Regiments and the 1st U.S. Volunteer Cavalry (better known as the Rough Riders), together with a four-gun battery of mountain field pieces, to attack Las Guásimas. The attack was to be supported by some 800 revolutionaries, promised by General Castillo. The promised support, however, never materialized.

The approach to Las Guásimas, covered as it was with heavy brush and timber, afforded some concealment for Young's troops,

who reached Las Guásimas at 5:40 a.m. on a hot and humid June 24. At 8:00 a.m., Young's field pieces opened up but soon were silenced, and the artillerymen were forced to withdraw due to the effective fire of the Spanish riflemen. The attack would have to proceed without artillery support. Young divided his brigade into two columns, with the 1st and 10th Regular Cavalry Regiments under his personal command on the right flank and the Rough Riders, under Colonel Leonard Wood and Lieutenant Colonel Theodore Roosevelt, on the left. Four war correspondents, including Richard Harding Davis and Stephen Crane, also were on hand to cover the action.

The Spanish line was strong, and Rubín commanded some 1,500 men against 1,000 Americans. His forces consisted of three companies of the Provisional Battalion of Puerto Rico No. 1, three companies of the San Fernando Regiment, and two Plascencia guns. His men were well positioned behind stone walls and wire fences, the salient point being a brick building. On the right, Young's regulars occupied the defenders, but the Spanish riflemen were doing considerable damage with their Mauser rifles that utilized smokeless powder and thereby rendered the riflemen almost impossible for U.S. soldiers to locate.

Wood directed Roosevelt to take three companies of the Rough Riders and work around behind the Spanish. In this situation Roosevelt was truly in his element, as he would be later at Kettle Hill and San Juan Hill. Alongside Roosevelt was arguably the most famous journalist of his era, Richard Harding Davis, having armed himself with a carbine and behaving more like a soldier than a correspondent.

Supported by fire from the other two regiments in Young's brigade, the Rough Riders advanced, with Roosevelt commanding on the left, Wood controlling in the center, and Wheeler himself, having arrived on the scene, taking personal charge on the right. In the heat of battle, Wheeler is reported to have shouted, "Come on—we've got the damn Yankees on the run."

After two hours of fighting, General Rubín, in accordance with his orders, broke off the action and effected a clean withdrawal to Santiago. Although Young's brigade took possession of the ground and thus claimed a victory, the affair was of little strategic importance except as a morale boost to U.S. troops. Young's command incurred 16 dead, including Sergeant Hamilton Fish, a New York socialite and grandson of the former secretary of state in President Ulysses Grant's administration. Fish probably was the first Rough Rider to die in action. Captain Allyn Capron Jr. was also killed. Among the 52 Americans wounded was correspondent David Edward Marshall. The Spanish sustained 10 killed and 25 wounded.

Las Marías, Battle of

Event Date: August 13, 1898

Skirmish between Spanish and U.S. troops and the last combat of the war. The engagement near Las Marías, Puerto Rico, took place on August 13, 1898, a day after the Protocol of Peace went into effect. On the morning of August 11, U.S. brigadier general Theodore Schwan's independent brigade entered Mayagüez only to find that

Spanish troops there had already departed. The U.S. soldiers were exhausted, having fought one battle and marched 45 miles in rain and mud in three days.

Schwan decided to let his infantry rest, but he sent A Troop and the Puerto Rican Scouts on ahead to maintain contact with the Spanish throughout the night of August 11. Then on the morning of August 12, he sent one company of the 1st Kentucky Regiment, six companies of the 11th Infantry Regiment, and some artillery to catch up with A Troop and the withdrawing Spanish, who were headed northeast to Lares.

The battle occurred at about 7:30 on the morning of August 13 when Schwan's advance force caught up with the Spanish. The Alfonso XIII Battalion commanded by Lieutenant Colonel Antonio Osés was attempting to ford the swollen Prieto River, near the town of Las Marías. The Americans quickly advanced and, following a brief firefight, scattered the Spaniards. In the engagement, 3 Spaniards were killed, 27 were wounded, and 56 were taken prisoner, including Osés. There were no American casualties. A pursuit, planned for the next day, was canceled when the Americans received word of the Protocol of Peace.

Latin America, U.S. Policies toward

U.S. foreign policy toward Latin America prior to the Spanish-American War was shaped by national security, economic, and ideological concerns. From a national security perspective, once the Latin American nations declared their independence from Spain and Portugal during the first quarter of the 19th century, U.S. policy makers were concerned that European powers might try to help the Spanish regain their lost colonies or, worse yet, try to establish new colonies at the expense of the newly independent Latin American nations. Equally alarming was the possibility that Spain might transfer its two remaining colonies in the New World—Cuba and Puerto Rico—to a stronger European power such as Britain or France. U.S. policy makers were also worried that expanded European economic interests in Latin America would exclude the United States from Latin American markets and raw materials. Ideologically speaking, Americans often invoked the concept of Manifest Destiny, the belief that it was the God-given right and obligation of the United States to civilize and democratize the less advantaged and culturally inferior Latin Americans. Although assertion of Manifest Destiny was frequently a justification for U.S. territorial and commercial

Political cartoon from 1898 depicting Uncle Sam standing at the fork of “Imperial Highway” and “Monroe Doctrine.” (Library of Congress)

expansion, many Americans believed that they were morally bound to assist their neighbors to the south. Historians of U.S.–Latin American relations, however, disagree as to which of the three concerns—national security, economic, or ideological—was the primary motivating factor driving U.S. policy during the period.

During the Latin American wars of independence (1814–1824), U.S. policy makers were faced with the dilemma of how best to respond to the Latin American revolutionaries. Speaker of the House of Representatives Henry Clay argued that the United States should grant immediate diplomatic recognition to the Latin Americans. He believed that the United States and Latin America shared a common historical experience based on European colonialism. Secretary of State John Quincy Adams, however, opposed the immediate recognition of the Latin American nations. He argued that the United States and Latin America had vastly different colonial experiences that resulted in cultural and political differences. The viewpoint argued by Adams, however, was conditioned by his negotiations with Spain regarding the sale of Florida to the United States. Adams believed that U.S. recognition of the new Latin American nations would hinder his negotiations with Spain. In 1819, Adams negotiated the Transcontinental Treaty with Spain, which

ceded Florida to the United States for \$5 million and established the boundary between the Louisiana Territory and the Viceroyalty of New Spain. Significantly, the treaty said nothing of U.S. recognition of Latin American independence. Once the treaty was ratified by Spain in 1821, Adams had no qualms about recognizing the Latin American nations. The first nation to officially receive U.S. diplomat recognition was Colombia, in 1822.

Americans were fearful that European powers might try to help Spain regain its lost colonies or impose political domination over Spain’s former colonies. These were not idle fears, however, for a real threat existed. In 1815, Austria, Prussia, and Russia formed the Holy Alliance to safeguard monarchies from republicanism. The Holy Alliance contemplated helping Spain regain its lost American colonies. Rumors soon spread that the French would be rewarded with Cuba, a proposition unappealing to the United States. The possibility was equally unappealing to Great Britain. In August 1823, therefore, British foreign secretary George Canning informed U.S. minister to England Richard Rush of the possibility of a joint U.S.–English declaration to the Holy Alliance to deter it from impeding Latin American independence. Rush, President James Monroe, and former president Thomas Jefferson were initially receptive to the plan. Secretary of State John Q. Adams, however, opposed it and successfully fought for a unilateral statement from the United States with the full knowledge that it had British support.

The result of Adams’s insistence on a unilateral U.S. declaration was President Monroe’s December 1823 Presidential Message to Congress, which has since become known as the Monroe Doctrine. Filled with moralistic rhetoric asserting that the United States was the defender of Latin American independence, the statement decreed that there would be no new colonies in Latin America, no territory transfers in Latin America, and no extension of the monarchical system in the Americas. Significantly, the Monroe Doctrine did not mention any limits on U.S. territorial and commercial expansion in Latin America. Because the United States lacked the power to back up the Monroe Doctrine until the 1890s, both Europeans and Latin Americans considered it a meaningless statement. It was, however, a declaration of future U.S. hopes and became the cornerstone of U.S. policy toward Latin America, which endures into the 21st century.

For the next six decades, the Europeans committed frequent violations of the Monroe Doctrine in Latin America. Most noteworthy was the French occupation of Mexico during the early 1860s and the imposition of a European prince, Maximilian von Habsburg, on the throne of Mexico. The United States, engrossed in the American Civil War, was unable to offer more than a verbal protest of French actions. After the Civil War, however, the French withdrew their forces from Mexico, leading to Maximilian’s overthrow and execution in 1867.

While simultaneously proclaiming to safeguard Latin American independence and criticize European encroachments on Latin American sovereignty, U.S. officials, cloaking their actions in the rhetoric of Manifest Destiny, waged a war of territorial expansion

against Mexico during the 1840s. In 1845, the United States welcomed Texas into the Union after Anglo-Texan revolutionaries had declared their independence from Mexico in 1836. U.S. president James K. Polk, who sought to annex Mexican-held California and other areas of the West and Southwest, initiated the Mexican-American War (1846–1848). The 1848 Treaty of Guadalupe Hidalgo, which ended the war and violated the spirit, but not the letter, of the Monroe Doctrine, granted the United States possession of what eventually became the entire U.S. Southwest, more than 500,000 square miles.

Mexico, however, was not the only target of U.S. territorial expansion in Latin America. The U.S. government did little to inhibit private filibuster adventures to Cuba, Mexico, Nicaragua, and the Dominican Republic. The American filibusterer William Walker, who managed to seize power in Nicaragua in 1856, was granted official U.S. diplomatic recognition but was denied his petition for annexation to the United States. Meanwhile, U.S. efforts to purchase or otherwise acquire Cuba were stymied. The 1854 Ostend Manifesto, a blatant attempt to coerce Spain into selling Cuba to the United States, was abandoned once it was leaked to the press and presented as a southern plot to bring another slave state into the union.

After the Civil War, the rapidly expanding Industrial Revolution in the United States increased the need for access to foreign markets and raw materials. Envious of British trade advantages in Latin America, the United States deliberately and energetically sought to expand investment in Latin America in the last third of the 19th century. This was reflected in Secretary of State James G. Blaine's attempts to negotiate a Pan-American customs union and to establish U.S. arbitration of international disputes involving Latin American countries. By 1900, U.S. investors had invested more than \$2 billion in Latin America, primarily in the Caribbean Basin. At the time, only British investment surpassed U.S. economic investment in Latin America.

The Industrial Revolution provided the United States with the wealth and prowess to build a modern, all-steel navy during the 1880s and 1890s. This gave the United States the ability to enforce the Monroe Doctrine for the first time. The first test of the United States as a major world power came in 1895 with the First Venezuela Crisis (1895–1897). The British, eager to avoid conflict with the United States, chose to negotiate the boundary between British Guyana and Venezuela instead of using force. By accepting U.S. demands, the mightiest European power gave the Monroe Doctrine an international standing that it had not heretofore enjoyed.

The Cuban War of Independence, which began in 1895, however, was of far greater concern to the United States. Unlike with Venezuela, U.S. economic investments in Cuba were significant. The failure of the Spanish government to satisfy U.S. demands regarding Cuba eventually resulted in the Spanish-American War, which brought increased U.S. political and economic interest in Latin America, especially the Caribbean Basin. Indeed, after 1900, the United States intervened repeatedly in Latin American and Caribbean affairs, of-

tentimes with force. President Theodore Roosevelt's corollary to the Monroe Doctrine, promulgated in 1904, purported to give the United States carte blanche to intervene unilaterally in the affairs of any Central American or Caribbean nation that proved incapable of stabilizing its own finances or political system. Indeed, the Roosevelt Corollary triggered U.S. military interventions in Cuba (1906–1910), Nicaragua (1909–1911, 1912–1925, 1926–1933), and the Dominican Republic (1916–1924). Although President Franklin Roosevelt's Good Neighbor Policy of the 1930s eschewed American intervention in the region, the United States intervened—directly or indirectly—in Latin American affairs, beginning with Guatemala in 1954 and including U.S. aid to rebel fighters in El Salvador and Nicaragua in the 1980s. In 1989, the United States invaded Panama, ostensibly to rid the nation of President Manuel Noriega, a despot whom Washington had once supported but sought to remove because of his involvement in drug trafficking.

Lawton, Henry Ware

Birth Date: March 17, 1843

Death Date: December 18, 1899

U.S. Army general. Born in Maumee, Ohio, on March 17, 1843, Henry Ware Lawton moved with his family to Fort Wayne, Indiana, that same year. He moved extensively thereafter but returned to Fort Wayne in 1858 and was a student at the Methodist Episcopal College there when the American Civil War began in April 1861.

Lawton immediately responded to President Abraham Lincoln's call for 90-day volunteers, joining the 9th Indiana Regiment in late April. He served during the early fighting in western Virginia and then mustered out with his unit that July. Returning to Fort Wayne, he reenlisted in the army in the 30th Indiana Regiment that August and was promoted to first lieutenant the same month. His unit joined the Army of the Ohio in Kentucky, and he saw combat in the bloody Battle of Shiloh (April 6–7, 1862). He was promoted to captain in June during the Corinth Campaign. In all during the war, Lawton fought in 22 major engagements, including Chickamauga

Major General Henry Ware Lawton served in the American Civil War as a colonel. During the Spanish-American War he saw action in Cuba. He was killed in fighting in the Philippines in December 1899. (John Clark Ridpath, *Ridpath's History of the World*, 1901)

(September 20, 1863). He ended the war as a brevet colonel and was subsequently awarded the Medal of Honor for his conduct during the Atlanta Campaign.

Following the Civil War, Lawton briefly studied law at Harvard University but returned to the army in 1867 as a second lieutenant. He joined Colonel Ranald S. Mackenzie's 41st Infantry Regiment and served with Mackenzie in most of the Indian campaigns in the Southwest, including the Battle of Palo Duro Canyon (September 20, 1874). Lawton earned a reputation as a brave and able officer who fought hard in battle but was respected for his compassion and fairness toward the defeated. He was promoted to captain in March 1879, and in 1888 he commanded B Troop of the 4th Cavalry when he was selected by Brigadier General Nelson A. Miles to lead the column that captured Chiricahua Apache leader Geronimo that September.

Lawton was advanced to major in September 1888 and to lieutenant colonel in February 1889. Following the declaration of war against Spain, in May 1899 he was advanced to brigadier general of volunteers and assumed command of the 2nd Division of Major General William R. Shafter's V Corps for the invasion of Cuba. Respected for his skills as a logistician and an administrator, Lawton supervised the initial V Corps landing at Daiquirí on June 22, 1898.

In the advance on Santiago, Lawton, reinforced by Brigadier General John C. Bates's brigade, received an order from Shafter to

cover the landing at Daiquirí by advancing on Siboney. Major General Joseph Wheeler, who, in Shafter's immediate absence, was the ranking commander on the field, changed that order to join him at Las Guásimas, where Wheeler found himself in a stiff fight with the Spanish.

Shafter ordered Lawton to move against El Caney in support of the general advance on Santiago. The fight at El Caney was expected to be relatively easy, and Lawton expected it to last only two hours, until 9:00 a.m., after which he would join the main attack against San Juan Heights. El Caney, however, turned out to be a tough day-long fight on July 1 that cost Lawton's 6,000-man force heavy casualties and delayed his participation in the attack on San Juan Heights. Lawton, however, was partially responsible. He failed to deploy his forces effectively, and thus a third of them did not get into the fight. Lawton resisted Shafter's order sometime after noon that he break off the attack and move to below San Juan Heights. Lawton claimed that this would constitute defeat. Shafter then acceded to Lawton's request to continue, and the fight at El Caney went on to the finish.

Promoted to major general of volunteers on July 8, Lawton favored lenient terms for the Spanish, including allowing the Spanish soldiers to return home with their arms. Following the end of the fighting, Lawton served briefly as military governor of Santiago and then of the entire province. Relieved of his command because of alleged ill health (heavy drinking that had led him to physically attack the Santiago police chief), Lawton returned to the United States to command IV Corps at Huntsville, Alabama. Receiving a stern lecture from President McKinley and swearing off liquor, in March 1899 the popular Lawton was transferred to the Philippines, where he commanded the 1st Division and exhibited a lack of strategic sense combined with a reckless bravery in battle that on several occasions almost brought his death.

For whatever reason, Lawton chose to lead in person a small punitive action against Montalban and San Mateo near Manila. Walking the firing line in the open with complete disregard for his own safety during fighting near San Mateo on December 18, 1899, he was struck by a bullet in the chest and died almost instantly, the only American fatality that day. Widely respected for his courage and leadership, Lawton was much grieved in the army and by the American public. The city of Lawton, Oklahoma, is named for him.

Lee, Fitzhugh

Birth Date: November 19, 1835

Death Date: April 28, 1905

U.S. Army officer, Confederate general, and commander of VII Corps in the Spanish-American War. One of the youngest and most capable cavalry commanders in the American Civil War, Fitzhugh Lee later gained prominence as an author, a politician, and a diplomat. He was born in Clermont, Virginia, on November 19, 1835, the grandson of American Revolution hero Henry Lee and a nephew of future Confederate Army general Robert E. Lee. Fitzhugh Lee was admitted to the United States Military Academy, West Point, in 1852 and was nearly expelled by his famous uncle on account of poor grades and misbehavior. In 1856, Lee graduated near the bottom of his class and was commissioned a second lieutenant in the cavalry.

During 1856–1858, Lee was an instructor at the Carlisle Barracks, Pennsylvania, before transferring to the 2nd U.S. Cavalry Regiment commanded by Colonel Albert S. Johnston. Lee was severely wounded fighting the Comanche Indians in Texas before transferring back to West Point in 1860 as an instructor. At the beginning of the Civil War in April 1861, he resigned his commission and joined the Confederate Army as a lieutenant.

Lee was initially posted to the staff of Brigadier General Richard S. Ewell and fought well at the First Battle of Bull Run (July 21, 1861). The following month, Lee advanced to colonel of the 1st Virginia Cavalry and began a long association with Colonel James E. B. “Jeb” Stuart. Lee accompanied Stuart’s ride around the army of Union major general George B. McClellan during June 12–16, 1862, and gained a promotion to brigadier general. Lee then fought with distinction in the Second Battle of Bull Run (August 29–30, 1862), although his tardiness forced General Robert E. Lee to delay his attack on Major General John Pope’s forces for two days, allowing the latter to escape. Fitzhugh Lee subsequently fought in the Battle of Antietam (September 17, 1862) and in the Battle of Kelly’s Ford (March 17, 1863). At Kelly’s Ford, he repulsed a larger force of Union cavalry. Two months later at Chancellorsville, Lee’s cavalry discovered the exposed position of Union major general Oliver O. Howard’s XI Corps for Confederate lieutenant general Stonewall Jackson’s devastating flank attack. After additional fighting in the Battle of Gettysburg (July 1–3, 1863), Lee advanced to major general and commanded a cavalry division of his own.

The waning fortunes of the Confederacy only intensified Lee’s battlefield performances. He waged a splendid holding action in the Battle of Spotsylvania Court House (May 7–19, 1864), fending off Union attacks long enough to be reinforced by Lieutenant General James Longstreet. At Trevilian Station (June 11–12, 1864), Lee’s men were

Former Confederate general Fitzhugh Lee, U.S. consulate general in Havana during 1896–1898, urged a strong U.S. stance against the Spanish government over Cuba. (Library of Congress)

initially surprised by Brigadier General George Armstrong Custer’s attack but regrouped and beat back the Union advance.

Shortly thereafter Lee’s division joined Confederate forces under Lieutenant General Jubal Early in the Shenandoah Valley, where in the Third Battle of Winchester (September 19, 1864) Lee had three horses shot from under him. Severely wounded, he convalesced until March 1865, when he replaced Lieutenant General Wade Hampton as Cavalry Corps commander. The most notorious episode in Lee’s distinguished career occurred during the initial phase of the Battle of Five Forks (April 1, 1865), when he was conspicuously absent from the front lines while attending a fish fry hosted by Major General George E. Pickett. Lee had failed to inform subordinates of his whereabouts and, consequently, only a portion of his command managed to cut through Union forces under Major General Philip H. Sheridan when they attacked. Lee also led the last charge by Confederate cavalry at Farmville, Virginia, on April 9, 1865, the same day his uncle surrendered at Appomattox.

Following the Civil War, Lee turned to farming but soon switched to politics and was elected governor of Virginia as a Democrat in 1885. He lost a bid for the U.S. Senate in 1893. He also published several books, including *General Lee* (1894), a biography of his noted uncle.

Lee was rewarded for his loyalty to the Democratic Party in 1896 when President Grover Cleveland appointed him U.S. consul

general in Havana, Cuba. The island was then in the throes of a determined independence movement against Spain. Lee openly expressed his dislike of the Spanish and overt sympathy toward the Cuban revolutionaries, and he strongly urged American intervention to assist the Cubans. He was retained in that post by new Republican president William McKinley after 1897 despite the fact that Lee attacked McKinley's policy toward Cuba as being cowardly. Lee advised the administration to dispatch the battleship *Maine* to Havana to protect American interests there but then urged that its arrival be delayed until after the end of the Autonomy Riots. He was thus surprised with the arrival of the battleship on January 24, 1898. On February 15, 1898, it fell to Lee to inform the government that the *Maine* had exploded in Havana Harbor with great loss of life. Lee did not believe that Spain was responsible for the destruction of the ship. When Spanish authorities suggested on March 1 that Lee be recalled, McKinley refused.

When the Spanish-American War began in April 1898, Lee offered his services to the U.S. government and was commissioned a major general of volunteers in command of VII Corps, one of only three former Confederate generals to be so rewarded. He selected the site for Camp Cuba Libre at Jacksonville, Florida, and then trained his men intensively. Although his corps saw no action, it went to Cuba after the war in occupation duty in January 1899, and Lee was appointed military governor of Havana Province. There he found time to research and publish *Cuba's Struggle against Spain* (1899), a ringing defense of the war and its outcome.

Following a brief stint commanding the Department of the Missouri, Lee resigned from the army in March 1901. He died in Washington, D.C., on April 28, 1905.

formal colonial empire that, although small by comparison with those of European powers, was nonetheless a departure from traditional U.S. isolationism. The war was the harbinger of greater international assertiveness on the part of the United States, bolstered by efforts among American elites to enhance U.S. military and diplomatic capabilities. For Spain, the loss of its last colonies symbolized that country's final decline into a second- or even third-rate power. For both Cuba and the Philippines, the war marked the beginning of closer and often contentious relations with the United States, a pattern that would continue into the 21st century. The war also propelled Theodore Roosevelt, often considered the first modern president, into his country's highest elected office in 1901.

Once the war had ended in American victory, the United States and Spain had to negotiate a peace treaty. Throughout the war and beyond, Spain sought to limit its losses of colonies to Cuba alone, but American representatives insisted on retaining the Philippines, Puerto Rico, and Guam. Negotiations for a peace treaty between Spain and the United States, from which both Cuban and Philippine delegates were notably absent, were held in Paris from October to December 1898. President William McKinley, who did not attend the conference but was in close contact with the American commissioners, originally left open whether the United States should demand all the Philippine Islands or more limited territory there. Audience responses to his speeches convinced him that the majority of his countrymen believed that the United States should demand that Spain relinquish its sovereignty over the entire Philippine archipelago. Eventually, the United States agreed to pay Spain \$20 million in exchange for the Philippines. The Treaty of Paris, signed on December 10, 1898, also ceded Puerto Rico and Guam to the United States, while Spain renounced all sovereignty over Cuba.

When war came in April 1898, McKinley refused to recognize the provisional government (Cuban Revolutionary Government) that Cuban insurgents had established in 1895 and negotiated peace with Spain without including any Cuban representatives. Throughout the war and after, relations between American troops and the insurgent Cubans were poor. Many Americans believed that the Cubans were ill-suited to govern themselves and would require an extended period of American tutelage. From January 1, 1899, to May 20, 1902, Cuba remained under U.S. military administration. Leading American officials feared that if Cuba gained full independence, it would quickly slip into instability and become a source of continuing problems. American officials insisted that before Cuba could gain independence, its constitution must include the Platt Amendment, provisions drafted by the U.S. Congress that granted the United States the right to intervene in Cuba to maintain order and stability. Cuba's rights to enter into foreign treaties or take on financial obligations were also restricted, while the U.S. government obtained a perpetual lease on territory at Guantánamo Bay that remains today a major American naval base.

Although nominally independent, Cuba was effectively reduced to an American protectorate, with the United States reserving the right to define when conditions demanding intervention might

Legacy of the War

The Spanish-American War was in many ways a significant turning point in the diplomacy and international position of the United States. As a consequence of the war, the United States acquired a

U.S. Marines at Deer Point Camp, Guantánamo Bay, Cuba, April 26, 1911. (Library of Congress)

arise. Many other Latin American nations resented what they perceived as Yankee imperialism during and after the Spanish-American War and feared that the United States sought to reduce them to a comparable state of vassalage.

The United States subsequently resumed military control of Cuba on several occasions, in 1906, 1909, and 1912, and also from 1917 to 1933, when U.S. Marines occupied the island to contain a state of revolutionary turmoil. The Platt Amendment was formally repealed in 1933, but the implicit threat of intervention still remained, as a pro-American dictatorship headed by Fulgencio Batista controlled Cuba until 1959. Many Cubans deeply resented their country's continuing subordination to American interests, feelings that contributed to Batista's overthrow and the strongly anti-American outlook and policies of his successor, the leftist Fidel Castro. Even under Castro, however, Guantánamo still remained an American military base. It became notorious in the early 21st century as an extralegal holding prison for a wide assortment of detainees captured in various parts of the world during the War on Terror.

The question of whether the United States should keep the Philippines as a colonial possession provoked heated domestic debate when the Treaty of Paris was submitted to the U.S. Senate for ratification in late 1898. Many Americans believed that imperialism and dominion over subject peoples ran counter to their country's traditions, an antipathy reinforced by the fact that the United States traced its own origins to a revolt against British colonial rule. The annexation of the Philippines or other colonial territories would, they argued, be unconstitutional and subvert American democratic values, yet the islands could not be considered suitable candidates for eventual statehood.

Most such anti-imperialists believed that Filipinos and other non-Western peoples were inherently inferior to Caucasians, incapable of observing democratic norms or reaching the standards of Western civilization. An impressive array of prominent Americans, including the industrialist and philanthropist Andrew Carnegie, former presidents Benjamin Harrison and Grover Cleveland, the

populist Democratic leader William Jennings Bryan, the author Mark Twain, and various prominent congressmen and senators, joined the Anti-Imperialist League, founded in Boston in November 1898, that argued forcefully against any annexation of the Philippines. In Congress, Democrats who had supported U.S. intervention in Cuba were equally strongly opposed to American acquisition of the Philippines. A Philippine insurgency against Spanish rule had been in progress since 1897, and indigenous Filipino leaders sought independence and self-rule, not the replacement of one colonial overlord by another.

McKinley and most of his administration, however, together with the majority of Congress, favored annexation. Even while the war was in progress, the United States had already, at McKinley's urging, annexed the remote Pacific islands of Hawaii, several thousand miles distant from American shores. These had previously been independent and under the rule of an indigenous monarch. In 1893, American planters, led by Sanford Dole, deposed Queen Liliuokalani and sought to join the United States. When this bid failed, they declared Hawaii an independent republic. In 1897, Congress rejected a proposal, backed by McKinley, that Hawaii should be annexed by the United States, but one year later, with the Spanish-American War in progress, the United States finally annexed Hawaii, which became a territory in 1900.

While most Americans considered the Filipinos, unlike the Hawaiians, incapable of self-government, public opinion ran strongly in favor of annexation. A group of longtime Republican internationalists who supported a greatly expanded overseas role for their country, including the acquisition of colonies and strategically positioned naval bases, were particularly staunch advocates of this policy. Drawing on traditions of American mission and Manifest Destiny, supporters of annexation argued that the moral duty of bringing the blessings of civilization to the Philippines had effectively fallen upon their country, which should not and could not reject it. More pragmatically, they also suggested that the islands would be both commercially and strategically valuable to the United States, serving as stepping-stones to Asian markets. In addition,

The Great White Fleet steams out of Hampton Roads, Virginia, on December 16, 1907. The new 16,000-ton battleships *Kansas* and *Vermont* appear nearest to the camera. (Naval Historical Center)

they warned that should the United States cut the Philippines loose, other imperialist powers—most probably Japan or Germany—could hasten to annex these poorly defended and vulnerable targets, an outcome that would actually threaten the United States strategically. Great Britain, eager to win the United States as an ally against its own imperial rivals, hoped that the United States would take the islands. In rousing verse, the popular British poet Rudyard Kipling urged Americans to “take up the white man’s burden” of imperialism. Although a few mavericks, notably Senators George Frisbie Hoar of Massachusetts and Eugene Hale of Maine, voted against annexation, most Republicans in Congress rallied behind McKinley. After Vice President Garret Hobart cast the tie-breaking vote against the Bacon Amendment, which would have renounced permanent sovereignty over the Philippines, the Senate ratified the treaty on February 6, 1899. Eleven Democrats helped to provide the necessary bare two-thirds majority.

Ratification of the treaty meant that the United States had acquired several colonial possessions, an overseas empire that would for several decades be administered by the U.S. Army and the U.S. Navy. For several decades, Puerto Rico was ruled by an American governor, while Guam was controlled by U.S. naval officers. Naval administrators also ran two other small Pacific island territories, Wake Island and Tutuila Island (American Samoa).

The situation in the larger and more diverse Philippines, whose affairs came within the mandate of the U.S. Army, was far more problematic and complicated. Initially the Americans and Filipino rebels cooperated somewhat uneasily during the war and its aftermath, but in February 1899, shortly after the United States annexed the islands, Emilio Aguinaldo y Famy and his followers began an

armed guerrilla insurgency against American rule. The new American overlords who had replaced the Spanish generally treated the Philippine population as racial inferiors, arousing deep resentment among their subjects. U.S. military forces that had already occupied the islands began a repressive countercampaign, relocating civilians and using ruthless methods, including torture, against the rebels. By 1900, reports of American atrocities had begun to reach the United States, undercutting the stated objective of what McKinley had described as benevolent assimilation. In July 1901, the Ohio politician William Howard Taft was appointed civil governor. Taft placed greater emphasis upon conciliatory tactics and winning over the indigenous population, and his arrival coincided with growing U.S. military successes, including the capture of Aguinaldo.

Although sporadic guerrilla resistance lasted until 1913, in July 1902 President Theodore Roosevelt declared the formal end of fighting in the Philippines. Since hostilities began there, deaths among the rebels were estimated at between 16,000 and 20,000, with perhaps another 200,000 civilian deaths. The Philippine-American War cost the United States \$400 million. It was a bloody beginning to more than 40 years of American rule in the Philippines, first as a territory and from 1935 as a self-governing commonwealth. In July 1946, the Philippines were granted full independence. American acquisition of the Philippines, together with Hawaii, meant that the United States had become a major Pacific power. It also set up the subsequent confrontation between the United States and Japan. Ironically, until after World War II, America’s ability to defend these possessions against outside attack was limited, and military planners often considered them a strategic liability rather than an asset.

The swift American victory in the Spanish-American War, described by Secretary of State John Hay as a “splendid little war,” brought a spirit of elation that gave a great boost to national morale, self-confidence, and assertiveness. Such self-congratulation was, however, diluted by the knowledge that victory in the war had resulted as much from Spanish military weakness as U.S. military prowess. Although the new American navy had performed well, coordination between naval and military forces was poor, and the war effort was bedeviled by interservice rivalries. Logistically, American forces were poorly supplied, with inadequate or poor-quality rations, uniforms, weapons, and medical supplies, and thousands of American troops in Cuba succumbed to debilitating disease. In 1899, a special presidential commission chaired by Grenville M. Dodge investigated the War Department’s handling of the war and concluded that its administration and professional standards had been inadequate. As a result, Secretary of War Russell A. Alger resigned and was replaced by Elihu Root, who implemented wide-ranging reforms and reorganization to modernize the War Department. Training at all levels was also improved, and more military attachés were dispatched overseas to familiarize themselves with foreign practices.

In the aftermath of the war, U.S. diplomacy became more assertive. In 1899 and 1900, Secretary of State Hay published the Open Door Notes on China, warning other powers against demanding or acquiring further special territorial or economic concessions in that nation and stating that Americans should be able to trade and invest on equal terms. In 1900, U.S. forces also took part in the international expedition that suppressed the Boxer Rebellion. From then until 1941, the United States maintained a permanent though small military and naval presence in China, a symbol of American interest in Asia.

American activism on the international scene became even more pronounced once the fervent internationalist Theodore Roosevelt became president in 1901. His well-publicized (and self-publicized) combat service during the Spanish-American War with the Rough Riders and the stirring accounts of the unit’s exploits that he sent back to the American press made him a political celebrity. In 1899, he was elected governor of New York and in 1900 became McKinley’s running mate and won the vice presidency. The following year, McKinley’s assassination made the youthful Roosevelt president. Vigorous and energetic in style, Roosevelt significantly enhanced the powers of his office and sought to provide his country with far more proactive leadership than in the past.

Internationally, Roosevelt sought to enhance the power and authority of the United States. The Roosevelt Corollary to the Monroe Doctrine, promulgated in 1904, arrogated to the United States the right to intervene in any Latin American nation that was deemed to be mismanaging its affairs. Effectively an expansion of portions of the Platt Amendment to the entire Western Hemisphere, over the next three decades this doctrine became the justification for numerous interventions by the United States throughout the region.

In the interests of building a canal connecting the Atlantic and Pacific Oceans across the Isthmus of Panama, in 1903 Roosevelt encouraged the secession of the province of Panama from Colombia and immediately recognized the new state, after which he promptly negotiated an agreement to build such a waterway, to remain under U.S. control. Roosevelt expanded the U.S. Navy and, as a tangible demonstration of his country’s strength, in 1907 dispatched the so-called Great White Fleet on a much-publicized world tour.

British support for the United States during the Spanish-American War contributed to warmer relations between those two countries. In each nation, many policy makers believed that their nations shared similar values and interests and should cooperate more closely in international affairs. Other big powers, notably Germany and Japan, two countries that were seeking to expand their overseas presence, were more apprehensive over the growing might of the United States. The actions of German naval forces in ignoring the U.S. blockade of the Philippines in the summer of 1898 and apparent German interest in acquiring those islands alarmed Americans, as did indications that Japan also coveted the archipelago.

Overall, the Spanish-American War, although limited in scope, served as a curtain-raiser for the American Century, during which the United States would become an unrivaled global power. The United States established formal and informal imperial relationships with various other states, experienced both conventional warfare and guerrilla insurgencies, experimented in nation-building, professionalized its armed forces, gave flamboyant demonstrations of its growing economic and military strength, and expanded presidential power. In the ensuing decades, all of these tendencies would be dramatically enhanced. By 1900, it was clear that the United States had to be considered an international great power, albeit one whose precise role remained still tentative and undefined.

León y Castillo, Fernando de

Birth Date: November 30, 1842

Death Date: March 12, 1918

Spanish politician and ambassador to France during the Spanish-American War. Fernando de León y Castillo was born on November 30, 1842, in Telde, Gran Canaria (Canary Islands). After earning his baccalaureate at the Colegio San Agustín in Las Palmas, he went to Madrid, where he earned an undergraduate law degree in 1866. In 1871, he became a deputy in the Spanish Cortes (parliament), representing the Canary Islands for the rest of his life. He was instrumental in constructing the Las Palmas port, which contributed to that city's later development. He held numerous political and diplomatic posts, serving as colonial secretary from 1881 to 1883, minister of the interior from 1886 to 1887, and ambassador to France in 1887, 1892, and 1897–1910.

Throughout his political and diplomatic career, León was a political ally of Liberal politician Práxedes Mateo Sagasta. In the months leading up to the Spanish-American War, León was again named ambassador to France in 1897 and attempted to secure French support in diffusing the building tensions between Spain and the United States. Because France was allied to Russia, the government of which did not wish to anger the United States, the French government refused to initiate a European effort to dissuade the United States from declaring war on Spain. Clearly sympathetic to the Spanish cause, however, French leaders suggested to León that the Spanish government approach the Austrians to intercede in an effort to defuse the situation. Although the Austrian government eventually initiated a diplomatic letter on April 6, 1898, that was signed by the representatives of the major European powers and attempted to convince the U.S. government not to declare war on Spain over events in Cuba, its pacific tone helped ensure that it had virtually no impact on U.S. policy makers.

Following the war and the Treaty of Paris, signed on December 10, 1898, in which Spain relinquished control of Cuba, Puerto Rico, Guam, and the Philippines, the Spanish colonial empire essentially ceased to exist, and the following year the Spanish Overseas Ministry was formally abolished. However, León's negotiations with the French government led to the resurrection (albeit limited) of Spanish colonialism. Following extensive negotiations, he concluded the 1900 Treaty of Paris with the French that recognized

Spain's claim to Rio Muni, a small area on the mainland of West Africa that had been claimed by Spain since the Berlin Conference of 1885. In 1909, the Spanish government united Rio Muni, the island of Fernando Pó (currently known as Bioko), and the islands of Elobey, Annobón, and Corsico to form Spanish Guinea. To honor their diplomat, the Spanish government conferred the title of marquis of Muni on León.

In 1906, León facilitated the Algeciras Conference, which defused the First Moroccan Crisis between France and Germany. He gave up his diplomatic post in 1910. León died on March 12, 1918, in Biarritz, France.

Liga Filipina

A secret Philippine nationalist association founded by José Rizal in 1892 to promote Filipino political, economic, and social development. Rizal, an acclaimed writer, essayist, and scholar, conceptualized the Liga Filipina, or Philippine League, while in Hong Kong. He wrote its constitution, aided by José Ma Basa, an expatriate of the 1872 Cavite uprising against Spain. Once the document was completed, Rizal returned to the Philippines.

On July 3, 1892, Rizal formally launched the Liga Filipina in Manila. The constitution of this civic society for Filipinos provided for a supreme council representing the nation, provincial councils for each province, and popular councils in each village. Its officers included Ambrosio Salvador, president; Agustín de la Rosa, financial planning; Bonifacio Arévalo, treasurer; and Deodato Arellano, secretary. The principle of *Unus Instar Omnium* (One Like All) guided the association.

In keeping with Rizal's aversion to violence and his belief in an evolutionary approach through education as a way to bring about social change, the organization's main tenets were not very revolutionary. The Liga Filipina's constitution had two explicit goals. First,

it touted an indivisible, strong, and uniform community, which would be essential for national unity, the promotion of a common defense, and the curtailment of internal disorders and injustices. Second, it encouraged educational, agricultural, and commercial pursuits and called for reforms in each.

Liga Filipina's membership crossed educational lines, mixing the less learned with more erudite young males. It emphasized economic development for the nation and fraternal advantages for its members. Hoping to find some amicable means to end Spanish-inspired inequities, the secret order resisted independence. Its objectives, in general, reflected the reform message as expressed by the liberal *ilustrados*, or enlightened ones, in Spain.

Despite its innocuous bent, however, the Spanish colonial administration quickly judged the Liga Filipina to be subversive. On July 6, 1892, Rizal was arrested and the next day was banished to Dapitan on the northwest coast of Mindanao, the most southern of the archipelago's large islands. A minority of members maintained their financial contributions for a time. In hopes of influencing Spanish policy, the remaining leadership decided to fund *La Solidaridad* (Solidarity), the émigré newspaper published in Barcelona, Spain, since 1889.

Eventually, the Liga Filipina held new elections. Domingo Franco was chosen president, Deodato Arelan became secretary-treasurer, Isidoro Francisco was responsible for fiscal matters, and Juan Zulueta and Timoteo Paez won supreme council seats. Afterward, Apolinario Mabini was selected as secretary.

Despite the new leadership, members complained of the organization's financial burden and also that Spanish authorities were ignoring the reformist ideas expressed in *La Solidaridad*. After several months, the association had collapsed, with its members at odds with one another. A middle-class faction emerged, favoring continued support for *La Solidaridad* and its incrementalist reform program, but a lower-class faction led by Andrés Bonifacio rejected accommodation with Spain and instead supported the revolutionary Katipunan organization. The middle-class group responded with the creation of the Cuerpo de Compromisarios (Body of Compromisers) organization and for a few months forwarded money to Marcelo del Pilar in Madrid for *La Solidaridad*'s expenses. However, members of the Compromisarios soon ceased paying dues, and the paper's subsidy ended. The Liga Filipina was moribund by 1893, largely a victim of Rizal's incremental approach to Filipino nationalism.

Liliuokalani, Queen of Hawaii

Birth Date: September 2, 1838

Death Date: November 11, 1917

Last reigning monarch of the Hawaiian Islands who ruled during 1891–1895. Lydia Paki Kamekeha Liliuokalani ruled over Hawaii during the turbulent years in which the tropical islands became a U.S. protectorate. She was born on September 2, 1838, in Honolulu. Her aristocratic family was closely associated with King Kamehameha III for whom her mother, Keohokalohe, served as an adviser. Lydia was educated by American missionaries at the Royal School in Honolulu and became fluent in English at a young age.

In September 1862, Lydia married John Owen Dominis, a Boston sea captain and official in the Hawaiian government. In 1874, her brother David Kalakaua succeeded to the Hawaiian throne, leaving her younger brother, W. P. Leleiohoku, heir apparent. When Leleiohoku died three years later in 1877, Lydia was then

Queen Liliuokalani was the last ruler of Hawaii during 1891–1895, before it became a U.S. protectorate. (Library of Congress)

named heir to the throne, being known from that point on by her royal name of Liliuokalani.

As the crown princess, Liliuokalani helped to establish schools for her subjects and served as regent during her brother's world tour in 1881. During her own world tour in 1887, she met with U.S. president Grover Cleveland and Britain's Queen Victoria. Liliuokalani succeeded to the throne in January 1891 at age 53 upon the death of her brother, becoming the first woman ever to rule over Hawaii.

Throughout the 19th century, U.S. interests in Hawaii had grown, mainly because of increased investment in the islands' lucrative sugar industry. In 1887, American investors managed to force a liberal constitution on Hawaii that deprived the monarch of many traditional ruling powers that had already dissipated during her brother's reign. When Liliuokalani came to the throne, she vowed to reclaim those powers and stand firm for Hawaiian independence.

In response, American colonists and planters, led by Sanford Dole, formed the Committee of Safety. The committee had the support of the U.S. minister to Hawaii John L. Stevens and enlisted the aid of marines from the U.S. Navy cruiser *Boston*. The Americans then established a separate government, proclaiming it an American protectorate on February 1, 1893. Dole himself was named president. The Americans submitted a treaty of annexation to the U.S. Congress, but when President Cleveland began his second term shortly thereafter, he ordered an investigation into the affair.

The investigating committee found that the American-led revolution had been supported almost exclusively by Hawaii's sugar planters and that most Hawaiians did not want to be annexed to the United States. A new minister was sent to Hawaii with orders to restore Liliuokalani to her throne as long as she accepted the liberal constitution of 1887. She assented.

Dole defied Cleveland's orders, however, and declared the Republic of Hawaii in 1894. The royalists revolted, but Dole's forces squelched them and jailed the queen's supporters. Queen Liliuokalani abdicated in 1895 in order to win pardons for them. Cleveland watched the unfolding events in Hawaii with dismay, but he eventually recognized the republic in an effort to avoid additional bloodshed. In 1898, the year the islands were formally annexed by the United States, Liliuokalani wrote *Hawaii's Story by Hawaii's Queen* and composed "Aloha Oe," which quickly became the farewell song for her country. Hawaii officially became a territory in 1900 (with Dole as its governor) and a U.S. state in 1959.

Liliuokalani spent the remainder of her life living in Honolulu on a government pension and continuing to receive homage from visitors and natives alike as Hawaii's queen. She died at Washington Place in Honolulu on November 11, 1917.

Linares y Pombo, Arsenio

Birth Date: 1848

Death Date: 1914

Spanish Army general. Born in Valencia in 1848, Arsenio Linares y Pombo was a career Spanish Army officer of wide military experience. Commissioned a lieutenant in 1868 and initially an artillery officer, he later transferred to the infantry. He fought against insurgents in Cuba, in the Carlist Wars in Spain, and against insurgents in the Philippines. In 1897, he was appointed commander of the Spanish garrison at Santiago, Cuba, where he worked to prepare his forces for possible war with the United States. Following the declaration of war, in May 1898 he was promoted to lieutenant general. Although he had some 35,000 men under his command, instead of concentrating them at Santiago, he left some 24,000 men in such scattered locations as Baracoa, Guantánamo, Holguín, Manzanillo, and Sagua de Tánamo to defend against attacks by Cuban insurgent forces. Provisioning all of them in Santiago would have been difficult, but this decision meant that only limited Spanish military resources were available to oppose the Americans in the Battle of San Juan Hill (July 1, 1898). He opposed the departure of Rear Admiral Pascual Cervera y Topete's squadron from Santiago until after the arrival there of Colonel Federico Escario García's column.

Linares conducted himself well in the Battle of San Juan Hill during which he was severely wounded. He was replaced in command of Santiago by General José Toral y Vázquez. When Cuban governor-general Ramón Blanco y Erenas suggested to Linares that he attempt to break out with his troops from Santiago de Cuba, he replied on July 12 that this was impossible and that he would take full responsibility for the decision to surrender Spanish troops there. Criticized after the war for his failure to concentrate his forces at Santiago, he testified before the Spanish Cortes (parliament). Linares was appointed senator for life in 1900 and served as minister of war for several Spanish premiers (although not consecutively) during 1900–1909.

On July 9, 1909, Linares, as minister of war, called up reserve troops from Catalonia, which sparked week-long riots throughout the province, especially in Barcelona. The troops were to be sent to Morocco, where Spain was undertaking military action. The latter provoked an antimilitarist, anti-imperialist backlash that was fueled by the strong presence of anarchists and socialists in Barcelona. In what has since come to be called the Tragic Week, as many as 150 Catalonians died in the melee, while government police and army casualties included 8 dead and 125 wounded. Moreover, 1,700 people were indicted by military courts for armed insurrection, and martial law was declared in Barcelona. The 1909 riots forced Prime

Minister Antonio Maura y Montaner to resign, and Linares was also forced out of the government at the same time. Linares died in Madrid in 1914.

Lodge, Henry Cabot

Birth Date: May 12, 1850

Death Date: November 9, 1924

Historian, writer, Republican Party politician, and influential U.S. senator. Born in Boston, Massachusetts, on May 12, 1850, Henry Cabot Lodge was a scion of Massachusetts society whose roots in the state predated the American Revolution. His grandfather was the governor of Massachusetts, and his great-grandfather was a U.S. senator from the state.

Lodge graduated from Harvard University in 1871. He received his law degree from the same institution in 1874 and, in 1876, one of the first doctorates in history and government granted by Harvard. He entered the legal profession in 1876 after admission to the bar the previous year. He also lectured on American history at Harvard from 1876 to 1879 while he continued to practice law and write history.

Lodge entered politics in 1880 when he won election to the Massachusetts state legislature on the Republican Party ticket. He won election to the U.S. House of Representatives in 1887 and served there until 1893, when he was appointed to the U.S. Senate, serving there until his death in 1924. He became a close friend and confidant of Theodore Roosevelt. Both men held similar views regarding foreign affairs. Both were also historians and wrote works about men who inspired their leadership.

As the situation in Cuba became more grave after 1896, Lodge, a member of the Senate Committee on Foreign Relations, urged American intervention on the island to curb Spanish abuses. He no doubt also saw in the situation a golden opportunity for the United States to flex its muscle in the hemisphere. Indeed, he was a firm believer in U.S. expansionism who saw the potential to expand U.S. influence in Cuba and the Philippines as a natural continuation of America's Manifest Destiny. In this he was hardly alone, for many other influential U.S. leaders, such as Roosevelt, William Randolph

Influential Republican Party senator from Massachusetts Henry Cabot Lodge was a strong advocate of U.S. expansionism and urged U.S. intervention in Cuba. (Library of Congress)

Hearst, and William McKinley, held very similar views. Lodge, who admired naval strategist Alfred Thayer Mahan's ideas, supported the building of a great naval fleet and advocated the expansion of the U.S. Army in the years leading up to the Spanish-American War. As such, Lodge's views corresponded with—and certainly bolstered—Roosevelt's political ascendancy. When the war vote was taken in April 1898, Lodge was unambiguously prowar and used his considerable clout to influence the outcome of the war declaration. In 1899, he published a history of the conflict.

As an admirer of Roosevelt's foreign policy (Roosevelt succeeded McKinley as president in 1901), Lodge was highly critical of the foreign policy of Roosevelt's two successors as president, William Howard Taft and Woodrow Wilson. Lodge continued to advocate a strong international role for the United States, including early entry into World War I (1914–1918) on the Allied side. He also pushed for U.S. military preparedness. He became Senate majority leader following the November 1918 elections and assumed the chairmanship of the Senate Committee on Foreign Relations in 1919. Thus, he held a pivotal position in the fight against Wilson's cherished League of Nations, which became a key issue shortly after the November 1918 elections and continued into March 1920. Indeed, perhaps Lodge's single most momentous political action came during the fight for the League of Nations, which ultimately derailed Wilson's political career and also ruined his health.

President Wilson had failed to consult leading Republicans regarding the Paris Peace Conference and his proposed League of Nations, and he had excluded them from membership in the U.S. delegation. The Senate divided into three groups on the issue of ratification: Wilson's Democratic supporters, who favored immediate ratification; Lodge's Republican moderates, who favored participation in the League of Nations but with reservations that would preserve the role of Congress in declaring war and adopting economic sanctions; and the so-called irreconcilables who opposed the League of Nations completely. On November 6, 1919, Lodge advanced a resolution of ratification of the League of Nations with 14 reservations that, while somewhat circumventing U.S. obligations under the covenant, did not seriously impair the organization. Wilson urged its defeat, and Democrats joined with the irreconcilable Republicans on November 19 to vote down the resolution. Had the Democrats voted for the Lodge resolution, the treaty would have been carried by a vote of 81 to 13.

Lodge refused to modify his original reservations, while Wilson remained defiant that the Senate must not modify the treaty at all. On March 19, 1920, 21 Democrats deserted Wilson to join the reservationists, and the Senate voted down the Treaty of Versailles containing the League of Nations Covenant. Not until July 1921, under Wilson's successor Warren G. Harding, did Congress, by joint resolution, officially terminate war with Germany and Austria-Hungary. Although Lodge is sometimes blamed for the failure of the United States to join the League of Nations, most historians argue that this more properly belongs with Wilson and his stubborn refusal to compromise.

Lodge was also a noted author who wrote many books, articles, and essays, including well-regarded biographies of Daniel Webster and George Washington. Dedicated thoroughly to the work of the U.S. Senate, Lodge held his seat until his death in Cambridge, Massachusetts, on November 9, 1924.

Long, John Davis

Birth Date: October 27, 1838

Death Date: August 28, 1915

Lawyer, Republican Party politician, and secretary of the navy (1897–1902). Born near Buckfield, Maine, on October 27, 1838, John Davis Long grew up in New England. He graduated from Harvard Law School in 1861 and practiced law before winning election to the Massachusetts legislature in 1874. After serving as that body's Speaker from 1876 to 1879, he ran for and was elected lieutenant governor in 1879 and governor in 1880. In 1883, after his third term as governor, he was elected to the U.S. House of Representatives. He retired from politics and returned to his legal practice in 1889.

President William McKinley appointed Long secretary of the navy on March 5, 1897, and he was sworn in the following day. He was not in the best of health when he took office, and like many in McKinley's war cabinet, lacked the appropriate background to head the Navy Department. Be that as it may, while in Congress Long had regularly spoken about and voted in favor of naval expansion and modernization. More importantly, he had great difficulty rein-ing in the more bellicose assistant secretary of the navy, Theodore Roosevelt, who often acted without Long's permission.

Relations between the United States and Spain worsened after Long assumed office, and as war loomed, he and Roosevelt rushed to ready the navy for possible conflict. Despite 15 years of steady growth and modernization, the navy remained seriously deficient in small warships, munitions, and support vessels, particularly colliers to refuel the fleet.

Long and Roosevelt soon recalled American warships from various overseas assignments, concentrating those in the Pacific at Hong Kong for possible deployment against the Spanish squadron in the Philippines and at Key West, Florida, to be able to operate against Cuba and Puerto Rico. A special appropriation by Congress of \$50 million allowed Long and Roosevelt to dispatch officers to Europe and there purchase small warships and various munitions and also to secure 104 civilian ships, including 15 colliers, and convert them to military use.

Following the U.S. declaration of war on April 25, 1898, Long and Roosevelt implemented existing war plans developed over the previous years by officers at the Office of Naval Intelligence and the Naval War College. Roosevelt, however, acted on his own in ordering Commodore George Dewey to prepare for an attack on the Spanish naval base at Manila at the outbreak of war. Dewey led the Asiatic Squadron's cruisers and gunboats to victory over Spanish rear admiral Patricio Montojo y Pasarón's squadron in the Battle of Manila Bay on May 1, 1898, while other ships of Rear Admiral William T. Sampson's North Atlantic Squadron blockaded Cuba and transported the army's V Corps to the island. The blockaders then destroyed the Spanish cruiser squadron in the one-sided Battle of Santiago de Cuba on July 3. The navy then oversaw the lifting of other troops to Puerto Rico. For the navy, the war proved short and glorious, and Long, assisted by Bureau

Lodge Committee

See Committee on the Philippines

John Davis Long was secretary of the navy during 1897–1902, and in this position he worked to prepare the navy for its important role in the Spanish-American War. (Library of Congress)

of Navigation chief Rear Admiral Arent S. Crowninshield, proved an able wartime secretary.

The war, however, produced a bitter dispute over credit between the commanders at Santiago de Cuba: Sampson and Commodore Winfield Scott Schley. Long bowed to Schley's demands for vindication and appointed a court of inquiry to settle the matter. Its report, while often critical of Schley, still credited him with winning a "glorious victory." When this failed to settle the dispute, Long prohibited its discussion among naval officers.

Despite the ease with which the U.S. Navy defeated its Spanish counterpart in the Caribbean and Pacific, Long had faced multiple management challenges, including prewar dealings with his impetuous assistant, Roosevelt, and then his disagreements with Secretary of War Russell A. Alger and the War Department. Besides the usual interservice rivalries, Long's conservatism meant that the navy would not place its capital ships at the disposal of the army until after the Spanish had been defeated at sea. Furthermore, Long's reluctance to part with ships to launch the late-July 1898 invasion of Puerto Rico had necessitated a presidential order for him to comply with the war plan.

In 1899, Long redeployed the navy to support military operations in the Philippines, temporarily decommissioning several

cruisers to free crews for the shallow-draft gunboats that patrolled the Philippines and allowing American forces to isolate and defeat insurgent forces. While Long struggled to find ships to wage war in the Philippines, he also had to deploy American sailors and marines as part of the international force sent in the summer of 1900 to China to end the siege of Peking's (Beijing's) foreign embassies and legations during the Boxer Rebellion (1899–1901).

Meanwhile, Long had to contend with another contentious issue. Stephen B. Luce, Alfred Thayer Mahan, and other naval reformers had long advocated the creation of a naval general staff. They believed that the navy's mobilizations for the conflicts of the late 1890s and early 1900s would add weight to their arguments, but Long dashed their hopes. Indeed, he spent his last year in office arguing against and scuttling their proposal. Instead, he successfully argued that a naval general staff would undermine civilian control of the navy and the secretary of the navy.

Long left office in April 1902. The following year, he published *The New American Navy*, a two-volume work that celebrated the generation of progress that had made the United States a great naval power. Afterward, he resumed his legal practice and generally avoided politics. Long died at his home in Hingham, Massachusetts, on August 28, 1915.

Love, Alfred

Birth Date: September 7, 1830

Death Date: June 23, 1913

U.S. peace activist and founder of the Universal Peace Union (UPU) in 1866. Alfred Love, a Quaker and disciple of the abolitionist William Lloyd Garrison's views on peaceful resistance, was born in Philadelphia, Pennsylvania, on September 7, 1830, and became a

package woolen merchant in Philadelphia. In 1862, Love published a tract titled *An Appeal in Vindication of Peace Principles and against Resistance by Force of Arms* in which he explained his radical pacifist views. Among other things, he argued that war was un-Christian and inhumane. A year later, he was drafted into the Union Army but refused to serve or find a substitute. He also would not permit his business to sell goods in support of the war effort, causing him economic hardship.

Angry and disenchanted with peace groups such as the American Peace Society for supporting the American Civil War, Love founded the UPU in 1866. Its headquarters was in Philadelphia. He served as its president until his death in 1913 and edited its various periodicals, *The Bond of Peace* (1868–1874), *The Voice of Peace* (1874–1882), and *The Peacemaker and Court of Arbitration* (1882–1913). Under his leadership, the UPU's guiding principle was that peace meant individual moral perfection in both personal and community relationships. The organization held to an absolutist position that human life is sacred and should not be taken away by either individuals or governments. Strangely, among the UPU's most notable vice presidents, although hardly radical pacifists such as Love, were Andrew Carnegie, William H. Taft, and Mexican leader Porfirio Diaz.

Love and the UPU championed a wide range of social reforms. Among them were temperance, social purity, justice for Native Americans, women's rights, full equality for freedmen, abolition of capital punishment, prison reform, and arbitration in labor-management disputes. On the international scene, Love and his organization supported the views of British free trade theorist John Bright. The UPU promoted the idea of the free exchange of goods as a means to attain internationalism, anticolonialism, humanitarianism, and world peace.

In the late 1890s, as calls grew increasingly louder for American military intervention in the Cuban crisis, Love and the UPU vigorously campaigned against the war. He publicly urged Americans to stay calm after the sinking of the battleship *Maine* in Havana Harbor on February 15, 1898. In letters and cables addressed to Steward L. Woodford, the American minister in Madrid, Love and other officers of the UPU encouraged him to implore the Spanish government to act quickly and decisively in making concessions while also exploring the possibility of third-party mediation. Love even wrote to Spanish prime minister Práxedes Mateo Sagasta expressing his appreciation for conciliatory actions already taken and warning him of the jingoistic pressure—especially from the yellow press—on the William McKinley administration to go to war. Love insisted that the crisis could be solved by granting Cuba its complete independence.

When it became evident that the United States was determined to conduct military operations against the Spanish, Love sent one last letter to the Spanish queen regent María Cristina declaring that he and his peace organization were the “true representatives of the American heart” and that peaceful means remained the only viable course of action worth pursuing. After the war began, Love and the

UPU continued to urge the McKinley administration to send a peace commission to Madrid. Unfortunately, before Love's letter could be dispatched to the queen regent, it was intercepted and made public by a reporter for the *Philadelphia Bulletin*. The letter's publication unleashed a storm of protest. An unruly crowd entered the UPU's headquarters and peace museum located in Independence Hall and tore down pictures and banners, including flags of numerous nations and one with the Spanish colors. Love and other members of the UPU also received death threats. Love was also burned in effigy, the figure riddled with bullets and dragged through the streets of Philadelphia.

Despite being forced to abandon its offices, the UPU continued to oppose the war. When the war came to a quick end in August 1898, Love began focusing his attacks on the McKinley administration's decision to annex the Philippines and on the subsequent Philippine-American War (1899–1902). Opposition to the Spanish-American War and the Philippine-American War represented the high point of the UPU's activities. After 1900, membership in the organization declined rapidly as the emergence of institutional and professional bodies began replacing those such as the UPU that relied on voluntary and personal relationships. Alfred Love died in Philadelphia on June 23, 1913. With his passing, the UPU ceased operations.

Luce, Stephen Bleeker

Birth Date: March 25, 1827

Death Date: July 28, 1917

U.S. admiral. Born in Albany, New York, on March 25, 1827, Stephen Bleeker Luce entered the navy as a midshipman on October 19, 1841, and joined the frigate *Congress* in the Mediterranean. In 1845, he joined the ship of the line *Columbus* in Captain James Biddle's mission to China and Japan. Luce attended the Naval Academy during 1848–1849 and served on the sloop *Vandalia* in the Pacific during 1849–1852 and on the steamer *Vixen* during 1853–1854, followed by duty with the Coast Survey in 1854–1857 and on the sloop *Jamestown* in the Caribbean in 1857–1860. He became seamanship and gunnery instructor at the Naval Academy in

Admiral Stephen B. Luce was a strong advocate for reform and professional development in the U.S. Navy. He founded the Naval War College, which developed the plans for war with Spain. (Naval War College Museum)

1860, following it from Annapolis to Newport at the start of the American Civil War.

At Newport, Luce revised W. H. Parker's textbook *Naval Light Artillery* (1862). Ordered temporarily to the screw frigate *Wabash* in the South Atlantic Blockading Squadron during 1861–1862, Luce returned to the academy to write the U.S. Navy's textbook *Seamanship* (1862), which was the navy's first textbook on the subject and remained the standard manual until 1901. In 1863, Luce took command of the training ship *Macedonian* and then the *Nantucket*, *Sonoma*, and *Pontiac* during 1864–1865. He returned to the Naval Academy in 1865 as commandant of midshipmen and served in that capacity until 1868. He then commanded the *Mohongo* (1868–1869) and the *Juniata* (1869–1870).

While serving at the Boston Navy Yard, Luce wrote what became the lead article in the first issue of the newly established Naval Institute *Proceedings*. In 1874, he played a key role in outfitting the sloop *St. Mary* to become the New York State Maritime School. After commanding the sloop *Hartford* during 1875–1877 and the screw frigate *Minnesota* in 1877–1881, he commanded the Naval Training Squadron, establishing its base at Newport in 1883.

In 1884, Luce founded the Naval War College, becoming its first president. Inspired by Emory Upton, John Laughton, and others, Luce focused the college on the study of strategy, tactics, international law, naval history, and war gaming, gathering James Soley, William McCarty Little, and Alfred Thayer Mahan to carry out this work.

Luce commanded the North Atlantic Station during 1886–1889. Following retirement in March 1889, he was an active writer and lecturer, serving on the War College faculty during 1901–1910. In January 1909, President Theodore Roosevelt appointed him to the Moody Commission on naval reorganization. A key figure in the professional development of U.S. Navy officers, Luce died in Newport, Rhode Island, on July 28, 1917.

Ludington, Marshall Independence

Birth Date: July 4, 1839

Death Date: July 26, 1919

U.S. Army officer and quartermaster general during the Spanish-American War. Marshall Independence Ludington was born in Smithfield, Pennsylvania, on July 4, 1839. At the beginning of the American Civil War in 1861, he joined the Union Army. On November 1, 1862, he received a captain's commission and the post of assistant quartermaster of volunteers. He participated in numerous battles, including those at Chancellorsville and Gettysburg, and served as a quartermaster for a variety of units during the war. He performed his job well and was breveted to brigadier general of volunteers in 1865.

Ludington continued in the army after the war and during the next three decades served in a variety of quartermaster posts, rising slowly but steadily through the ranks. In 1890, he was promoted to the rank of colonel. As tensions between the United States and Spain neared the boiling point, on February 3, 1898, President William McKinley appointed Ludington to the post of quartermaster general of the U.S. Army at the rank of brigadier general. Realizing full well that the army was woefully unprepared for war from a supply perspective, he immediately took steps to speed up procurement even before war was declared in April 1898. However, he was working under severe limitations placed upon him by Congress as well as by the War Department.

Ludington stepped up efforts to secure more uniforms and tents, which were in short supply, but he was partly stymied by bottlenecks and the limitations of domestic manufacturers. He tried, for example, to convince American textile makers to produce khaki cloth for summer uniforms, but almost nobody at the time had the capacity to do so. The end result was that thousands of U.S. soldiers fought a war in tropical locales—and during the heat of the summer—in heavy wool uniforms. This contributed to an abnormally high number of heat-related illnesses.

Ludington was not averse to procuring needed supplies from outside the army's official procurement system. Thus a great number of contracts were arranged with new suppliers. To speed up the procurement process, he delegated considerable authority to his subordinates, who had virtual free rein to procure goods from a variety of manufacturers. These same subordinates had the authority to enter into priority contracts with civilian suppliers, which included the authority to ask for second and even third shifts in order to increase a factory's output. Ludington also improvised when necessary, sometimes procuring inferior-grade cloth for uniforms to fill the gap. In addition, he worked closely with the railroads, devising an inventory system that would help railroads and depot workers identify and expedite the delivery of military supplies, especially those in shortest supply. It was also Ludington's job to requisition seaborne transports to supply the army in both the Caribbean and the Far East, which he performed admirably given the enormous pressure under which he labored. There is general agreement that despite the handicaps under which he had to labor, he did a fine job of supplying troops in two theaters of war thousands of miles apart.

Ludington came under repeated fire during the war—both by politicians and the press—concerning the equipping of soldiers and a general lack of supplies. The War Department Investigating Commission (Dodge Commission), convened after the war to look into the problems of supply and readiness, did not, however, single Ludington out for supply problems. Rather, the commission concluded that the state of unpreparedness leading up to the war had caused most of these problems.

When it became clear that American troops would be garrisoned in Puerto Rico and the Philippines for an unspecified period of time, Ludington created the Army Transport Service, an outfit specifically designed to move supplies over great distances and with minimal delay.

Beginning in 1899, Ludington was instrumental in the repair and modernization of many barracks, warehouses, and other buildings on army posts throughout the United States and in the newly acquired territories. He also pushed hard to streamline the procurement system and ensure that the army would not be caught unprepared in a future conflict.

In April 1903, Ludington was advanced to major general. That same month, he retired from active duty, concluding a career that had lasted for more than 40 years. In retirement, he traveled extensively, including overseas, and also went on a brief speaking

tour. Ludington finally settled down in Skaneateles in upstate New York, where he died on July 26, 1919.

Ludlow, William

Birth Date: November 27, 1843

Death Date: August 30, 1901

U.S. Army officer. William Ludlow was born in Riverside, Islip, Long Island, New York, on November 27, 1843. He attended Burlington College and New York University and then enrolled in the United States Military Academy, West Point, graduating in 1864 as a second lieutenant in the Corps of Engineers. During the American Civil War, he was breveted captain for gallantry at the Battle of Peachtree Creek in July 1864. He served on Major General William T. Sherman's staff during the March to the Sea and the Carolinas Campaign. In March 1865, Ludlow was breveted lieutenant colonel.

Ludlow remained in the army after the Civil War and served in a variety of frontier posts. He became chief engineer of the Dakota Territory and supervised the mapping of the region. He also directed the 7th Cavalry's 1874 expedition to map and gather information on the Black Hills (now South Dakota), which resulted in the discovery of gold and renewed conflict with the Sioux. He then oversaw river and harbor projects in New York City and along the Great Lakes. In 1883, he was named Philadelphia's chief water engineer, a post he held for three years during which time he reorganized and rebuilt the city's antiquated public water works.

In 1898, when the Spanish-American War began, Ludlow was promoted to brigadier general of volunteers, taking command of the 1st Brigade in Major General Henry Lawton's 2nd Division. Besides his brigade responsibilities, he also served as the chief engineer for V Corps. As such, he was instrumental in landing the corps at Daiquirí and Siboney, Cuba, in June 1898 and also supervised the landing of rebel forces at Aseraderos, which were under the command of General Calixto García y Iñiguez. Ludlow, who had helped prepare a plan of attack against Mariel, argued unsuccessfully for the seizure of Mariel and a subsequent push to Havana. Major General William R. Shafter refused to accept the Mariel Plan and instead set his sights on Santiago de Cuba.

Ludlow commanded his brigade competently in the July 1, 1898, Battle of El Caney and signed the Round-Robin Letter (July 31–August 4) that argued forcefully for the immediate removal of U.S. troops from Cuba out of fear that they would be felled by tropical

General Calixto García y Iñiguez and U.S. Army brigadier general William Ludlow during their meeting at the time of the landing of V Corps in Cuba. (*Harper's Pictorial History of the War with Spain*, 1899)

diseases. In September 1898, he was advanced to major general of volunteers and served for a time under Shafter, organizing the modernization and rebuilding of Havana. Ludlow subsequently served as military governor of Havana and briefly served in the Philippines in 1901 but returned because of illness. In 1900, he was a member of a board that helped establish the Army War College. Ludlow died in Convent, New Jersey, on August 30, 1901.

Lukban, Vicente

Birth Date: February 11, 1860

Death Date: November 16, 1916

Filipino revolutionary and general during the Philippine-American War (1899–1902). Vicente Lukban was born on February 11, 1860,

in Labo, Camarines Norte, Philippines. His father was a lawyer, and his parents sent Lukban to the Ateneo Municipal in Manila. He subsequently earned a law degree at the University of Santo Tomas, also in Manila. In 1886, he resigned his position as a justice of the peace and formed the *Cooperativa Popular*, an agricultural and commercial cooperative based in Bicol. He established the cooperative to assist small- and medium-sized farmers in increasing their profits from agricultural sales by circumventing middlemen. Lukban, an ardent nationalist and supporter of Filipino revolutionary Andrés Bonifacio, secretly skimmed profits from the cooperative for the revolutionary cause, however. In addition, the cooperative was an effective method to disseminate revolutionary propaganda. Members of the cooperative could freely move about the region without arousing the suspicion of the Spanish colonial authorities.

By 1896, the *Cooperativa Popular* was a major contributor to the growing revolutionary movement in the Philippines. Lukban began serving as an espionage agent for the clandestine Katipunan in Bicol and gathered crucial information about Spanish troop movements in Bicol. That same year, while in Manila, Spanish colonial authorities, suspicious about his frequent visits to the city, charged Lukban with conspiring to overthrow the Spanish colonial government. He was imprisoned and tortured. Unable to prove his complicity in the revolutionary movement, the Spanish authorities released him from prison on August 18, 1897. He immediately joined Filipino revolutionaries in their military struggle to overthrow Spanish colonial rule and assisted Emilio Aguinaldo y Famy in strategic planning. After Aguinaldo signed the Pact of Biak-na-Bato in December 1897, Lukban accompanied Aguinaldo and his close advisers into exile in Hong Kong.

While in Hong Kong, Lukban studied military science under British naval officer Joseph Churchase. From him, Lukban learned the military skills of marksmanship, ammunition preparation, and infantry tactics. With the beginning of the Spanish-American War, Lukban returned to Bicol in 1898 to resume revolutionary activities. Because of his success in Bicol, Aguinaldo made Lukban the political and military chief in Leyte and Samar.

Meeting virtually no resistance on December 31, 1899, Lukban proclaimed himself the governor of Samar Province of the recently proclaimed Republic of the Philippines. When American troops landed in Samar in January 1901, they were greeted by well-organized charges by Lukban's infantry. Although U.S. troop strength forced Lukban to retreat, he nevertheless left behind an efficient espionage and resistance movement. He ordered that anyone found to be cooperating with the American troops be immediately executed without trial. He also repeatedly rejected U.S. offers of amnesty in exchange for surrender.

On September 28, 1901, Lukban approved the operation that became known as the Balangiga Massacre. This surprise attack killed 48 of the 78 U.S. troops stationed in the town of Balangiga on Samar Island. Retaliation by American troops in the subsequent Samar Campaign brought the slaughter of thousands of Filipino civilians. U.S. brigadier general Jacob Smith, the officer who

oversaw the operation, was merely reprimanded, but not formally punished, for his role in it.

On February 27, 1902, two Filipino prisoners revealed the location of Lukban's secret jungle headquarters, which led to his capture by U.S. forces. Following several years of imprisonment, Lukban took a pledge of loyalty to the new government. He entered local politics and in 1912 was elected governor of Tayabas, Quezon. Reelected in 1916, he died in Manila on November 16, 1916.

Luna de St. Pedro, António Narciso

Birth Date: October 29, 1866

Death Date: June 5, 1899

Filipino journalist, revolutionary, and military leader. António Narciso Luna de St. Pedro, the youngest of seven siblings including the acclaimed painter Juan, was born on October 29, 1866, in Manila to a prominent Filipino family. António Luna studied literature and chemistry, receiving a BA from the Ateneo de Manila University in 1882. He then began working on a pharmacy degree at the University of Santo Tomas in Manila. In 1885, he continued his education in Spain, earning a pharmacy licentiate from the University of Barcelona and a doctorate in pharmacy from the Central University of Madrid in 1890. He continued his studies in France and Belgium while writing and lecturing on scientific matters.

While in Europe, Luna wrote under the pseudonym Taga-Ilog for *La Solidaridad*, a Barcelona periodical championing administrative changes in the Philippines. In Spain, he became a friend of the Filipino nationalist José Rizal, founder of the Liga Filipina. In 1894, the Spanish government sent Luna back to the Philippines as a civil service pharmacist to study various diseases. Many urged him to join the fledgling Filipino revolutionary movement, but he demurred, believing it better to work for reforms under Spanish tutelage. He did, however, join the Katipunan. This move apparently angered Spanish authorities in the Philippines, who arrested and almost executed him and one of his brothers in the late summer of 1896, suspecting them of involvement in the revolutionary movement.

In February 1897, Luna was exiled to and imprisoned in Spain. Following his release, he was not permitted to return to the Philip-

pines, so he studied military science in Belgium before returning home after the Spanish-American War ended in 1898.

Upon his return to the Philippines, Luna tried to join the revolutionary movement led by Emilio Aguinaldo y Famy. The revolutionaries were disinclined to accept Luna because of his previous vacillation and quick temper but changed their minds because he was well respected and well educated, had excellent contacts, and knew military tactics and strategy. In September 1898, Aguinaldo reluctantly appointed him a brigadier general and chief of military operations. Luna also received a faculty appointment to Universidad Literaria de Filipinas, founded by the Aguinaldo revolutionary government, and represented Ilocos Norte Province in the Malolos Congress.

In early September 1898, Luna founded and funded *La Independencia*, a journal supporting the revolution. He became its editor and a major contributor. In October, he established the first Filipino military academy at Malolos to train officers. The following month, Aguinaldo, while remaining in de facto control of the military, appointed him supreme chief of the army.

In December, when it became clear that the United States would not grant independence to the Philippines, Luna unsuccessfully urged Aguinaldo to besiege and attack Manila. In February 1899 as the Philippine-American War began, Luna assumed command of insurgent forces around Manila. During the next several months, he fought various battles against great odds, becoming known for both his bravery and strict discipline, which also earned him numerous enemies among the Filipinos. As a result of military losses, Aguinaldo decided to negotiate with the Americans, which Luna staunchly opposed. Indeed, as the conflict went on, Aguinaldo and Luna locked horns repeatedly, and at least from Aguinaldo's perspective, Luna became increasingly difficult to control.

In early June 1899, Luna received a telegram to meet Aguinaldo at a convent in Cabantuan. When Luna arrived on June 5, 1899, he learned that Aguinaldo had departed. As Luna and his aide were walking down the convent steps, they were shot and stabbed to death by soldiers Luna had apparently disciplined earlier. Although there is no hard evidence to link Aguinaldo to the assassination, the building enmity with Luna may indeed have played a role in the murder. Given Aguinaldo's likely orders to have rival Andrés Bonifacio killed in 1897, such an act would not have been out of character.

Luzon

The largest and most populated island of the Philippine archipelago. The island of Luzon, the scene of fierce fighting between U.S. forces and Filipino insurgents during the Philippine-American War, encompasses approximately 40,420 square miles and has a current population of some 35 million people. Luzon is home to Manila, capital of the Philippines. Luzon also includes Manila Bay, considered the finest harbor in East Asia. Just adjacent to Manila is Quezon City, the Philippines' most populated city. To the west of Luzon is the South China Sea, while the Philippine Sea lies to the east. South of Luzon are the Visayas Islands and the Sulu Sea.

Luzon also refers to one of the three main island groups comprising the Philippine archipelago (the other two are Visayas and Mindanao). Currently, the Luzon island chain is divided into 37 provinces and 8 regions, which are chiefly for administrative and tourism purposes.

Luzon is geographically diverse with soaring, rugged mountain ranges; volcanoes; dense jungles; and the Cagayan River Valley, the largest river system in all of the Philippines. The principal mountain ranges include the Cordillera Central, the Sierra Madre, and the Zambales Mountains, which includes the volcano Mount

Pinatubo. The Bicol Peninsula, located in the southeastern corner of Luzon, is an area punctuated by mountains and a series of small bays. The climate throughout, except for the high altitudes, is typical of a tropical region. Luzon features very hot and humid summers with plentiful rainfall and occasional typhoons and warm, somewhat drier winters.

Most of Luzon's inhabitants at the time of the Spanish-American War were Christians and belonged to either the Tagalog group or the Ilocano group. Manila and its environs contained most of the Spanish and European population during the time of Spanish control. Known for many years as the breadbasket of the Philippines, Luzon provided most of the food crops for Manila, had a huge rice-growing industry, and was the chief area of sugarcane cultivation in the Philippines.

In 1896, Luzon and Manila witnessed the beginning of the Filipino insurrection against the Spanish and in 1898 was the scene of U.S. naval and land battles between Spanish and American forces (the Battle of Manila Bay and the First and Second Battles of Manila). After the Spanish were defeated in the summer of 1898, American forces then fought a war against Filipino insurgents led by Emilio Aguinaldo and family beginning in 1899. Much of

Village on the island of Luzon, circa 1898. (*Photographic History of the Spanish-American War*, 1898)

the fighting was centered on the island of Luzon. In 1901 after two years of fighting, U.S. Army brigadier general James Franklin Bell declared that as many as one out of six Luzon natives had died in combat or had fallen to the ravages of dengue fever.

In late 1941 and early 1942 during World War II, Japanese forces attacked American positions on Luzon and in Manila and began a brutal occupation of the island until 1945, when U.S. troops began a campaign to wrest the Philippines from Japanese control. On July 5, 1945, American forces declared the official liberation of the island, although pockets of Japanese resistance remained until after the war ended in August 1945.

Luzon Campaigns

Start Date: February 1899

End Date: December 1899

Luzon, the largest and most important Philippine island in a political and economic sense, is also home to the Philippine capital of Manila. Luzon experienced a series of U.S. military campaigns during February–December 1899 in the Philippine-American War.

The war against Emilio Aguinaldo y Famy's Army of Liberation began with the Manila Campaign (February 4–March 17, 1899). Following a series of hard-fought actions during the three-week period of February 4–23, which constitutes the Second Battle of Manila, U.S. military commander in the Philippines Major General Elwell Otis believed that the key to winning the war lay in securing that portion of Luzon north of Manila. Otis was convinced that the insurrection was rooted in the Tagalog population, concentrated in the provinces of southern Luzon. These areas, he reasoned, would be difficult to subjugate, but the ethnic groups north of Manila would welcome the Americans. This assessment was based on a misguided understanding of Filipino opposition to the U.S. presence.

Otis's strategy had two parts. First, he sought to sever the insurgents' supply line north out of Manila. On March 12, 1899, Brigadier General Lloyd Wheaton led a provisional brigade in striking east and south to Laguna de Bay. Wheaton's assignment was to clean out any pockets of nationalist resistance and destroy crops that might be a source of supply to Aguinaldo's forces. In the week that followed, Wheaton, supported by a gunboat and artillery, de-

U.S. soldiers occupying a trench position on the island of Luzon in 1898 during the Philippine-American War. (Library of Congress)

livered a crippling blow to nationalist forces south of Manila. This phase ended on March 17.

The second part of Otis's strategy was aimed at the capture of Malolos, the newly proclaimed capital of the Philippine Republic. This campaign lasted from March 24 to August 16 and was carried out by Major General Arthur MacArthur's 2nd Division of 9,000 men in three brigades under Brigadier Generals Wheaton, Harrison Otis, and Irving Hale. Otis and Hale moved north along the rail line from Caloocan supported by the artillery of the Utah Battery and a section of Colt machine guns. The advance was slow and the fighting fierce as the troops worked their way through nearly impenetrable brush. Meanwhile, Wheaton's brigade, designated a flying column, got under way on March 25 and moved to the west of Otis and Hale. The hope was that they could catch the Army of Liberation between these two forces. On March 26, Wheaton's troops captured Malinta, though not in time to seal off Aguinaldo's withdrawing forces. Five days later, on March 31, MacArthur's troops entered Malolos, which the departing nationalists had burned and destroyed. Malolos was now in U.S. hands, but the plan had failed in that the Army of Liberation had escaped the trap. The Americans captured Pampagna on May 5 and San Isidro on May 15. The campaign ended with the capture on August 16, 1899, of Angeles by the 12th Infantry Regiment.

While MacArthur and Wheaton moved against Aguinaldo's forces, troops under Major General Henry Ware Lawton moved south in the Laguna de Bay Campaign of April 8–17, 1899. They captured Santa Cruz in the Laguna de Bay region on April 10, returning to Manila on April 17.

In the San Isidro Campaign of April 21–May 30, 1899, General Lawton's men advanced from La Lona Church on San Isidro on

April 21, dispersing insurgent forces there. Lawton's forces returned to Manila on May 30. Two weeks later, on June 13, Lawton's men overran insurgent field fortifications along the Zapote River.

With the arrival of the annual summer monsoon rains, active campaigning ceased temporarily in Luzon. During this period, the character of U.S. forces in the Philippines had changed. With the expiration of the term of service for Spanish-American War troops, Washington created a force of two-year U.S. volunteer regiments (rather than state volunteer units), consisting of 1 cavalry and 24 infantry regiments. This period also saw the organization of the Philippine Scouts.

Fall 1898 brought the beginning of the dry season and with it a resumption of campaigning. In the Cavite Campaign on October 7–13, 1899, forces under General Wheaton and Brigadier General Theodore Schwan wiped out nationalist resistance in Cavite and adjacent provinces. A 400-man U.S. Marine Corps battalion also took part, attacking Filipino entrenchments at the coastal town of Novaleta from the land side on October 8.

That same month, General Otis began a three-pronged offensive in northern Luzon involving forces under Lawton, MacArthur, and Wheaton with the primary objective of trapping nationalist leader Aguinaldo. His capture, it was believed, would destroy the nationalist resistance. Aguinaldo's army numbered perhaps as many as 80,000 men. Although they were certainly not as well equipped as the U.S. forces and lacked a cadre of veteran leaders, the nationalists were tough, courageous, and determined. They also had the great advantage of being familiar with the territory.

In the San Isidro Campaign of October 15–November 19, 1899, Lawton and Brigadier General Samuel B. M. Young headed north up the Rio Grande de la Pampanga, closing off the mountain passes of the Sierra Madres in order to prevent Filipino nationalist forces from escaping. They took San Isidro on October 19.

Recognizing the importance of capturing Aguinaldo, Lawton decided to send a mixed force of infantry and cavalry from San Isidro under Young to push on in advance of the main column. Lawton was also concerned about Wheaton, from whom he had heard nothing, and feared that if their two commands did not unite as planned, Aguinaldo would have an opportunity to evade the net and escape. Lawton's command pursued the nationalist forces aggressively, covering more than 100 miles of extremely harsh terrain over a six-week period. The group did manage to skirmish with Aguinaldo's rear guard but was unable to capture the Filipino

leader. Lawton's men approached San Fabian on the Lingayen Gulf on November 18.

At the same time, in the Tarlac Campaign of November 5–20, 1899, MacArthur advanced from San Fernando along a rail route that ran through the fertile valleys and plains of central Luzon. His men captured Tarlac on November 12 and reached Dagupan on November 20.

Finally, a third force under Wheaton carried out the San Fabian Campaign of November 6–19, 1899. His 2,500-man force sailed from Manila on November 6 and went ashore at San Fabian the next day. It promptly got bogged down. Routing an insurgent force at San Jacinto on November 12, it linked up with MacArthur's men at Dagupan only on November 20 despite the fact that it was only a dozen miles from San Fabian. Even though some of Young's scouts had alerted Wheaton to the urgency of the situation, he did not act with dispatch. Finally moved to action, he did capture Aguinaldo's mother and infant son, but the Filipino leader himself escaped with about 1,000 followers.

On December 2, elements of Wheaton's command under Major Peyton March struck Aguinaldo's rear guard at Triad Pass, killing General Gregorio del Pilar, Aguinaldo's close friend and adviser. The action at Triad Pass ended the U.S. Army's major campaigns in Luzon; only scattered insurgent elements remained active in the island. Considerable fighting was yet to be done, but Aguinaldo recognized that he could not wage a conventional war against the United States with any real hope of success. As a result, from December 1899 until Aguinaldo's capture on March 23, 1901, the U.S. Army was forced to fight a protracted guerrilla war that did not end until 1902.

M

Maass, Clara Louise

Birth Date: June 28, 1876

Death Date: August 24, 1901

U.S. nurse and medical pioneer. Born in East Orange, New Jersey, on June 28, 1876, Clara Louise Maass was the oldest of 10 children in a devout Lutheran German immigrant family. She helped in an orphanage during her high school years and at age 17 entered the newly established Christina Trefz Training School for Nurses at Newark's German Hospital. She graduated in 1895, and her competence earned her a promotion to head nurse only two years later.

On the outbreak of the Spanish-American War in April 1898, Maass volunteered to serve as a contract nurse for the U.S. Army. From October 1898 to February 1899, she served with VII Corps in Jacksonville, Florida; Savannah, Georgia; and Santiago, Cuba. After her discharge, she joined VIII Corps in the Philippines, which was battling Filipino insurgents in the Philippine-American War (1899–1902). She remained in the Philippines until mid-1900, when she was sent home after having contracted dengue fever, a serious disease of the tropics transmitted by infected mosquitoes.

The wars in which she had served had given Maass considerable expertise in fighting malaria, yellow fever, and other tropical diseases. In October 1900, she returned to the Las Animas Hospital in Havana, Cuba, at the request of Major William Gorgas, chief sanitation officer, and Dr. John Guitares. The U.S. Army's Yellow Fever Board (also known as the Reed Commission), headed by Major Walter Reed, an army physician, had been established in Cuba after the war to find out the means of transmission for this tropical fever and develop effective immunization against it.

In order to determine whether yellow fever was caused by contaminated filth, person-to-person transmission, or the bite of a

mosquito, the commission recruited volunteers to test their theories. They were paid \$100 for risking their lives, with an offer of an additional \$100 if they became ill. In March 1901, experiments revealed that men living in filth without exposure to mosquitoes were not infected with yellow fever. Next, seven volunteers offered themselves to be bitten by infected mosquitoes. One of them was Maass, who contracted a mild case of the fever and recovered quickly; however, two men who volunteered died. Because the other volunteers remained healthy, however, researchers were not sure whether the mosquitoes were truly the carriers of the disease.

On August 14, 1901, Maass volunteered for a second mosquito bite, hoping to prove that her earlier case of yellow fever had immunized her against the disease. This time, however, she became severely ill. She died of yellow fever on August 24, 1901, at the age of 25 and was buried in Colón Cemetery in Havana with full military honors. Her death confirmed the theory of transmission by mosquitoes, but public protest put an end to further experiments on humans. Maass's death also seemed to prove that the body did not produce sufficient antibodies to ward off further infections of yellow fever. In fact, the original illness was almost certainly not yellow fever, and Maass was not immune. Several years later, vaccines would be developed to build the body's defenses against infection.

Maass's body was moved to Fairmont Cemetery in Newark, New Jersey, on February 20, 1902. She has been honored by both Cuba (in 1951) and the United States (in 1976) with a postage stamp, the first nurse to receive such a distinction. In 1952, Newark's German Hospital was renamed Clara Maass Memorial Hospital (now located in Belleville, New Jersey) in her honor, and she was inducted into the American Nursing Association's Nursing Hall of Fame in 1976.

Mabini, Apolinario

Birth Date: July 22, 1864

Death Date: May 13, 1903

Filipino intellectual, political philosopher, patriot, key adviser to Filipino revolutionary leader Emilio Aguinaldo y Famy, and first prime minister of the First Philippine Republic during 1899. Apolinario Mabini was born on July 22, 1864, in Talaga, Batangas, Philippines, to a poor peasant family. Despite his impoverished upbringing, the bright and precocious Mabini attended the Colegio de San Juan de Latran in the Philippines from which he received an undergraduate degree.

Mabini also worked as a Latin teacher and a clerk for a Philippine court. While doing so, he pursued law studies at the University of Santo Thomas (Philippines) from which he earned a law degree in 1894. An ardent champion of the poor, he dedicated much time to ameliorating the status of impoverished peasants and defending those who could not afford representation.

In 1896, Mabini was struck down by a serious illness, likely polio (infantile paralysis), that paralyzed him from the waist down. From then on he became known as the "sublime paralytic," in part an acknowledgment of his keen intellect. As the unrest in the Philippines intensified, Spanish authorities arrested the still desperately ill Mabini in late 1896 for inciting turmoil. When he proved that he was unable to move his lower limbs and thus unable to participate in the uprisings, he was released and sent to a hospital, where he was able to convalesce.

A member of the Liga Filipina, a reformist group headed by José Rizal, Mabini was initially against the use of violence to effect social change in the Philippines. By 1897, however, he had become convinced that radical change was needed to throw off the shackles of Spanish rule and began to support the concept of armed rebellion. Accordingly, he wrote a number of manifestos urging all Filipinos to unite in the fight against the Spanish.

In May 1898, while he was on holiday in Los Banos, Laguna, Philippines, Mabini was summoned by Aguinaldo to help him establish a government in anticipation of the end to Spanish colonial rule. It required dozens of men to physically carry Mabini's cot to the meeting with Aguinaldo in Kawit. Mabini quickly became one of Aguinaldo's most trusted advisers and certainly his most cerebral. Mabini penned the June 18, 1898, decree that organized local governments under Filipino control. He was also instrumental in establishing an independent judicial system, supervising elections for the revolutionary congress, and crafting the framework of the soon-to-be new government.

When the revolutionary congress first convened in Malolos on September 15, 1898, Mabini immediately found himself at odds with the Filipino elites, who called for the prompt invocation of a constitution. Mabini believed that the role of the congress should be to advise the leaders and to facilitate the pursuit of the revolution. When he was overruled, he wrote his own draft of a constitution, which was rejected by the majority.

After the Malolos Constitution, which represented a compromise document, was adopted and the First Philippine Republic officially organized, Mabini was appointed both prime minister and foreign minister when the government came into force on January 23, 1899. Mabini was immediately confronted with a panoply of problems, not the least of which was negotiating an end to the hostilities between Filipino revolutionaries and U.S. forces. Having failed on several occasions to secure a cease-fire or armistice with the Americans, Mabini cut off negotiations and instead backed the growing guerrilla insurgency. On May 7, 1899, he resigned his posts with the fledgling republic. By then, he had alienated many of the elites in the government and had fallen out of favor with Aguinaldo. Mabini's departure was

a significant loss, for no other person within the revolutionary movement had understood the stakes of the struggle as well as he did.

Mabini went into hiding to escape capture but was apprehended by American forces on December 10, 1899. When asked to take an oath of allegiance to the U.S. government, he pointedly refused. He also refused to end his support for the Filipino insurgency. After Mabini spent more than a year in detention, American authorities deported him to Guam. In February 1903, he returned to the Philippines, where he died in Manila on May 13, 1903, only weeks after having sworn allegiance to the U.S. government. During Mabini's imprisonment, he wrote *La Revolución Filipina* (The Philippine Revolution), which was published posthumously in 1907 and remains today one of the most insightful analyses of the Filipino struggle during the 1890s.

Macabebe Scouts

Filipinos from the town of Macabebe in Pampanga Province on the island of Luzon who served with the U.S. military during the Philippine-American War (1899–1902). The residents of Macabebe were longtime foes of the Tagalogs and had a history of providing military service to Spain. As loyal Spanish mercenaries and fierce warriors, the Macabebes had manned outposts, engaged in foreign campaigns, and suppressed domestic disorder. For example, when Francisco Maniago rebelled in Pampanga in 1660, the Macabebes helped quell the uprising. They likewise assisted Spanish authorities in putting down the revolutions of 1896 and 1898, actually compelling a Spanish pledge to remove them to the safety of the Caroline Islands if the revolt prevailed. Once Spain ceded the Philippine Islands to the United States, the Macabebes were essentially abandoned and sought to protect themselves from Tagalog reprisal. Consequently, they tendered their services to the U.S. military upon the beginning of the Philippine-American War in February 1899.

With War Department approval and upon the order of Major General Henry W. Lawton, Lieutenant Matthew A. Batson recruited the first company of Macabebes in the spring of 1899. He proposed to employ the unit in the Rio Grande region, a strategy that Lawton endorsed. By September 10, the 1st Company, Macabebe Scouts, had been established. After training, the unit was armed with Krag

As many as 5,000 Filipino Macabebe Scouts served with U.S. forces during the Philippine-American War. One of their detachments helped capture insurgent leader Emilio Aguinaldo. (Library of Congress)

carbines, and traveling in bancas (outrigger canoes), they at once demonstrated their effectiveness by curtailing raids on military communications.

Major General Elwell S. Otis decreed the creation of a second Macabebe troop on September 21 and a third one on October 6, 1899. In short order, the U.S. Army VIII Corps could rely on the services of a battalion of five companies designated Batson's Macabebe Scouts. It is estimated that as many as 5,000 Macabebe Scouts served with U.S. forces.

Fiercely loyal to the United States, the Macabebes quickly won the trust and admiration of American officers. They were of great assistance in recognizing insurgents posing as friendly natives in crowds. However, the Macabebes were often cruel and inhumane toward their adversaries, and a number of atrocities were attributed to them.

Batson and his colleagues stood by the Macabebes, claiming that the accusations of cruelties were simply insurgent propaganda. Yet the Macabebes did use torture to obtain intelligence, and by 1900 both American troops and their mercenaries turned to, among other excesses, the water cure (force-feeding a suspect with water).

In early October 1899, two companies of Batson's Macabebe Scouts were in the vanguard of Brigadier General Samuel B. M. Young's drive to San Isidro in Nueva Ecija Province, and in March 1900 Colonel Frederick Funston led a combined troop of Macabebes and Americans against an enemy base at Fort Rizal in southern Nueva Ecija. To the southwest, Brigadier General Frederick D. Grant employed Lieutenant Colonel William E. Wilder's Macabebes to sweep southward through the Rio Grande delta to Manila Bay in Bulacan Province. Bancas carried Macabebes into swamps, and there they roused guerrillas who fled to villages, where they were identified and captured. Rifles were seized, but the Macabebes committed atrocities. On March 30, 130 natives were murdered, and there were allegations of rape and arson. Yet American officers on the scene continued to defend the Macabebes. On March 23, 1901, Macabebe Scouts were part of a detail led by Funston (now a brigadier general) that captured Filipino leader Emilio Aguinaldo y Famy at Palanan, Isabela Province, in northern Luzon. Following the Philippine-American War, the Macabebes were folded into the Philippine Constabulary.

MacArthur, Arthur

Birth Date: June 2, 1845

Death Date: September 5, 1912

U.S. Army general. Arthur MacArthur was born in Chicopee Falls, Massachusetts, on June 2, 1845. At an early age he moved with his family to Milwaukee, Wisconsin, and was educated in the local schools. With the start of the American Civil War, he secured a commission as first lieutenant with the 24th Wisconsin Regiment of Volunteers and soon distinguished himself in fighting. He was breveted captain following his performance in the Battle of Perryville (October 8, 1862). He also fought effectively at Stone's River (December 31–January 2, 1863), Chickamauga (September 18–20, 1863), and Kennesaw Mountain (June 17, 1864). He was severely wounded at the Battle of Franklin, Tennessee (November 30, 1864). He received brevet promotions for gallantry and was advanced to major (January 1864), lieutenant colonel (March 1865), and colonel (May 1865). By the end of the war, MacArthur, not yet 20 years old, was commanding the 24th Wisconsin. In 1890, he was belatedly awarded the Medal of Honor for his actions in the Union assault on Missionary Ridge.

With the end of the Civil War, MacArthur joined the regular army as a second lieutenant in the 17th Infantry Regiment in February 1866 and was immediately promoted to first lieutenant. He made captain that July. Over the next 20 years, he served in various posts throughout the country. At first posted to Louisiana during Reconstruction, he then commanded a unit that protected the builders of the Union Pacific Railroad in Nebraska and Wyoming. He was also a cavalry recruiting officer in New York and commanded an outpost in the Utah and New Mexico territory. In 1886, Captain MacArthur was posted to the Infantry and Cavalry School at Fort Leavenworth, Kansas. In July 1889, he was promoted to major and assigned to the adjutant general's department. MacArthur won promotion to lieutenant colonel in May 1898.

Shortly after the U.S. declaration of war on Spain, MacArthur was appointed brigadier general of volunteers in May 1898 and assigned to the U.S. expeditionary force sent to the Philippines. He commanded the 1st Brigade of the 2nd Division in Major General Wesley Merritt's VIII Corps. MacArthur led his brigade in the First Battle of Manila (August 13, 1898). Cited for gallantry, he became the provost marshal general and civil governor of Manila.

Promoted to major general of volunteers, MacArthur then commanded the 2nd Division, the chief field force opposing Filipino insurgents led by Emilio Aguinaldo y Famy in the Philippine-American War. MacArthur's forces pacified all of Luzon. Promoted to regular army brigadier general in January 1900, he succeeded Major General Elwell S. Otis as commanding general of the Division of the Philippines and military governor of the Philippine Islands. He was promoted to major general in the regular army that July. After he combined a mixture of vigorous military action and civic action, including advances in education, health care, and legal reform.

Major General Arthur MacArthur distinguished himself in the American Civil War, but he is best remembered for his role in the Philippine-American War, during which he achieved victory through a combination of military force and civic action. (Library of Congress)

MacArthur was, however, slow to hand over control to the civilian administrators headed by William H. Taft. MacArthur and Taft clashed repeatedly, and before the year was out, President Theodore Roosevelt had replaced MacArthur with a more pliable military governor. MacArthur's disagreements with Taft and Roosevelt ultimately cost MacArthur the position of commanding general of the U.S. Army.

Returning to the United States, MacArthur commanded in turn the Department of Colorado, the Department of the Lakes, and the Department of the East. In 1905, he went to Manchuria as a military observer for the last stage of the Russo-Japanese War (1904–1905) and then for a few months was the U.S. military attaché in Tokyo. He toured Asia during November 1905–August 1906. On his return to the United States, he commanded the Department of the Pacific, was promoted to lieutenant general, and was the senior officer in the army (September 1906). When Taft, then secretary of war and still bearing a grudge against his old nemesis, named a more junior officer as chief of staff, MacArthur returned to Milwaukee to await orders. When none were forthcoming, he retired in July 1909. MacArthur died in Milwaukee on September 5, 1912, while giving a speech during the reunion of the 24th Wisconsin Regiment.

Arthur MacArthur's son, Douglas MacArthur, was later chief of staff of the army and rose to the rank of general of the army. Like his father, Douglas MacArthur would have an equally stormy relationship with his superiors.

Maceo Grajales, Antonio

Birth Date: June 14, 1848

Death Date: December 7, 1896

Cuban revolutionary and second-in-command of the Cuban Revolutionary Army during the Ten Years' War and the Cuban War of Independence and one of Latin America's most ardent and successful guerrilla leaders. Antonio Maceo Grajales, commonly referred to as the "Titan of Bronze" because of his bravery and skin tone, was born on June 14, 1848, in Majaguabo near Santiago de Cuba. His father, Marcos Maceo, a mulatto farmer of French descent who had fought with the loyalists in Venezuela during the Latin American Wars of Independence, fled Venezuela in 1823 after Simón Bolívar's revolutionary forces liberated northern South America. Settling in Santiago de Cuba, Maceo's father married Mariana Grajales, a black widow of Dominican descent who already had four children. Maceo was the first of five children born to Marcos and Mariana.

Within days of Carlos Manuel de Céspedes y del Castillo's Grito de Yara (October 10, 1868), which began the Ten Years' War, Maceo, his father, and three of his brothers joined the revolutionary cause. Because of his valor, Maceo was promoted to lieutenant colonel by the end of 1868. Participating in dozens of battles, he had been promoted to brigadier general by the end of the war. By 1878, most Cuban revolutionary generals believed that it was futile to continue to resist Spanish attempts to restore colonial rule on the island.

Maceo, however, was unwilling to stop fighting until Cuban independence and the abolition of slavery were achieved. On March 15, 1878, he met with Spanish captain-general Arsenio Martínez de Campos to discuss the terms of the Pact of Zanjón (February 8, 1878), which had ended the Ten Years' War. Although most Cuban revolutionary generals, including Máximo Gomez, had already accepted Martínez's plan for increased Cuban autonomy and the eventual abolition of slavery, Maceo insisted that the terms were insufficient. In addition, he was offended that Spanish newspapers reported that his popularity with the dark-skinned revolutionaries

Cuban revolutionary Antonio Maceo Grajales was known for his bravery and great skill as a leader of guerrillas. He was killed in battle with the Spanish in 1896. (Library of Congress)

of Cuba threatened to unleash a race war in Cuba and convert Cuba into a second Haiti. Concerns expressed by Maceo at the meeting with Martínez at Baragua are known as the Protest of Baragua. Unwilling to accept the Pact of Zanjón and unable to muster enough troops to continue the revolutionary struggle, Maceo went into exile.

Contending that Spain had not honored the provisions of the Pact of Zanjón, Maceo and Calixto García y Iníiguez called for the Little War, or Guerra Chiquita (1879–1880), the second Cuban revolutionary attempt at independence during the 19th century. Unable to return to Cuba before the end of the Little War, Maceo spent the next 15 years living in exile, primarily in Panama and Costa Rica.

On March 31, 1895, Maceo, accompanied by his brother José, returned to eastern Cuba to continue the revolutionary struggle. On May 5, 1895, Maceo, Gómez, and José Martí y Pérez met in Bocuy to devise political and military strategy. Although Maceo's forces defeated Martínez's troops at the Battle of Peralejo on July 12,

Martínez was able to escape. As second-in-command of the Cuban revolutionaries, Maceo directed thousands of Cuban revolutionaries, many of whom were black and were only armed with machetes.

Maceo believed that U.S. entry into the conflict was unnecessary. Following Martínez's replacement by General Valeriano Weyler y Nicolau in January 1896, Maceo faced an opponent who pursued him relentlessly. On December 7, 1896, Spanish forces killed Maceo in battle at San Pedro in Havana Province as he attempted to rejoin Gómez's forces. Maceo's death, however, did not discourage the Cuban revolutionaries. On the contrary, it motivated them to fight all the harder.

Machine Guns

Efficient manually operated rapid-firing small arms were in operation in the 1860s and 1870s. They included the Agar Coffee Mill (ca. 1860) and Gatling gun (1862) of the American Civil War and the 25-barrel *mitrailleuse* (1869) employed by the French in the Franco-Prussian War (1870–1871). But the Maxim gun of 1884, named for American Hiram Maxim, was the first truly automatic machine gun. Development of the metallic cartridge made rapid loading at the breech possible.

Maxim's innovation was to use some of the energy of the firing to operate the weapon. Using the recoil energy, which he called blowback, Maxim designed a fully automatic rifle fed by a revolving magazine. He then applied the same principle to a machine gun (in effect a machine for killing), which fired as long as the trigger was depressed. In the Maxim gun, the firing of the cartridge drove back the bolt, compressing a spring that in turn drove the bolt forward again, bringing a new round into position for firing. The Maxim gun was both self-loading and self-ejecting.

Maxim demonstrated his prototype machine gun in 1884. It weighed just 60 pounds, in contrast to the 2,000-pound *mitrailleuse*. The Maxim gun was belt fed and water cooled. It fired a .45-caliber bullet at a rate of up to 600 rounds per minute and could be operated by a crew of only five men, one to operate the trigger and four to assist in carrying the weapon and its ammunition as well as loading the ammunition belts. Aided by the British firm of Vickers, Maxim had his gun largely perfected before the end of the 1880s.

The Maxim gun, invented by American Hiram Maxim, was the first truly automatic machine gun. (*Photographic History of the Spanish-American War*, 1898)

The British employed the Maxim gun with great success against the Zulus in South Africa and the Dervishes in the Sudan. Rudyard Kipling proclaimed the importance of the new weapon when he wrote, "Whatever else, we have got the Maxim Gun, and they have not." Maxim was later knighted by Queen Victoria for services to humanity in the false assumption that the machine gun would make wars shorter and thus more humane.

The U.S. Army eschewed the Maxim gun and still employed the .45-caliber rotating multibarrel Gatling gun at the time of the Spanish-American War. Under Captain John H. "Gatling Gun" Parker, a Gatling gun unit saw effective service during the Santiago de Cuba Land Campaign and provided important fire support to the attacking infantry in the Battle of San Juan Hill, perhaps the first time that machine guns were used offensively in combat. Parker placed the guns, which were mounted on rolling carriages, on the flanks of the U.S. troops, moving them forward with the troops. Parker was an enthusiastic advocate of the machine gun and later wrote three books on the subject, noting that the Santiago Campaign had established the machine gun as "a weapon to be reckoned with in some form in all future wars." Although the

Gatling gun itself was abandoned by the U.S. military as obsolete in 1911, its rotating barrels design nonetheless had important applications for the modern era.

The Colt Model 1895 automatic machine gun, developed by John Browning, was rejected by the U.S. Army but became the first automatic machine gun acquired by the U.S. military when the navy purchased several hundred examples. Browning had offered the machine gun to Colt in 1890. The gas-operated Model 1895 fired a 6-millimeter (mm) round. The gun alone weighed 40 pounds. A tripod added 28 pounds and a mount 28.5 pounds, while a light landing carriage without ammunition weighed 146 pounds.

The 1st Marine Battalion took at least two Colt Model 1895s to Cuba in 1898 and employed them at Camp McCalla after its landing at Guantánamo on June 10, 1898. Two additional Colts, belonging to the battleship *Texas*, were landed several days later to provide additional firepower. The U.S. Marine Corps employed some of these Colts in the Battle of Cuzco Well on June 14, and apparently they were instrumental in halting the initial Spanish attack. A tripod-mounted Colt was also employed in the later Battle of Guánica in Puerto Rico.

Two privately purchased tripod-mounted Colts in 7-mm caliber were taken by the 1st Volunteer Cavalry Regiment (the Rough Riders) to Cuba, but apparently they proved to be unreliable and difficult to transport. The Colt is reported to have performed well with American troops in China during the Boxer Rebellion. Later versions were chambered for the .30–06 Springfield rifle cartridge. The Colt continued in service with the U.S. Navy and the U.S. Marine Corps up to World War I.

Although machine guns proved their worth in colonial conflicts, the implications of the modern machine gun for fighting in Europe were ignored, even when revealed in the Russo-Japanese War (1904–1905). At 450–600 rounds per minute, one machine gun could equal the fire of 40–80 riflemen. It also had greater range than the rifle, enabling indirect fire in support of an attack. New light machine guns, such as the British Lewis gun, soon appeared and were destined to play an important role in the trench warfare of World War I.

Macías y Casado, Manuel

Birth Date: 1845

Death Date: 1937

Spanish general and last Spanish colonial governor of Puerto Rico. Manuel Macías y Casado was born in Teruel, Spain, around 1845. He graduated from the Infantry School as a second lieutenant in 1862, was promoted to lieutenant in 1863, and then was sent to Cuba.

From 1863 to 1865, Macías participated in the occupation of the Dominican Republic and while serving there was promoted to captain. After Dominican independence was restored in 1865, he returned to Cuba and remained there until 1875. His proven valor on the battlefield during the Ten Years' War (1868–1878) brought him a promotion to colonel. In 1875, he returned to Spain to defend the Spanish Crown during the Third Carlist War (1872–1876). After the Carlist revolutionaries were quelled in 1876, he returned to Cuba in October 1876 to participate in the final months of the Ten Years' War. His actions on the battlefield resulted in his promotion to brigadier general in July 1878 at age 33.

In May 1879, Macías returned to Spain and then took command of Spanish troops stationed at Melilla on the Rif coast of northwestern Africa. Leaving Melilla in 1886, he subsequently served as military commander in Albacete and Santoña. On June 9, 1891, he

was appointed major general and was made governor of Cartagena. He returned to Melilla as governor in 1893 to quell a local revolt. Because of his success, he was advanced to lieutenant general in August 1893, making him the youngest lieutenant general in the Spanish Army. He then served as the governor of the Canary Islands during 1894–1898.

On January 17, 1898, Macías was appointed governor of Puerto Rico, replacing Lieutenant General Andrés González Muñoz, who had died on the day of his inauguration. Macías was governor of Puerto Rico from February 2 to October 16, 1898. One of his major achievements was the implementation on February 9, 1898, of the Autonomous Charter of Puerto Rico, which had been approved by the Spanish Cortes (parliament) on November 25, 1897. The Autonomous Charter gave town councils complete autonomy in local concerns. As a result, the governor had no authority to intervene in civil and political matters unless authorized to do so by the cabinet. On February 10, 1898, Macías convened the first autonomous cabinet of Puerto Rico. In elections for the Cortes on March 27, 1898, Luis Muñoz Rivera's Autonomist Party won a majority of the seats.

Macías believed that war with the United States was inevitable. On April 21, 1898, he declared martial law, suspended civil liberties, and prepared to defend the island against an expected American invasion. He delegated the defense of Puerto Rico to Colonel Juan Camó. Macías's effort to defend Puerto Rico against American invasion failed, however, and fighting ended on August 13, 1898. On October 16, he and most of his troops departed Puerto Rico. As he left, he was honored with U.S. and Puerto Rican gunfire salutes and cheers from the people of San Juan. He left Ricardo de Ortega y Diez with the responsibility of turning over power to U.S. officials on October 18, 1898.

On November 3, 1898, Macías, in addition to being named governor of Burgos, Navarra, and Vascongadas, became commander of VI Corps of the Spanish Army. He died in Madrid in 1937.

Mahan, Alfred Thayer

Birth Date: September 27, 1840

Death Date: December 1, 1914

Prominent naval historian, strategist, and staunch proponent of U.S. imperialism. Born on September 27, 1840, at West Point, New York, Alfred Thayer Mahan was the son of West Point professor

Rear Admiral Alfred Thayer Mahan was a staunch champion of sea power and an advocate of U.S. imperial expansion. His many books on the history of sea power were highly influential in the United States and abroad. (Library of Congress)

Dennis Hart Mahan, who initiated the study of military theory in the United States and exerted a profound impact on officers in the American Civil War.

The younger Mahan attended Columbia College for two years and then entered the United States Naval Academy, Annapolis, graduating second in his class in 1859. He then was on the *Congress* in the Brazil Squadron. During the Civil War, he served with the South Atlantic Blockading Squadron and was promoted to lieutenant commander (June 1865) and commander (November 1872). In 1883, he published *The Gulf and Inland Waters*, a book treating U.S. Navy operations during the Civil War. This impressed Captain Stephen Luce, who in 1885, as president of the newly established Naval War College, invited Mahan there to lecture on naval tactics and history. He was promoted to captain in September 1885.

In 1890, Mahan published his lectures under the title *The Influence of Sea Power upon History, 1660–1783*. This very important book is a history of British naval development in its most crucial period, a treatise on war at sea, and a ringing defense of a large navy. The book had particular influence in Britain, Germany, and Japan, but Mahan's lectures and magazine articles on current strategic problems also won an ever-widening audience in the United States that included such individuals as Theodore Roosevelt.

Mahan argued that the United States needed a strong navy to compete for the world's trade. He claimed that there was no instance of a great commercial power retaining its leadership without a large navy. He also criticized the traditional U.S. strategy of single-ship commerce raiding (*guerre de course*) because it could not win control of the seas. He argued for a seagoing fleet, an overbearing force that could beat down an enemy's battle line. Its strength had to be in battleships operating in squadrons. Mahan believed in the concentration of forces, urging that the fleet be kept in one ocean only. He also called for U.S. naval bases in the Caribbean and in the Pacific. Mahan had his shortcomings: he overlooked new technology, such as the torpedo and the submarine, and he was not concerned about speed in battleships.

Mahan was president of the Naval War College twice (1886–1889 and 1889–1893). He commanded the cruiser *Chicago*, flagship of the European Station (1893–1896), and was publically feted in Europe and recognized with honorary degrees from Oxford University and Cambridge University. An important apostle of the new navalism, he retired from the navy in 1896 to devote himself full-time to writing.

Mahan was called back to active duty with the navy in an advisory role during the 1898 Spanish-American War. He was a delegate to the 1899 Hague Peace Conference, and he was promoted to rear admiral on the retired list in 1906. He wrote a dozen books on naval warfare and more than 50 articles in leading journals, and he was elected president of the American Historical Association in 1902. Mahan died on December 1, 1914, in Washington, D.C.

Maine, USS

The U.S. Navy warship *Maine* was authorized by Congress on August 3, 1886, as an armored cruiser (heavy cruiser) but was designated by the navy as a second-class battleship. Built at the New York Navy Yard supposedly on the design of the *Riachuelo*, built by Samuda for Brazil, the *Maine* was laid down in October 1888,

The U.S. battleship *Maine*. On February 15, 1898, the ship exploded and sank in Havana Harbor, killing 266 of its crew. Many Americans held Spain responsible, and the battle cry “Remember the *Maine*, to hell with Spain!” swept the nation. (Naval Historical Center)

launched in November 1889, and commissioned on September 17, 1895. The ship was 319 feet in length overall by 57 feet in beam. It displaced 6,682 tons (7,180 fully loaded) and had a speed of 17.5 knots. Its coal capacity largely limited it to a coastal defense role. Typical of such warships at the time, it had a decidedly mixed battery to allow the ship to fight at long, intermediate, and close ranges. It was armed with four 10-inch guns in twin *en echelon* turrets and six 6-inch guns in the superstructure (two forward, two amidships, and two aft). It also carried seven 6-pounders, four 1-pounders, and four Gatling guns and had six 18-inch above-water torpedo tubes. Protection came in the form of a 180-foot-long steel armor belt 3 feet above the waterline and 4 feet below it. The top portion of the belt tapered from 12 inches in thickness to 6 inches at the lower edge. It also had 2-inch deck armor forward and 2–3 inches aft. Barbette and turret armor was 12 and 8 inches, respectively.

The renewal of fighting in Cuba between revolutionaries bent on independence and Spanish troops determined to prevent that created concern for the security of U.S. interests in Cuba and fears that a European power, most probably Germany, might seek to take advantage of the situation. On January 24, 1898, President William McKinley ordered Captain Charles Sigsbee of the *Maine* to steam from Key West, Florida, to Havana supposedly to protect U.S. interests in Cuba but actually to pressure Spain to change its policies there and to enforce the 1823 Monroe Doctrine. This was certainly a provocative

act, much resented by Spain, although Madrid had reluctantly agreed to it. The *Maine* arrived in Havana Harbor on January 25.

Although the Spanish authorities in Havana extended full courtesies to the *Maine*'s crew, Sigsbee refused to allow the sailors shore leave in order to avoid a possible incident. At 9:30 p.m. on February 15, the *Maine* sank in Havana Harbor when its forward magazines, containing nearly five tons of powder charges, exploded. The explosion claimed 266 lives. A total of 260 men died immediately or shortly thereafter. Another 6 men died later from their injuries. The casualties represented nearly three-quarters of the ship's crew. Sigsbee and most of the officers survived because their quarters were located aft in the ship. Spanish ships and the civilian steamer *City of Washington* set about rescuing the survivors.

While the circumstances of the ignition of the magazines remained in controversy, the loss of the *Maine* provided a rallying point for Americans who wanted war. The cry “Remember the *Maine*, to hell with Spain!” swept the country, and the day after the board of inquiry's report, President McKinley sent Madrid an ultimatum that on April 11 led to the U.S. declaration of war against Spain. It may be misleading to say that the explosion aboard the *Maine* in and of itself brought about the war declaration, but it is hard not to conclude that the incident gave the United States a perfect pretense for war and was indeed the last in a long series of U.S.-Spanish clashes over Cuba.

Maine, USS, Inquiries into the Loss of

At 9:30 p.m. on February 15, 1898, the U.S. Navy second-class battleship *Maine* sank in Havana Harbor when its forward magazines, filled with nearly five tons of powder charges, exploded. The explosion claimed 266 lives and proved a rallying cry for those in the United States who wanted war with Spain.

Charles Sigsbee, the captain of the *Maine* and one of the survivors of the explosion, urged that there be no rush to judgment,

especially as the Spanish extended every possible resource in rescue and recovery efforts after the ship sank. He noted at the end of his official telegraphed report to Washington, "Public opinion should be suspended until further report."

The navy immediately established a board of inquiry to establish the cause of the explosion of the ship's magazines. This went forward in Havana and extended over a four-week period. The condition of the wreck and the lack of technical experts on the board cast doubt on the report's validity. The board issued its findings on March 28, 1898, and held that an external mine was to blame. Although the board did not attempt to determine who had set the device, there was a clear implication of Spanish responsibility. The day after the official report was issued, U.S. president William McKinley sent Madrid an ultimatum that on April 11 led to the president asking Congress for a declaration of war against Spain.

In 1911, Congress voted the requisite funds to remove the wreckage of the *Maine* from Havana Harbor, where it was a navigational hazard, and the Navy Department ordered a second investigation into the ship's destruction. Toward that end, U.S. Army engineers constructed a coffer dam around the ship, and the water was pumped out. The wreck was then studied and photographed before it was repaired to floating state and towed out to sea to be scuttled. The examining board discovered that the bottom hull

The damaged forward section of the U.S. battleship *Maine* following its sinking. In 1911, army engineers built a coffer dam around the wreckage, pumping out the water and allowing the damage to be studied. (Naval Historical Center)

plates in the area of the reserve six-inch magazine were bent inward, which suggested an external explosion. The board then confirmed the earlier finding of an external explosion.

Although the precise cause will probably never be established, in 1976 Admiral Hyman Rickover and his staff published *How the Battleship Maine Was Destroyed*, a study that relied on the previous two reports as well as several experts on explosions and stress studies of metal in underwater explosions and concluded that the damage was inconsistent with an external mine. Rickover suggested that spontaneous combustion of bituminous coal in one of the ship's bunkers had cooked off ammunition in an adjacent magazine. There had been similar examples of spontaneous combustion in coal bunkers aboard other navy ships, most notably on the cruiser *Cincinnati* while at Key West, Florida, in 1896 and on board the armored cruiser *Brooklyn* in May 1898, but they had been discovered in time. Critics of Rickover's conclusion point out that it is unlikely that such a fire could have gone undetected.

It is hard to see what the Spanish might have thought they could gain from planting a mine. Other possibilities are an accidental explosion in the magazine itself, sabotage, or a mine planted either by right-wing Spanish groups who hated the United States or by Cuban rebels anxious to involve the United States in a war with Spain in which they could secure independence for Cuba. Peggy and Harold Samuels claimed in *Remembering the Maine* (1995), the latest study of this event, that the culprit was a mine set by Spanish extremists. The truth is that we will never know for certain who or what caused the explosion that sank the *Maine*.

Malaria

Systemic disease caused by four species of protozoa of the genus *Plasmodium*. The organism is transmitted by the female of one of several species of the *Anopheles* mosquito, which, on biting a human, ingests the gametocyte, one of several stages in the organism's complex developmental cycle. The malarial organism multiplies in the mosquito's abdominal cavity and then migrates to the salivary glands from which it is injected into whomever it bites next. It migrates through the human bloodstream to the liver, where it multiplies before again being released back into the bloodstream. It then enters red blood cells and feeds on hemoglobin. When the

victim is bitten by another mosquito, the malarial protozoa are ingested, and the cycle is repeated. There are four species of *Plasmodium*, of which *falciparum* is the most lethal. The other three (*vivax*, *ovale*, and *malariae*) seldom cause death but can cause repeated episodes of fever and debilitation.

Malaria (named from the Italian *mal aria*, or bad air) was endemic in Athens at least as early as the fifth century BC, and its prevalence in Rome probably played a role in the empire's decline. It was brought to the Western Hemisphere by the Spanish slave trade and was a factor in the collapse of the Central and South American indigenous peoples.

Malaria was endemic in Cuba, and more than 30,000 Spanish troops died from infectious diseases in 1897 alone, leading Cuban revolutionary General Máximo Gómez y Báez to comment that the three best insurrectionist generals were June, July, and August. Because the disease was often confused with typhoid (or conflated into typho-malarial fever), it is impossible to arrive at a precise estimate of the disease incidence during the Spanish-American War, but cases were almost entirely confined to Cuba, and malaria was essentially unknown in both Puerto Rico and the Philippines.

Diagnosis and record keeping were better after the war. Between 1898 and 1900, more than 1,000 people a year died from the disease in Havana alone. Ronald Ross, the British Indian surgeon who had worked out the malarial life cycle and proven that the mosquito was its vector, had contacted U.S. Army surgeon general George Sternberg in 1898 and suggested that the invading force consider mosquito control and protective netting, but neither measure was adopted until after the war, when Walter Reed and his co-workers demonstrated that the mosquito was also responsible for yellow fever transmission. Brigadier General Leonard Wood ordered his chief surgeon William Gorgas to institute a comprehensive anti-mosquito program, and both yellow fever and malaria were brought under control. The number of malaria cases in Havana dropped to an average of only 44 a year between 1899 and 1902. In all of 1912, there was only 1 malaria fatality in Cuba's capital city.

Malolos, Philippines, Capture of

Event Date: March 31, 1899

Capture of the capital of the First Philippine Republic on March 31, 1899, by U.S. forces during the Philippine-American War (1899–1902). On January 21, 1899, rebels proclaimed Malolos, a town lo-

American soldiers ride into the captured Filipino insurgent capital of Malolos in 1899. (Library of Congress)

cated 25 miles north of Manila in Bulacan Province of the island of Luzon, to be the Philippine Republic's capital. Once hostilities began between American forces and the Army of Liberation on February 4, fighting flared along U.S. positions in Manila, and the Filipinos withdrew northward abreast along the Manila-Dagupan railroad toward Malolos.

Major General Elwell S. Otis prepared the U.S. VIII Corps for operations against Malolos hoping that this might end the revolt in one stroke. Reaching the insurgents' capital would be no easy task, for villages, thick vegetation, swamps, and rice paddies as well as streams, ditches, and deltas impeded the approach. Six rivers, some with no bridges, proved a formidable obstacle.

Otis first planned to sever the insurgents' supply line north from Manila. On March 12, 1899, Brigadier General Lloyd Wheaton led a U.S. brigade east and south to Laguna de Bay, cleaning out pockets of resistance and destroying crops that might be a source of supply to the rebels. Wheaton's operations were successful and ended on March 17.

Otis was now ready to begin operations against Malolos. On March 17, he split VIII Corps into a defensive force to defend Manila and an offensive force to operate against the Army of Liberation at Malolos. The campaign began on March 25. Major General Arthur MacArthur's 2nd Division of 9,000 men was reorganized into three brigades under Brigadier Generals Harrison

Otis (1st Brigade), Irving Hale (2nd Brigade), and Robert H. Hall (3rd Brigade). Wheaton's provision brigade, shifted from the 1st Division, was to act in support.

Hall's brigade was to feint a direct attack along the Caloocan-Malolos road. Two brigades would then proceed northward—Otis's brigade on the left and Hale's brigade on the right—to Novaliches and there separate. Hale was to move against San Francisco del Monte and Bagbag, while Otis pushed to the south of Novaliches. The brigades would then pivot to the west, sever the railway below Polo, and move against the Filipino left and check its retreat. Wheaton was then to begin a frontal attack with his provisional brigade, forcing the Army of Liberation toward Hale and Otis. Although the plan appeared sound, the Spanish maps proved largely worthless, and the Americans soon discovered that serious terrain obstacles, not identified on the maps, severely impeded their progress.

On March 25, Hale's brigade, backed by the Utah artillery battery, attacked and penetrated the Filipino defensive positions. Advancing northward, it faced physical obstructions and tenacious resistance. Supported by the battery, the brigade crossed the Tuliahan River and engaged and outflanked insurgent forces. To Hale's left, Otis's brigade confronted difficult terrain and a spirited Filipino defense.

MacArthur now realized that he could not reach the assigned rendezvous point of Polo in time. He then requested and received

permission from Otis to discontinue the drive on Polo and turn below its objective. This effectively ended any chance of blocking the Army of Liberation's withdrawal to Malolos.

On March 26, U.S. troops of the 2nd Division advanced to the northwest near Polo, crossed the Mecauyan Bridge, and engaged Army of Liberation troops, killing more than 90 of them. On March 27, they forded the Marilao River, outflanked the insurgents, and cut the latter's defensive line.

On March 25, meanwhile, Wheaton launched his diversionary attack beyond Caloocan and drove to the Tuliahan River. Despite natural obstacles and stout defenders, the brigade's direct assault carried the position. Once across the Tuliahan on March 26, Wheaton's men drove the Filipinos back. Still, the Filipinos fought hard, killing 26 U.S. soldiers and wounding another 150 before withdrawing.

Otis now ordered MacArthur and Wheaton to combine and drive north, hopefully catching the Army of Liberation before it could gain Malolos. On March 26, the Americans took the town of Malinta, and Filipino troops on its outskirts scattered. Shortly thereafter, MacArthur's and Wheaton's men joined forces. The American trap had thus closed, but the Army of Liberation eluded it.

MacArthur's men were now exhausted, and he was obliged to halt and await resupply. The advance resumed on March 29. A stiff fight occurred at the Bocaue River when the insurgents ambushed the 20th Kansas Regiment and inflicted 27 U.S. casualties, but by now the Filipinos were in full retreat, and there was no climactic battle for Malolos. The Americans entered the town, but as they did so it was in flames, torched by the escaping Army of Liberation.

The campaign to take Malolos was a qualified success. The Americans had failed in their effort to crush nationalist resistance in one stroke, and the American forces had sustained nearly 500 casualties during a span of only a few days. Emilio Aguinaldo y Famy and much of the Army of Liberation had escaped to fight again. Nonetheless, the campaign had also cost the insurgents dearly in terms of equipment, especially Mauser rifles and ammunition.

23, 1898. The Malolos Constitution was actually the fourth and final constitution written by Filipino nationalists between 1896 and 1899. Of these, it was the first to call for a true representative democracy. Shortly after the Spanish-American War began, Aguinaldo proclaimed independence from Spain on June 12, 1898. Later that month, he called upon Filipinos to elect delegates to a unicameral congress that would write a constitution and establish a framework for government. By July 7, 193 delegates had been selected. They came almost exclusively from the educated political and economic elite, and only about 20 percent were actually elected. Because of wartime conditions and travel difficulties, Aguinaldo appointed the rest. Meanwhile, on August 13, 1898, the Spanish surrendered to the Americans at Manila.

In mid-September 1898, Aguinaldo asked delegates to convene just north of Manila. They met in the convent of Barasoain Church at Malolos (Bulacan Province) from September 15, 1898, to January 21, 1899. In the opening session on September 15, Aguinaldo addressed the delegates. Against the advice of Apolinario Mabini, a close adviser to Aguinaldo and the great theoretician of the revolution, Aguinaldo also asked them to form committees to draft a constitution for the First Philippine Republic. On September 29, 1898, with Japanese and American journalists witnessing the proceedings, the delegates ratified Aguinaldo's Declaration of Independence.

From the start, the convention was fundamentally divided. Some delegates opposed a strong chief executive and secretly favored autonomy or political assimilation under U.S. rule. Influenced by Mabini, a minority held that writing a permanent constitution was premature and would only accelerate U.S. military intervention and occupation.

Debated in Tagalog and Spanish, the *Constitución Política* (Malolos Constitution) was written entirely in Spanish. Competing proposals were hotly debated, and ordinary Malolos townspeople, no longer fearing reprisals from the Spanish colonialists, also excitedly discussed the constitutional issues. The constitution consisted of 14 articles, several transitory provisions, and 1 additional unnumbered article. Among other issues, the constitution provided for separation of church and state (Title III), individual human and political rights (Title IV), separation of governmental powers (Titles V and VII–X), local assemblies (Title XI), and an amendment procedure (Title XIII). To that extent, the document reflected liberal and Enlightenment views embodied in constitutions of the United States, Belgium, France, Guatemala, Costa Rica, and Brazil, among others.

The Malolos Constitution outlined the governance of a parliamentary republic. However, by limiting the chief executive's freedom of action, it threatened to hamper rapid decision making during wartime. Elected by the *Asamblea Nacional* (National Assembly), a permanent seven-member legislative commission was to supervise the president at all times (Title VI). Although legislative supervision was ostensibly designed to offset dictatorial tendencies, it also handicapped the government as hostilities with the

Malolos Constitution

Philippine constitution. Drafted by the Malolos Congress and ratified on November 28, 1898, it served as the working blueprint for the First Philippine Republic. Emilio Aguinaldo y Famy, the republic's first president, signed the document into law on December

United States loomed. Under pressure from Mabini, Aguinaldo held out for a few minor amendments.

On November 29, 1898, the Malolos Congress ratified the constitution. On December 10, however, ratification was upstaged by the Treaty of Paris between the United States and Spain. Under Article II of that agreement, the Americans agreed to pay Spain \$20 million for the Philippines. Although the U.S. Senate did not ratify the Treaty of Paris until February 6, 1899, it strengthened the hand of President William McKinley in domestic U.S. politics and gave him a pretext for prompt Philippine annexation. Entreaties by Don Felipe Agoncillo and other diplomats sent by Aguinaldo went unanswered both in Washington and Paris, and their energetic high-profile supporters in the Anti-Imperialist League could not stem the tide of public opinion in the United States that supported annexation.

Despite continuing misgivings about its basic structure and amendments, Aguinaldo signed the constitution on December 23, 1898. He refrained from proclaiming it, however, until January 23, 1899, in a public ceremony held in Malolos. Less than a month later, the Philippine-American War broke out, rendering much of the Malolos Constitution next to impossible to execute.

Malvar, Miguel

Birth Date: September 27, 1865

Death Date: October 11, 1911

Key military leader in the 1896–1898 Filipino uprising against Spanish rule and the anti-American insurgency during the Philippine-American War (1899–1902). Miguel Malvar was born on September 27, 1865, in Santo Tomas, Batangas, Philippines. His father, Maximo, was a hardworking and enterprising farmer and businessman who amassed considerable wealth, making his money from the cultivation of sugarcane and rice in the shadow of Mount Maquiling.

Unlike most Filipinos at the time, the younger Malvar had the benefit of education, although studies were clearly not his strong suit. His early schooling came about through private tutorials with a Roman Catholic priest, Father Valerio Malabanan. Malvar then

spent an additional three years in school before turning his sights on business and farming. He enjoyed even more success than his father and before long had cobbled together major landholdings in Batangas and was growing oranges, mainly for export.

By the mid-1880s, many Filipinos had begun to chafe under Spanish rule, which was little changed since the 16th century when the Spanish had first laid claim to the archipelago. Discontent with the status quo was strong in Batangas Province, which lay in the southwestern corner of the island of Luzon. In Batangas, anti-Spanish sentiment had a distinct anticlerical element to it, and before long priests and friars in the region had become targets of Filipino animosity. In 1890, Malvar was elected *gobernadorcillo* (local governor) and immediately began to implement a systematic anticleric campaign. This put him on a collision course with the local clergy, and this confrontation soon blossomed into open defiance of Spanish authorities in general.

Sometime in the early to mid-1890s, Malvar joined the secret Katipunan society, which was dedicated to ridding the Philippines of Spanish control. He began assembling a makeshift army on his own initiative, to be known as the Batangas Brigade, and proved to be an able military leader known for his dogged determination even in the face of likely defeat. His forces collaborated closely with other insurgents on Luzon, and he became a close ally of Emilio Aguinaldo y Famy. Although the insurgency against the Spanish grew in size and intensity, Filipino forces were gradually outgunned by the better-armed Spanish. When Aguinaldo and much of the resistance had taken refuge in Biak-na-Bato, Malvar joined other revolutionary leaders there and reluctantly signed the Pact of Biak-na-Bato in December 1897. He had been opposed to any accommodation with the Spanish, but his view was clearly in the minority.

Malvar left for Hong Kong, per the stipulations of the pact, on December 25. His exile was short-lived, however. When the Spanish-American War commenced in April 1898, American officials requested that Aguinaldo and the other revolutionaries return to the Philippines to help in the fight against the Spanish. Malvar returned to the Philippines in early May and immediately mobilized his Batangas Brigade for action.

The war against the Spanish went well for Malvar. By July, Batangas had been cleansed of Spanish control. It was at this time that Malvar began to assemble a larger force, which he envisioned would be akin to a provincial army. He did so when it became clear that the Americans were not going to allow Filipino independence or autonomy. In February 1899, the Philippine-American War commenced, and Malvar was at the forefront of guerrilla activity, this time against U.S. forces. Like Aguinaldo, Malvar understood well the importance of guerrilla warfare against a force with superior firepower. Thus, he sought to prolong the war as long as possible to wear down American morale, which in turn might help the antiexpansionist Democrats win the 1900 elections in the United States.

In May 1899, Malvar planned an attack on American strongholds in southern Luzon. The offensive never took place, however, as U.S. forces decided to concentrate on pacifying the south. In the

summer of 1899, Malvar had retreated to Calamba to effect a defensive perimeter around Batangas. Repeated American thrusts into Batangas began to wear away his forces. It was clear that he had spread his men too thinly. Refusing to give way, Malvar and his remaining troops kept up an insurgency campaign that would last into 1902. Nevertheless, as the fighting dragged on and more and more civilian casualties occurred, he began losing support from the province's elites and small middle class.

Aguinaldo was finally captured by U.S. forces in March 1901, which should have put an effective end to the insurgency movement. Malvar, undeterred, chose to fight on in Batangas. He was also now considered the leader of the entire insurgency effort. For a brief time, his offensives exacted a toll on the American military in late 1901 and early 1902. But he could not keep up the momentum or overcome the lopsided U.S. advantage in firepower. At the same time, Brigadier General James Franklin Bell launched a brutal offensive in Batangas to capture Malvar and decapitate his forces, which included a controversial scorched earth policy that brought high casualties. By early 1902, only two guerrilla units in the Philippines remained, that of Malvar's and forces under Vicente Lukban on Samar. As Malvar's forces suffered one defeat after another and as short supplies brought them to near starvation, defections and desertions skyrocketed.

In April 1902, Malvar finally surrendered to U.S. forces. His position had been revealed by former guerrillas who had defected to the American side. Just a few days before, Lukban had also surren-

dered. By month's end, nearly all of the Batangas guerrillas had given up, and the battle for Batangas was over.

Malvar had the distinction of being the last guerrilla leader to capitulate during the Philippine-American War. The Americans treated Malvar with honor, and he returned to a quiet life of farming on his native land in Batangas. Malvar died on October 11, 1911.

Mambises

Term used to describe Cuban rebels, beginning with the Ten Years' War (1868–1878). The origin of the term "Mambi" is not known with certainty. Conjecture has it that it is an Afro-Antillean word that was given to rebels on the island of Hispaniola fighting against Spanish rule in the early part of the 19th century. During that in-

Mambi (rebel) soldiers who fought for Cuban independence from Spain, shown here in 1896. (Library of Congress)

surrection, which was led by a former Spanish military officer named Eutimio Mamby (or Mambi), Spanish troops dubbed the rebels “Mambises.” In 1868 when Cuban insurrectionists rebelled against the Spanish and resorted to the machete-wielding tactics of the Mambises on Hispaniola, the Spaniards began referring to them as Mambises as well. Before long, the rebels had adopted the name for themselves. By 1870, the Ten Years’ War had produced some 12,000 Mambises, who were bent on driving the Spanish out of Cuba. When the Cuban insurrection of 1895 began, the rebels were once again known as the Mambises.

Manifest Destiny

An ideological mind-set used to rationalize the westward territorial expansion of the United States to the Pacific Ocean during the 1840s and 1850s. Manifest Destiny expressed the belief that the United States had the God-given right and indeed duty to occupy the remainder of the continent and that such expansion was clearly justified (manifest) and inevitable (destiny). The concept was also used to legitimize the annexation of Oregon, Hawaii, and the Philippines.

The phrase “manifest destiny” was coined in the summer of 1845 by John L. Sullivan, a journalist and editor of the *United States Magazine and Democratic Review*. In an essay supporting the annexation of Texas, he argued for the “fulfillment of our manifest destiny to overspread the continent allotted by Providence for the free development of our yearly multiplying millions.” Even though the phrase became one of the most influential slogans ever coined, O’Sullivan certainly did not originate the sentiment behind the slogan. In the first half of the 19th century, the United States witnessed an extraordinary growth in territory and population. The multiplying millions to which O’Sullivan referred included immigrants from Europe, who had crossed the Atlantic in droves hoping for a better life. Many of these newcomers began looking westward for fertile, unoccupied lands. Expansion across the continent was thus seen as a desirable necessity, and O’Sullivan gave the movement its name. However, Manifest Destiny included more than the will for westward expansion. It was also a belief that the United States was exceptional of all the world’s nations—the promised land, the new Israel, and God’s own country—and that its people had both a divine mission and the altruistic right to spread the virtue of its democratic institutions and liberties to new realms. Indeed, this thinking can be traced back to the 17th century, when in 1630 the Puritan minister John Winthrop referred

to the Massachusetts Bay Colony as a “city upon a hill” that would stand as an example for all people.

The theme of American exceptionalism was heightened during the American Revolution, when the colonists fought for the right to implement their own version of freedom and democracy. With independence came the promise of expansion, which included cheap and abundant land and economic opportunities west and south of the 13 original colonies. The Louisiana Purchase of 1803 and the acquisition of Florida from Spain in the 1819 Adams-Onís Treaty more than doubled the size of the United States, creating a new frontier that offered relief for a growing population.

The Monroe Doctrine of 1823 also exemplified the ideas and the mood behind Manifest Destiny. When President James Monroe warned Europe that the Americas were no longer “to be considered as subjects for future colonization by any European powers,” he paved the way for increasing U.S. hegemony over its neighbors by establishing his nation as the legitimate protector of the Western Hemisphere. Thus, the concept of Manifest Destiny became even more important during the Oregon Boundary Dispute with Great Britain and in U.S. relations with Mexico. Regarding Oregon, Great Britain and the United States had agreed in the Anglo-American Convention of 1818 to jointly occupy the Oregon Territory. However, in the years following the treaty, thousands of American settlers had migrated to the Northwest, and calls for annexation of the region became very popular in the 1840s. When Great Britain rejected President John Tyler’s proposal to divide the area along the 49th parallel, American expansionists responded with demands for a northern border along the 54°40′ line (the slogan at the time was “Fifty-Four Forty or Fight”). The question of the annexation of Oregon played an important role in the election of James K. Polk as president in 1844. After the election, however, Polk did not yield to the extremists and settled the boundary dispute with Britain diplomatically with the Buchanan-Pakenham of 1846, which terminated the joint occupation and divided Oregon along the 49th parallel.

At the same time, expansionist sentiments led to war with Mexico in 1846. Ever since Mexico had opened its province of Texas for colonization in 1823, thousands of settlers from the United States had moved south. The movement was so strong that Mexican authorities soon lost control of the province. In 1835–1836, differences between Anglo settlers and the Mexican government led the new settlers to revolt against Mexico and declare Texas independent. They then sought admittance to the United States. The annexation of Texas was highly controversial among U.S. politicians, however, because it would come in as a slave state. Anxious to keep the delicate balance between slave and free states, the United States rebuffed Texas’s request to join the Union. The question of what to do with Texas was an issue in the 1844 presidential campaign because Polk promised annexation should he be elected. Although he agreed to settle the boundary dispute over Oregon diplomatically, he refused to compromise with Mexico after Congress approved the annexation of Texas in 1845.

John Gast's 1873 painting *American Progress*, depicting an allegorical female figure of America leading settlers, telegraph lines, and railroads into the untamed West. The concept of Manifest Destiny represented in the painting held that the United States had a moral and divine mandate to colonize the lands west of the Mississippi. (Library of Congress)

Polk's desire to acquire California as well as annex all of Texas led to war with Mexico in May 1846. In supporting war against Mexico, American expansionists for the first time cited racial reasons for expanding American territory. This reasoning, though, was controversial even among expansionists. Its supporters argued that Manifest Destiny would help improve the Mexicans, while its opponents claimed that Mexicans, as non-Anglo-Saxons, were not qualified to become Americans. When the Mexican War ended in February 1848 with the Treaty of Guadalupe Hidalgo, Mexico ceded to the United States present-day Texas with its boundary at the Rio Grande and what would become New Mexico, Arizona, California, and parts of Nevada, Utah, and Colorado. The United States had now accomplished its goal of expanding its territory to the Pacific Ocean. After the war, Polk offered Spain \$100 million for Cuba in an attempt to consolidate his territory even further, but Spain declined.

After decades of internal struggle, civil war, and reconstruction, the belief that Manifest Destiny justified the seizing of Native American and Spanish-held lands was revived in the 1890s. The ideology behind the term, however, now contained elements of social

Darwinism and social determinism. Expansionists believed that it was the white man's burden to lead inferior races in other parts of the world to better lives. The British author Rudyard Kipling made this viewpoint famous in his 1899 poem "The White Man's Burden," which was subtitled "The United States and the Philippine Islands" and in which he urged the United States to spread civilization to less-developed peoples. This expanded set of beliefs incorporated ideas not only about race and religion but also about culture and economic opportunities. Expansionists assumed that Americans had the divine right to dominate other lands because they belonged to the most advanced race and had the most developed culture, the best economic system, and the necessary military and technical expertise.

This notion of an international Manifest Destiny was at play in the decision of the United States to intervene in the Cuban War of Independence (1895–1897) and to annex Hawaii and the Philippines in 1898. The United States soon extended its interest into Asia and the Far East with its calls for an open door policy, meaning that U.S. policy makers sought equal trade preferences in places such as China.

During the Spanish-American War, several U.S. legislators called for the annexation of all Spanish territories. As a result of the war, the United States took control of the Philippines, Guam, and Puerto Rico and had occupation troops in Cuba for several years. Despite the extremist expansionists' demands, Cuba was not annexed, however. Yet the 1901 Platt Amendment provided for the establishment of a permanent U.S. naval base on the island at Guantánamo and the right to intervene in Cuba militarily to maintain order.

The Spanish-American War and the Philippine-American War marked U.S. entry into world affairs. President Theodore Roosevelt buttressed the Monroe Doctrine with his 1904 corollary to the Monroe Doctrine, which stated that the United States reserved the right to intervene in the affairs of any nation in the hemisphere if its political system or economic policies threatened the United States or other nations in the hemisphere. The belief that it was a mission of the United States to promote and defend democracy throughout the world would remain an influential part of the political culture within the United States during the 20th century and into the 21st century.

Manila

Capital city of the Philippines and the primary political and cultural center of the Philippine archipelago. Manila is located along Manila Bay in the southern portion of the Island of Luzon, the largest island in the Philippines, and has a current metropolitan population of more than 10 million people. The word "Manila" is derived from the Tagalog *may nilad*, a reference to an aquatic plant that grew profusely along the margins of Manila Bay. The city of Manila has always maintained a strong seafaring flavor owing to its situation on one of the finest natural bays in the world and arguably the best in East Asia.

Begun along the banks of the Pasig River near its confluence with the bay as a small tribal community, Manila was a lively town ruled by Rajah Sulayman, an Islamic Malaysian with a royal bloodline, prior to the arrival of the Spanish. Only a year after the first Spanish conquistador landed at Manila, the Islamic town had been torched by the Spaniards and the vestiges of Islam destroyed. Recognizing its strategic potential, Spanish colonial authorities soon

established Manila as the principal Spanish outpost on the Philippines and made it the seat of Spanish colonial government beginning in the late 16th century.

Over the course of more than three centuries, the Spanish left their mark on the city, including Roman Catholicism. Indeed, the formerly Muslim enclave became a bastion for Catholics, both native and Spanish. The principal ethnic group found in Manila was the Tagalogs; however, there were also significant numbers of Filipinos from other islands (Visayans, Maranoas, Llocanos) and a sizable community of Chinese. While the Spanish population in Manila was never very large, it certainly held sway over the city and its politics because of its wealth and privileged positions in the government. Like most locales in the tropics, Manila's weather is characterized by hot, rainy summers and warm, relatively dry winters. The city is regularly threatened by typhoons during typhoon season.

The Spaniards developed what came to be known as the Intramuros beginning around 1570. The Intramuros, meaning "within the walls," was a fortified city enclosed within high, thick walls and surrounded by a moat. It was here where the Spanish colonial government was headquartered and here where government officials and other Spaniards of note lived. During Spanish rule, the Intramuros was considered Manila proper. Anything that fell outside of the walls was typically not planned by Spanish colonial officials. Usually, laborers and field hands erected makeshift communities adjacent to, but outside of, the walls.

Formally established by a royal Spanish decree in 1573, the Intramuros was designed after a medieval Spanish castle and enclosed city. Today, the Intramuros (also referred to as the Old City) is remarkably well preserved, although much of it was rebuilt after World

War II. The area is the only part of the city that has retained significant Spanish details. Also to be found in the Intramuros was Fort Santiago, a famous Spanish redoubt first constructed in 1571.

On May 1, 1898, U.S. naval forces under Commodore George Dewey decimated the Spanish squadron in Manila Bay in less than six hours. The city was also the scene of the First Battle of Manila on August 13, 1898, and the Second Battle of Manila on February 5, 1899. When the war ended and the United States annexed the Philippines, the Americans assumed the old Spanish offices and buildings and administered the territory from Manila.

Manila suffered considerable damage during World War II, especially in the Battle of Manila during February 3–March 3, 1945. Particularly hard hit was the Old City, which was heavily shelled. At the time, Manila was one of the largest cities of Asia, with a population of some 800,000 people. By the end of the battle, the Intramuros had been nearly obliterated, and other parts of the city lay in ruins. The Battle for Manila cost the Americans 1,010 killed and 5,561 wounded. The Japanese lost perhaps 16,000 men in and around the city. More than 100,000 Filipino civilians were killed, and perhaps 70 percent of the city was destroyed.

Manila, Capitulation Agreement

Official agreement in which the Spanish surrendered Manila in the Philippines to the Americans. The agreement came after the First Battle of Manila during the Spanish-American War. The term “capitulation” (*capitulación*) was used in the agreement rather than the more pejorative “surrender” (*rendición*) because the latter would have resulted in courts-martial for Spanish officers upon their return to Spain.

The agreement was concluded two days after hostilities had officially ended under the terms of the August 12 Protocol of Peace, word of which did not arrive in the Philippines until August 16 because cable communications had not yet been restored. The Capitulation of Manila Agreement was based on a document signed the day before by U.S. commander in the Philippines Major General Wesley Merritt and Spanish governor-general of the Philippines Fermín Jáudenes y Álvarez.

The agreement of August 14 provided that Spanish soldiers were prisoners of war and were to surrender their weapons. But

until the conclusion of a formal peace treaty ending the war, the soldiers would simply remain in their barracks under their own officers. Although also prisoners of war, Spanish officers were permitted to retain their quarters as well as side arms, horses, and all private property. The United States would take possession of all public property and Spanish funds (which amounted to more than \$1 million), and Spanish authorities were to present a full list of all public property within 10 days. Manila would now come under U.S. military control. Spanish military families in the islands desiring to leave would be free to do so when they wished.

When word of the Protocol of Peace was received in the Philippines on August 16, Jáudenes protested certain provisions of the Capitulation of Manila Agreement because the Protocol of Peace had been signed before the First Battle of Manila had actually occurred. Merritt rejected Jáudenes's argument and insisted on full implementation of the Capitulation of Manila Agreement, and the Spaniard complied under protest. Because of the date of the Protocol of Peace, however, the issue of whether the United States had acquired the Philippines under right of conquest came up at the Paris Peace Conference.

Manila, First Battle of

Event Date: August 13, 1898

Last battle fought during the Spanish-American War on August 13, 1898, in Manila. The engagement, which pitted troops of the U.S. Army VIII Corps against Spanish forces, was waged after the Protocol of Peace of August 12 had been signed in Cuba, which ostensibly ended hostilities. At the time, the cable linking Manila with Hong Kong had been cut, so field commanders in the Philippines were unaware of the truce agreement.

Manila, the capital and most important city of the Philippines, is located on the east side of Manila Bay on the island of Luzon. As the capital, Manila was the center of Spanish power in the archipelago and understandably the focal point of Filipino nationalists' efforts to overthrow Spanish rule. Following his breathtaking defeat of the Spanish naval squadron at Manila Bay on May 1, 1898, Commodore George Dewey realized that Manila could and should be seized; however, he had no available landing force to undertake such a mission and therefore could only remain in place and await the army's arrival.

Members of the U.S. Army Signal Corps using flags to communicate from an artillery position outside the city of Manila. (Library of Congress)

The Philippine Expeditionary Force (VIII Corps) reached the Philippines in three contingents, departing from San Francisco as ship availability permitted. The first contingent of 2,500 men, under Brigadier General Thomas Anderson, arrived at the end of June, followed in mid-July by 3,500 additional men under Brigadier General Francis V. Greene. The final contingent, numbering some 4,800 troops and commanded by Brigadier General Arthur MacArthur, reached the islands at the end of July, as did commander of VIII Corps Major General Wesley Merritt.

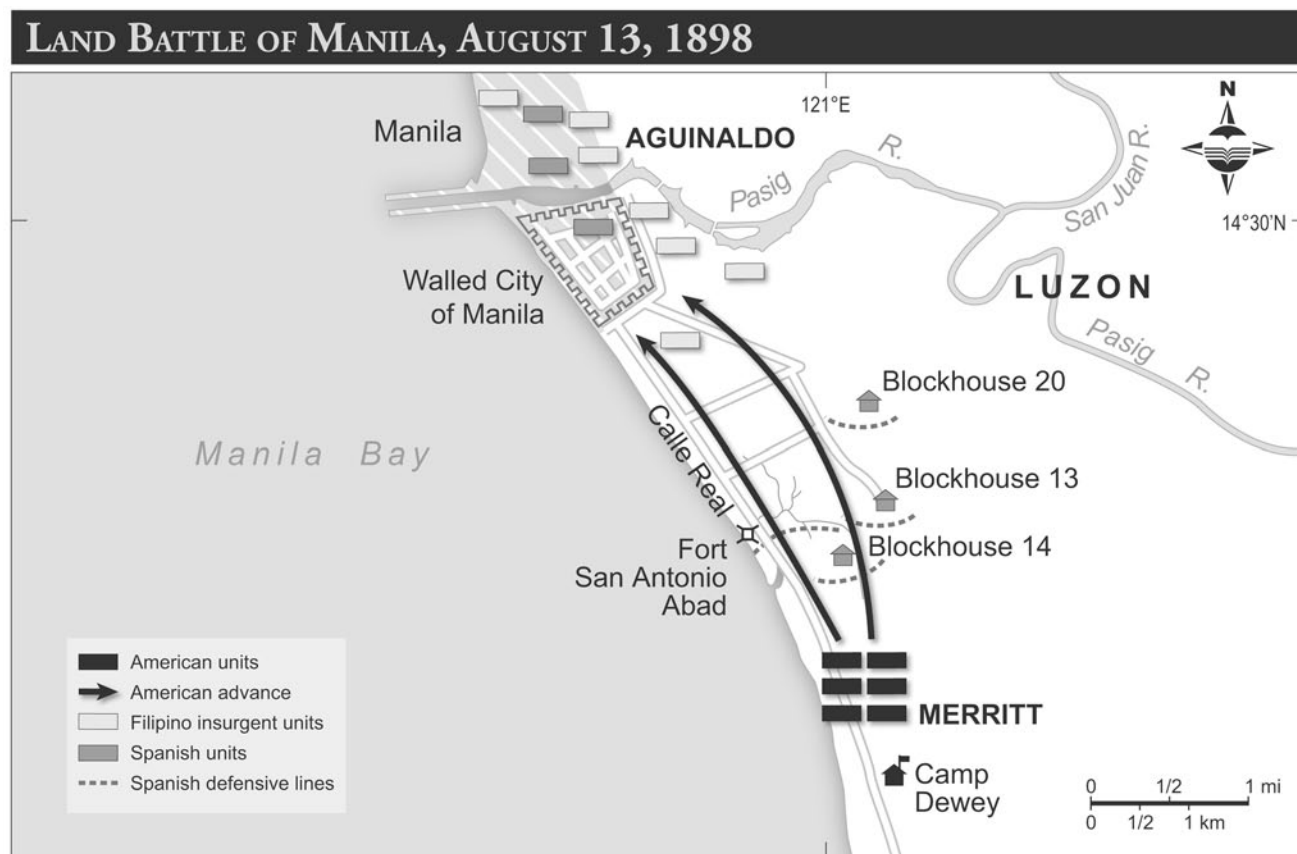

At the end of July, the Spanish still controlled Manila and much of its environs. The city proper was split by the Pasig River, south of which stood the old walled city of Fort Santiago. The Spanish defensive line, known as the Zapote Line, was located 1.5 miles to the south from where a large blockhouse, Number 14, on the Pasay Road extended west to a stone structure known as Fort San Antonio de Abad, located near the shore of Manila Bay. A line of entrenchments connected these two strong points.

Opposing the Spanish positions were some 10,000 Filipino nationalist troops under the overall command of General Emilio

Aguinaldo y Famy, who had formally proclaimed the Republic of the Philippines on June 12. Through the early summer, the nationalists had managed to isolate Manila from its source of supplies, in effect leaving it a city under siege. In Manila, food was scarce and mainly consisted of a little horseflesh and some water buffalo. At night the nationalists and the Spanish defenders maintained lively fire between the two lines but undertook no serious offensive movements.

During the course of the U.S. buildup, Greene's troops constructed a series of entrenchments and moved into some of the works created by the nationalists, who abandoned these positions only reluctantly when Greene persuaded them to do so. The arrangement was irregular, however. In places the nationalist forces actually occupied trench works in between the Americans and the Spaniards.

During the two weeks preceding the attack on Manila, heavy rains of the monsoon season had drenched the area. The period was also characterized by frequent exchanges of artillery and rifle fire between the Americans and the Spanish, with Greene's units

sustaining a number of casualties. In addition, relations between the Americans and Aguinaldo's men, at first cordial, began to deteriorate, as the latter had grown increasingly suspicious of U.S. intentions in the islands.

During the latter part of July, Dewey, now a rear admiral, became convinced that the Spanish would surrender Manila through negotiations. Thus, he met first with Captain-General Basilio Augustín y Dávila and later with his successor, Fermín Jáudenes y Alvarez, to explore possible arrangements. Nevertheless, Greene urged naval gunfire on Spanish positions to relieve the pressure on his command. His troops had dug a line of trenches south of Fort Abad and were taking casualties from Spanish fire every day. General Merritt supported Greene in this request. Dewey, however, was reluctant to open fire from his warships, fearing that doing so would destroy any chance of securing the city by negotiation, an arrangement that he still believed to be entirely possible. Dewey suggested that perhaps the troops could be withdrawn from the trenches until a general attack became necessary. The admiral, however, did agree to support Greene should this prove absolutely necessary. In that eventuality, Greene was to burn a blue light on the beach, and the ships would open fire. Dewey hoped that it would not be necessary.

Merritt had arrived in the Philippines under orders from President William McKinley not to involve the nationalists in taking Manila because to do so would mean including them as partners in future treaty negotiations with Spain. Fermin Jáudenes y Alvarez, who had recently replaced Basilio Augustín as Spanish commander

in Manila, had taken over with orders to hold the city. Inasmuch as peace negotiations were about to get under way, Spain's bargaining position would be weakened by a surrender of the city.

On August 9, 1898, Merritt and Dewey sent an ultimatum to Jáudenes demanding that he surrender Manila. They warned that if he did not, U.S. forces would attack. Jáudenes responded by convening a meeting of his subordinate commanders, putting the issue to a vote. Seven voted in favor of immediate negotiations for a surrender, while seven were opposed. Jáudenes broke the tie, with a decision to continue the present delaying tactics. He informed the Americans that he had no authority to surrender and asked to be able to communicate with Madrid through Hong Kong. On August 10, Dewey and Merritt rejected the suggestion.

In the meantime, Dewey pursued separate negotiations with Jáudenes, working through Belgian consul in Manila Edouard André. Jáudenes then agreed to consider surrendering Manila to U.S. forces but insisted that it would have to appear that a genuine effort had been made to defend the city in order to salvage Spanish honor. Perhaps most important, the Filipino nationalists could not be allowed to enter the city, as Jáudenes feared that they would show no mercy to the Spanish defenders. He also did not want to make it appear as if Spain were surrendering to the Filipinos. Thus, Spain and the United States each had its reasons for wanting to keep Aguinaldo's men from entering Manila.

Finally, the two sides agreed that the Spanish would offer a token defense of their outer works but not of the walled city itself.

However, neither of the U.S. commanders who were to lead the attack, Generals Greene and MacArthur, had been made aware of the pact because General Merritt feared that if they had known of the arrangements, their respective attacks would have lacked authenticity.

Following expiration of the 48-hour truce, Merritt's forces prepared to move. The axis of their attack would be south to north in two essentially parallel columns. Greene's brigade would advance along the northern flank nearest Manila Bay, while MacArthur's brigade was to move along the southern flank. By prearrangement, Dewey's flagship, the *Olympia*, would fire a few token rounds at the heavy stone walls of Fort San Antonio de Abad before raising the international signal flag calling for Spain's surrender.

On the morning of August 13 amid a heavy rain, reveille was sounded. Following the naval bombardment, directed against Fort San Antonio de Abad as agreed, the American artillery opened fire, and the assault moved forward, with the troops advancing under what had turned into a drenching deluge. The Spanish resistance turned out to be heavier than Merritt had expected although not sufficient to thwart the advance. The Spanish defenders gradually fell back, and Greene moved into the city unopposed to accept the Spanish surrender.

On the right flank MacArthur found the going much tougher, exacerbated by Filipino nationalists determined to be involved in the capture of the city. As MacArthur's troops moved north along the Singalong Road, Spanish infantry positioned in a blockhouse inflicted numerous casualties on a regiment of Minnesotans. MacArthur's biggest challenge, however, was in keeping the nationalists from entering the city. As his troops moved closer to Manila, their ranks became increasingly intermingled with those of the Filipinos, and MacArthur was compelled to have his commanders hold the nationalists back from the city.

By the end of the day, U.S. troops had occupied all of Manila proper, but outside the city, Aguinaldo's troops, angry at being denied entrance, were in an ugly mood. Fortunately for the Americans, the heavy tropical storm served to help defuse the hostile mob. On August 14, a joint group of American and Spanish officers agreed to a formal capitulation agreement supplementing a preliminary agreement signed by Merritt and Jáudenes the day before.

The U.S. capture of Manila yielded some 13,000 Spanish prisoners. In addition, the United States garnered 22,000 stands of small arms, 10 million rounds of ammunition, and 70 pieces of artillery. Because Manila had been seized after the Protocol of Peace had been signed, Spanish negotiators in Paris during the autumn of 1898 argued that the U.S. capture of Manila was not valid, a point that the U.S. peace commissioners countered successfully.

Manila, Second Battle of

Event Date: February 4, 1899

The U.S. Army capture of the city of Manila in the Philippines. Relations between the United States and Emilio Aguinaldo y Famy's Philippine Revolutionary Army were strained almost from the arrival of the first elements of VIII Corps in the Philippines in late June 1898. In large part, the friction resulted from the lack of a clear policy on the part of President William McKinley, who was undecided as to exactly what the U.S. role in the Philippines ought to be once Spain was defeated. Interwoven into this political tapestry was a racial bias on the part of U.S. troops against the Filipino people, whom many soldiers regarded as inferior. In addition to vague political directives, there was an attitudinal problem that did not bode well for future relations.

For his part, Aguinaldo sought U.S. recognition of the Philippine Republic and a full partnership in defeating Spain. The McKinley administration, however, was unwilling to recognize any republican government. Indeed, General Wesley Merritt, commanding the Philippine Expeditionary Force, was specifically directed not to enter into any political arrangements with Aguinaldo. Although Merritt's instructions were otherwise ambiguous, McKinley was clear on that point.

During the summer of 1898, however, both sides were largely occupied with the task of defeating Spanish forces around Manila. During the First Battle of Manila (August 13, 1898), the relationship between the forces of Aguinaldo and Merritt deteriorated further when the Americans denied the Filipino revolutionary forces access to the old walled city of Manila; their aim was to shut out Aguinaldo's Army of Liberation from any role in determining the ultimate disposition of the Philippines during later treaty negotiations. Nonetheless, in the nearly five months following the Spanish surrender of Manila in August and the signing of the Treaty of Paris in December 1898, U.S. occupation troops and the Philippine Army of Liberation managed to more or less coexist, although the situation remained volatile.

In the aftermath of Manila's surrender, the United States insisted that the Army of Liberation retract its lines from in front of the capital city as a preventive measure in order to avoid possible exchanges with U.S. troops. Aguinaldo grudgingly acceded to the

U.S. demands, but there were frequent verbal exchanges between Americans and Filipinos, suggesting that a full-scale eruption perhaps was not far off.

That eruption occurred on the night of February 4, 1899. Exactly who fired the first shot remains a matter of dispute. The evidence suggests that the fighting was simply the result of an explosive situation awaiting only the spark needed to ignite a war that was inevitable. At any rate, in the Santa Mesa District northeast of Manila, a patrol of U.S. troops fired on some Filipino troops, supposedly as retaliation against the latter's incursion into what had been agreed to as a neutral zone. The exchange set off what would prove to be a three-year war between the United States and Aguinaldo's republican forces.

The U.S. response to the fighting was swift. On Sunday, February 5, 1899, Brigadier General Arthur MacArthur attacked along his 2nd Division front. Supported by artillery and naval gunfire, some elements of the division advanced through rice paddies, encountering minimal opposition and seizing nationalist positions. Other units had to contend with more difficult terrain and heavy Filipino fire. By the end of the second day of fighting on February 6, MacArthur's troops had driven the nationalists back and secured the high ground north of Manila.

Meanwhile, also on February 6, Brigadier General Thomas Anderson's division attacked Army of Liberation positions south of Manila. Anderson's troops—composed largely of volunteers from

the U.S. western states—were also supported by artillery as they steadily advanced. At an old Spanish position on the Pasig River, strong Filipino fire stalled Anderson's advance until supporting cross fire from a California regiment got things moving again. Then, in short order, Army of Liberation forces were in full retreat.

As the Filipinos fled, the U.S. attack lost its cohesiveness in the melee of the pursuit. Units became mixed, and organizational control was temporarily lost. General Anderson had intended to trap the Filipino forces between his two brigades, but the strategy fell apart when the attack splintered. Contributing to the confusion was a breakdown in communications all the way down the chain of command.

The fighting of February 5–6 was heavy, and by the end of the second day, the U.S. forces, and Anderson's in particular, were widely dispersed. Although the area over which much of the action of February 6–7 had taken place was largely secured, pockets of resistance remained, with considerable fighting. On February 16, for example, the Filipinos attacked one of Anderson's brigades in grand style—with trim ranks, bugles blaring, and flags flying—only to be devastated by the Americans' disciplined defensive firepower. On February 19, California and Washington troops, supported by fire from the gunboat *Laguna de Bay*, devastated Filipino positions south of Manila.

In the wake of the fighting of February 5–6, most of the Army of Liberation had fallen back to Caloocan, a dozen miles north of

Filipino insurgents outside the city of Manila in 1898. (Library of Congress)

Manila. MacArthur's plan to strike Caloocan had to be postponed, however, because of an anticipated uprising in the city of Manila itself. Finally, on February 10, MacArthur's division, supported by the guns of Rear Admiral George Dewey's squadron, attacked the Filipino positions in Caloocan, and by day's end the Americans had secured that important rail center on the line to Malolos, the newly proclaimed capital of the Philippine Republic.

Meanwhile, the uprising in Manila, which the United States had learned about through captured nationalist documents, enabled the provost guard of Major General Elwell S. Otis to arrest known revolutionaries and thus shut down the revolt before it really got started. Although some street fighting ensued, it fell far short of a full-scale revolt. The failure of the revolt to materialize—some said because of poor organization within the Army of Liberation—effectively ended the Second Battle of Manila. The next phase of General Otis's effort to defeat Aguinaldo's Army of Liberation began with a spring campaign against the capital of Malolos.

Manila Bay, Battle of

Event Date: May 1, 1898

The Battle of Manila Bay was the decisive naval engagement of the Spanish-American War. Commodore George Dewey's U.S. Asiatic Squadron was at Hong Kong when he was informed on April 23 by the British acting governor, Major General Wilson Black, that war had been declared. Black then issued a proclamation of British neutrality and ordered Dewey's ships to leave Hong Kong's territorial waters by noon the next day.

Dewey repaired to Mirs Bay, an anchorage in Chinese waters, and there received a cablegram from Washington ordering him to the Philippines. It instructed him to "commence operations at once, particularly against the Spanish fleet. You must capture vessels or destroy. Use utmost endeavors."

Dewey's squadron consisted of the protected cruisers *Olympia* (flagship), *Baltimore*, *Boston*, and *Raleigh*; the gunboats *Concord* and *Petrel*; and the *McCulloch*, a revenue cutter that was pressed into service. Dewey left behind the old paddle wheeler *Monocacy*,

but two colliers also accompanied the squadron. He was concerned about his ammunition supply, for when the squadron departed for the Philippines, the ship magazines were only about 60 percent of capacity. Before sailing, he conferred with the former U.S. consul to the Philippines, Oscar Williams, who had left Manila under threat of his life on April 23. Williams briefed Dewey and his commanders on board the *Olympia* only an hour before their departure on April 27, confirming that the American squadron was superior to that of the Spanish, which would most likely be found in Subic Bay, 30 miles from Manila.

That same afternoon, the Americans ships departed Chinese waters. They made landfall at Cape Bolineau, Luzon, at daybreak on April 30. Dewey detached the *Boston* and *Concord*, later reinforced by the *Baltimore*, to make a quick reconnaissance of Subic Bay. The Americans soon determined that the Spanish squadron was not present. Reportedly, Dewey was pleased at the news and remarked, "Now we have them."

Dewey then ordered his ships to steam to Manila Bay, which the squadron entered on the night of April 30. He chose to ignore the threat of mines and the fortifications guarding the entrance to the bay. He selected Boca Grande channel, and the ships steamed in single file with as few lights as possible. Not until the squadron had passed El Fraile rock did the Spanish discover the American presence. Both sides then exchanged a few shots but without damage. The American ships were now into the bay. Detaching his two supply ships and the *McCulloch*, Dewey proceeded ahead, although he did not intend to engage the Spanish until dawn.

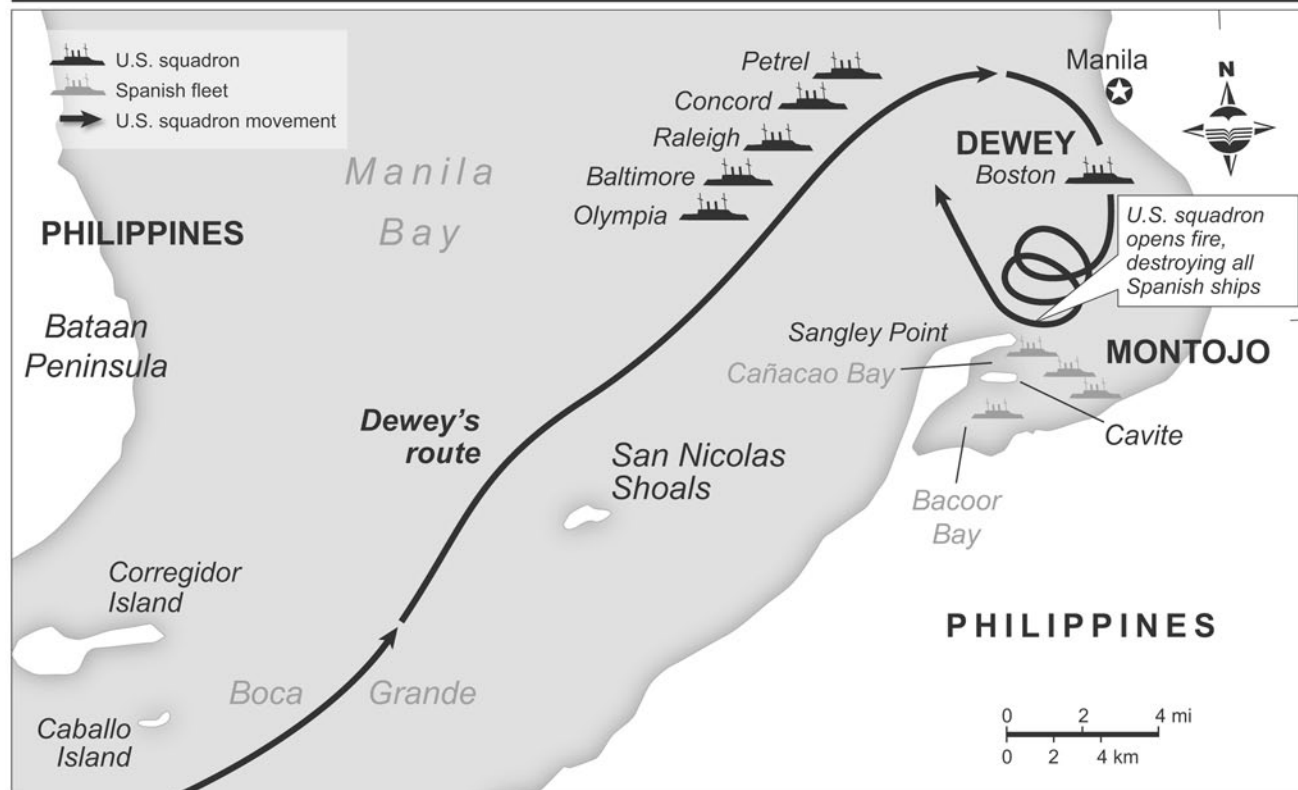

The Spanish had some 40 naval vessels in and around Manila, but most were small gunboats. Spanish rear admiral Patricio Montojo y Pasarón's squadron consisted of six ships: the two large cruisers *Reina Cristina* and *Castilla* (of about 3,000 tons each and the latter of wood) and the five small cruisers *Don Juan de Austria*, *Don Antonio de Ulloa*, *Isle de Cuba*, *Marqués del Duro*, and *Isle de Luzon*. Each of these was a very small cruiser of less than 1,200 tons, and none had more than four 4.7-inch guns in its main battery. Other ships were undergoing repairs. The Spanish warships were greatly inferior in armament to the American squadron, the crews of which were also better trained.

Montojo originally had his ships at Subic Bay during April 26–29, but its promised shore batteries were not yet in place, and the harbor entrance had not been mined. The water there was also 40 feet deep. Pessimistic about his chances and reportedly deciding that if his ships were to be sunk he would prefer it to occur in shallower water, Montojo had returned them to Manila Bay. His captains concurred with the decision.

Estimated Casualties of the Battle of Manila Bay

	<i>Killed in Action</i>	<i>Wounded</i>

United States	0	8

NAVAL BATTLE OF MANILA BAY, MAY 1, 1898

To help offset his weakness in firepower, Montojo anchored his ships in Cañacao Bay just south of Manila off the fortified naval yard of Cavite so that they might be supported by land batteries. There the water was only 25 feet deep, and if the ships were sunk or had to be scuttled, the Spanish crews would stand a better chance of escape. Not believing that there was any immediate threat from the Americans, Montojo went ashore for the night only to be alerted to their presence by the sounds of the exchange of gunfire on Dewey's ships entering the bay.

Early on the morning of May 1, only a week after the declaration of war, Dewey's ships steamed toward Manila, with the *Olympia* leading followed by the *Baltimore*, *Raleigh*, *Petrel*, *Concord*, and *Boston*. Off Manila a little after 5:00 a.m., the Spanish shore batteries opened up with wildly inaccurate fire that inflicted no damage. The *Boston* and *Concord* returned fire. Dewey then turned his ships toward the Spanish squadron. As the American ships advanced in single line, two Spanish mines exploded at some distance away from the *Olympia* and without effect. Advancing to about 5,000 yards of the Spanish line, at 5:40 a.m. Dewey turned to his flag captain Charles Gridley of the *Olympia* and said, "You may fire when you are ready, Gridley."

The ships of the American squadron then closed to about 3,000 yards and turned to the west, running parallel back and forth along the Spanish line and pounding it with their guns. The 8-inch guns of the U.S. cruisers, hurling 150-pound shells, exacted the most damage. The Spanish ships and shore batteries responded but failed

to inflict significant damage. Dewey then called a halt to assess damage and the status of ammunition stocks, and at the same time he ordered breakfast served to the crews.

At 11:16 a.m., the U.S. ships stood in again to complete their work. Within little more than an hour they had sunk the remaining Spanish vessels firing at them and had secured the surrender of the naval station at Cavite. Dewey then sent a message to the Spanish commander at Manila that if the shore batteries did not cease fire, he would shell and destroy the city. Shortly thereafter, the city's guns fell silent.

In the ships and at Cavite, the Spanish lost 167 dead and 214 wounded, all but 10 aboard the ships. Three of the Spanish ships were later salvaged and pressed into service by the Americans. The Americans had no men killed and only 8 wounded. Rarely was a victory more cheaply obtained.

Dewey then took Cavite and blockaded the city of Manila while awaiting troops to take it. On June 30, Major General Wesley Merritt and 10,000 men arrived. On August 13, the troops, assisted by naval gunfire from Dewey's squadron and Filipino guerrillas under Emilio Aguinaldo y Famy, attacked Manila. After a short nominal defense, the city surrendered. In only 10 weeks' time, the United States had secured an empire from Spain, and it was control of the ocean that had enabled it to do so. The Philippines were secured to provide a bargaining chip to persuade Spain to conclude peace, but in the final peace agreement the United States decided to keep the islands. This led to a war with Filipino nationalists who wanted

independence and set up the future confrontation between the United States and Japan.

Manzanillo, Cuba, Actions at

Start Date: June 30, 1898

End Date: August 12, 1898

Series of U.S.-Spanish clashes at Manzanillo, Cuba, during June 30–July 1, July 18, and August 12, 1898, involving American and Spanish ships. Manzanillo lies approximately 85 miles west of Santiago de Cuba on the Gulf of Guacanayabo. Although surrounded by malarial swamps, during the Spanish-American War it possessed strategic importance because it lay astride an overland supply route to Santiago de Cuba during the U.S. naval blockade of Cuba. U.S. naval squadrons attempted to destroy the Spanish naval forces based at Manzanillo on June 30 and July 1 but were repulsed. A stronger U.S. naval squadron destroyed 10 ships in Manzanillo's harbor on July 18 and bombarded the city on August 12 but ended fire once the armistice had been signed that same day.

Manzanillo also served as a substantial trading port, and as soon as North Atlantic Squadron commander Rear Admiral William T. Sampson obtained shallow-draft naval vessels, he took steps to include Manzanillo in the blockade. On June 30, several small ships—the armed yachts *Hist* and *Hornet* and the armed tug *Wompatuck*—began a reconnaissance of Manzanillo. On their approach, the U.S. squadron encountered and engaged a Spanish armed launch, the *Centinela*, that subsequently sank after being hit by U.S. fire. When the American squadron approached the port of Manzanillo late that afternoon, they were met by the Spanish gunboats *Delgado Perrado*, *Estrella*, *Guantánamo*, and *Guardian*; the disabled gunboats *María* and *Cuba Española*; and a shore battery. In the ensuing exchange of fire, the *Hornet* was hit and immobilized, and both the *Wompatuck* and *Hist* were also hit several times. The *Wompatuck* was able to tow the *Hornet* to safety, and the U.S. squadron retired. The U.S. squadron suffered only three injuries (all on board the *Hornet*), while Spanish forces reported two dead and six injured aboard two ships and in Manzanillo itself.

The next day, on July 1, with the Americans believing that they had inflicted much more damage than was the case and that only the Spanish shore battery remained a threat and with the other U.S. ships having gone to Guantánamo to coal, the armed yacht *Scorpion* and the armed tug *Osceola* steamed to Manzanillo to engage the shore battery. Twenty minutes of firing caused no damage to the shore battery, but the *Scorpion* was struck a dozen times by return fire in the 23-minute engagement. Miraculously, it suffered no casualties. The U.S. squadron then withdrew, postponing further attacks until additional ships could be marshaled.

On July 18, 1898, the U.S. gunboats *Wilmington* and *Helena* along with the *Hist*, *Hornet*, *Scorpion*, *Wompatuck*, and *Osceola* steamed into Manzanillo Harbor. Remaining out of range of Spanish shore guns, they proceeded to destroy 10 Spanish ships in the harbor. The Spanish were outgunned and unable to retaliate effectively. Later they transferred remaining naval guns to the shore. U.S. forces suffered no casualties in the engagement, while the Spanish sustained casualties of 3 dead and 14 wounded.

On August 12, 1898, U.S. Navy captain Caspar F. Goodrich called upon the Spanish commander at Manzanillo to surrender. When the latter refused, Goodrich ordered the ships in his squadron—which included the cruiser *Newark*; the auxiliary gunboats *Hist*, *Osceola*, and *Suwanee*; the transport *Resolute*; and the captured Spanish gunboat *Alvarado*—to shell the port. At the same time, Cuban insurgents attacked by land. The bombardment began in late afternoon and continued intermittently through the night. When Goodrich received word the next morning that the armistice had been signed, he ordered fire ended. This action resulted in no American casualties. Spanish casualties were 6 dead and 31 wounded. Goodrich then sent men ashore to take possession of Manzanillo.

María Cristina, Queen Regent of Spain

Birth Date: July 21, 1858

Death Date: February 6, 1929

Second queen consort of Spanish king Alfonso XII (1879–1885) and queen regent of Spain from 1885 to 1902. María Cristina was born on July 21, 1858, to Archduke Ferdinand of Austria and his wife Archduchess Elisabeth Franziska at Zidlochovice Castle near Brno,

María Cristina, queen regent of Spain during 1885–1902. (James Rankin Young and J. Hampton Moore, *History of Our War with Spain*, 1898)

Moravia (in what is now the eastern part of the Czech Republic). María Cristina was tutored privately and became betrothed to King Alfonso XII, whose first wife had died after less than two years of marriage. The union had produced no heirs.

On November 29, 1879, Alfonso and María Cristina were married in Madrid. Their marriage produced three children (two girls and a boy). The boy was born in May 1886 shortly after his father died and would become Alfonso XIII at the age of 16. Beginning in 1885, María Cristina ruled Spain as queen regent until her son came of age and ascended the throne in 1902.

By most accounts, María Cristina's reign was a smooth one except for some domestic unrest as a result of the Spanish-American War. As a conservative force in Spanish politics, she hoped to maintain what was left of Spain's once grand empire. Complicating her reign were the frequent shifts in Spanish governments, from liberal to conservative and back again. As the situation in Cuba deteriorated during the Cuban War of Independence (1895–1898), the queen made it clear that she not only disapproved of Governor-General Valeriano Weyler y Nicolau's heavy-handed tactics but also believed that he was one of the most pernicious men in the Spanish Empire. Nor did she have much use for the policies of conservative prime minister Antonio Cánovas del Castillo y Vallejo.

As events careened toward war in late 1897 and early 1898, María Cristina tried several times to avert war with the United States by enlisting the help of other European powers. She wrote to Britain's Queen Victoria (the two women were cousins) requesting her assistance in drumming up international support for Spain. Although Victoria would view U.S. motives in the Spanish-American War with suspicion and the war as a potential threat to the British Empire, her views were not shared by Lord Salisbury's cabinet. Consequently, she rebuffed her cousin's plea. María Cristina did not stop there. She also requested aid from both France and tsarist Russia but was again politely rebuffed.

Not willing to give up the last vestiges of the Spanish Empire, María Cristina sullenly agreed to the war with the United States in the vain hope that Spanish troops might prevail. When that did not occur, she quickly approved the Treaty of Paris in March 1899 over the strenuous objections of many of her advisers.

When her son came of age and ascended the throne as Alfonso XIII in 1902, María Cristina largely retired from the public spotlight, although Spaniards continued to respect and honor her for her service to their country. After 1902, she busied herself with family affairs and charitable work. María Cristina died in Madrid on February 6, 1929.

Mariana Islands

The northernmost component of Micronesia, the Mariana Islands are an archipelago of 15 islands located in the northwestern Pacific Ocean between the 12th and 21st latitudes. The Mariana Islands encompass just 389 square miles and have a small population. Guam is by far the largest island, covering some 200 square miles. The islands are the southern part of a submerged mountain range that extends over 1,500 miles from Japan to Guam. Geographically, the Mariana Islands can be divided into two categories. The 10 northern islands (Agrihan, Almagan, Anatahan, Asuncion, Farallon de Medinilla, Farallon de Pajaros, Guguan, Maug, Pagan, and Sari-

gan) are volcanic, while the five southern islands (Aguijan, Guam, Rota, Saipan, and Tinian) are limestone islands surrounded by coral reefs. Because of volcanic activity, the northern islands are virtually uninhabited. Most people, therefore, live on Guam or Saipan. Rising to 2,700 feet, the volcano on Agrihan is the highest point in the Marianas. Except for Farallon de Medinilla and Farallon de Pajaros, the vegetation on the islands is densely tropical and resembles that of the Philippines.

Portuguese explorer Ferdinand Magellan, sailing in the service of Spain, discovered the Mariana Islands on March 6, 1521. He promptly engaged in trade with the local Chamorro people in order to procure fresh supplies. The Chamorro people mistakenly assumed that the Europeans had also traded one of their landing boats, and the confusion resulted in a skirmish with the Spaniards. Three days after arriving, Magellan fled the islands under attack. The European sailors subsequently dubbed the islands the *Islas de los Ladrones* (Islands of the Thieves). As a result, many sailors simply referred to the islands as the *Ladrones*. Subsequent navigators and sailors also referred to the islands as the San Lazarus Islands, the *Jardines*, and the *Prazeres*.

In 1665, Spanish Jesuit missionary Diego Luis de San Vitores, who had visited the islands in 1662, convinced King Philip IV and Queen Mariana to establish a mission in the archipelago. In 1668, San Vitores named the archipelago Las Marianas in honor of the widow of Spanish king Philip IV. Although the Marianas initially had an indigenous population of more than 50,000 people, they were quickly decimated by diseases brought by the Europeans for which the natives had no immunity. Within 100 years, as a result of disease and miscegenation, less than 2,000 pure Chamorro people remained. During the 19th century, however, the indigenous population, augmented with colonists from the Caroline Islands and the Philippines, increased. The Mariana Islands remained a subsidiary of the Spanish colonial government in the Philippines until the Spanish-American War.

In December 1898, Spain formally ceded Guam to the United States. German protests against U.S. efforts to acquire all of the Mariana Islands with the 1898 Treaty of Paris resulted in Spain's continued political control over the remaining 14 Mariana Islands. On February 12, 1899, Spain sold the remaining islands to Germany for \$4 million. The Germans then incorporated the 14 islands and their 2,646 inhabitants into the German Protectorate of New Guinea.

For the Americans, the occupation of Guam was key to their efforts to project power into Asia, protect trade routes, and administer and supply their newfound holdings in the Philippines. Possessing a commodious and accessible harbor, Guam served as a strategic coaling station and became home to a sizable U.S. naval base. Since 1898, Guam has served almost continuously as a key American naval base in the Pacific.

During World War I, Japan invaded the Mariana Islands (except Guam). After the war, the League of Nations gave the Japanese a mandate over the islands. During World War II, Japan occupied Guam for almost three years while the United States sought the is-

lands as a base from which to attack the Japanese mainland. In August 1945, U.S. Boeing B-29 bombers *Enola Gay* and *Bockscar*, which dropped the atomic bombs on Hiroshima and Nagasaki, respectively, flew from Tinian Island.

After World War II, the islands were administered by the United States as part of the United Nations Trust Territory of the Pacific Islands. In 1978, the Northern Mariana Islands became a commonwealth associated with the United States. Guam, meanwhile, remains an unincorporated territory of the United States administered by the Department of the Interior's Office of Insular Affairs.

Mariel, Cuba

Cuban port city situated about 25 miles south-southwest of Havana and the initial U.S. proposed landing and staging site for a ground invasion of Cuba. Mariel lies along the southeast portion of Mariel Bay and is the closest major port to the continental United States. Because of Mariel's proximity to Havana and the United States, U.S. military planners envisioned using the city as a staging area from which American forces would launch an assault against Havana, which was at the heart of the Spanish colonial government. Even before formal hostilities commenced in April 1898, an army-navy advisory board had seen Mariel as key to a ground invasion of Cuba via Havana.

During the second week of May 1898, however, President William McKinley held a series of strategy sessions with his key military advisers. These included Secretary of War Russell A. Alger, commanding general of the army Major General Nelson A. Miles, and Secretary of the Navy John D. Long. The sessions were often contentious mainly because of constant bickering between Long and Alger and interservice rivalry.

The White House, along with the U.S. Navy, advocated a prompt invasion of Cuba, using Mariel as the first landing and staging area. Miles demurred on an immediate invasion, primarily because he knew that the U.S. Army was still ill-prepared for such an expedition. Alger disagreed with Miles and also pushed for an immediate ground assault. The navy, in fact, believed itself prepared for an immediate descent on Cuba, and Long took considerable relish in reminding Miles and Alger of this fact.

Annoyed by Long's posturing, Alger precipitously tasked Miles with preparing for a major ground assault aimed at occupying Havana. Miles was told to prepare for the expedition, which would commence with a landing at Mariel with about 75,000 troops. Miles was frustrated with Alger's impatience but nevertheless began to assemble such a force.

The final plan had U.S. regular forces landing at Mariel, capturing it, and creating a staging area there. That was to be followed by the arrival of reinforcements (largely U.S. volunteer forces) and a joint effort against Havana. On May 10, 1898, V Corps, then still in Florida, was ordered to begin the offensive by landing and taking Mariel. The plan, however, was never implemented.

Several problems led to this plan being shelved. First, the logistics involved in supplying such a large expeditionary force so far from American shores proved daunting. Second, few U.S. Army volunteer units were ready to deploy. Indeed, many of these had been only partly trained, and even more had yet to be properly armed and equipped. Finally, the Spanish decision to deploy its naval forces at Santiago de Cuba meant that those naval assets would have to be defeated or otherwise immobilized before an invasion could take place at Mariel. It was in fact the naval war that decided the U.S. ground strategy in Cuba.

Reducing the Spanish squadron at Santiago de Cuba became a joint army-navy affair, and following the July 3, 1898, U.S. naval victory at Santiago, U.S. invasion forces entered Cuba chiefly through that port, rather than Mariel. Indeed, Havana itself saw almost no action during the brief war, in stark contrast to what might have been the case had the Mariel invasion plan been carried out.

Marinduque

Philippine island located 11 miles from the coast of Luzon where United States armed forces trained soldiers in pacification tactics and carried out a pacification campaign during the Philippine-American War (1899–1902). Somewhat circular in shape, Marinduque is a small island of 370 square miles in the Sibuyan Sea, south of Luzon's Tayabas Bay in the Philippine archipelago. Despite a rugged topographical interior that inhibits travel, the is-

land is blessed with palm-lined coastlines, green highlands, and dry as well as rainy seasons.

At the start of the insurgency, about 50,000 Filipinos lived on Marinduque. They spoke Tagalog; produced hemp, rice, and coconuts; and raised cattle. The island's landowning and commercial elite exercised political, social, and economic authority and governed from Boac, the provincial capital, through 7 other towns and 96 villages.

The upper classes of Marinduque supported the war of liberation against the Americans. The insurgent leader for the Philippine Republic on Marinduque was Martin Lardizabal, and the insurgent military commander was Lieutenant Colonel Maximo Abad. Abad led the Marinduque Battalion as well as a poorly armed militia. He had at least nominal control of as many as 2,500 part- and full-time guerrilla fighters.

In early 1900, Major General John C. Bates, commander of U.S. forces in southern Luzon, decided to occupy Marinduque to prevent its use as a haven and supply base for Filipino insurgent forces. He also hoped to seize the island's cattle to feed Manila's population. On April 25, 1900, Colonel Edward E. Hardin's battalion of the 29th U.S. Volunteer Infantry Regiment arrived at Marinduque and was later reinforced by Major Charles H. Muir's Company D of the 38th U.S. Volunteer Infantry Regiment. On May 20, Muir defeated Filipino fighters at Santa Cruz and mounted an operation into the interior before being replaced by Captain Devereux Shields's Company F of Hardin's battalion. Filipino harassment and another American campaign into the Santa Cruz area followed, with Shields and 52 soldiers and a hospital corpsman being ambushed in the interior on September 13, 1900, by a force of 250 riflemen and some 2,000 bolomen. After Shields was wounded, the command surrendered.

Santa Cruz then came under insurgent siege, and Bates directed Colonel George S. Anderson to reinforce the garrison. Believing that many of Marinduque's inhabitants supported the guerrillas, Anderson requested additional troops.

In October 1900, Major General Arthur MacArthur ordered two battalions of the 1st U.S. Infantry under Brigadier General Luther R. Hare to Marinduque. MacArthur sent orders to Hare to treat the entire adult male population of the island who were older than 15 years of age as hostile and to arrest as many of them as he could and hold them as hostages until the insurgents surrendered. Hare secured Shields's freedom, arrested all the adult males he could find, and destroyed villages and food stocks. General Bates encouraged Lieutenant Colonel A. W. Corliss, Hare's successor, to continue such aggressive policies. Corliss proceeded to lay waste to much of the island in a series of 30 expeditions during December 1900–January 1901. In the process, Governor Lardizabal was arrested, and many of the elite surrendered. The installation of civil government and Philippine police patrols, including detachments of the Philippine Constabulary, brought some quiet to the island's largest communities.

Major Frederick A. Smith took charge on February 6, 1901, and embraced Corliss's methods with two exceptions. Smith stopped the devastation of livestock and hemp, and he concentrated the population in American-held towns. All civilians were now gathered in six concentration centers to keep them from aiding the guerrillas. Those found to be aiding the insurgency were labeled as enemy combatants and jailed. Reminiscent of the Spanish *reconcentrado* (reconcentration) policy in Cuba, the American tactic did help U.S. officials assert control over the island. Separated from popular support and menaced by repeated U.S. forays into the interior, Abad gave up on April 15, 1901. By early May, Philippine commissioners confirmed the island's pacification and the institution of civilian rule. During the pacification campaign on Marinduque, U.S. forces suffered 27 casualties, apart from the more than 50 men captured. Abad's guerrillas sustained some 100 casualties, while 200 others were taken captive.

Martí y Pérez, José Julián

Birth Date: January 28, 1853

Death Date: May 19, 1895

Cuban independence leader, poet, and writer. Considered by many to be the national hero of Cuba, José Julián Martí y Pérez is often called the Apostle of Cuban Independence. Born in Havana, Cuba, on January 28, 1853, he was the son of a professional soldier. Although he was too young to participate in the Ten Years' War (1868–1878), that futile struggle of Cuban nationalists against Spain had an enormous impact on the young Martí, who cultivated and nurtured democratic ideals and the goal of Cuban independence.

A talented painter, Martí enrolled in a professional school in Havana for sculpting and painting. He also began to write inflammatory essays and plays that were critical of Spanish authority and promoted Cuban independence. He published his first political writings in the only edition of the newspaper *El Diablo Cojuelo* in 1869. His well-known sonnet "10 de Octubre" was also written that same year.

In March 1869, the Spanish authorities closed Martí's school and in October arrested him on a charge of treason. Four months later, he was convicted and sentenced, at age 16, to prison for six

Considered by many Cubans to be their national hero, José Martí y Pérez led the fight for independence from Spain. He was killed in battle with Spanish troops in 1895. (Library of Congress)

years. He fell ill and was sent to the Isla de Pinos in lieu of imprisonment. In 1871, he was paroled and sent to Spain, where he studied law and secured a bachelor of arts degree. He also continued to write in support of a free and independent Cuba. He then spent some time in France and also traveled in Latin America.

In 1877, Martí returned illegally to Cuba under an assumed name. In Havana, he continued to agitate for Cuban independence. Arrested and again deported to Spain in 1878, in 1880 he traveled to New York City, where he acted as the joint consul for Argentina, Paraguay, and Uruguay.

Martí traveled the East Coast of the United States, cultivating assistance for the Cuban cause especially from among the Cuban exile community in Florida. In January 1892, he established the Partido Revolucionario Cubano (Cuban Revolutionary Party). He also edited the party's newspaper, *Patria*. His efforts made him the central figure in the Cuban revolutionary movement. While in New York City, he also published his greatest literary works, including his collections of poetry, *Versos Sencillos* and *Versos Libres*.

An idealist and visionary whose life was dedicated to the Cuban cause, Martí firmly believed that Cuba should be built on democratic principles, to apply regardless of an individual's race. He insisted that all citizens should both exercise their political rights and undertake obligations owed to the state. He drew to his ranks other

notable Cuban revolutionaries, including Máximo Gómez y Báez and Antonio Maceo Grajales.

The Cuban War of Independence began with the Grito de Baire in February 1895. On March 25, Martí and Gómez issued the “Manifesto of Montecristi” calling for Cubans to take up arms in the fight for independence. Martí arrived in Cuba from Florida with Gómez on April 11 only to be killed in battle with Spanish troops at Dos Ríos on May 19, 1895. His loss was a tremendous blow to the revolutionary cause. However, in no small part due to his unceasing labors on its behalf, the revolution was able to carry on without its most eloquent and determined spokesman. Martí wrote extensively (one edition of his complete work runs 28 volumes). The most popular have been his books for children, of which the best known is *La Edad de Oro* (The Golden Age). José Martí International Airport at Havana and the city of Martí in Cuba are named for him.

Martínez de Campos, Arsenio

Birth Date: December 14, 1831

Death Date: September 23, 1900

Spanish military officer, politician, and captain-general of Cuba (1876–1879, 1895–1896). Arsenio Martínez de Campos was born in Segovia, Spain, on December 14, 1831. After receiving a military education, he joined the officer corps in 1852 and served in Morocco from 1858 to 1860. He also participated in the 1861 joint British, French, and Spanish seizure of the Veracruz customhouse after Mexican President Benito Juárez declared a moratorium on the payment of his nation's international debt.

In 1868, at the outbreak of the Ten Years' War (1868–1878), Martínez posted to Cuba. He attained the rank of brigadier general in 1869. Believing that the draconian policies orchestrated by Captain-General Blas Villate would be counterproductive to quelling Cuban resistance, Martínez returned to Spain in 1872. He

Spanish general Arsenio Martínez de Campos was Spanish captain-general of Cuba during 1895–1896. Believing that a military victory against the Cuban rebels was impossible without inhumane methods, Martínez resigned his position. He was replaced by General Valeriano Weyler. (Library of Congress)

then fought against the Carlists in the Third Carlist War (1872–1876). In charge of the military garrison in Valencia, he secured several victories against the Carlists in eastern Spain.

On December 29, 1874, Martínez, troubled by the continued inability of the republicans to restore order, announced his support for King Alfonso XII, which led to many other Spanish generals declaring their support for the son of exiled Queen Isabella II. This ultimately resulted in the restoration of the Bourbon monarchy in 1875.

After the defeat of the Carlists in 1876, Alfonso XII sent Martínez to Cuba to end the Ten Years' War. While serving as the captain-general of Cuba from October 1876 to February 1879, Martínez signed the Pact of Zanjón with the Cuban revolutionaries on February 10, 1878. Indicative of his belief that conciliatory gestures would be more successful than force, the Pact of Zanjón granted the Cubans more autonomy and emancipated those slaves who had participated in the revolution. Although the peace treaty failed to attain Cuban independence or the complete end of slavery on the island, it did, albeit temporarily, end hostilities in Cuba. Cuban

discontent with the Pact of Zanjón, however, led to the Little War (Guerra Chiquita) from 1879 to 1880, which erupted in August after Martínez had returned to Spain.

Martínez initially supported the Conservative Party led by Antonio Cánovas del Castillo and briefly served as prime minister from March 7 to December 9, 1879, but was forced to leave the Conservative Party after he announced that slavery would be abolished in the Spanish Empire by 1888. Martínez then supported the Liberal Party, led by Práxedes Mateo Sagasta, who made him minister of war in 1881. Martínez founded the Academia Militar General (General Military Academy) in Zaragoza in 1884. He also successfully led Spanish troops in Morocco from September 1893 to January 1894 and negotiated the Treaty of Marrakech, which ended the war with Morocco on January 29, 1894.

Following Cánovas's return to power in March 1895, the Conservative prime minister sent Martínez to Cuba in April 1895 to end the Cuban War of Independence. Unwilling to implement harsh policies, Martínez, who became convinced that a military victory in Cuba was impossible, resigned his post in January 1896 and was replaced by General Valeriano Weyler y Nicolau, who implemented the notorious *reconcentrado* (reconcentration) system. Rather than defeating the Cuban rebels, Weyler's plan led to U.S. intervention in the Cuban War of Independence. Martínez returned to Spain and served as president of the Supreme War and Navy Council until his death in Zarauz, Spain, on September 23, 1900.

Massiquisie, Battle of

Event Date: September 13, 1900

Battle between U.S. forces and Filipino insurgents during the Philippine-American War of 1899–1902. The engagement took place near the town of Massiquisie on the island of Marinduque on September 13, 1900. Marinduque, an island of about 400 square miles in size, lies just 11 miles off the southern coast of Luzon, southwest of Quezon Province.

Marinduque possesses a rugged, mountainous interior and experiences both rainy (June into October) and dry (November into February) seasons. In 1900, Marinduque, with a population of some

50,000 people, was administered through 5 municipalities, including the capital of Boac, and 96 barrios (towns or villages). Its chief products were hemp and rice. Reportedly, some 250 active guerrilla fighters on the island enjoyed the support of as many as 2,000 part-time insurgents. The principal guerrilla leaders were Martin Lardizabal and Lieutenant Colonel Máximo Abad. In April 1900, Major General John C. Bates, commander of the U.S. military campaign in southern Luzon, deployed a battalion of the 29th U.S. Volunteer Infantry Regiment to Marinduque, and over the next two years the island was occupied by various army units. Although these units conducted patrols in the interior, Abad steadfastly refused to engage in pitched battle with the Americans.

Captain Devereux Shields, commander of Company F of the 29th Volunteer Regiment, was determined to pursue aggressive action. He established a base at Santa Cruz on Marinduque's northeastern corner and carried out 13 operations during July and August. None of these ventured more than 10 miles from Santa Cruz, however. Aided by the local populace and Marinduque's rugged terrain, Abad evaded Shields with little difficulty.

In early September, the presence of the U.S. Navy (ex-Spanish) gunboat *Villalobos* gave Shields the opportunity to deploy his forces to Torrijos, located on Marinduque's southeastern coast. Ordering First Lieutenant M. H. Wilson and 41 soldiers to defend Santa Cruz, Shields and 51 others traveled via the gunboat by water to land on September 11 near Torrijos. There the Americans scattered a group of 20 guerrillas and demolished their compound.

On September 13, Shields and his troops marched into the interior, intending to return to Santa Cruz. Abad then massed virtually his entire insurgent force of some 250 men with rifles and another 2,000 with bolos beside a vertical height overlooking the path. Shields led his detachment right into the trap. Following several hours of fighting, he ordered a withdrawal into a concealed gorge. But this soon became a dash through a rock-strewn stream as he and his men struggled to flee the insurgent flanking columns that were attempting a double envelopment. After withdrawing for more than 3 miles, the harassed Americans took cover in a rice paddy close to the town of Massiquisie; guerrilla rifle fire compelled them to seek shelter behind paddy dikes. Shields was among the wounded.

With no other recourse, Shields surrendered his entire force. Four Americans died in the action, and all others were taken prisoner, 6 of them wounded. The Americans estimated that 30 insurgents had perished in the fight, but this figure was never verified. Following months of stealth, in less than a day of fighting Abad had eliminated a third of the U.S. force on Marinduque.

The Battle of Massiquisie prompted sharp reprisals from the Americans, who reinforced their garrisons on the island and launched a number of stronger punitive raids, which did little to cripple guerrilla activities.

Matanzas, Cuba

City and province located in the northwestern part of Cuba. The city of Matanzas is located approximately 50 miles east of Havana. The Spanish word *matanzas* means "massacre" and is a reference to a massacre of Spanish soldiers as they attempted to cross one of the city's rivers during the early colonial period.

Besides the city of Matanzas, the province's other major cities include Jovellanos, Veradero, and Cárdenas, the latter the site of a brief naval engagement between U.S. and Spanish forces in May 1898. Cuba's second largest province in terms of land mass, Matanzas Province consists of relatively flat terrain. It has a long coastline to the north and south. The northern coast is known for its many small cays (keys, or small islands) and its enormous mangrove swamps. Cárdenas is located on the province's northern coast and sits along Cárdenas Bay (Bahía de Cárdenas), a commodious if shallow body of water. Along the province's southern coast is a huge

marsh, Ciénaga de Zapata, and a peninsula with the same name. Matanzas's southern shoreline also includes the Bay of Pigs (Bahía de Puercos), the site of the failed U.S.-backed Cuban invasion of April 1961.

Matanzas Province served as the center of the sugar and sugar-refining industries. The city of Matanzas, situated along the province's northern shore, has long been noted for its rich Afro-Cuban folklore and is sometimes referred to as the "city of bridges" because of the three rivers that run through it.

Jovellanos, located in the interior section of Matanzas Province, was mainly an industrial area where sugar-processing facilities abounded. Veradero, located on the Hicacos Peninsula, is situated on the eastern end of the peninsula and is renowned for its beautiful beaches. During the 20th century, this seaside resort developed into a major tourist destination and was among the largest resorts in the Caribbean.

Formally established only in 1828, Cárdenas grew quickly owing to the rich surrounding lands and its access to Cárdenas Bay, a wide but shallow body of water that limited access to smaller vessels only. Cárdenas is protected by a large promontory and is strategically positioned between the ocean to the north and hills to the south and southeast. In 1850, the city became momentarily famous when the Venezuelan soldier of fortune Narcisco Lopez launched a filibustering expedition there. After occupying the town for nearly a day, he abandoned it when it had become clear that the locals were not

The armored cruiser *New York* and other U.S. warships shelling the batteries of Matanzas, Cuba, on April 27, 1898. The drawing is by Rufus F. Zogbaum, who was on board the *New York*. (*Harper's Pictorial History of the War with Spain*, 1899)

flocking to his cause. It had been Lopez's intention to free Cuba from Spanish colonial rule.

Although the bay at Cárdenas was too shallow for most naval vessels, including blockade runners, U.S. North Atlantic Squadron commander Rear Admiral William Sampson sought to prevent supplies from reaching the Spanish through Cárdenas or Matanzas. In late April 1898, just days after the declaration of war, a minor naval skirmish took place off the coast of Cárdenas between American and Spanish ships. That same month, U.S. ships blockaded Matanzas, which also came under fire from the battleship *New York*, the protected cruiser *Cincinnati*, and the double-turreted monitor *Puritan*.

The following month, on May 8, 1898, the U.S. torpedo boat *Winslow* entered the bay at Cárdenas and fired on a Spanish gunboat and armed tugs that were present there in an effort to draw them out of the bay where the cruiser *Wilmington* and gunboat *Macias* were lying in wait. This attempt failed, but three days later, on May 11, the *Wilmington*, *Macias*, and *Winslow* and the revenue cutter *Hudson* returned to Cárdenas. The American ships duelled with the Spanish shore batteries and the gunboats *Alerta* and *Ligera* and the armed tug *Antonio López*. The *Winslow* was seriously damaged in the exchange with a Spanish shore battery and had to be towed out to sea by the *Hudson*. Five crewmen died, and three others were wounded. Among the dead was Ensign Worth Bagley, believed to be the first naval officer killed in the war. On the Spanish side, two ships were damaged, part of Cárdenas was set on fire, and seven people were killed.

Mayagüez, Battle of

Event Date: August 11, 1898

Brief skirmish between American and Spanish forces at Mayagüez, Puerto Rico. Mayagüez was located on the west coast of Puerto Rico. At the time the fourth largest city in Puerto Rico with a population of 28,000 people, Mayagüez was unfortified. On August 1, Spanish colonel Julio Soto Villanueva commanded the Mayagüez district with a force of 1,362 men.

Opposing him was a U.S. brigade under Brigadier General Theodore Schwan, assigned to Major General John R. Brooke's I Corps. Schwan's brigade consisted of three battalions of the 11th

U.S. Infantry Regiment, the 1st Kentucky Volunteer Infantry Regiment, Troop A of the 5th U.S. Cavalry Regiment, and two batteries of artillery from the 3rd and 5th Artillery Regiments, in all some 2,900 men.

Schwan's brigade had landed at Ponce, Puerto Rico, on July 31 and then moved westward along the coast to Guánica. The men met only light resistance along the way. Schwan's orders called on him to secure western Puerto Rico. In the process, his men advanced 92 miles in less than nine days, captured nine towns, engaged in two brief battles, and took 192 Spanish prisoners. On August 10, Schwan's brigade took part in the Battle of Silva Heights, the brigade's first real engagement, near Hormigueros, seven miles south of Mayagüez. The Spanish suffered perhaps 50 casualties, while the Americans reported only 17. The Spanish then withdrew, opening the way for the Americans to move into Mayagüez. Colonel Soto Villanueva chose not to fight for the city.

The Americans were well received in Mayagüez. Having secured the city, Schwan's brigade departed the next day and pursued withdrawing Spanish forces toward La Marías, where a skirmish was fought on August 13. Word was then received of the Protocol of Peace of August 12, ending hostilities.

McCalla, Bowman Hendry

Birth Date: June 19, 1844

Death Date: May 6, 1910

U.S. navy officer. Born in Camden, New Jersey, on June 19, 1844, Bowman Hendry McCalla was appointed to the United States Naval Academy, then temporarily located in Newport, Rhode Island, during the American Civil War in November 1861. He graduated fourth in his class in November 1864. His initial service was with the South Atlantic Blockading Squadron.

Following the Civil War, Bowman served successively with the South Pacific Squadron, the Home Squadron, and the European Squadron through 1874. During this period, he experienced rapid promotion, becoming a lieutenant commander by March 1869. He then served as an instructor at the Naval Academy. Following three years as executive officer of the steamer *Powhatan*, he served from

U.S. Navy commander Bowman H. McCalla, who commanded the cruiser *Marblehead* in the blockade of Cuba and whose crewmen cut the cable lines at Cienfuegos. (*Harper's Pictorial History of the War with Spain*, 1899)

1881 to 1887 as the assistant chief of the Bureau of Navigation. He first came to public prominence in April 1885 when he led an expeditionary force of marines and sailors in Panama to protect American interests during an uprising against Colombian control.

From 1888 to 1890, Commander McCalla commanded the steam sloop *Enterprise* in the European Squadron. Known as a strict disciplinarian, he faced a highly publicized court-martial upon his return to the United States for striking an enlisted man and for other discipline-related charges. Convicted on all five counts, he was suspended from duty for three years, losing several places on the navy's seniority list in the process. Upon his restoration to duty in 1893, he served for more than three years as equipment officer at the Mare Island Navy Yard in San Francisco, California. He assumed command of the Montgomery-class cruiser *Marblehead* in 1897.

With the beginning of the Spanish-American War, McCalla commanded U.S. naval forces blockading Havana and Cienfuegos, Cuba, and shelled the port city of Cienfuegos on April 29, 1898. On May 11, members of his ship's crew, along with sailors from the cruiser *Nashville*, cut two of the three telegraph cables located at

Cienfuegos. McCalla later made arrangements with local Cuban insurgents regarding ship-to-shore communications but failed to pass word of the arrangements on to his superiors. This contributed to Commodore Winfield Scott Schley's delay in establishing the blockade of Rear Admiral Pascual Cervera y Topete's squadron at Santiago de Cuba, as Schley erroneously feared that Cervera had taken refuge at Cienfuegos and could not communicate with the insurgents on shore.

The *Marblehead* participated in the blockade before being detached to reconnoiter and seize Guantánamo Bay in southeastern Cuba. McCalla bombarded Spanish positions there on June 7, capturing the outer harbor for use as a supply base for the American blockading squadron. He later supported the landings by the 1st Marine Battalion on June 10. With the *Marblehead*, he remained on station while the marines solidified their positions, taking part in the effective bombardment of a Spanish fort at Cayo del Toro in Guantánamo Bay. In appreciation of his actions, the marines named their encampment Camp McCalla in his honor.

In the dispensation of honors following the war, McCalla was advanced six numbers in grade, restoring him to the seniority he had held before his court-martial. Promoted to captain in April 1899, he commanded the Navy Yard at Norfolk, Virginia, before assuming command of the cruiser *Newark* in September 1899 for service on the Asiatic Station. He then participated in the campaign against Filipino insurgents in the Philippine-American War (1899–1902) and took part in the events of the Boxer Rebellion in China in 1900. He delivered reinforcements to the American legation in Peking in late May 1900 and then led 112 sailors and marines as part of the Seymour Relief Expedition, which unsuccessfully tried to relieve the now-besieged foreign legation in June 1900.

Wounded during the expedition, McCalla received commendations for bravery from Congress, Kaiser Wilhelm II of Germany, and King Edward VII of Great Britain. Following a final tour of sea duty commanding the battleship *Kearsarge* and serving as chief of staff to the commander of the North Atlantic Squadron, McCalla finished his career ashore commanding the Mare Island Navy Yard. Promoted to rear admiral on October 11, 1903, he oversaw the navy's immediate response to the San Francisco earthquake of April 1906, sending ships and men to the aid of the stricken city. He retired in June 1906 and remained in the San Francisco area, where he helped welcome the ships of the Great White Fleet in 1908. McCalla died in Santa Barbara, California, on May 6, 1910.

McClerland, Edward John

Birth Date: December 29, 1848

Death Date: February 9, 1926

U.S. Army officer. Edward John McClerland was born in Jacksonville, Illinois, on December 29, 1848. His father was Major General John A. McClerland, who commanded the U.S. Army VIII Corps during the American Civil War. After an education in local schools, the younger McClerland entered the United States Military Academy, West Point, graduating in the class of 1867. He saw much service in the American West during various Indian wars and was attached to the 2nd U.S. Cavalry on June 15, 1870. He soon gained a well-earned reputation as a tenacious fighter and was awarded the Medal of Honor for his gallantry at the Battle of Bear Paw Mountains (September 30–October 5, 1877) in Montana during the Nez Perce War.

When the Spanish-American War began, McClerland was a lieutenant colonel, and on May 9, 1898, he became assistant general adjutant of volunteers. He was subsequently assigned to serve on the staff of Major General William Shafter, commander of V Corps during the Cuba Campaign. As the Santiago de Cuba Land Campaign began in late June 1898, Shafter's considerable weight (300 pounds), an attack of gout, and the tropical heat made it impossible for him to take command in the field. As such, he designated McClerland to act as his liaison with his field commanders.

During the Battle of San Juan Hill (July 1, 1898), McClerland had the unenviable task of transmitting Shafter's orders to the battlefield and reporting back to Shafter on events as they unfolded. At the height of the battle, Brigadier General Jacob Ford Kent criticized McClerland, alleging that he had acted indecisively, but McClerland was not in a position to issue orders; indeed, he was merely acting as a go-between for Shafter.

On July 2, when General Shafter was about to withdraw from the siege of Santiago de Cuba out of fear that his men might fall victim to yellow fever season, it was McClerland who suggested that he immediately demand the city's surrender. Shafter took McClerland's counsel, and the Spanish capitulated on July 17. This move all but ended the war, and Shafter was able to contemplate a withdrawal before tropical disease season set in.

When the fighting was over in the Caribbean, McClerland was assigned to the Philippines, where he was for a time military governor of Cebu Province. He subsequently served in a variety of other army posts and was advanced to brigadier general on August 27, 1912. He retired from active service that December and took up residence in Easton, Pennsylvania, staying active in military matters and writing about his experiences in the Indian

Wars and the Spanish-American War. McClerland died on February 9, 1926.

McCoy, Frank Ross

Birth Date: October 29, 1874

Death Date: June 4, 1954

U.S. Army officer and diplomat. Frank Ross McCoy was born on October 29, 1874, in Lewistown, Pennsylvania. He graduated from the United States Military Academy, West Point, in 1897 and was commissioned a second lieutenant. When the Spanish-American War began in April 1898, he transferred to the 10th Cavalry Regiment (the Buffalo Soldiers), a unit comprised of African American soldiers with white officers. The unit left for Cuba two months later.

During the Santiago de Cuba Land Campaign, McCoy fought at the Battle of Las Guásimas on June 24 and received a leg wound on July 1 at Kettle Hill, part of the Battle of San Juan Hill waged outside Santiago de Cuba. While lying wounded under a tree on the battlefield, he by chance met Colonel Leonard Wood, who came to have a major impact on McCoy's military career. Wood, a physician as well as a field commander, stopped to rebandage McCoy's wound.

After recovering in the United States, McCoy rejoined his unit before it returned to Cuba as part of the occupation force in April 1899. The next year, Wood, who had been appointed military governor of Cuba, requested McCoy as his aide. McCoy reorganized the military government's finances and in June 1901 was promoted to first lieutenant. When the Cuban occupation ended in May 1902, McCoy continued as Wood's aide.

In early 1903, Wood had become the military commander of the Department of Mindanao and governor of Moro Province in the Philippines with McCoy as his aide. In August 1903, McCoy rose to captain. He served at various times as acting secretary and provincial engineer in the Moro legislative council.

As the intelligence officer of the Department of Mindanao, McCoy was often called upon to fight against the Moros. In October 1904, he planned the defeat of the powerful Datu Ali, the last of the hostile Moro chieftains, using American infantry and Philippine Scouts and suffering only one casualty. Both Wood and President Theodore Roosevelt praised McCoy highly for this victory.

On leave in late 1905, McCoy visited Japan and Canton, China, gathering intelligence before returning to Manila in January 1906.

He departed for the United States that June. Later that same year, he served as an aide to the provisional governor of Cuba, William Howard Taft, and his successor before becoming President Theodore Roosevelt's chief military aide in 1907.

McCoy commanded troops along the American-Mexican border during the Mexican Revolution (1915–1916) and became American attaché in Mexico City in 1917. When the United States entered World War I, he transferred to France in the summer of 1917. He fought in several battles and ended the war as a temporary brigadier general. He then served in various diplomatic assignments, including Armenia, Latin America, and Japan. Later he served on the League of Nations Lytton Commission that tried to resolve the Manchurian Crisis.

In 1920, McCoy worked for Wood's unsuccessful campaign for the Republican nomination for president. The following year, McCoy again joined Wood when the latter was appointed governor of the Philippines. McCoy was promoted to brigadier general in 1922 and married Wood's niece Frances Judson in 1924 before returning to the United States in 1925.

McCoy retired from the army as a major general in October 1938. He served as the president of the Foreign Policy Association until 1945. During World War II, he was recalled twice to active duty, and he chaired the Far Eastern Commission in October 1945, overseeing the Allied occupation of Japan and serving in that capacity until November 1949. McCoy died in Washington, D.C., on June 4, 1954.

McKinley, William

Birth Date: January 29, 1843

Death Date: September 14, 1901

U.S. politician, congressman, governor of Ohio, and president of the United States (1897–1901). The pivotal figure of the Spanish-American War, William McKinley Jr., was born in Niles, Ohio, on January 29, 1843. In his late teens, he attended Allegheny College, but he did not graduate. As with many others of his generation, his

William McKinley, the pivotal figure of the Spanish-American War, was president of the United States during 1897–1901. (Library of Congress)

American Civil War service as a young Ohio Volunteer officer had a profound impact on his life, and he developed a deep hatred of war. Nevertheless, he performed his duty ably and emerged from the war a brevet major of volunteers.

After the war, McKinley studied law at the Albany Law School in Albany, New York, and was admitted to the Ohio bar in 1867. In 1876, he was elected to the U.S. House of Representatives as a Republican. As chairman of the Committee on Ways and Means, he authored the McKinley Tariff of 1890, which raised tariff rates on many imports, especially sugar, that negatively affected the Cuban economy, already in significant turmoil. That same year, he lost his congressional seat. He went on to serve as governor of Ohio from 1892 to 1896. With the United States mired in the economic depression of 1893–1897, McKinley's longtime mentor, Mark Hanna, worked to secure the Republican presidential nomination for McKinley. In November 1896, McKinley defeated Democratic presidential nominee William Jennings Bryan to become the 25th president of the United States.

Although the campaign of 1896 had focused primarily on monetary policy—McKinley favored the gold standard, while Bryan championed free silver—McKinley's administration would be dominated by foreign policy. When he took the oath of office on

March 4, 1897, the Cuban War of Independence was already two years old and was rapidly becoming a popular issue in the United States. Although the press of the day painted increasingly negative portrayals of Spain's treatment of the Cubans, McKinley nevertheless moved cautiously in forming an official position about Spain. He was not given to falling headlong into a conflict for dubious reasons or because of popular sentiments.

By June 1897, McKinley, who had come to favor Cuban independence, officially demanded of Spain that Cubans be treated in a humane way. In so doing, the president departed from the position of strict neutrality adhered to by his predecessor, Grover Cleveland. As a result of McKinley's prodding, Spain did make an effort to improve relations with the Cubans by offering autonomy and repealing the hated *reconcentrado* (reconcentration) policy. Neither McKinley nor the Cuban revolutionaries, however, were willing to accept anything less than full independence.

During the ensuing months, as tensions with Spain mounted, McKinley ordered the U.S. Navy's Atlantic Squadron to Key West, Florida, as a signal to the Spanish government that the United States regarded the situation as serious business. In addition, he directed the War Department and the Navy Department to prepare war plans.

In February 1898, the infamous Dupuy de Lôme–Canalejas Letter was published. Enrique Dupuy de Lôme, Spanish ambassador to the United States, wrote a dispatch to José Canalejas that was highly critical of McKinley. The communication was intercepted and made available by the Cuban revolutionary junta to the *New York Journal*, which promptly printed it. In his dispatch, Dupuy de Lôme had called McKinley a spineless politician. Amazingly, McKinley himself remained remarkably composed about Dupuy de Lôme's remarks. Publication of the letter was followed by the second and far more provocative event that month, when the U.S. battleship *Maine* blew up in Havana Harbor on the night of February 15. Many Americans blamed the Spanish government for the deed, further inflaming public opinion against Spain.

After the destruction of the *Maine*, McKinley pushed through congressional legislation known as the Fifty Million Dollar Bill, designed to prepare the nation's military services for war. The day after the report of the board of inquiry concerning the loss of the *Maine* concluded that the ship had been sunk by an external mine, McKinley sent to Madrid an ultimatum demanding an immediate armistice, the release of prisoners, and American mediation between Spain and Cuba. Although Spain's formal reply was not satisfactory, the Spanish government did not want war with the United States, and on April 9, Spanish officials in Cuba offered an armistice to the insurgents. The next day, the American minister at Madrid, Stewart L. Woodford, cabled Washington that if nothing was done to humiliate Spain, he could obtain a settlement on the basis of Cuban autonomy or independence or even cession of the island to the United States.

McKinley did not want war, but the Young Republicans in Congress were eager for it, and expansionists saw this as an opportunity

to expand American power. McKinley gave in to the view that if he did not give way, the Republican Party would be split. After much prayer and hesitation, he yielded to the interventionists. A year later, the president confessed, "But for the inflamed state of public opinion and the fact that Congress could no longer be held in check, a peaceful solution might have been had."

On April 11, 1898, McKinley requested a declaration of war from Congress, which passed a joint resolution authorizing armed intervention in Cuba on April 19. Three days later, on April 22, the president initiated a naval blockade of Cuba and on April 25 signed the official war declaration against Spain, effective as of April 21.

Overall, McKinley's conduct of the war was efficient, especially in the area of communications. Indeed, he created the nation's first official war room in the White House using the latest technology. President Abraham Lincoln had spent hours in the military telegraph office keeping himself updated on the progress of the American Civil War. McKinley, however, took that concept to the next level. The war room was set up to accommodate 25 telegraph lines and 15 special telephone lines through which he kept close tabs on developments in Cuba. He was in constant and direct contact with his field commanders, usually via telephone.

With the exception of Secretary of War Russell Alger, McKinley's relationship with his cabinet was generally harmonious. Alger, who had performed well enough in a prewar bureaucratic environment, proved to be a poor choice to manage the War Department under the stress of conflict, however. McKinley came to rely on him less and less. The president also came to avoid commanding general of the army Major General Nelson A. Miles, whose frequent squabbling with Alger caused McKinley to turn increasingly to Adjutant General Henry Corbin for military advice. By contrast, McKinley worked well with Secretary of the Navy John D. Long.

Militarily, the war proved to be far less challenging than negotiating the final peace treaty with Spain, and the Philippines turned out to be the sticking point. Had it not been for the U.S. acquisition of the Philippines, McKinley's role in history surely would be much less controversial. At one point early on, he professed to not knowing the exact location of the Philippines, a remark that he perhaps did not intend to be taken literally. He seems to have agonized a great deal as to whether the United States should retain just the port city of Manila, the island of Luzon, or the entire Philippine archipelago.

A strong argument arose against the United States annexing any part of the Philippines because to do so would run counter to U.S. constitutional philosophy. In the end, McKinley reasoned that the islands should not be returned to Spain and that if the United States did not take them, Germany or Japan surely would. Thus, he concluded that the United States should take all of the Philippines, and he instructed his peace commissioners in Paris to stand firm on that point. Because Spain had little bargaining power, it had no choice but to sell the Philippines in exchange for \$20 million. In addition to the Philippines, the United States also acquired Puerto Rico and Guam in the Marianas. The terms of the Treaty of Paris further required Spain to evacuate Cuba and

called for the United States to oversee that island's preparation for independent government.

If McKinley was not the most controversial occupant of the White House, he was certainly one of the most difficult presidents to know. Pleasant and affable with a wry sense of humor and a fondness for cigars, he somehow appeared more like a country judge than a president of the United States. For all that, however, he was an astute politician who was fully in charge, even if he seemed at times indecisive. His office was open to nearly everyone who wished to see him, and he was the first president to establish a regular format for providing the media with White House news.

In 1900, McKinley ran for reelection, again contesting with Bryan. Enormously popular in the aftermath of the war and having lifted the U.S. out of a serious economic depression, McKinley easily defeated Bryan. McKinley's second term was to last only six months, however, for he was shot on September 6, 1901, while attending the Pan-American Exposition in Buffalo, New York, by an anarchist Leon Czolgosz. McKinley was struck by two bullets. One did little harm and was readily removed by doctors. The second, however, had caused extensive damage and would have been exceedingly difficult to extricate. McKinley appeared to be rallying, so doctors decided to leave the second bullet in place rather than risk a serious operation. However, on September 14, 1901, McKinley went into shock and died in Buffalo. This tragic event ruled out the possibility of his further elaborating on some of the controversial issues of his presidency, such as the acquisition of the Philippines. It also resulted in the impetuous vice president, Theodore Roosevelt, becoming president. Many Americans, even Republicans, wondered whether the 42-year-old Roosevelt had the requisite wisdom and foresight to lead the nation at that time.

In the century since the Spanish-American War, historians have debated and sharply differed over McKinley's presidency. In the first two decades following the war, scholars largely supported the McKinley administration for its able prosecution of the war and for the results of the Treaty of Paris, by which the United States acquired its first territorial possessions. Beginning about 1920, however, opinions began to diverge. Some saw McKinley as a reluctant expansionist, but others viewed him as a president who employed clever means to expand U.S. interests, a crafty politician who adroitly managed the acquisition of territorial possessions seemingly without wanting to do so.

The controversy is attributable in large part to the fact that historians have little knowledge of McKinley as a man. He left behind almost nothing in the way of personal correspondence, memos, or a diary through which historians might gain some access to his inner thoughts and feelings. Instead, to evaluate his presidency, scholars have had to rely on the recollections and observations of those with whom he worked closely. As a consequence, he remains something of an enigma, a controversial occupant of the White House during a key transitional period when the United States moved onto the stage of international affairs.

Medicine, Military

The U.S. Army Medical Department was anything but ready for the Spanish-American War. Just four years earlier, Congress had stripped 15 commissioned surgeons and the entire allotment of contract surgeons from a corps that had consistently and justifiably complained that it was incapable of meeting even peacetime requirements.

The Medical Department's organizational structure had not changed since the 1860s. Each regiment had its own surgeons and each division its own hospital. All were under a corps-level chief surgeon. Physicians had an advisory role only over matters directly pertaining to medical care of patients. Hospital administration and evacuation of the wounded were the province of line officers. Even worse, so were camp locations, arrangement, and sanitation.

The department, which still counted 14 veterans of the American Civil War, was led by Surgeon General George Sternberg, an internationally renowned bacteriologist with almost no administrative experience. Besides a severe shortage of physicians, he had no nurses, which left hospital care to a woefully undermanned, untrained, and largely unmotivated collection of stewards assigned to the Hospital Corps. The Medical Department had no transportation resources of its own, being entirely dependent on the Quartermaster Corps. Although war was a near certainty after the February 15 sinking of the U.S. battleship *Maine* at Havana, Sternberg was legally barred from spending any more money to stockpile supplies than had already been budgeted for 1898. He had barely sufficient equipment, hospital supplies, and medicines on hand to take care of the 27,000-man prewar force. The March 9 Fifty Million Dollar Bill intended to fund the war (mostly in the form of coastal defenses) allocated only \$20,000 to the Medical Department. Even when purchases were authorized after the declaration of war in April, goods and drugs were almost entirely unavailable on such short notice.

In April 1898, the army numbered 2,143 officers and 26,040 enlisted men. In two calls issued by August, Congress authorized an increase to 2,232 officers and 56,365 enlisted men in the regular army and another 8,785 officers and 207,244 enlisted men in a volunteer army that was to be drawn primarily from the National Guard, supplemented by 3 volunteer cavalry regiments, 1 engineering regiment, and another 10 regiments composed largely of African Americans from the South who were presumed to be immune to yellow fever. On April 22, President William McKinley commissioned 77 surgeons in the Medical Corps and authorized each volunteer regiment to hire 1 surgeon and 2 assistant surgeons. The contract surgeon program was reinstituted, and 700 men eventually served in that capacity, although only 177 of those possessed any military experience. Even at that, the positions proved hard to fill, and the army ultimately closed its medical school and activated the faculty primarily in order to train newly recruited physicians. Operationally, these men fell under the command of Colonel Charles R. Greenleaf to whom they reported for matters pertaining to professional activity, but they remained subordinate to line officers for virtually every other aspect of their day-to-day lives. The contract surgeons, because they had neither rank nor military background, were typically accorded the same level of respect as hired teamsters and packers.

The volunteer regiments were authorized “one acting hospital steward and one private, one hospital and one common tent, one ambulance and necessary animals fully equipped in order to preserve the regimental organization.” Their physicians were in no way superior to the contract surgeons. Most had obtained their positions through political influence, and since Abraham Flexner’s reform of medical education was still a decade away, their professional training and qualifications were wildly variable and, with distressing frequency, wholly inadequate.

Surgeons were instructed to bring their own instruments, supplies, and medications. What they lacked their regiments lacked as well. To make matters worse, there was no standard pharmacopoeia, and the volunteer surgeons complained incessantly about the lack of their favorite compounded remedies. Of the various state units, none had a complete medical kit, and 16 had no medical supplies at all, a situation they shared with the majority of the regular regiments.

After Congress authorized purchases, supply depots were established at Lytle, Georgia, and at Tampa, Florida. But because of the difficulty in buying what was needed and transporting it, noth-

A dentist at work in a U.S. Army camp during the Spanish-American War. (Library of Congress)

ing arrived in either place for more than a month. When the trains finally started coming in, the system was overwhelmed. Cars were backed up all the way from Tampa to Charleston, South Carolina. Freight was seldom labeled, and one complete field hospital was found only after the war had ended. Still, to their great credit, Sternberg and his staff found and distributed 272,000 first-aid packets, 7,500,000 quinine pills, 18,185 cots, 23,950 blankets, and 2,259 liters in 1898.

The flood of regulars and volunteers had to be collected and trained, and to that end, the army established training camps in the southern United States to acclimate the men to a hot, damp climate: Camp Alger in Fairfax County, Virginia; Camp Thomas at the Chickamauga and Chattanooga National Military Park in North Georgia; and Camp Cuba Libre at Jacksonville, Florida. In the first few weeks, disease was not a problem, but no one yet realized that typhoid could be carried by asymptomatic individuals, and the disease tore through camps crowded with men unaccustomed to the necessities of outdoor sanitation. By August, 260 of the 15th Minnesota’s 1,323 men were infected. More than 90 percent of the volunteer regiments had typhoid within eight weeks of arriving in camp, and not a single regiment escaped the disease. In the end, far more men died in camp than in battle, and 80 percent of those succumbed to what was likely typhoid, although the disease was often confused with malaria.

The Medical Corps initially planned for 1 percent of the volunteer force to require hospitalization while in camp, but the folly of that estimate was quickly evident, and a network of military hospitals had to be created. General hospitals were built at Key West,

Comparison of Casualties between the U.S. Army and the U.S. Navy during the Spanish-American War

	<i>U.S. Army</i>	<i>U.S. Navy</i>
Killed in action or died of wounds or injuries	345	47
Died of disease	2,565	56
Wounded	1,577	68

Nurses with the U.S. Army VII Corps mobilized in Savannah, Georgia, during the Spanish-American War, 1898. (National Library of Medicine)

Fort McPherson in Atlanta, Fort Monroe in Virginia, at Chickamauga, and in Washington, D.C. In addition, post hospitals in New York City, at the Presidio in San Francisco (later Letterman General Hospital), and at Vancouver Barracks in Washington state were enlarged enough to be essentially general hospitals. Two more hospitals were later opened at Manila and Honolulu (later to become Tripler General Hospital). On July 17, a 300-bed general hospital was opened in the newly captured city of Santiago, Cuba. After July, a number of civilian hospitals—especially in Philadelphia and New York City—were employed, and a number of the sick and injured were simply discharged to seek care at facilities near their homes. Transport within the United States was assisted by a 10-car hospital train operated by the Medical Department.

At the war's outset, Sternberg decided to replace the regimental hospitals with 200-bed division hospitals staffed with 6 officers, 99 enlisted men, and an ambulance company comprising 6 more officers and 114 enlisted men responsible for getting men to dressing stations and then on to rear-area hospitals. The regiments were left with only 1 surgeon, 1 steward, and a Hospital Corps private, the remainder being seconded to the division hospital, a decision that proved efficient but profoundly unpopular both with the physicians and the soldiers.

When the war began, nursing care was provided by the 791 non-commissioned officers and privates of the Hospital Corps since the Medical Corps had no female nurses. It proved much more difficult to get volunteers for the Hospital Corps than for line regiments, a deficit that was often made up by forced transfer of unwilling sol-

diers. To help alleviate the problem, Congress authorized the hiring of female nurses on contract, and the Daughters of the American Revolution (DAR) was recruited to find and hire those women. The DAR committee led by Anita Newcombe McGee, a physician and vice president of the organization, included the wives of both Sternberg and Secretary of War Russell Alger. In August 1898, the Army Nurse Corps Division of the Surgeon General's Office was formed and placed under Dr. McGee, who was made an acting assistant surgeon. A total of 1,563 women were hired, with a maximum of 1,158 serving at any one time, but since the first American nursing school had only been founded 25 years earlier, the supply of trained nurses was quite limited.

Besides their service in hospitals in the United States, 76 members of the Nurse Corps were sent to Cuba, 9 to Puerto Rico, 30 to the Philippines, 6 to Honolulu, and 8 to the hospital ship *Relief*. Typhoid struck 140 of the nurses, and 12 died from the disease. One nurse, Clara Maass, died of yellow fever acquired as a result of the Reed Commission's experiments. By the end of the war, nurses had largely been accepted as important to patient care in ways other than seeing to adequate diets and clean linen.

Although the Army Dental Corps was not established until 1901, army steward J. W. Horner, who was serving in VII Corps, set up a free tooth extraction clinic for soldiers stationed at Camp Cuba Libre.

When Major General William Shafter's V Corps left Tampa for Cuba, it took with it 79 medical officers and 89 newspaper correspondents. At the time of embarkation, most of the force's drugs

were still lost on trains scattered north from Florida. A system dating to Jonathan Letterman's American Civil War plan called for stretcher bearers to carry men to collecting stations two or three miles behind the lines, where they could be dressed and transferred to ambulances that would take them another two or three miles to a base hospital. There was, however, a general shortage of litters, with few regiments having more than two and some having none at all. All but three ambulances were left in Tampa, and those that were taken had been disassembled and were not taken off the transports. The general lack of equipment would turn out to be immaterial to the initial landing at Daiquiri since the harbor was unprotected and the single dock was not even adequate for unloading military animals and equipment. Draft animals were simply shoved overboard with the hope that they would swim ashore. Many were lost. Chief surgeon Lieutenant Colonel Benjamin A. Pope and his division surgeons Majors Marshall W. Wood, Henry S. Kilbourne, and Valery Havard were largely left to their own devices.

By the time of the initial skirmish at Las Guásimas, there was no facility for the 52 wounded ashore, so those needing more than minimal care were transferred to the *Olivette*, a freighter converted to a hospital ship. Later, a field hospital was established at Siboney, and the wounded from San Juan Heights and El Caney were treated there. That facility had an adequate supply of surgical instruments and dressings and was able to keep six operating tables working around the clock. Men in the field had a good supply of first-aid packs and splints, and most of the men—who were transported to Siboney on a short-haul railroad pressed into service for that purpose—were well splinted and well dressed.

A combination of antisepsis, anesthesia, and relatively clean wounds from the high-velocity Spanish Mauser rifles resulted in cleaner injuries and better surgical results than in prior wars. Of the 1,142 men wounded in the Battle of San Juan Hill and the Battle of El Caney, the War Department reported a mortality of less than 1 percent. The Surgeon General's Report for 1898, however, said that 1,457 men were injured by guns that year, with a mortality rate of 6 percent. Regardless, the death rate from gunshot wounds was strikingly less than in prior wars.

Although the number of battle injuries was relatively low and the complications less frequent than in earlier wars, disease was a major problem. By mid-July, V Corps had 1,500 men sick with fever, and 10 percent of those had yellow fever. The death rate from disease peaked at 6.14 per 1,000 in August, with malaria being the most common problem and yellow fever the most feared.

As many as 75 percent of the American forces in Cuba may have ultimately suffered from malaria, with typhoid, dysentery, and other diarrheal diseases also common. In 1898, there were 217,072 cases of disease or injury among the men serving in the U.S. Army. The rate of men reporting for sick call was 2,146 per 1,000 per year. Battle wounds were numerically almost insignificant. In fact, significantly more men were disabled by rupture (the contemporary term for cases of inguinal hernia) than by gunshot wounds. Dis-

ease, however, became such a problem that in late July the city of Siboney was burned to the ground as a sanitary measure.

The land-based facility at Siboney had been largely replaced by three hospital ships, the *Olivette*, *Relief*, and *Missouri*. The *Olivette* was a former commercial passenger steamer that accompanied V Corps from Tampa and, because it also carried hospital equipment, was quickly converted to a 280-bed floating hospital after its arrival at Cuba. The *Missouri* was a former cattle boat given 10 days to convert to medical use. Its entire below-deck plumbing consisted of a hole in the deck and a funnel that had been used as a shower for the former captain. The *Relief* had been the Long Island passenger steamer *John Englin* before being sent to Cuba.

One immediate effect of the outbreak of disease was the Round-Robin Letter in which Shafter and his general officers demanded the immediate return of the American force to the United States. Because there was a widespread fear that returning soldiers would bring yellow fever with them, the decision had been made to build what was in essence a quarantine facility at Camp Wikoff on eastern Long Island. The Round-Robin Letter led to a hurried transfer of almost all of Shafter's troops to that facility in spite of the fact that transport ships were disastrously underequipped and the camp not nearly finished. The facility was divided into five detention camps for 1,000 men each and one 500-bed general hospital.

The short Puerto Rico Campaign resulted in only 3 enlisted men being killed and 4 officers and 36 enlisted men being wounded. There were no large concentrations of men, and as a result, no serious infectious disease outbreaks.

Although Commodore George Dewey had defeated the Spanish Navy in Manila Harbor on May 1, 1898, he lacked the manpower to occupy the capital. A force of 13,000 regulars and 2,000 volunteers under Major General Wesley Merritt left San Francisco two weeks before Shafter left Tampa. VII Corps was better organized than the Cuban invasion force. Chief surgeon Lieutenant Colonel Henry Lippincott's force (Ashburn called Lippincott "a kindly old man nearing retirement") was well staffed except for stewards and was well supplied. The force arrived on July 25, 1898, and, after a brief and prearranged battle, took the city from the Spanish on August 13. The medical purveyor to the expedition noted that every man was comfortably dressed and in bed by 7:00 p.m. after the engagement. No Americans were killed, and only 50 were wounded.

There were a handful of military medical innovations attributable to the Spanish-American War. Difficulty in identifying dead and seriously wounded men led to the use of metal identification tags subsequently worn by all soldiers. X-rays were used both in hospitals in the United States and on hospital ships to locate metallic foreign bodies and to visualize fractures. But the biggest changes came as a result of the postwar investigation of shortcomings in medical care led by Major General Grenville Dodge. Colonel Jefferson R. Kean called the resultant Dodge Commission Report the Medical Department's charter. The report recommended a sharp increase in the number of commissioned medical officers and the

establishment of a volunteer hospital corps and a permanent corps of trained nurses. It also recommended maintenance of a stockpile of medical stores sufficient to supply an army four times as large as that maintained in peacetime and a separate transport service dedicated to medical needs. Virtually all of the commission's recommendations were adopted, and the changes in the Medical Department formed the basis of its preparation for the larger wars to come.

Menocal, Mario García

Birth Date: December 17, 1866

Death Date: September 7, 1941

Cuban engineer, soldier, politician, and third president of the Republic of Cuba (1913–1921). Mario García Menocal was born in Hanábana, Matanzas Province, Cuba, on December 17, 1866. His father owned a sugar plantation. When Menocal was only about 2 years old, his father was forced to flee Cuba with his family because of his revolutionary activities. The family went first to the United States and then settled in Mexico. There Menocal's father resumed his livelihood of growing sugarcane at San Juan Bautista, in Tabasco. At age 13, Menocal left Mexico to be educated in the United States, first at the Chappaqua Institute in New York and then at the Maryland College of Agriculture. In 1884, he entered Cornell University, graduating with an engineering degree in 1888.

Menocal spent nearly three years working with his uncle Aniceto Menocal on the commission studying the possible construction of an isthmian canal across Nicaragua. In 1891, the younger Menocal returned to Cuba, a stranger to his native land. For a time he worked as an engineer for a French Company that owned salt works and banana plantations on Cayo Romano Island. Then he worked in railroad construction, doing surveying for a rail line from Camagüey to Santa Cruz del Sur.

Mario García Menocal served in the Cuban revolutionary forces during the Spanish-American War and served as president of Cuba during 1913–1921. (Library of Congress)

Menocal was also soon in the middle of Cuban revolutionary activities. When the Cuban War of Independence began in 1895, Menocal joined forces under General Máximo Gómez y Báez. He continued to serve in the field until the final victory following U.S. intervention as a consequence of the Spanish-American War of 1898. Menocal served under three well-known Cuban generals: Máximo Gómez, Mayía Rodríguez, and Calixto García y Iníguez. Menocal won recognition in the battles of Yerba de Guinea, La Piedra, and La Aguada and also in the capture of Fort Loma de Hierro, for which he won special distinction and was rewarded with the rank of colonel. For his participation in the siege and capture of Guáimaro in Camagüey, he was advanced to brigadier general in the Cuban revolutionary forces. The Battle of Victoria de las Tunas marked the climax of his military career.

Following the Spanish-American War, Menocal helped organize the Lighthouse Service, a post he held for a short time. He then worked for the Cuban American Sugar Company helping to construct its factory at Chaparra, said to be the largest sugar factory in the world at the time. He also became a leading figure in the Conservative Party. In 1908, he received his party's nomination for the presidency but failed to win the election. In 1912, he again ran for the presidency from the Conservative Party and this time won.

Menocal served as president of Cuba from May 20, 1913, to May 20, 1921. As president, he championed closer ties with the United States, administrative and financial reform, and strict fiscal conservatism. He was criticized in some quarters for his strong support of large corporations and businesses and rampant corruption. He won reelection in 1916, but the race was so close that members of the opposition Liberal Party took to the streets in an armed uprising, which for a time threatened to overturn the government and was put down only with some loss of life and property destruction. Menocal's close relations with the United States may be seen in the fact that Cuba declared war on Germany on April 7, 1917, only a day after the U.S. declaration. Menocal left office in 1921. He ran again for the presidency, without success, in 1924. Attempting a revolution in 1931, on its failure he went into exile in the United States. He returned to Cuba within five years and in 1936 again ran unsuccessfully for president. Menocal died on September 7, 1941.

Merriam, Henry Clay

Birth Date: November 13, 1837

Death Date: November 18, 1912

U.S. Army officer and commander of the Department of California during the Spanish-American War. Henry Clay Merriam was born in Houlton, Maine, on November 13, 1837. After attending Colby College, in 1862 during the American Civil War, he enlisted in the army and raised a volunteer company from Houlton. He was then commissioned a captain, in command of Company H, of the 20th Maine Regiment. He saw action in various engagements during the Civil War, including the Battle of Antietam and a daring assault on Fort Blakely on April 9, 1865, during which 600 Confederates were captured. For this action, he was awarded the Medal of Honor.

Following the Civil War, Merriam briefly read for the law but then again cast his fortunes with the military, becoming a major of the 38th Infantry Regiment. He was involved in numerous campaigns against Native Americans and served in a variety of frontier posts. On June 30, 1897, he was promoted to brigadier general.

When the Spanish-American War began in April 1898, Major General Wesley Merritt, VIII Corps commander, employed Merriam and his staff in the Department of California to help muster men into VIII Corps and organize what would become the Philippine Expeditionary Force. San Francisco was Merriam's headquarters, so he and his staff were well placed to assist. Some of

Merriam's tasks included housing, supplying, and training the troops of VIII Corps. In so doing, he worked closely with Merritt's chief deputy, Major General Elwell S. Otis.

On May 7, 1898, Camp Merriam—named as was customary for its commander—was officially established. The camp was located on a series of hills just beyond the Lombard Street entrance to the San Francisco Presidio. Conditions at the camp were deemed satisfactory, and there were ample supplies of fresh water and adequate bathing facilities. However, Camp Merriam was not a large facility in area and soon became overcrowded.

Shortly after Camp Merriam opened, the U.S. Army decided to increase the size of VIII Corps and designated San Francisco to be the staging area for the Philippine Islands Expeditionary Forces. In consequence, toward the end of May, a second camp, located along the northern border of Golden Gate Park, was established and was named for Major General Wesley Merritt. The camp was probably known as Camp Richmond prior to Merritt becoming commander. Toward the end of May, most of the soldiers from Camp Merriam were moved to Camp Merritt as the new recruits began arriving en masse. At that time, Merriam turned command of the camps over to Merritt. Unlike the sometimes chaotic planning for the Caribbean expeditions, planning in San Francisco for the Philippine expedition was both smoothly executed and well organized, thanks in good measure to General Merriam's assistance.

In May 1898, Merriam was promoted to major general of volunteers. In February 1899, he was advanced to major general (regular army), and from 1900 to 1901, he commanded the Department of Colorado. Merriam retired from active service in February 1903 and settled in Portland, Maine, where he died on November 18, 1912.

Merrimac, USS

U.S. Navy collier (a coal-carrying ship designed to resupply other ships) scuttled in an attempt to block the channel to the harbor of Santiago de Cuba in order to bottle up the Spanish squadron there. The mission occurred on June 3, 1898. The *Merrimac* had been the Hogan line *Solvieg* before the U.S. Navy purchased it for \$342,000 on April 12, 1898. It was renamed in honor of the U.S. Navy steam frigate secured by the Confederates and turned into the ironclad ram *Virginia*.

In late April 1898, a Spanish squadron commanded by Rear Admiral Pascual Cervera y Topete departed the Cape Verde Islands,

The U.S. Navy collier *Merrimac*, shown here at the Norfolk Navy Yard early in 1898. In a daring operation, the ship was scuttled in an unsuccessful effort to block the channel to Santiago Harbor. (Naval Historical Center)

ultimately anchoring in the harbor of Santiago de Cuba. Once its presence was known to the United States, the far superior North Atlantic Squadron, commanded by Rear Admiral William T. Sampson, established itself off the narrow harbor entrance. In order to thwart an escape attempt at night by Cervera's squadron, the American ships illuminated the harbor channel during hours of darkness with searchlights.

The entrance and much of the harbor were protected naturally by high cliffs. The meandering ship channel varied in width from 350 to 450 feet. Over the years, the Spanish had erected a number of batteries along both sides of the entrance, and they had sowed the channel with electronically detonated mines. These mines and American intelligence estimates of the strength of the Spanish defenses led Sampson to attempt to incapacitate Cervera's squadron by blocking it in the harbor instead of taking it on directly. To accomplish his plan, conceived prior to his leaving Key West, Florida, Sampson selected the collier *Merrimac* to be scuttled at a strategic spot at the channel mouth. The *Merrimac*, which had frequently broken down and had to be towed to Santiago, was on the list of expendable U.S. Navy ships.

Lieutenant Richmond Pearson Hobson of the battleship *New York* commanded the attempt. When a call went out for men to assist Hobson in what many regarded as a suicidal mission, hundreds

volunteered. Six were selected, while a seventh man stowed away in order to participate.

To scuttle the *Merrimac*, 10 electronically detonated mines, each filled with 78 pounds of gunpowder, were lashed to the port side of the ship below its waterline. The plan called for Hobson and his crew to steer the *Merrimac* toward the harbor entrance, pass Morro Castle, then turn to port, drop anchors fore and aft, and detonate the charges. Because the *Merrimac* was 333 feet long, if properly positioned it would completely block the channel for larger ships. Their mission accomplished, the crew were to escape via a lifeboat that was towed astern.

Problems delayed an attempt on the night of June 1–2, and it was then called off. The mission was rescheduled and began at 3:00 a.m. on June 3. It started out well, with the *Merrimac* able to proceed up the channel some distance before it was discovered by a Spanish picket boat. It and Spanish shore batteries then opened fire. The Spanish also exploded a number of their electronically detonated mines, according to Hobson six in the first line and two in the second. Also, one of the Spanish shots disabled the *Merrimac*'s steering. Hobson ordered the sea cocks opened; the mines exploded, but only two went off. Both the bow and stern anchor were dropped, but the stern anchor was shot away, and the bow anchor cable parted under the strain. The strong current straightened out the sinking vessel, which

finally went down inside Santiago Harbor but past the entrance. The placement of the ship did not block egress for ships.

In the exchange of fire, the Spanish suffered a number of casualties from cross fire, while the Americans involved received only minor injuries in the operation. Hobson and his crew were picked up by a Spanish steam launch at 6:00 a.m. and taken prisoner. The Spanish praised the men for their brave deed, and that afternoon Captain Joaquín Bustamante y Quevedo came out under a flag of truce to inform Sampson that all the crewmen were safe and prisoners.

The failure of the attempt with the *Merrimac* forced Sampson into a close blockade. A month later, the Spanish squadron sortied only to be destroyed in the Battle of Santiago de Cuba. The crew of the *Merrimac* was released in an exchange of prisoners on July 6. All were subsequently awarded the Medal of Honor.

Merritt, Wesley

Birth Date: June 16, 1836

Death Date: December 10, 1910

U.S. Army officer. Wesley Merritt was born in New York City on June 16, 1836. He attended the United States Military Academy, West Point, graduating in the middle of his class in 1860. Following graduation, he served in Utah with the 2nd Dragoons. The American Civil War brought Lieutenant Merritt's transfer to the East. There he turned out to be a superb cavalry officer. As a captain, he distinguished himself in the Gettysburg Campaign in the Battle of Brandy Station (June 9, 1863), the largest cavalry engagement in the history of North America. Receiving further notice, he was breveted brigadier general of volunteers and commanded the reserve cavalry of the Army of the Potomac.

Assigned temporary command of a division in May 1864, Merritt again fought with distinction in the Battle of Todd's Tavern on May 7, the largest dismounted cavalry engagement of the war. Following further distinguished service, especially the Battle of Yellow Tavern on May 11, he received permanent command of the 1st Cavalry Division of Sheridan's Army of the Shenandoah, leading it in a number of important Union victories. During the Appomattox Campaign of April 1865, Merritt commanded the Cavalry Corps as a brevet major general of Volunteers.

During the Spanish-American War, U.S. Army major general Wesley Merritt (shown here as a brigadier general) commanded VIII Corps, the expeditionary force sent to the Philippines. (Chaiba Media)

Following the Civil War, Merritt remained with the regular army as a lieutenant colonel and commander of the 9th Cavalry Regiment, one of two African American regiments in the army. This began 17 years of service on the frontier and extensive fighting against hostile Native Americans in the West. In 1876, he received promotion to colonel and took command of the 5th Cavalry Regiment, fighting in the Great Sioux War of 1876, the pursuit of the Nez Perce and in the Bannock War (1877–1878), and the Ute War (1879).

In 1882, Merritt became superintendent of West Point, serving in that position until his promotion to brigadier general in 1887. He then assumed command of the Department of the Missouri at Ft. Leavenworth, Kansas. From 1895 to 1897, he commanded the Department of the Missouri, the Department of Dakota, and Department of the East, respectively. In 1893, he wrote a book, *The Armies of Today*. In the book and in articles, he advocated a large and modern regular U.S. Army. He also supported U.S. imperial expansion.

Nearing retirement age at the beginning of the Spanish-American War, Major General Merritt was the second-ranking officer in the army. On the outbreak of war, he asked for command of VIII Corps. Appointed to that position on May 12, he was informed

that the corps would be headed to the Philippines. On May 19, he received his instructions to defeat the Spanish, pacify the islands, and hold them for the United States but not to ally his forces with those of Filipino insurgent leader Emilio Aguinaldo y Famy. Although the instructions left vague the future of the islands, Merritt assumed that they would be annexed by the United States.

Merritt did what he could to organize his corps prior to departure, making it a point to secure suitable tropical uniforms and supplies for the soldiers, which may have reduced deaths from heat-related illness and disease. He sailed for the Philippines in the *Newport*, departing San Francisco on June 29 and arriving at Manila in late July.

Styling Aguinaldo a "Chinese half-breed adventurer," Merritt followed his instructions of operating independently of the insurgent forces, which had surrounded Manila. Rear Admiral George Dewey negotiated with the Spanish commander, General Fermín Jáudenes y Alvarez, agreeing to stage a small symbolic battle on August 13 to satisfy Spanish honor while at the same time excluding the Filipino revolutionaries. The occupation of Manila on August 14 proceeded smoothly, and Merritt's troops quickly established order in the city. He issued a proclamation promising support and protection to all those cooperating with the U.S. troops.

On August 30, Merritt transferred command of VIII Corps to Major General Elwell S. Otis and departed the islands for Paris to brief the U.S. peace commissioners meeting with their Spanish counterparts in Paris. There, Merritt told the commissioners that it was his opinion that the United States should annex the Philippines and that the majority of Filipinos would welcome American rule.

In December 1898, Merritt assumed command of the Department of the East. He retired from the army in 1900 and died in Natural Bridge, Virginia, on December 10, 1910.

material and carried no title. Much to Hubbard's surprise, the essay, which praises the initiative taken by an American soldier at the outset of the Spanish-American War, became an instant success. Before long, Hubbard republished it as a stand-alone pamphlet and then in book form.

The essay recounts the actions of Andrew Summers Rowan, a U.S. soldier and 1881 graduate of the United States Military Academy, who was ordered to carry a message to Cuban revolutionary Calixto García y Iñiguez just prior to combat operations in Cuba. García, who had been struggling for Cuban independence since the Ten Years' War (1868–1878), had repeatedly sought American assistance in liberating Cuba from Spanish colonial rule. U.S. military officials hoped to contact García to coordinate the U.S. Army's land invasion of Cuba. In his essay, Hubbard applauds Rowan's dogged dedication to duty and his willingness to accomplish his task without asking questions or raising any objections. Rowan's success in delivering the letter to García made him the prototype of the American can-do mentality. For many years, even after World War II, Hubbard's inspiring story became a popular cultural allusion, showcasing Yankee ingenuity and self-reliance. Leaders in both the military and business frequently used "A Message to Garcia" to motivate their subordinates.

More than 4 million copies of the essay have been published in 37 languages, and it was required reading for all U.S. servicemen during both world wars. The essay was the basis of two motion pictures: a silent film released in 1916 and another one in 1936 that starred Wallace Beery, Barbara Stanwyck, and Alan Hale.

"Message to Garcia, A"

Event Date: February 22, 1899

Essay written by American writer and publisher Elbert Hubbard on February 22, 1899, to extol the virtues of self-reliance. First published in the March 1899 issue of *Philistine* magazine, which Hubbard was then editing, "A Message to Garcia" was meant as filler

Midway Island

A coral atoll in the North Pacific Ocean annexed by the United States in August 1867 as the Unincorporated Territory of Midway Island and administered by the U.S. Navy. Midway Island is located in the north central Pacific Ocean at 28°12' north latitude and 177°12' west longitude, about one-third of the way between

Honolulu and Tokyo. It is considered a distant part of the Hawaiian Islands chain.

Midway, just 2.4 square miles in area, is almost circular and surrounds a shallow lagoon about 15 miles in circumference. The largest and most important parts of Midway are two islands, Sand and Eastern, that lie on the southern edge of the lagoon. Midway has a subtropical climate that is characterized by warm, dry summers and cool (but not cold), wet winters. Its native flora includes beach morning glory and bunchgrass. The most common animal life consists of seabirds such as the tern and albatross.

U.S. Navy captain N. C. Middlebrooks discovered the uninhabited atoll in July 1859, but the tiny island chain was largely ignored in the ensuing years despite general interest in Pacific islands for their deposits of guano, which was commonly used as fertilizer. In August 1867, the Department of the Navy sent Commander William Reynolds to take possession of Midway Island for use as a coaling station, and the United States annexed Midway later that year. The relatively early acquisition of Midway kept it out of the reach of other seagoing powers such as Great Britain and Germany, which were seeking to acquire coaling stations in the North Pacific. The possession of Midway and America's new land acquisitions resulting from the Spanish-American War helped contain Germany's strategic influence in the Pacific.

After 1903, Midway became a cable station along the Guam-to-Hawaii portion of the first transpacific telegraph cable. In the late 1930s, the island served as a stop on Pan American Airline's civilian air route between San Francisco and Manila. The U.S. Navy began constructing a submarine base and an air station on Midway Island in 1940 as war clouds loomed. As such, it was an important part of the American war effort in the Pacific during World War II. There were two seaplane landing areas carved into the coral of the lagoon's bottom, and although many parts of Welles Harbor on the western side of Sand Island were adequate to accommodate many ships, oceangoing vessels used a man-made channel between the two islands to berth at the larger island. President Franklin D. Roosevelt assigned control of the airspace and ocean surrounding Midway to the navy in 1941. The atoll is perhaps most famous for the Battle of Midway, fought near there during June 4–7, 1942. Midway Island remains a U.S. possession. Since 1996, it has been administered by the Department of the Interior.

Miles, Evan

Birth Date: 1838

Death Date: 1908

U.S. Army officer. Born in 1838, Evan Miles saw service in the American Civil War and remained in the U.S. Army afterward, assigned to the 21st Infantry Regiment as a captain. Serving in the American West, he took part in the Bannock War in 1878. Rising to the rank of major, during the Spanish-American War he first commanded the 1st Infantry Regiment and then the 2nd Brigade of the 2nd Division in V Corps during the Santiago Campaign. The 2nd Brigade comprised the 1st, 4th, and 25th Infantry Regiments. Initially held in reserve, the brigade saw service at El Caney on July 1, 1898. Advanced to brigadier general of volunteers on October 6, 1898, Miles retired from the army in 1899 and died in 1908.

Miles, Nelson Appleton

Birth Date: August 8, 1839

Death Date: May 15, 1925

U.S. Army officer and commanding general of the army during the Spanish-American War. Nelson Appleton Miles was born on a farm near Westminster, Massachusetts, on August 8, 1839. After attending public school, in 1856 he moved to Boston, where he worked as a store clerk. Interested in the military, he received some instruction from a retired French colonel.

At the outbreak of the American Civil War, Miles recruited some 100 men for the Massachusetts Regiment of Volunteers and was commissioned a captain. At first considered too young for battlefield command, he initially served in a staff position during the 1862 Peninsula Campaign. He soon demonstrated a natural capacity for battlefield leadership and began a meteoric advance in rank. After the Battle of Seven Pines (Fair Oaks), he was promoted to lieutenant colonel. He then fought in the Seven Days' Campaign and the Battle of Antietam (Sharpsburg). Promoted to colonel, he was wounded in the Battle of Fredericksburg and again in the Battle of Chancellorsville. For his actions at Chancellorsville, he received the Medal of Honor in 1892. He commanded a brigade of II Corps in the 1864 Overland Campaign and saw combat in the Battle of the Wilderness and the Battle of Spotsylvania Court House, after which he was breveted a brigadier general of volunteers in May 1864. He commanded a division in the Siege of Petersburg and, briefly (at age 26), a corps. He suffered his fourth wound of the war in the Battle of Reams Station.

U.S. Army major general Nelson A. Miles distinguished himself in the American Civil War and in fighting against Native Americans in the West. He was commanding general of the army during the Spanish-American War. (Library of Congress)

Following the war, in October 1865 Miles was advanced to major general of volunteers and assumed command of II Corps. In the reorganization of the army in 1866, he became a colonel and commander of the 40th Infantry Regiment, an African American unit. In 1869, he took command of the 5th Infantry Regiment. He saw extensive service in the American West and became renowned as one of the army's finest commanders in the ensuing Native American wars. He was largely responsible for the quick end of the Red River War of 1874–1875. In 1876 and 1877, he fought in the Sioux Wars and the Nez Perce War, and he personally took the surrenders of Sioux war chief Crazy Horse and Nez Perce chief Joseph.

Miles was promoted to brigadier general in the regular army in December 1880. From 1880 to 1885, he commanded the Department of the Columbia, and from 1885 to 1886, he had charge of the Department of the Missouri. In 1886, he took command of the Department of Arizona, overseeing the final surrender of Geronimo and the Chiricahua Apaches in September 1886. Miles then engaged in a public dispute with Brigadier General George Crook over the subsequent exile of the Apaches, including the loyal scouts, to Florida.

In 1888, Miles took command of the Division of the Pacific. He was promoted to major general in April 1890 and commanded the Department of the Missouri. He had overall charge of the suppres-

sion of the Sioux Ghost Dance Uprising but was angered by the bloodshed at Wounded Knee on December 19, 1890. He wanted to court-martial Colonel John W. Forsyth, in command during that action. Although Miles relieved Forsyth from command, the War Department reinstated him. In 1894, Miles was called upon to employ troops in suppressing the Pullman Strike. He next commanded the Department of the East. On October 5, 1895, he succeeded Lieutenant General John M. Schofield as commanding general of the army.

Miles opposed the Spanish-American War, believing that diplomacy could resolve the differences between Spain and the United States. He also held that fighting the war would be best left to the regular army rather than recruiting a volunteer force. Thus, he thought that the invasion of Cuba should be carried out by regular troops with volunteers replacing the regulars at home, where they would garrison the coast defense works against a possible Spanish attack. Unlike Secretary of War Russell Alger with whom he was continually at odds, Miles recognized the impracticality of expanding the nation's army to several times its prewar strength and expecting to employ it virtually overnight. He opposed an invasion of Cuba during the summer, the tropical disease season, and believed that initially the United States should rely on a naval blockade and support for the Cuban insurgents.

Originally, U.S. strategy focused on Havana, but Miles persuaded President William McKinley that the city was not a good choice because it was the strongest Spanish position on the island. The revised strategy settled on an assault against Santiago de Cuba. Miles urged postponing any invasion until the Spanish squadron there had been destroyed. He seemed to have a realistic understanding of the problems in creating and organizing a large army, and his recommendations regarding it were generally sound.

Miles supported the choice of Major General William R. Shafter to command the Cuban Expeditionary Force of V Corps. In July 1898, Miles, undoubtedly chafing at not having a more active role in the war, visited Shafter in Cuba but, to his credit, did not interfere in operations there even though as commanding general of the army he was Shafter's superior.

Once Santiago was secured, Miles received approval to proceed with his own invasion of Puerto Rico, an assignment he had sought early on. Indeed, he had originally argued for an invasion of Puerto Rico before attempting to seize Cuba. Originally, he had planned to land at Fajardo on the eastern coast but en route changed his mind because of anticipated heavy losses. On July 25, 1898, his troops came ashore at Guánica on the southwestern coast. Miles conducted a highly successful campaign in Puerto Rico but was angered that the armistice of August 12 denied him the capture of San Juan.

In the aftermath of the war, Miles was the central figure in the notorious Embalmed Beef Scandal. He alleged that the Commissary Department had issued spoiled beef to the troops, but others claimed that the meat was safe, just not very palatable. On December 21, 1898, Miles gave sensational testimony before the Dodge Commission, headed by former Civil War general and railroad builder Grenville Dodge, investigating the scandal.

Miles's allegations brought a strong response from Brigadier General Charles P. Egan, the army's commissary general, who called him a liar in the hearings. Egan was severely reprimanded for his outburst, but Miles did not escape unscathed. He too was reprimanded by the Dodge Commission for making charges that were proven to be substantially unfounded. Miles's old enemy, Secretary of War Alger, sought to take advantage of the situation by requesting that Miles be relieved of his command, which President McKinley rejected.

In February 1901, Miles was promoted to lieutenant general. President Theodore Roosevelt, who called him a "brave peacock" for his love of excessive uniform display, also crossed swords with Miles, as did Secretary of War Elihu Root, who found Miles in sharp opposition to his plan to create a general staff and do away with the position of commanding general of the army, substituting for it the new position of chief of staff.

While Root was carrying out his reforms, Miles was sent on an inspection tour of the Philippines in 1902 to get him out of Washington. From the Philippines he wrote to condemn the U.S. Army's torture of prisoners in order to extract information from them. Such criticism was not welcome in Washington and was suppressed.

Miles retired from the army on his 64th birthday in 1903. Combative, vain, and ambitious, he was, despite his leadership qualities in battle, a commanding general who displayed little political sense and did not fit in well with the new 20th-century army. In 1917 when the United States entered World War I, he offered his services, but the offer was not accepted. In retirement, he wrote articles and several books, including a two-volume memoir. Miles died in Washington, D.C., on May 15, 1925.

Academy, West Point, in 1887, ranking 20th in a class of 64, and was commissioned a second lieutenant of artillery. His initial assignments included Fort Adams in Rhode Island; Fort Schuyler in New York; and the Presidio in San Francisco. While stationed at Fort Schuyler, he graduated from Columbia Law School in 1889. In 1894, he was promoted to first lieutenant.

In 1897, Miley became aide-de-camp to Major General William Shafter, who at the beginning of the Spanish-American War in April 1898 took command of V Corps. Shafter then led V Corps with more than 15,000 troops from Tampa, Florida, to Cuba, with the taking of Santiago de Cuba his primary strategic task.

U.S. forces landed at Daiquirí, east of Santiago, during June 22–24, 1898. By July 1, they had advanced to San Juan Heights, which dominated the approaches to Santiago. Since arriving in Cuba, Shafter's size (he weighed 300 pounds), the frenetic activity of the campaign, and the hot climate all combined to cause him serious health problems. He was thus forced to rely extensively on his aides to bring him reports and relay orders. Early on the morning of July 1, as the assault on San Juan Heights was about to begin, General Shafter and Lieutenant Miley visited the troops and surveyed the area. By the time the attack began at approximately 10:00 a.m., however, Shafter had taken ill and was unable to personally direct operations. Miley and Colonel Edward J. McClernand, Shafter's adjutant, set up a forward command post at El Pozo, about four miles east of San Juan Heights, and employed messengers to relay situation reports and orders between Shafter at general headquarters, a mile farther east, and his subordinate commanders.

Miley was positioned with the troops and served as Shafter's forward observer and coordinator for the operation. Miley's most distinct contribution came as American units were forming at the base of the hill complex and taking heavy casualties from Spanish rifle fire from the top of the hills. At that point, assault unit commanders Brigadier Generals Jacob F. Kent, Samuel S. Sumner, and Hamilton S. Hawkins met with Miley. Hawkins reported that his command was taking heavy casualties and was unable to withdraw because of congestion on the trails behind them. Kent considered delaying the assault until the arrival of Brigadier General Henry Ware Lawton's 2nd Division, but Miley concurred with Hawkins that a withdrawal was not practical and that the troops could not continue to maintain their exposed positions indefinitely. The lieutenant then gave the command to the generals, under the authority of General Shafter (but without his input), to initiate the assault that ultimately resulted in Hawkins's brigade securing San Juan Hill and Sumner's cavalry division securing Kettle Hill.

Following the Battle of San Juan Hill, Miley led an expedition to secure the surrender of outlying Spanish garrisons. This assignment was accomplished without further fighting. Later, he was appointed a member of the U.S. commission that negotiated for the Spanish surrender of Santiago de Cuba.

Following the war, Miley wrote a book, *In Cuba with Shafter* (1899). He transferred to the Philippines in 1899, where he was promoted to lieutenant colonel of volunteers and became inspector

Miley, John David

Birth Date: September 1862

Death Date: September 19, 1899

U.S. Army officer. John David Miley was born in Belleville, Illinois, in September 1862. He graduated from the United States Military

general for Major General Elwell S. Otis, commander of U.S. forces in the Philippines. Miley died in Manila on September 19, 1899, from complications of typhoid fever, which he had contracted in Cuba soon after the conclusion of the campaign there. In 1900, the military reservation on Point Lobos in San Francisco was renamed Fort Miley in his honor.

Military Intelligence

In the period leading up to and during the Spanish-American War, the organized gathering of military intelligence was still in its infancy. The United States had no civilian government agency charged with information gathering. Although the U.S. Army and U.S. Navy had their own intelligence agencies, there was little coordination between them. Organized espionage became a uniformly acceptable method of gaining intelligence only in the period after the American Civil War. To supplement the data from the intelligence agencies, individual military commanders created and utilized their own espionage networks to gain tactical information, often through local insurgents. Counterintelligence did exist and was handled by a civilian agency, the Treasury Department's U.S. Secret Service.

The most successful intelligence agency was the U.S. Navy's Office of Naval Intelligence (ONI), founded in 1882. Prior to the war, the agency confined its activities to the compiling of data on foreign naval capabilities through reports from naval attachés serving with the diplomatic corps in various countries. The attachés provided data on the state of preparedness as well as on strength and movements of naval forces through such sources as open observation and newspaper accounts. Later, as the war appeared inevitable and the clash began, the ONI, headed by Commander Richardson Clover, successfully supplemented the data with information gathered through espionage. The ONI managed to provide fairly accurate data on the condition, location, and order of battle of the Spanish naval forces.

The ONI's most successful espionage effort was that of Lieutenants William Sims and John Colwell in Europe. Although not necessarily working together, the pair created spy networks that were able to gain information from all over Europe and as far away as Egypt. The network's efforts at espionage, disinformation, and direct action became particularly important in dealing with the threat posed by Spanish admiral Manuel de la Cámara's y Libermore's squadron to the U.S. Asiatic Squadron in the Philippines.

The U.S. Army's intelligence wing was the Military Information Division (MID), which was organized in 1885. Like the ONI, the MID collected reports from military attachés and similar sources. During the Spanish-American War period, the MID, headed by Major Arthur Wagner, was generally successful, with its greatest achievements being in Cuba, where it determined the Spanish order of battle and gained useful information on the island's geography and topography.

To supplement the official data from their respective intelligence agencies, individual commanders created their own espionage systems. Commodore George Dewey supplemented official reports from the Philippines, such as those from U.S. consul Oscar Williams, with data from American businessmen operating in the area and from his own aide, Ensign Frank Upham. Upham, posing as an inquisitive civilian traveler, would meet incoming ships arriving at Hong Kong from the Philippines and question the crews regarding conditions there. The navy also landed in Cuba men such as Lieutenant Victor Blue, who infiltrated the Spanish lines to verify the arrival of Cervera's squadron at Santiago de Cuba. The army used similar methods. Lieutenant Henry Whitney was sent to Puerto Rico under the guise of being a British sailor traveling and gaining important data on climate, topography, harbors, and the attitude of the population. Lieutenant Andrew Rowan aided the army by posing as an English traveler to gain access to Cuba, where he met with the Cuban insurgents, gaining data from them and through direct observation. Rowan's actions became popularized in *A Message to Garcia*.

The greatest coup in military intelligence, however, was not the result of the efforts of either the ONI or the MID. Through an acquaintance of U.S. Navy captain Charles Sigsbee, who commanded the battleship *Maine*, a system was set up to obtain information directly from the palace of the Spanish governor-general in Havana, Cuba. The system, eventually turned over to the U.S. Signal Corps, utilized a Cuban agent, Domingo Villaverde, who was a telegraph operator within the governor-general's palace. Villaverde relayed data obtained from communications of high-level Spanish officials to a contact at a subsidiary of the Western Union Telegraph Company. The data was then forwarded directly to the White House. The existence of this connection was such a closely guarded secret that even U.S. secretary of the navy John D. Long did not know of it.

Although uncoordinated and limited, the intelligence-gathering efforts during the war were generally successful. Failures did occur, however. The most dramatic failure of intelligence was that in-

U.S. Secret Service employees at work, circa 1906. The Secret Service of the Treasury Department carried out counterintelligence operations in the United States during the Spanish-American War. (Library of Congress)

volving the independence movement in the Philippines. The strength of the movement for an independent Philippines was greatly underestimated by the Americans. This lack of understanding led to failed policies toward the movement, which ultimately precipitated the Philippine-American War.

During the Philippine-American War, little centralized military intelligence was initially gained and passed to the field commanders to aid them in pursuing the war. To overcome this lack of information about the Philippine independence movement and its forces, Major General Elwell Otis created the Bureau of Insurgent Records (BIR) to translate and interpret captured documents. The small agency was completely overwhelmed with the amount of data, however, and little useful information was passed back to field commanders. In 1900, Brigadier General Arthur MacArthur reorganized the BIR into the Division of Military Information (DIM), which finally began providing useful data to field commanders. Eventually, a system was created by which field commanders also provided data back to the DIM to allow for more comprehensive understanding of the overall conditions.

Counterintelligence efforts in the United States were directed by the U.S. Treasury Department's Secret Service. The Secret Ser-

vice's most notable success was the destruction of a Spanish spy network being organized in Canada. After departing the United States as war approached, the former naval attaché of the Spanish Washington legation, Lieutenant Ramon Carranza, traveled to Montreal. There he began creating a spy network that included former U.S. Navy cruiser *Brooklyn* crewman George Downing, former artillerist Frank Mellor, and others. The ring was successful in obtaining data on the movement of naval vessels, etc. However, the major informants in the United States were caught and jailed. Carranza was forced to leave Canada but was still transmitting data as late as June 15, 1898.

The Spanish-American War prompted a significant improvement in military intelligence gathering. With the war, the government changed from relying solely on reports available through its diplomatic corps to using organized espionage to gain important information. Improvements were made in espionage methods and practices, although no central agency was charged with coordinating and disseminating military intelligence. The agencies of the U.S. Navy and the U.S. Army were, however, generally successful in gaining useful but limited military intelligence.

Militia, Naval

Personnel from state naval militias who augmented the U.S. Navy during the Spanish-American War. The modern naval militia system began in 1889 when the Massachusetts and New York legislatures each passed measures establishing state naval militias, the first such organizations since the Revolutionary War. Recognizing the need for a source of trained, experienced seamen for use in wartime, U.S. naval and congressional leaders in the late 1880s attempted to secure funding to organize a federal naval reserve force. Failing in this endeavor, Congress supported the two fledgling state naval militias by instituting what became an annual appropriation for arms and equipment in March 1891.

In 1894, Congress bolstered its support for the naval militia program and authorized the loaning of ships to the then 11 state militias for training purposes. By 1898, 16 states sponsored naval militias with federal assistance, providing a potential source of trained maritime manpower for use by the U.S. Navy.

In January 1898, the U.S. Navy numbered 1,232 officers and had an authorized strength of 11,750 enlisted men. At peak strength in the Spanish-American War, the U.S. Navy numbered 2,088 officers and 24,123 enlisted men, 4,316 of whom came from state naval militias for employment in naval operations and coastal defense. At this time, there was no legal mechanism for mustering these forces into federal service, so state governors allowed state naval militiamen to temporarily resign their state obligations or granted them leave to allow them to serve in the U.S. Navy.

Naval militiamen during the Spanish-American War served either in the Coast Signal Service or the Auxiliary Naval Force (sometimes referred to as the Mosquito Squadron). The Coastal Signal Service, part of the U.S. Coastal Defenses, was manned entirely by state naval militia forces. The service established 36 signal stations

along the Atlantic and Gulf coasts cooperating closely with personnel from the Life Saving Service, the Weather Bureau, and light-houses. These forces kept lookout for the approach of enemy vessels and used various methods of communication including telephone, telegraph, torches, and International Code flags.

Naval militiamen also augmented crews of U.S. naval vessels during the course of the war and provided the entire crew for four naval auxiliary cruisers. The Auxiliary Naval Force was formally established by Congress on May 26, 1898, as a temporary measure to strengthen the naval ship complement for the protection of U.S. cities and ports on the Atlantic, Gulf, and Pacific coasts for the duration of the war. Ten American Civil War-era recommissioned monitors, joined by 31 purchased, chartered, or donated vessels in nine districts along the coasts, patrolled local waters, conducted target practice, protected minefields, and enforced quarantine regulations. Almost entirely manned by naval militiamen, these forces were augmented by a small percentage of merchant mariners.

Naval militiamen entirely manned the four naval auxiliary cruisers *Dixie*, *Prairie*, *Yankee*, and *Yosemite*. The personnel came from the state naval militias of Maryland, Massachusetts, New York, and Michigan, respectively. The cruisers served in blockade duty, in engagements, and as transports to and from Cuba, Puerto Rico, and other areas of the Caribbean theater. The naval militia programs of several states continued with federal support until World War I and served as a precursor to today's Naval Reserve Service.

Militia Act of 1903

U.S. congressional legislation passed on January 21, 1903, that marked the beginning of federal funding and recognition of the National Guard, composed of the Reserve Militia and the Organized Militia (National Guard). The Militia Act of 1903 is also known as the Dick Act for its sponsor, Republican senator Charles W. Dick, also a general in the Ohio National Guard. The act offered federal funds to each state to train and equip its own contingent of National Guardsmen. Also under the provisions of the act, the Organized Militia could be deployed upon presidential order for an initial period of nine months. The states, however, operated both reserve and organized militias. The Militia Act was part of Secretary of War Elihu Root's efforts to reorganize, reform, and streamline the American military establishment, a need that had been sorely apparent

during the often chaotic and tumultuous mobilization for the Spanish-American War.

Militia units had been part of the American defense system since December 1636, when the General Court of the Massachusetts Bay Colony organized three militia regiments to defend the settlements against the growing threat of Native American attacks. The term “national guard” was first used by Marie Joseph Motier, Marquis de Lafayette, to describe citizen forces mobilized during the French Revolution in the 1790s. The militia was initially patterned after the British militia systems and was later regulated by the Militia Act of 1792. Yet the federal government provided no funding for the militias, and most states allowed their militias to deteriorate, which made them quite ineffective in subsequent wars. By 1903, it was clear that a militia act that was more than 100 years old had to be revised.

In 1902, Dick became president of the National Guard Association. He was determined to elevate the National Guard to the same level as the regular army. However, the final version of the law was a compromise between the association’s demands for better funding and training and the government’s request to free the militias from complete state control. The 1903 Militia Act consisted of 26 sections, which set forth provisions that had previously applied only to the regular army. Among other things, male citizens between the ages of 18 and 45 were divided into the Organized Militia (National Guard) and the Reserve Militia. Furthermore, Congress mandated that within five years the National Guard’s organizational structure, pay scale, equipment, and discipline had to be identical to that of the regular army. Membership in the National Guard units remained voluntary, and state governors retained control over their National Guard regiments’ mobilization. To be eligible for federal funds, the states’ National Guard units were obliged to undertake 24 drills and 5 days of summer training camps per year, allow for federal inspections, conform to U.S. Army rules, and meet all federal requirements.

Federal funding for the National Guard increased substantially within the next few years. Whereas the militia’s budget in 1887 had been a meager \$400,000, Congress allocated \$53 million to the National Guard between 1903 and 1916. To supervise training, the U.S. War Department created the Division of Militia Affairs. In 1908, the Militia Act was amended to allow guardsmen to serve outside the United States and nullified the nine-month cap for active duty. The June 1916 National Defense Act further expanded the National Guard’s role and increased federal regulation of it. This act stipulated that National Guard regiments could be called into federal service, at which point they would be part of the regular army and not the state militia. In addition, the term “National Guard” became mandatory, and the president was given the power to deploy the National Guard in case of war or other national emergency.

Mindanao

Second largest island in the Philippine archipelago. Geographically, Mindanao is the southernmost Philippine island and encompasses some 36,000 square miles, about the size of the state of Indiana or one-third of all of the landmass of the Philippines. At the time of the Spanish-American War, much of the island was mountainous and heavily forested and was rich in natural resources such as gold, nickel, and copper.

Mindanao has the highest peak in the Philippines, Mount Apo, that soars to 9,692 feet above sea level. The island includes the Sulu Archipelago, which runs to the southwest of the main island. To the north is the Visayas island chain. The island’s principal city is Davao in the south. Mindanao is currently home to about 18 million people and is divided into 6 administrative regions and further subdivided into 25 provinces.

Mindanao’s social formation has been distinct from the rest of the Philippines because of its unique history. Spanish colonization beginning in 1565 left Mindanao and the smaller islands of Sulu and Tawi-Tawi virtually untouched. At best, they were only weakly integrated to Las Islas Filipinas, the Spanish term for the Philippine Islands. By 1898, about one-third of Mindanao’s inhabitants were Muslims, or Moros as the Spanish called them. In the nearly five centuries between Spanish colonization and the Spanish-American War, the Moros waged frequent warfare against their colonial overlords in an attempt to keep themselves separated from the rest of the Filipino population, much of which was Christian by the early 1800s.

Economically, Mindanao was and still is an important region. At the turn of the 20th century, it was a great source of fertile lands officially classified as belonging to the public domain. Most of its land was available for agricultural use except for a few patches occupied by Moros and various tribal groups, whose combined population was only about 380,000 people according to the 1903 census. Thus, the frontier on Mindanao offered a vast potential for agricultural development. American colonial administration initiated steps to open this region by encouraging foreign venture capitalists to invest in the region and invited settlers onto the island to harness its rich, largely untapped resources.

Field artillery on the move at Camp Vicars on the island of Mindanao in the Philippines. (Library of Congress)

While no fighting occurred on Mindanao during the Spanish-American War, the island was the scene of periodic and pitched engagements between rebellious Moros and U.S. Army forces during 1902–1903. The Moros, who steadfastly refused to yield to American governance, continued their long tradition of resisting rule by outside forces. In 1902 and 1903, U.S. forces under Colonel Frank Baldwin and then Captain John J. Pershing conducted a series of punitive raids against entrenched Moro encampments in the Lake Lanao region of the island. Thanks to Pershing's intrepid military skills and sharp diplomatic savvy, the threat posed to U.S. forces by the Moros was sharply diminished after the Lake Lanao Campaigns. Mindanao has remained a hotbed of rebel agitation, however, into the 21st century.

Today, Mindanao is host to various industries engaged in extracting or producing agricultural products (coconuts, pineapples, bananas, sugar, abaca, rubber), deep-sea fishing, mining, and other industrial ventures. The Davao Province was once dominated by Japanese colonists, who pioneered abaca plantations that ushered in the development of this province during the 1930s until the outbreak of World War II.

Following World War II and after the Philippines gained its independence, Mindanao attracted millions of landless settlers from Luzon and the Visayas seeking to acquire and develop its abundant lands. The government passed laws to encourage such mass migration, which contributed largely to the peopling of the southern frontier during the 1950s–1970s. Between 1948 and 1960, for instance, Mindanao's population grew at a rate more than double the national average of 2.9 percent. This pattern of migration eventu-

ally diluted the indigenous culture and overshadowed the native peoples, who became minorities in their own homeland.

Today, Mindanao has become a mainly Christian community except for five predominantly Muslim provinces and a few towns inhabited mostly by tribal communities. Mindanao has become a source of political strain and warfare associated with the secessionist struggle waged by the Moros since the 1970s. Since then, the Philippine government has been engaged in a peace process with the Moro National Liberation Front and lately with the Moro Islamic Liberation Front. The Armed Forces of the Philippines also conducts periodic punitive operations against militant Islamic elements on Mindanao, notably the Abu Sayyaf Group and the Rajah Soliman Movement, which emerged in the 1990s.

Mines

The 19th century saw development of the modern mine and the automotive torpedo, both of which came to have profound impact on war at sea. The first mines were known as torpedoes, after the electric ray fish that shocks its prey. Modern underwater mine warfare may be said to have originated during the American Revolutionary War when Yale University student David Bushnell released floating kegs of powder in the Delaware River. These contact mines were triggered by a flintlock arrangement inside the keg; the hammer was released by the shock of the mine striking an object. The mines took too long to reach their target, and premature explosion of one of them apparently alerted the British.

During the Napoleonic Wars, the American Robert Fulton tried to interest first the French and then the British in mines of his invention. These were intended to drift down in pairs on their target, be caught by the anchor chains of a target vessel, and then explode by means of a timer on a delay of up to four hours. In October 1804 and again in October 1805, Fulton tried the mines against the French at Boulogne with no apparent effect. In October 1805, he used a mine to blow up the 200-ton captured Danish brig *Dorothea*, the first time in history that such a large vessel had been destroyed by a mine. In another such test in July 1807, he blew up a 200-ton

During the Spanish-American War, U.S. seaports were protected by tethered mines that could be electrically detonated from the shore or that exploded when a ship came into contact with them. (*Photographic History of the Spanish-American War*, 1898)

brig in New York Harbor. During the War of 1812, the Americans made several attempts to destroy British ships with mines, but none were successful.

During the Crimean War of 1853–1856, the Russians used mines to try to prevent Allied access to their coastal forts. In 1839, Tsar Nicholas I appointed Prussian émigré Moritz-Hermann Jacobi as head of a scientific committee to conduct experiments in the development of a galvanic (electronic) mine. As early as 1782, Tiberius Cavallo had demonstrated that gunpowder could be detonated by means of an electric current. Building on the work of Cavallo, Americans Fulton and Samuel Colt and Russian baron Pavel L'vovich Schilling von Cannstadt, Jacobi developed working mines by the time of the Crimean War. The Russians subsequently deployed these mines to help protect access to St. Petersburg. Jacobi's mines consisted of zinc canisters filled with gunpowder and were set off by a detonator, a glass tube filled with acid, that when broken ignited the main charge. During the war, the Russians used chemical, contact, and electrical command-detonated mines in both the Baltic Sea and the Black Sea. Although several of the mines went off against British ships, they were too small to inflict significant damage.

The Confederacy made extensive use of mines during the American Civil War. Influential Confederate Navy officer and scientist Matthew Fontaine Maury was an early proponent of mines and conducted experiments with them. Civil War naval mines and torpedoes were of a variety of types. Either scratch-built or constructed from barrels as casings, they were essentially stationary weapons, a sort of buoy held in place at an appropriate distance from the surface by a cable anchored to the sea bottom by a weight. The Confederates positioned them in rivers or harbors to explode against the hulls of Union warships. The two basic types of detonation were contact and electricity. The first type detonated when horns surrounding the charge were broken; this set off a chemical reaction that ignited the charge. The second was fired by means of electrical

connections from batteries on shore. The first type was more certain to explode but was unable to distinguish its victim and hence was also dangerous to friendly vessels. The second type could only be employed close to shore.

More often than not, such early mines failed to explode as a result of faulty detonating equipment or becoming waterlogged, or they were swept away by the current. Powder charges in Civil War mines ranged from approximately 50 pounds to up to a ton of explosive. In all, 50 ships were sunk or damaged by mines during the war, four-fifths of them Union vessels. Only one Confederate ship, the *Albemarle*, was lost to a Union mine. Most of the Confederate vessels sunk were victims of their own mines.

The Royal Navy in 1870 brought into service a towed mine known as the Harvey torpedo after its inventors, Captain John Harvey and Commander Frederick Harvey, both of the Royal Navy. They merely updated the Fulton concept. The Harvey torpedo made use of the principle that an object towed from the bow of a ship usually diverges from the vessel's course at a 45-degree angle. The towing vessel approached the target vessel at a maximum speed of 10 knots and then veered off to the side while the torpedo swung in a wider arc, struck the target ship, and exploded against it. Various chemical fuses were used to ignite the 33 pounds of gunpowder in the torpedo explosive charge; later this was increased to 66 pounds of wet guncotton. Another version was fired by electricity. However, there were many problems with the Harvey torpedo, including the low approach speed by its delivering vessel and difficulties with the torpedo parting its tow and prematurely exploding.

Despite the proven effectiveness of mines during the Civil War, the U.S. Navy largely ignored their use thereafter. Although the Spanish employed mines during the Spanish-American War in both the Philippines (at Subic Bay and off Manila) and in Cuban waters, these mines were either avoided or failed to explode. Mines produced no casualties during the war. This may have been the result

of maintenance problems or incorrect mooring depths or locations. Of course, the perception that a Spanish mine had destroyed the U.S. battleship *Maine* had a great deal to do with bringing on the war in the first place.

Mines really came into their own during the Russo-Japanese War of 1904–1905. During World War I, both sides deployed vast numbers of mines with considerable effect. A total of some 309,800 mines were reportedly laid during the war. Of this number, some 45,000 German mines reportedly claimed more than 1 million tons of Allied shipping sunk.

Missionaries

In the immediate aftermath of the Spanish-American War, Protestant missionaries traveled in large numbers to the Philippines and Cuba in an effort to evangelize foreign nationals. As early as the 16th century, shortly after the arrival of Spanish explorers, Catholic missionaries—usually monks or young priests—had spread Christianity in Cuba and throughout the Philippine Islands. With the exception of the people of Mindanao, which retained Islamic influences, the Filipinos converted en masse to the new religion while still keeping their cultural and animist roots. Local and foreign Catholic leaders quickly established powerful positions within communities and local governments.

Missionary efforts had long been part of the Protestant evangelical tradition, which required an individual and enthusiastic conversion in order to receive salvation. Most Protestant missionaries believed that Catholics were not true Christians, so they became targets for missionary evangelism. Additionally, Protestant missionary efforts often targeted nonwhite, or so-called heathen, populations as being less civilized than whites and therefore in greater need of the morality and discipline that religious practice and salvation would provide. The roots for such evangelical missions can be seen in early Protestant efforts to evangelize and civilize frontier Indian populations and immigrants. Thus, these Protestant missionaries fit well within the paradigms of imperialism, expansionism, ethnocentrism, and Progressivism of the late 19th and early 20th centuries. Most missionary efforts to the Philippines and to Cuba began after major fighting had ceased.

In 1899, the American Missionary Society publicly announced praise for Rudyard Kipling's poem "The White Man's Burden," which suggested that white people had a God-given mandate to civilize nonwhite societies as part of God's plan for the world. Soon after the Spanish-American War, President William McKinley, himself a Methodist, addressed the General Mission Committee of the Methodist Episcopal Church and explained his reasoning for annexing the Philippines. In addition to diplomatic and strategic reasons, he suggested that it was the mission of the United States to educate, uplift, civilize, and Christianize Filipino society. His public statement clearly emphasized the extent to which missionary and political objectives converged.

American churches responded to the annexation of the Philippines and continued involvement in Cuba by sending hundreds of missionaries to both countries. In 1899, the Foreign Christian Missionary Society, an organization of the Christian Churches, Churches of Christ, and the Disciples of Christ, sent two couples to Cuba. Sending couples into the mission field was a common practice for many Protestant denominations. In Cuba, Protestant missionaries met with limited success, as most Cubans were deeply instilled with Catholic beliefs and dogma.

In the Philippines, however, missionaries were in a more precarious situation. The Philippine-American War (1899–1902) placed American missionaries in the middle of a contest for control of the Philippines. Most important, American missionaries and their churches in the United States had to respond to Philippine nationalism. They had to balance American fears of Filipino nationalism and self-government with the need to train Filipino nationals as clergy and lay church leaders. Even in the second area, however, white missionaries consistently expressed doubt that Filipino nationals could effectively lead churches. In 1902, Filipino leader Gregorio Aglipay led a schism against the Catholic Church in the Philippines and established the Iglesia Filipina Independiente (Independent Filipino Church). Protestant reactions to the schism were mixed: some supported this nationalist movement against the Catholics, while others viewed the movement and its leader as opportunistic and bound to stir up unrest.

According to some scholars, missionary efforts such as these should also be viewed within a larger context of American cultural imperialism. In their assessment, missionaries to foreign countries preceded the cause of the flag and advanced the creation of new markets and imperialism. For example, Sanford Ballard Dole, the leader of the Americans who overthrew the Hawaiian monarchy in 1893, was the son of Protestant missionaries. In addition to spreading American ideas about religion, democracy, and culture throughout the Philippines and Cuba, missionaries also acted within the United States to create a national consensus about expansionism in general. Others contest the idea that missionaries were directly implicit in the hegemonic and imperialist policies of 19th-century politicians, but they generally recognize that religion constitutes an inseparable part of the larger culture. Therefore, some argue that even if missionaries' efforts were purely theologi-

cal or religious in nature, their actions cannot be considered apart from the wider imperial context.

Monroe Doctrine

Seminal principle of U.S. foreign policy enunciated on December 2, 1823, by President James Monroe during his annual message to Congress. Monroe's declaration came just eight years after the end of the Napoleonic Wars, which had resulted in the dissolution of much of the Spanish Empire and the declarations of independence of several Latin American countries between 1810 and 1822. The United States now perceived a threat from France and Spain, together with the Holy Alliance of Russia, Prussia, and Austria, to return colonial rule to many of these new republics. Washington was also concerned over Russia's intentions in northwestern North America. Indeed, Tsar Alexander I had recently declared the waters off Alaska closed to foreign ships.

Concerns in Washington were also shared in London. The British wanted to expand trade with Latin America. In September 1822, British foreign secretary George Canning suggested to the American minister to London, Richard Rush, that Britain and the United States issue a joint declaration designed to prevent European intervention in the New World. Although Secretary of State John Quincy Adams persuaded Monroe to go it alone, Canning later boasted that he had “called the New World into existence to redress the balance of the Old.” Any declaration by the Americans would have the support of Britain's Royal Navy, the world's most powerful navy.

Monroe's speech included three primary positions. First, European powers ought not to attempt to establish colonies in the continents of North or South America. Second, European monarchs should not meddle in the internal politics of the Americas, especially to attempt to overthrow republics and replace them with monarchies. Third, the United States would continue to refrain

from interfering in the internal politics of any European power. Monroe warned that European interference in the Americas would be viewed by the United States “as dangerous to our peace and security” and “as the manifestation of an unfriendly disposition toward the United States.” While not enforced at first, the Monroe Doctrine became a basic tenet of American foreign policy and a justification for American intervention throughout the Western Hemisphere.

Monroe's declaration was a response to these specific threats rather than the formulation of a fundamental doctrine governing American foreign policy. In fact, for two decades the United States did not act decisively to uphold Monroe's principles despite the fact that European powers continued to meddle in the politics of the Americas. Even if U.S. leaders had chosen to enforce Monroe's dictates, however, the nation lacked the military power to do so.

President Monroe's declaration began to be transformed into a doctrine in 1845 when President James K. Polk invoked it during the dispute with Mexico over the boundary of Texas, which the United States had annexed in March 1845. Texas had declared independence from Mexico in 1836, but Mexico had not ratified the treaty imposed on General Antonio López de Santa Anna after the Battle of San Jacinto. Consequently, Mexico recognized neither Texas independence nor its claim of the Rio Grande as the boundary with Mexico when the United States annexed Texas. Concerned over European potential interference in Texas and in Mexico generally (which included the territory of California, where both Britain and France had interests) and similarly concerned over British interests in the Oregon territory, Polk explicitly invoked Monroe's principles and warned European powers not to intervene militarily or interfere politically. Polk also enlarged those principles by prohibiting European powers from acquiring territories in the Americas through peaceful transfers (e.g., of California to Britain) but allowing such territorial transfers to be made to the United States (e.g., Texas). Finally, Polk warned that the United States would vigorously enforce these policies in North America even though the Monroe Doctrine had not been upheld in Central and South America heretofore.

American public support for the Mexican-American War (1846–1848) was bolstered by a belief in Manifest Destiny, the concept that divine providence had destined the United States to span the entire continent, from the Atlantic to the Pacific. The annexation of Texas was seen as partial fulfillment of this destiny. American victory in the war forced Mexico to transfer more than half its territory to the United States, including present-day California, Arizona, and New Mexico and parts of Colorado, Nevada, and Utah. This immense territorial acquisition further strengthened belief in Manifest Destiny, which lent additional support to the Monroe Doctrine. The outcome of the war also effectually defended the principles of the Monroe Doctrine as a preemptive action that kept European powers from establishing colonies in that territory or acquiring it through transfer.

Now established and enlarged, the Monroe Doctrine was directly challenged during the American Civil War (1861–1865) when

This 1896 political cartoon, originally captioned “The old horse was too slow for Uncle Sam,” criticizes U.S. foreign policy. To the anger of other countries, Uncle Sam has abandoned the horse, whose saddle says “Monroe Doctrine,” in favor of “coasting” on a bicycle with “Eastern Hemisphere” and “Western Hemisphere” for wheels. (Library of Congress)

France invaded Mexico, overthrew the republic, and established a puppet monarchy headed by Austrian prince Ferdinand Maximilian. While at the time the United States was unable to forcibly resist these events, Secretary of State William Seward negotiated with France to withdraw its forces, which led to the overthrow of Maximilian in 1867. Although the Monroe Doctrine was not explicitly invoked during this dispute, Seward’s diplomacy was most certainly guided by its principles.

The Monroe Doctrine finally found respect in Europe after a dispute between Great Britain and the United States over the boundary between British Guiana and Venezuela. In 1895, Secretary of State Richard Olney invoked the Monroe Doctrine explicitly in his correspondence with Great Britain demanding that it accept U.S. arbitration over the boundary dispute. While the British initially refused to acknowledge the authority of the Monroe Doctrine in international law, they ultimately submitted to American arbitration, which further vindicated the doctrine.

The Monroe Doctrine was again invoked and further extended by expansionists in favor of the Spanish-American War in 1898. The United States had long been interested in Cuba, where the Cuban War of Independence against Spanish rule commenced in 1895. In 1854, the Americans had attempted to purchase the island from Spain, which declined the offer. The revolution provided an opportunity to help force Spain out of Cuba and perhaps out of the Caribbean entirely, goals that further extended the Monroe Doc-

trine by intervening in the internal politics of a European power already possessing a colony in the Americas.

At the successful conclusion of the Spanish-American War, the United States acquired the Philippines, Guam, and Puerto Rico from Spain. And while the United States did not annex Cuba, the Platt Amendment guaranteed its interests and presence there, which would prove to be considerable until the 1959 Communist Revolution brought Fidel Castro to power. In this case, then, invocation and extension of the Monroe Doctrine contributed to the creation of an overseas empire, or an extraterritorial Manifest Destiny.

From 1823 to 1898, the Monroe Doctrine matured and was transformed into a doctrine justifying intervention by the United States in the Americas to preempt European interference. In December 1904, President Theodore Roosevelt made this transformation even more explicit by seeking to have the United States exercise “an international police power” in the Americas. In 1928, President Calvin Coolidge revoked the Roosevelt Corollary to the Monroe Doctrine, a step that led to President Franklin D. Roosevelt’s Good Neighbor Policy of the 1930s. Nevertheless, the transformation of the Monroe Doctrine from being primarily a demand of European nonintervention in the Americas to a justification for intervention by the United States remains a key part of the development of U.S. hegemony in the Western Hemisphere.

Montero Ríos, Eugenio

Birth Date: November 13, 1832

Death Date: May 12, 1914

Spanish politician, jurist, and member of the Spanish delegation that negotiated the Treaty of Paris on December 10, 1898, that officially ended the Spanish-American War. Eugenio Montero Ríos was born on November 13, 1832, in Santiago de Compostela, Spain. After studying canon law at the Universidad de Santiago de Compostela, he subsequently taught that subject at the Universidad de Oviedo (1859), the Universidad de Santiago de Compostela (1860), and the Universidad Central de Madrid (1864).

A member of the Partido Progresista (Progressive Party), Montero was elected a deputy to represent Pontevedra in the aftermath

of the Revolution of 1868, which overthrew Queen Isabella II. An ardent supporter of Juan Prim, primary architect of the Revolution of 1868, Montero was appointed minister of justice in 1870. Working to separate church and state, he introduced civil marriage into the Spanish legal system.

Montero supported Prim's efforts to offer the Spanish throne to Prince Leopold von Hohenzollern-Sigmaringen, which sparked the Franco-Prussian War (1870–1871). When the duke of Aosta, son of King Victor Emmanuel II of Piedmont-Sardinia, became king of Spain as Amadeo I in 1871, Montero supported his anticlerical stance and continued to push for legislation to strengthen the separation of church and state, much to the chagrin of many powerful elements of Spanish society. When Amadeo I, regarded as a foreigner by the Spanish people, was unable to win support, he abdicated in February 1873. Montero drafted his letter of abdication and followed the monarch into exile in Lisbon, Portugal.

In late 1873, Montero supported Cristino Martos's creation of the Partido Republicano Democrático (Democratic Republican Party). For the remainder of his life, Montero oscillated between republicanism and liberal monarchism. Unable to establish his own liberal party, in 1884 he joined Práxedes Mateo Sagasta's Partido Liberal (Liberal Party). Montero served as Sagasta's minister of justice in 1892.

In 1898, Montero, then the president of the Spanish Senate, was appointed president of Spain's Peace Commission sent to Paris to negotiate a formal end to the Spanish-American War. Other Spanish members of the commission included Buenaventura de Abarzuza, José Garnica, Wenceslao Ramírez de Villa-Urrutia, and Rafael Cerero. Never a supporter of a Spanish colonial empire, Montero was not opposed to relinquishing Spanish colonial authority of Cuba, Puerto Rico, Guam, or the Philippines. He was willing to give up all of these without indemnity provided that the United States absorbed all their debts. He also sought European arbitration to resolve the impasse. Ordered by his government on November 25 to sign the treaty, he threatened to resign but was persuaded to remain and did sign the treaty.

Following Sagasta's death in 1903, Montero led the radical faction of the Liberals while Segismundo Moret led the conservative faction. Montero was prime minister from June 23 to December 1, 1905. During his brief tenure, the *Cu-Cut!* debacle erupted. In November 1905, Barcelona's small Catalan weekly journal *Cu-Cut!* published a cartoon satirically contrasting the political victory of antimilitarist proseparatist politicians in Barcelona with the Spanish defeat in the Spanish-American War. On November 24, 1905, approximately 200 junior officers attacked the offices of *Cu-Cut!* Military officers demanded a law placing press attacks on the army under military jurisdiction. Montero, however, refused to agree to legislation curtailing freedom of the press. On November 30, 1905, King Alfonso XIII announced his support of the army's demands, prompting Montero's resignation on December 1. The *Cu-Cut!* Affair was a prelude to the end of the civil-military power sharing arrangement implemented by the Bourbon Restoration.

Montero again served as president of the Senate from 1911 to 1913. He died in Madrid on May 12, 1914. Interestingly, in his will, he renounced all royal decorations and honors.

Montgomery, USS

U.S. protected cruiser. The *Montgomery*, namesake of its class, displaced 2,094 tons, making it one of the smallest ships of its type in the U.S. Navy. The *Montgomery* was launched in December 1891 at Baltimore, Maryland, and was originally armed with nine 5-inch guns, six 6-pounders, two 1-pounders, and three 18-inch torpedo tubes. The ship was commissioned at Norfolk, Virginia, on June 21, 1894, under Commander Charles W. Davis. It joined the North Atlantic Squadron after its shakedown and embarked on routine service in both the Atlantic and Caribbean.

In February 1898, the *Montgomery*, now captained by Commander George A. Converse, visited several Cuban ports, including Santiago de Cuba, in conjunction with the visit to Havana of the U.S. battleship *Maine*. While there, Converse submitted reports to the Navy Department detailing the appalling conditions faced by Cuban civilians. Following the loss of the *Maine* on February 15, 1898, Converse brought the *Montgomery* to Havana on March 9 to assist briefly in the official investigation of the disaster. The *Montgomery* soon left for Key West, Florida, amid fears by Converse and Captain Charles D. Sigsbee of the *Maine* that the cruiser might suffer the same fate as the *Maine*.

Following the declaration of war against Spain in April 1898, the *Montgomery* escorted the transport *Panther*, carrying the 1st Marine Battalion (Provisional) from Hampton Roads, Virginia, to Key West. The *Montgomery* then joined the squadron of Rear Admiral William T. Sampson in the blockade of Havana on May 1 and captured two Spanish sailing ships, the *Lorenzo* and *Frasquito*, on May 5. On May 12, the *Montgomery* participated in the shelling of the Spanish forts guarding the harbor at San Juan, Puerto Rico, where Sampson had gone in search of Rear Admiral Pascual Cervera y Topete's squadron. The ship played a minor role but helped to silence Fort Canuelo during the bombardment.

The *Montgomery* then resumed its station with the blockade of Havana, remaining there when Sampson took most of his squadron to Santiago de Cuba, where Cervera had sought refuge.

The U.S. Navy protected cruiser *Montgomery* participated in the blockade of Cuba during the Spanish-American War. (Naval Historical Center)

In late May, the *Montgomery* served as the flagship of Commodore John Watson, commander of U.S. naval forces along Cuba's northern coast. The ship later participated in the Puerto Rico Campaign, which was still ongoing when hostilities came to an end on August 12, 1898.

In early 1899, the *Montgomery* joined the South Atlantic Squadron and patrolled the South American coast until it was decommissioned in September 1900. Recommissioned in May 1902, it served in the West Indies until decommissioned again in September 1904. The *Montgomery* was recommissioned in January 1908 and served as a torpedo experimental vessel in the Fifth Naval District, having all its armament except its torpedo tubes and four 6-pounder guns removed. From 1914 to 1918, the ship served with the Maryland Naval Militia. Renamed the *Anniston* on March 14, 1918, the ship then served with the American Patrol Detachment along the Atlantic coast and the Caribbean until its final decommissioning on May 16, 1918. The *Anniston* was sold on November 14, 1919.

Montojo y Pasarón, Patricio

Birth Date: September 7, 1839

Death Date: September 30, 1917

Spanish admiral, intellectual, novelist, and essayist who commanded the Spanish squadron in the Philippines during the Spanish-American War. Born in El Ferrol, Corunna Province, Spain, on September 7, 1839, Patricio Montojo y Pasarón studied

at the Naval School in Cádiz and joined the Spanish Navy as a midshipman in 1855. Promoted to sublieutenant in 1860, he was assigned that same year to the Philippines, where he fought against the Moros on the island of Mindanao. Returning to Spain in 1864, he served on the frigate *Almansa* and fought in the Battle of Abato and the Battle of El Callao under Admiral Casto Méndez Núñez, commander of the Spanish Pacific Fleet, in the Chíncha Islands War (1864–1866) against Peru and Chile. Montojo was then secretary to Admiral Méndez Núñez and served in the Admiralty Secretariat in Madrid.

Promoted to commander in 1873, Montojo then commanded Spanish warships on Havana station and in the River Plate. Advanced to commodore, he again served in the Philippines before returning to Madrid in 1890. Promoted to rear admiral and reassigned to the Philippines, he took command of all Spanish naval forces in the islands, the command he held at the start of the Spanish-American War.

Montojo had few options in prosecuting the Spanish-American War. Although he possessed some 40 ships, most were small gunboats. Only his 6 cruisers were capable of offering any real resistance to U.S. commodore George Dewey's Asiatic Squadron, and even these were not as well armored and were greatly inferior in armament to the ships in the American squadron. Montojo originally had his ships at Subic Bay 60 miles west of Manila, but the water there was 40 feet deep, and its defenses were unready. Reportedly, he decided that if his ships were to be sunk, he would prefer it to occur in shallower water. He then returned them to Manila Bay. To help offset his weakness in firepower, he anchored his ships off the fortified naval yard of Cavite so that they might be supported by land batteries.

Following the virtual destruction of his fleet in the May 1, 1898, Battle of Manila Bay, during which he was wounded in the leg (both his sons also participated in the battle on the Spanish side, and one was also wounded), Montojo withdrew to the city of Manila. There, he continued to exercise his command responsibilities until the surrender of that city on August 13.

A Spanish government decree of September 1898 officially relieved Montojo of his duties. On his return to Spain that November, he was imprisoned and then court-martialed. Absolved by the court of responsibility for the destruction of his squadron, he was nonetheless retired from active duty. One of his chief defenders was Read Admiral Dewey. Montojo later wrote an account of the Battle of Manila Bay. He died in Madrid on September 30, 1917.

Moret y Prendergast, Segismundo

Birth Date: June 2, 1833

Death Date: January 28, 1913

Spanish politician and writer. Born in Cádiz, Spain, on June 2, 1833, Segismundo Moret y Prendergast was educated in Britain and at the University of Madrid, where in 1858 he became a professor of political economy while at the same time continuing to study law.

Moret was elected to the Spanish Cortes (parliament) in 1863 and reelected in 1868. He was one of the authors of the Spanish Constitution of 1869 following the Glorious Revolution (1868) in Spain. In 1870, he became colonial minister in the cabinet headed by General Juan Prim and advocated the abolition of slavery and a constitution for Puerto Rico. In 1871, Moret became minister of the treasury and the next year was appointed Spanish ambassador to Great Britain but resigned from that post after some months to become director of a British bank. Following the restoration of King Alfonso XII in 1875, Moret returned to Spain. Reelected to the Cortes in 1879, he rallied to the restored Bourbon monarchy in 1882. The next year, he became minister of the interior, and in 1885, he joined the Liberal Party of Práxedes Mateo Sagasta and under him held a number of cabinet posts, including minister of foreign affairs (1885–1888) and minister for overseas colonies (1897–1898).

Appointed colonial minister in October 1897 in the Sagasta government, Moret was the most outspoken cabinet advocate of a conciliatory policy toward both Cuba and Puerto Rico, and he was the author of the November 1897 autonomy decrees in an effort to avoid secession of the two islands from Spain. He opposed war with the United States as a hopeless venture for Spain and, in consequence, sought mediation by other European governments to end the crisis over Cuba. Moret favored a positive Spanish response to President William McKinley's ultimatum of March 27, 1898, in the belief that this would give the Spanish government more time to resolve the situation short of war.

Because he had opposed war, when it occurred Moret found himself under fire from Spanish nationalists for having proposed concessions beforehand. He was dropped from the cabinet on May 15, 1898, and replaced by Vicente Romero Girón. Consulted by Sagasta regarding the Protocol of Peace in August 1898, Moret approved signing it provided it was limited to Cuba and Puerto Rico.

Following the death of Spanish premier Sagasta in 1903 and a period of political struggle, Moret became the leader of the Liberal Party. He was premier of Spain during 1905–1906 and again during 1909–1910. He was serving as president of the House of Representatives at the time of his death in Madrid on January 28, 1913.

Morgan, John Pierpont, Sr.

Birth Date: April 17, 1837

Death Date: March 31, 1913

American financier and banker and one of the wealthiest and most influential men in the United States during the Spanish-American War. John Pierpont Morgan's activities facilitated the Industrial Revolution, which gave an impetus to overseas economic and territorial expansion at the end of the 19th century. Born in Hartford, Connecticut, on April 17, 1837, he was the son of Julius Morgan, a wealthy financier. After attending the University of Göttingen in Germany, the younger Morgan worked as an accountant for Duncan, Sherman, and Company, a New York City banking firm, from 1857 to 1861. At the outbreak of the American Civil War, he avoided military service by paying for a substitute soldier to take his place, a practice that was legal at the time and not unusual for men in his position. During the war, he first worked for George Peabody and Company, then moved to Dabney, Morgan, and Company from 1864 to 1871. He joined the Philadelphia firm of Drexel, Morgan, and Company as a partner in 1871. After the death of the firm's founder, Anthony J. Drexel, in 1893, Morgan became the senior partner of the firm. The firm, which became J. P. Morgan and Company, grew to be one of the most powerful banking houses in the world.

Morgan bought, consolidated, or restructured many U.S. railroads during the last two decades of the 19th century. By 1900, he controlled more than 5,000 miles of rail lines. He also implemented regulations and standards that the federal government was either unwilling or unable to enact. His vast holdings in the railroad industry included the New York Central, the New Haven and Hartford, the Pennsylvania, the Reading, and the Chesapeake and Ohio networks. In 1902, he organized the Northern Securities Company as a trust for his railroad holdings only to have it dissolved two years later by a landmark antitrust suit. In 1892, he financed the formation of General Electric by merging Edison General Electric and the Thomson-Houston Electric Company. In 1896, General Electric was one of the first companies listed on the newly formed Dow Jones Industrial Average. During the economic depression of 1893–1897, Morgan supplied the U.S. government with \$62 million in gold to issue government bonds, which restored a surplus in the U.S. Treasury. This financial coup helped to return the nation to economic prosperity.

American financier and banker John Pierpont Morgan was one of the richest men in America and a dominant figure in the U.S. economy during the late 19th and early 20th centuries. (Library of Congress)

In 1901, Morgan financed the creation of the United States Steel Corporation by purchasing the interests of Andrew Carnegie and other steel-producing industrialists. At the time of its creation, the United States Steel Corporation, which became the world's first billion-dollar corporation, was the largest steel producer in the world and accounted for two-thirds of all U.S. steel production. Federal antitrust legislation unsuccessfully attempted to break up U.S. Steel in 1911. Increased steel production greatly facilitated the role of the United States as a great power during and in the aftermath of the Spanish-American War.

In 1902, Morgan facilitated the creation of the International Mercantile Marine Company by financing the purchase of the Leyland Line and other British steamship companies operating in the Atlantic Ocean. Among the companies purchased was the White Star Line, which built and operated the ill-fated ocean liner *Titanic*. Indeed, Morgan was to have been a passenger on the ship's maiden voyage, but business activities in Europe kept him from departing on the doomed ship in 1912.

Morgan's financial interests exerted a tremendous influence on American foreign policy and domestic politics. Having acquired the assets to the defunct French company that had attempted but failed in its efforts to build a canal in Panama, he used his considerable political influence to ensure that Panama, rather than Nicaragua, would be the preferred American site for a canal. When Colombia balked at the Hay-Herrán Treaty, in part because Colombia was offered only \$10 million up front and \$250,000 annually for a 100-year lease compared to \$40 million for Morgan's Panama Canal Company, the Theodore Roosevelt administration supported a revolution in Panama that resulted in independence from Colombia in 1903. Morgan's manipulation of financial markets was exposed in the Pugo Committee hearings in 1911 and contributed to the creation of the Federal Reserve System in 1913.

Often vilified in the press as a cold-hearted robber baron, Morgan made substantial contributions to charities, churches, hospitals, and schools during his lifetime. He died in Rome, Italy, on March 31, 1913, and his son, J. P. Morgan Jr., inherited his father's financial empire.

Morgan-Cameron Resolution

Resolution passed by Congress on April 6, 1896, two years before the start of the Spanish-American War that served as an indicator of congressional sentiment regarding Cuba. In the midst of an ongoing debate in the United States over what approach the nation should take regarding the Cuban War of Independence and with strong support from the Cuban exile lobby, in February 1896 expansionist Democratic senator John T. Morgan of Alabama and Republican senator Donald Cameron of Pennsylvania joined to introduce a resolution that recognized Cuban belligerency against Spain and called for Cuban independence. The bill passed the Senate on February 28. The House passed its own version of the resolution on March 2.

Following reconciliation between the two versions, the resolution was passed overwhelmingly on April 6. Although the Morgan-Cameron Resolution was not binding, it did serve notice on President Grover Cleveland and Secretary of State Richard Olney of congressional sentiment in support of the Cuban rebels and against Spain.

Moro Campaigns

Start Date: 1902

End Date: 1913

Under the terms of the Treaty of Paris of December 10, 1898, the United States acquired the Philippine archipelago from Spain. Yet the end of the war with Spain was only the beginning of hostilities for American forces in the Philippines. The northern islands had been in revolt against Spanish rule since 1896, and U.S. forces would spend nearly three years (1898–1902) defeating the Filipino independence movement in what was commonly called the Philippine Insurrection and is today known as the Philippine-American War.

The southern islands of Sulu and Mindanao in the Philippines had never been completely conquered by the Spanish despite more than 400 years of sporadic warfare. The U.S. Army would spend 11 more years (1902–1913) fighting on the southern islands against the Moros with only limited success. In the course of these Moro campaigns, some 130 American soldiers died in the fighting, and 16 Medals of Honor were awarded.

The southern portion of the Philippine archipelago was controlled by a people the Spanish called the Moros, meaning "Moors." The Moros were Austronesians who had migrated from Taiwan and had been converted to Islam beginning in the 14th and 15th centuries and enjoyed a fierce reputation as pirates and warriors. The Spanish had established isolated garrisons in small fortresses along the coastline but had never penetrated the thick jungle interior. The Moros had remained neutral throughout the Philippine-American War, for rule by a Christian-dominated Republic of the Philippines was as distasteful to them as rule by the Americans. Indeed, the Moros fought their Christian and pagan neighbors as hard as they had fought the Spanish.

When U.S. Army forces occupied Sulu and Mindanao, they were not content to remain barricaded along the coastline. Instead, they attempted to Americanize the entire island. This meant bringing an end to slavery, blood feuds, and the piracy that had been a way of life for the Moros for centuries. On August 20, 1899, Brigadier General John Bates signed a treaty with the sultan of Sulu ostensibly giving the United States control over the islands, ending slavery and piracy, and guaranteeing the sultan certain rights, including an annual stipend.

U.S. Army brigadier general Samuel Sumner meeting with the sultans of Bayang and Oato at Camp Vicars on Mindanao in 1902. (Library of Congress)

The Bates Treaty had little effect, however, for the sultan had little control over Sulu and Mindanao. Real power lay in the dozens of tribal datus (chiefs), who strongly resisted U.S. control over their territories and carried out isolated attacks against American troops and all other foreigners. Although the Moros were skilled with rifles taken from the Spanish and Americans, their principal weapon was a short sword, known as the kris.

The Moros were masters at guerrilla warfare, attacking at night and ambushing stragglers and small patrols. They used the jungle cover to their advantage and could be within stabbing distance with the kris before their enemies could return fire. The Moros often charged into gunfire, continuing to rush their enemies despite being hit several times. One consequence of the Moro Campaigns was the U.S. Army decision to change its official side arm from the .38 revolver to the semiautomatic .45 because the .38 round did not have the power to stop a charging Moro warrior.

Although isolated attacks occurred against U.S. troops from the beginning of the occupation, they were at first considered the work of solitary bandits. This changed in the spring of 1902 when more than 200 Moros ambushed 18 soldiers patrolling Lake Lanao on Mindanao. In the attack, a soldier of the 15th Cavalry Regiment was killed, and all of the horses were taken.

Colonel Frank Baldwin, who had won the Medal of Honor in both the American Civil War and the Indian Wars, commanded expeditionary troops against the datu of Binadayan. The resulting Battle of Bayang on May 2, 1902, led to 51 Americans killed or

wounded of a force of 470 men. Some 300 Moros died, with fewer than 30 escaping. Although the Moros were masters of jungle warfare, when attacked they retired to their cottas, which were small castlelike structures with thick, high walls. Cottas dotted the landscape and were almost impenetrable without artillery. In the Battle of Bayang, U.S. soldiers were forced to scale the walls of the cottas using improvised ladders.

Captain John J. Pershing, the future commander of the American Expeditionary Forces in World War I, was also a veteran of the Moro Campaigns. He led several campaigns in the Lake Lanao area. In April 1903, U.S. forces destroyed the cotta at Bacalod following a three-day siege that killed 120 Moros. In the Battle of Taraca on May 4, 1903, U.S. forces killed another 250 Moros. Only two Americans died in action, although 18 others succumbed to disease. Pershing was involved in both of these operations.

In August 1903, Major General Leonard Wood became the civilian governor of the Moro islands. He immediately launched a campaign into the interior in an attempt to capture Datu Ali, the leader of the resistance on Mindanao. In this operation, Wood employed not only the U.S. Army but also the Philippine Constabulary of native Filipinos. During the ensuing months, more than 130 cottas were destroyed, and hundreds of Moro warriors were slain.

On March 5–7, 1906, the largest battle of the Moro Campaigns occurred on the extinct volcano of Bud Dajo on Jolo Island. One thousand Moro warriors—both men and women—fiercely resisted 800 American soldiers and Filipino Constabulary troops. The

MORO WAR, 1898–1913

Moros used to great effect the area's natural fortifications and a series of cottas. When the brutal, sometimes hand-to-hand fighting was over, more than 700 Moros lay dead along with 21 Americans and Filipinos.

The next several years were relatively quiet, with only sporadic violence. By now, most Moros had begun to realize that the U.S. government had no intention of trying to convert them from Islam to Christianity as the Spanish had attempted to do. This removed a major incentive for Moro resistance.

The last major engagement of the Moro Campaigns occurred on the island of Jolo during June 11–15, 1913. Recently promoted Brigadier General John Pershing led U.S. Army forces in what came to be known as the Battle of Bud Bagsak. In four days of fierce combat, some 500 Moros were killed along with 15 Americans. The battle broke the last significant resistance to American rule in the southern Philippines.

As with all American actions in the Philippines, there were negative reactions to the Moro Campaigns. This was chiefly because of the high casualties inflicted on the Moros in comparison to the number taken prisoner. On the other hand, there was little U.S. soldiers could do, considering that most Moros chose to fight to the death rather than surrender. During the Moro Campaigns of 1902–1913, some 130 American soldiers died in combat, while more than 500 others died of various diseases.

Moro Province

Philippine province created on June 1, 1903, by U.S. occupation authorities. Moro Province was inhabited largely by Filipino Muslims, or Moros as they were known by the Spanish. Moro Province included a large part of the island of Mindanao and the Sulu Archipelago, which was traditionally considered part of greater Mindanao. Moro Province covered five districts of Mindanao:

Lanao, Cotabato, Zamboanga, Davao, and Sulu (Tawi-Tawi was part of Sulu because it was ruled by the Sulu sultanate). Each district was administered by an U.S.-appointed governor, also a military officer. The districts were subdivided into tribal wards, with key datus (chiefs) serving as ward chiefs and lesser datus serving as sheriffs, deputies, and judges.

The United States formed Moro Province in an attempt to subdue the hostile Moros and separate non-Muslim Filipinos from the Moro Rebellion. The unique administrative setup was designed to incorporate the Moros' existing political structure in which personal ties with ruling officials were deemed important.

Luzon, the Visayas, and a portion of Mindanao, including their constituent provinces, came to be administered by civilian authorities operating under the Philippine Commission headed by William H. Taft. But a large section of Mindanao, inhabited by intractable and often hostile Moros, was governed directly by the U.S. military.

The area of Mindanao was home to some 278,000 Moros and more than a dozen tribal groups (their numbers were estimated at more than 100,000) in 1903. Most American authorities believed that using force was the only way to subjugate the hostile Moros and other rogue elements on the island. Governing the Moros militarily was deemed necessary so that they could eventually be integrated with Christian Filipinos.

The relationship between Muslim and non-Muslim Filipinos had been characterized by mutual prejudice and animosity to the other, largely as an outcome of Spanish colonization policies and by the fact that the Christianized natives had often been conscripted into military campaigns against the Moros. The Moros posed a formidable problem for the U.S. colonial government, such as during the Spanish regime, because they lived under their own laws (*sharia*) and traditions (*adat*) and recognized no power except their own system of government under the sultans and datus. The mission of the military regime was to civilize the Moros and educate them to the ways of modernity. The American civilizing efforts applied both might and persuasion in alternating sequences. Many American soldiers, however, operated under the assumption that "a good Moro is a dead Moro."

Brigadier General Leonard Wood, a veteran American Indian fighter, was appointed the first military governor of Moro Province; his tenure lasted from 1903 to 1906. He was succeeded by two other military governors: Major General Tasker Bliss (1906–1909) and Brigadier General John Pershing (1909–1913). The military governor on Mindanao exercised vast powers and influence, which were likened to those of Roman proconsuls. He was directly responsible to the governor-general of the Philippines and the Philippine Commission, located in Manila. Laws and ordinances applicable to the Moro Province were charged to the Legislative Council, composed of the governor, a secretary, a treasurer, an engineer, a superintendent of public schools, and the provincial attorney, all Americans.

Military rule of the Moro Province spanned only a decade, but its consequences on the social and political structures of the Moros

and tribal communities cannot be overemphasized. Under the American military regime, economic development had begun to flourish, with foreign capital opening up various agricultural and industrial pursuits. Also, Christian migration to the region began with the encouragement of U.S. military authorities. It was Pershing who received the most credit for transforming Moro Province and making it amenable to a system of government based on the Western rule of law.

American officials were usually perceived as just, benevolent, and patriarchal; some were even called "father" by some local datus. However, defiant village chiefs occasionally challenged the authorities with armed resistance, even after the Moro Province was dissolved in 1913, usually over issues related to taxation, compulsory education of children, and mandatory enlistment in the armed forces, among others. Bloody revolts punctuated the history of Moroland, as the Moro Province was also called, ranging from the infamous May 2, 1902, Battle of Bayang to the massacres in the Battle of Bud Dajo (March 5–8, 1906) and the Battle of Bud Bagsak (January 13–15, 1913). There were, of course, smaller but equally violent confrontations between the U.S. military and other disaffected tribal groups. This pattern of resistance would continue on a small scale through the Commonwealth era (1935–1945), when Mindanao became firmly entrenched as part of the emerging Philippine state.

In a sense, the transitional system of military governance broke the backbone of the age-old sultanate (although it did not go away altogether). At the same time, however, the new ways provided avenues for upward mobility for those at the bottom of the social hierarchy. The fruits of these policies became evident when hundreds of low-status Moros eventually rose to prominent positions in government and the civil service sectors as teachers, clerks, and local officials.

Despite all the various difficulties in modernizing and integrating Moro Province, the policy of Filipinization had largely worked. The military governance of Moro Province ended in 1913, at which time the Moro insurgency had been largely neutralized. Civilian administrator Frank Carpenter then replaced Pershing as governor. The province was formally integrated with the three largely Christian provinces of Mindanao (Agusan, Misamis, and Bukidnon) and became a new administrative region known as the Department of Mindanao and Sulu under a civilian governor. This was followed by a series of administrative changes and jurisdictional rearrangements as independence neared during the 1930s and owing to the 1916 Jones Act, which accelerated the Filipinization of the islands. Central to these bureaucratic shifts was the gradual transfer of authority from Americans to the more educated and politically mature Christian Filipinos and educated and articulate Moros.

Moros

Native Muslims of the Philippines. The term “Moros” is Spanish for “Moors,” referencing the North African Muslims who conquered Spain in 711 CE. Most of the Moros resided in the southern Philippines in an area called Bangsamoro on the island of Mindanao. They also lived in the long archipelago of small islands to the south and west of Mindanao. There were, however, Muslim enclaves and influences as far away as Manila. The Spanish called all Muslims they encountered during the Age of Exploration Moros, but only in the Philippines did the name take hold. The group that became known as the Moros is believed to have come to the Philippines as part of the Great Polynesian Migration in about 100 CE. By the late 15th century, when the Moros had been converted to Islam

by merchants from India, they already had a reputation as fierce warriors and pirates.

Islam had arrived in the Philippines only 60 years before the Spanish. The Spanish conquered and Christianized the northern islands, while the southern islands of Mindanao and Sulu became Muslim strongholds. For more than 300 years, the Spanish battled the Moros for complete control of the archipelago. The Moros traditionally allied themselves with Spain’s enemies, the British and the Dutch, when the European powers were at war with one another. They also constantly preyed on Spanish merchant ships.

During the Spanish-American War and the Philippine-American War that immediately followed, the Moros remained neutral. Indeed, it was not until the Christian Filipinos had been conquered that the Moros and U.S. Army forces began to clash. A series of bloody confrontations followed between 1902 and 1913 that cost the United States more than 600 men. Finally subdued through a mix of military force and civic action, the Moros came under U.S. civilian administration, as did the entire Philippines.

During World War II, the Moros resisted Japanese occupation, and after Filipino independence in 1946, the Moro Islamic Liberation Front (MILF) began a terrorist campaign to win independence for the southern Muslim-dominated Filipino islands. Today the MILF receives funding from several international terrorist organizations, including Al Qaeda.

Morro Castle

A fortification situated at the entrance to the harbor of Santiago de Cuba. Also known as Castillo de San Pedro de la Roca, Castillo del Morro, San Pedro de la Roca Castle, and simply the Morro, the redoubt sits atop a bluff 207 feet high on the eastern headland of the harbor's entrance some six miles south of the city of Santiago itself. The Spanish began construction of the fort in the 16th century as part of a network of batteries at the mouth of the harbor and along the approximately 400-foot-wide channel that leads to it. During the Spanish-American War, Morro Castle was garrisoned by 411 soldiers and served as an observation post, an artillery position, and a prison.

During the war, the castle's handful of antiquated guns rarely fired at U.S. Navy ships, but the presence of the castle and the surrounding batteries was a consideration in the U.S. plans to bottle up Admiral Pascual Cervera y Topete's squadron in the harbor by sinking the collier *Merrimac* in its narrow approach channel. An idea to trick the defenders into thinking it was a Spanish ship was rejected in favor of moving the block ship surreptitiously into position, in part because of the fort's close proximity. During the actual mission on June 3, 1898, the mission commander, Navy lieutenant Richmond Pearson Hobson, decided to forego the gradual approach and order full steam when the castle's profile could be clearly seen in the early dawn and he became convinced that the ship must have been observed from only 2,000 yards away. The expedition ultimately failed, and the ship's skeleton crew, including Hobson, was captured and interred in Morro Castle.

Intelligence from Cuban insurgents, however, revealed the location of the prisoners, so the American ships that bombarded other defenses on June 6 and again on June 16 did not target the castle. It received only incidental damage in the actions. Lookouts on the castle were the first Spaniards to observe the dozens of ships that made up the American invasion fleet, and it was from the fort that Cervera learned of their presence. A sentinel on the castle also reported the departure of Rear Admiral William T. Sampson's flagship, the *New York*, from the blockading squadron outside the harbor's entrance on July 3.

Morro Castle was probably most important as a deterrent. Sampson was unwilling to send his ships through the Spanish defenses along the narrow approach to attack Cervera in his harbor refuge. Although Sampson believed that a determined bombard-

Morro Castle, a 16th-century fortification that sits above the harbor entrance to Santiago de Cuba. (Library of Congress)

ment could have silenced all of the castle's batteries, he was also very concerned about mines in the channel controlled from onshore installations.

Morro Castle still stands today more than 500 years after its construction. In 1997, the United Nations Educational Scientific and Cultural Organization (UNESCO) declared it and its associated works a World Heritage Site as the largest and most complete example of European Renaissance military architecture.

Morro Heights

A high bluff commanding the entrance to the harbor of Santiago de Cuba, situated on Cuba's southeastern coast. The headland lies six miles south of the city on the eastern side of the narrow channel that serves as the only sea approach to the city from the open ocean. The channel is no more than 400 yards wide at its greatest width.

Located on the heights were the Spanish-built Morro Castle, a Renaissance-style fortress first constructed in the 16th century, and

nearby Morro Battery on the high ground. These were part of a larger system of fortifications that included the Estrella and Punta Gorda batteries to the north and the Upper and Lower Socapa batteries on the somewhat lower western side of the channel. During the Spanish-American War, the defensive network contained about three dozen large guns of varying caliber and quality. Two 6.3-inch pieces in the upper Socapa battery were the largest in the defenses, but there were only some 100 rounds of ammunition for them. Most of the pieces were antiquated muzzle loaders, and some dated to 1724.

On June 3, 1898, rapid-fire guns and machine guns on the heights fired upon the U.S. collier *Merrimac*, commanded by Richmond Pearson Hobson, as the Americans tried unsuccessfully to block the channel by sinking the ship at its most narrow point. The mission failed, and Hobson and his crew were taken prisoner.

Rear Admiral William T. Sampson's blockading U.S. Navy warships bombarded Morro Heights on June 6, 16, and 21 but largely refrained from shelling the installations directly because accepted doctrine held that battleships should not engage shore batteries. American officials were also concerned about Hobson and his crew, who were being held in Morro Castle. Although the larger Spanish guns lacked the range and accuracy to pose a serious threat to the blockading squadron, Sampson nonetheless worried about mines in the harbor and the channel controlled from the batteries as he considered whether to enter the harbor to attack Rear Admiral Pascual Cervera y Topete's sequestered Spanish squadron and support the U.S. Army in its advance toward Santiago.

Sampson's desire to neutralize the defenses created a significant interservice dispute when he asked the army to capture Morro Heights from the rear so that minesweeping teams could work unimpeded. Having taken an interior route toward Santiago and fearing the digression would result in high casualties, U.S. ground force commander Major General William R. Shafter declined the request and suggested that the navy should challenge the guns and steam into the harbor directly.

Sampson did not follow suit, and the ships held their stations while the army fought toward the city. On July 3, the guns on Morro Heights saw their most sustained action of the campaign as they ineffectually fired on the U.S. blockading ships during the Spanish squadron's egress from the harbor in the prelude to the decisive Battle of Santiago de Cuba later that same day. Morro Heights was again a factor on July 6 when the U.S. Army and the U.S. Navy made plans for a coordinated attack on its defenses so that the navy could clear the mines, enter the harbor, and bombard the city itself. This plan was not carried out, and the ships instead bombarded the city from the sea for two days before a truce went into effect that lasted until the formal surrender on July 17.

Music

The musical scene during the Spanish-American War was particularly interesting, owing much of its variety and popularity to recent inventions such as the gramophone and phonograph, which for the first time allowed Americans to listen to quality music that had been prerecorded. In an age before radio, television, or even movies with sound, listening to music, playing music, and dancing to music were favorite American pastimes. Spectacularly popular songwriters and band leaders, such as John Philip Sousa, dubbed the "March King," and new forms of musical expression also lent to the music scene its own unique richness. Patriotic music and songs also played a central role in keeping civilians as well as soldiers enthusiastic about the war effort.

In addition to the gramophone and phonograph, which few people in fact could afford, the majority of Americans in the 1890s listened to music in person in such venues as dance halls, vaudeville and minstrel shows, concert halls, and outdoor band shells.

Many Americans were also introduced to new music and new musical genres by sheet music, which was sold for piano and for parlor singing at home. At the time, pianos were household fixtures in many middle- and upper-class American homes. The companies holding the rights to sheet music would often send musicians on musical tours so that the songs could be performed and sales of sheet music encouraged. These tours were usually performed by young and up-and-coming musicians who would one day become highly popular songwriters, musicians, and singers. Advertisements for sheet music were to be found in both magazines and newspapers. The covers of sheet music were often dramatically and elaborately illustrated to help sales and set a mood for the music.

During the 1890s, a section of New York City known for its high density of musicians, songwriters, and music publishers—dubbed Tin Pan Alley—became a fertile testing ground for new songs and genres of music. Ragtime, considered by many to be the precursor of jazz, had become enormously popular by the late 1890s. Among its most illustrious composers were Scott Joplin and Vess Ossman. A sort of hybridized form of marches with roots also in African American music, ragtime began as up-tempo dance music written usually in 2/4 or 4/4 time that featured highly syncopated melodies. Ragtime would come to feature a wide array of styles during its heyday.

Among the more popular songs during the Spanish-American War were "Hot Time in the Old Town Tonight," a very popular song among U.S. troops who often sang it in camp; "After the Ball"; John Philip Sousa's "El Capitan March," another favorite among soldiers and military bands; "My Wild Irish Rose"; and "Sweet Rosie O'Grady." When the U.S. Asiatic Squadron began its voyage to

Cover to a piece of patriotic American sheet music titled "The Yankee Message; Uncle Sam to Spain," published in 1898. (Rare Book, Manuscript, and Special Collections Library, Duke University)

Manila Bay in 1898, the band on board the *Olympia*, Commodore George Dewey's flagship, played "El Capitan March."

Songs dealing specifically with the war and military service were very popular among soldiers and were designed to stress esprit de corps and war propaganda all at the same time. "Brave Dewey and His Men" celebrated the American victory at the Battle of Manila Bay, while "The Charge of the Rough Riders" immortalized the service of Theodore Roosevelt and the Rough Riders at San Juan Hill. Songs such as "The Belle of Manila" and "Ma Filipino Babe" spoke of American intervention in the Philippines and the hard-

ships it had engendered. The emphasis in many of these songs was undiluted patriotism and sacrifice for a noble cause. Other such songs were blatantly racist and spoke of African Americans' service in the war as well as Filipino insurgents whom U.S. forces began to fight in February 1899.

Undoubtedly the most popular and influential musician of the time was Sousa, who had led the U.S. Marine Band for 12 years before retiring and branching out on his own in 1892. He became an instant sensation, known not only for the plethora of jaunty and memorable marches he wrote but also for his leadership of his own band of handpicked musicians that toured the nation exhaustively throughout the 1890s. Sousa was indeed the forerunner of a present-day rock-and-roll superstar.
